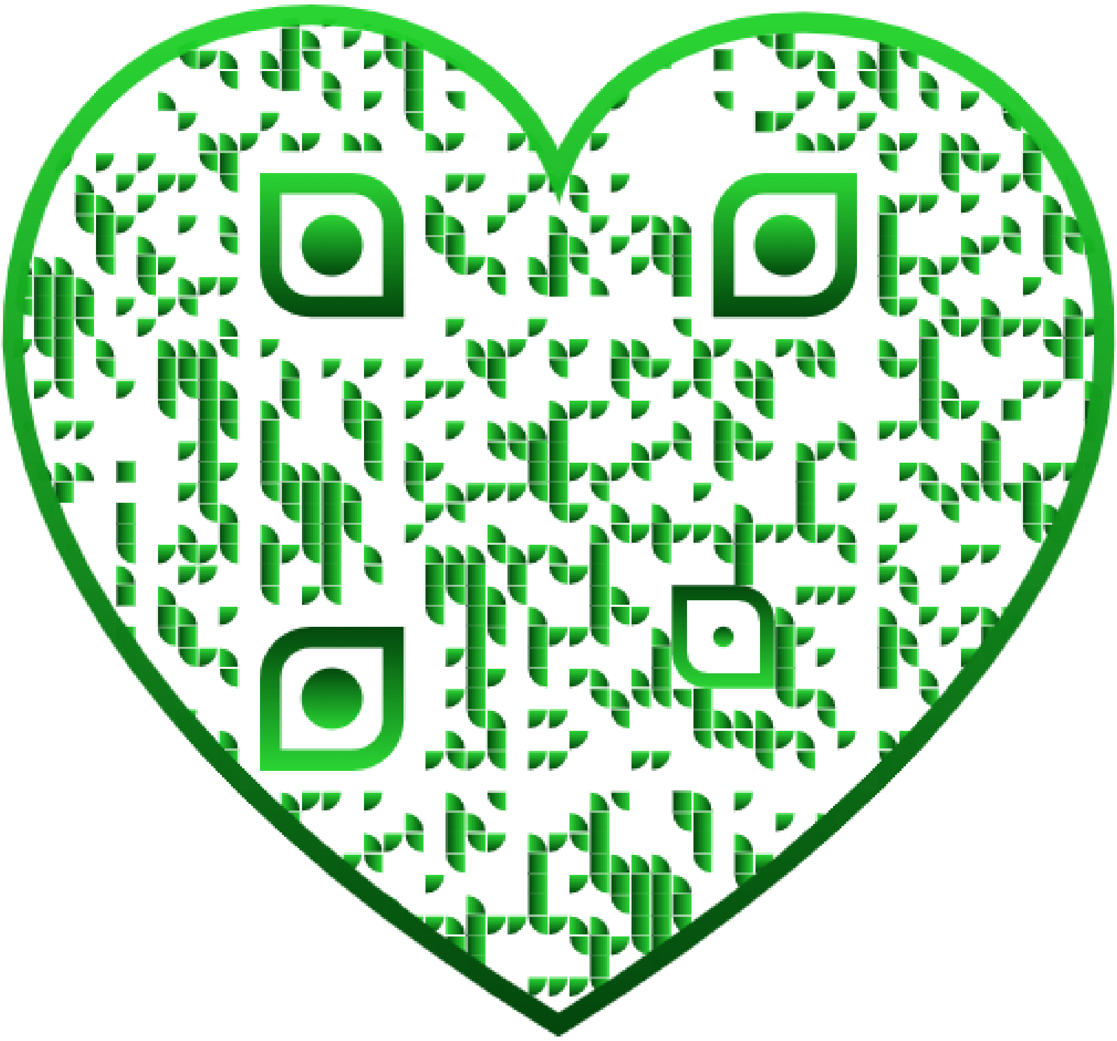
DIEU ET MON DROIT

British Pharmacopoeia



British Pharmacopoeia 2009

Published on the recommendation of the Commission on Human Medicines pursuant to the Medicines Act 1968 and notified in draft to the European Commission in accordance with Directive 98/34/EEC

The monographs of the Sixth Edition of the European Pharmacopoeia (2007), as amended by Supplements 6.1 and 6.2 published by the Council of Europe, are reproduced either in this edition of the British Pharmacopoeia or in the associated edition of the British Pharmacopoeia (Veterinary).

British Pharmacopoeia Commission

The British Pharmacopoeia Commission is appointed, on behalf of the Secretary of State for Health, by the Appointments Commission, the body responsible for appointments to all of the Medicines Act 1968 Advisory Bodies.

The duties of the British Pharmacopoeia Commission are as follows:

(a) the preparation under section 99(1) of the Act of any new edition of the British Pharmacopoeia;

(b) the preparation under section 99(1) of the Act, as given effect by section 102(1) thereof, of any amendments of the edition of the British Pharmacopoeia published in 1968 or any new edition of it;

(c) the preparation under section 100 of the Act (which provides for the preparation and publication of lists of names to be used as headings to monographs in the British Pharmacopoeia) of any list of names and the preparation under that section as given effect by section 102(3) of the Act of any amendments of any published list;

(d) the preparation under section 99(6) of the Act, of any compendium, or any new edition thereof, containing information relating to substances and articles which are or may be used in the practice of veterinary medicine or veterinary surgery;

(e) to frame clear and unequivocal technical advice in order to discharge the Commission's responsibilities both for the British Pharmacopoeia, the British Pharmacopoeia (Veterinary) and British Approved Names and as the national pharmacopoeial authority with respect to the European Pharmacopoeia.

Members of the British Pharmacopoeia Commission are appointed for a (renewable) term of 4 years and, under the requirements laid down by the Office of the Commissioner for Public Appointments, can serve for a maximum of 10 years.

British Pharmacopoeia Laboratory Staff

Current members of staff of the British Pharmacopoeia Laboratory who have taken part in the production of this edition include:

R Gaur, M Azizi, J Gan, P Hansal, K Harper, R Mannan, A Panchal, K Patel, M Patel, N Patel, J Rana, A Rogowska

Preface

The British Pharmacopoeia 2009 is published for the Health Ministers on the recommendation of the Commission on Human Medicines in accordance with section 99(6) of the Medicines Act 1968.

The Commission on Human Medicines believes that the British Pharmacopoeia contributes significantly to the overall control of the quality of medicinal products by providing an authoritative statement of the quality that a product, material or article is expected to meet at any time during its period of use. The Pharmacopoeial standards, which are publicly available and legally enforceable, are designed to complement and assist the licensing and inspection processes and are part of the system for safeguarding purchasers and users of medicinal products.

The Commission on Human Medicines wishes to record its appreciation of the services of all those who have contributed to this important work.

Notices

Monographs of the European Pharmacopoeia are distinguished by a chaplet of stars against the title. The term European Pharmacopoeia, used without qualification, means the sixth edition of the European Pharmacopoeia comprising, unless otherwise stated, the main volume, published in 2007 as amended by any subsequent supplements and revisions.

Patents

In this Pharmacopoeia certain drugs and preparations have been included notwithstanding the existence of actual or potential patent rights. In so far as such substances are protected by Letters Patent their inclusion in this Pharmacopoeia neither conveys, nor implies, licence to manufacture.

Effective dates

New and revised monographs of national origin enter into force on 1 January 2009. Monographs of the European Pharmacopoeia have previously been published by the Council of Europe and have been brought into effect by means of Notices published in the Belfast, Edinburgh and London Gazettes.

Introduction

The British Pharmacopoeia 2009 supersedes the British Pharmacopoeia 2008. It has been prepared by the British Pharmacopoeia Commission, with the collaboration and support of its Expert Advisory Groups and Panels of Experts, and contains approximately 3200 monographs for substances, preparations and articles used in the practice of medicine. Some of these monographs are of national origin while others have been reproduced from the 6th edition of the European Pharmacopoeia. This edition, together with its companion edition, the British Pharmacopoeia (Veterinary) 2009, incorporates all the monographs of the 6th edition of the European Pharmacopoeia as amended by Supplements 6.1 and 6.2. The user of the British Pharmacopoeia thereby benefits by finding within this one, comprehensively indexed, compendium all current United Kingdom pharmacopoeial standards for medicines for human use. The new edition comprises five volumes as follows.

Volumes I and II	Medicinal Substances
Volume III	Formulated Preparations, Blood-related Products, Immunological Products, Radiopharmaceutical Preparations, Surgical Materials, Herbal Drugs and Herbal Drug Preparations and Materials for use in the Manufacture of Homoeopathic Preparations
Volume IV	Infrared Reference Spectra, Appendices, Supplementary Chapters and Index
Volume V	British Pharmacopoeia (Veterinary) 2009

Effective Date

The effective date for this edition is 1 January 2009.

Where a monograph which appeared previously in an earlier edition of the British Pharmacopoeia has not been included in this edition, it remains effective in accordance with Section 65(4) of the Medicines Act 1968.

General Notices

The British Pharmacopoeia General Notices (Part II) have been amended as follows.

Labelling This General Notice has been amended to reflect current legislative requirements described in title V of the EC Directive 2001/83/EC as amended.

Additions

A list of monographs included for the first time in the British Pharmacopoeia 2009 is given at the end of this introduction. It includes 42 new monographs of national origin and 55 new monographs reproduced from the 6th Edition of the European Pharmacopoeia as amended by Supplements 6.1 and 6.2.

Traditional Herbal Medicines

Work is continuing on the development of monographs for herbal materials and processed herbs used in Traditional Chinese Medicines. This new edition sees the publication of 6 new monographs. It is emphasized that, although requirements for the *quality* of the material are provided in the monograph to assist the registration scheme by the UK Licensing Authority, the British Pharmacopoeia Commission has not assessed the safety of the material in traditional use.

Homoeopathic Preparations

A further 4 new monographs for homoeopathic stocks and mother tinctures, that support the simplified registration scheme by the UK Licensing Authority, have been added to this edition.

Immunological Products

This new edition sees the publication of a new monograph for Haemophilus Type b and Meningococcal Group C Conjugate Vaccine, a vaccine widely used in the vaccination programme in the United Kingdom.

Unlicensed Medicines

With this new edition, 6 individual monographs for unlicensed formulations have been added. These individual monographs are characterised by a statement that they are unlicensed in the United Kingdom. The general and individual monographs are intended to apply to all types of Unlicensed Medicines, that is, those formulations manufactured under a specials licence and those prepared extemporaneously under the supervision of a pharmacist.

Revisions

National monographs which have been amended technically by means of this edition are listed at the end of this introduction. For the benefit of the reader this list indicates the section, or sections, of each monograph which has/have been revised.

The list is as comprehensive as practicable. However, to ensure that the reader uses the current standard, it is essential to refer to the full text of each individual monograph.

Titles

Monographs for medicinal substances and formulated preparations, the titles of which had been changed from the British Approved Names in the British Pharmacopoeia 2003, had previously included the statement '*The name [former title] was formerly used in the United Kingdom*'. These monographs have been amended to delete the statement in this edition. Only the International Nonproprietary Names have been retained. The exceptions are Adrenaline and Noradrenaline which continue to be dual-labelled in this new edition. Adrenaline and Noradrenaline are the terms used in the European Pharmacopoeia and therefore the official titles used in the 37 Member States party to the Convention on the Elaboration of a European Pharmacopoeia.

Reference Substances

A number of monographs for medicinal substances and formulated preparations of the BP have been amended to refer to new British Pharmacopoeia Chemical Reference Substances established by the British Pharmacopoeia Laboratory.

Tablets

The general monograph for Tablets of the British Pharmacopoeia has been amended to delete the requirement for tablet shape. As a consequence approximately 70 monographs for formulated preparations have been amended.

Unlicensed Medicines

The general monograph for Unlicensed Medicines has been amended to introduce a requirement under Production concerning the need to ensure that, in the manufacturing, packaging and storage of unlicensed oral liquids, the microbial quality meets Pharmacopoeial requirements.

Infrared Reference Spectra

As with the previous edition, the reference spectra are placed in alphabetical order within this edition. Seven new spectra have been added to the collection.

Appendices

A new Appendix XI B 2 (Water-soluble Extractive) has been introduced in this edition to support the monographs for traditional herbal medicines.

The title of Appendix XIV A (Biological Assay of Antibiotics) has been harmonised with the title of the European Pharmacopoeia Method 2.7.2 (Microbiological Assay of Antibiotics). As a consequence, approximately 40 monographs have been amended in the new edition to refer to the new title.

For this edition, 14 new Appendices have been created to incorporate the methods of the European Pharmacopoeia.

Supplementary Chapters

Changes in Monograph Titles

The Supplementary Chapter on Changes in Monograph Titles (Supplementary Chapter II A) has been amended to delete reference to the British Approved Names previously used in monograph titles in earlier editions of the British Pharmacopoeia.

Chromatograms for Information

As an additional service to users, the chromatograms and spectra, produced by the British Pharmacopoeia Laboratory, during evaluation of a number of British Pharmacopoeia monographs for formulated preparations are collated and published in this Supplementary Chapter (Supplementary Chapter IV I).

Editorial Changes

Chromatographic tests

The new format for chromatographic tests, introduced in the BP 2008, to delineate sample preparation, chromatographic conditions, system suitability and acceptance criteria has been refined. The format will continue to be harmonised in future editions for all BP monographs.

Monographs for Herbal and Complementary Medicines

The monographs for herbal and complementary medicines have been reorganised into two sections in Volume III of the new edition. These sections are entitled 'Herbal Drugs and Herbal Drug Preparations' and 'Materials for use in the Manufacture of Homoeopathic Preparations' respectively.

European Pharmacopoeia

In accordance with previous practice, all monographs and requirements of the European Pharmacopoeia are reproduced in this edition of the British Pharmacopoeia or, where appropriate, within its companion edition, the British Pharmacopoeia (Veterinary) 2009.

Where a monograph has been reproduced from the European Pharmacopoeia, this is signified by the presence of a European chaplet of stars alongside its title. Additionally, reference to the European Pharmacopoeia monograph number is included immediately below the title in italics in the form '*Ph Eur monograph xxx*'. Where the title in the British Pharmacopoeia is different from that in the European Pharmacopoeia, an approved synonym has been created (see Appendix XXI B) and the Ph Eur title is included before the monograph number. The entire European Pharmacopoeia text is then bounded by two horizontal lines bearing the symbol '*Ph Eur*'.

The European Pharmacopoeia texts have been reproduced in their entirety but, where deemed appropriate, additional statements of relevance to UK usage have been added (e.g. action and use statement, a list of BP preparations). It should be noted, however, that in the event of doubt of interpretation in any text of the European Pharmacopoeia, the text published in English under the direction of the Council of Europe should be consulted.

Correspondence between the general methods of the European Pharmacopoeia and the appendices of the British Pharmacopoeia is indicated in each appendix and by inclusion of a check list at the beginning of the appendices section.

Pharmacopoeial Requirements

It should be noted that any article intended for medicinal use which is described by a name at the head of a monograph in the current edition of the Pharmacopoeia must comply with that monograph '*whether or not it is referred to as BP*'.

It is also important to note that no requirement of the Pharmacopoeia can be taken in isolation. A valid interpretation of any particular requirement depends upon it being read in the context of (i) the monograph as a whole, (ii) the specified method of analysis, (iii) the relevant General Notices and (iv) where appropriate, the relevant general monograph(s). Familiarity with the General Notices of the Pharmacopoeia will facilitate the correct application of the requirements. Additional guidance and information on the basis of pharmacopoeial requirements is provided in Supplementary Chapter I. This non-mandatory text describes the general underlying philosophy and current approaches to particular aspects of pharmacopoeial control.

Forward Look

A new website, www.pharmacopoeia.gov.uk, is currently being developed. It is intended to increase the scope of information available to British Pharmacopoeia stakeholders and to improve the regulatory transparency of the British Pharmacopoeia.

Acknowledgements

The British Pharmacopoeia Commission is greatly indebted to the members of its Expert Advisory Groups and Panels of Experts without whose dedicated enthusiasm and assistance this edition could not have been prepared.

Close co-operation has continued with many organisations at home and overseas. These include the Medicines and Healthcare products Regulatory Agency, the National Institute for Biological Standards and Control, the Veterinary Medicines Directorate, the Royal Pharmaceutical Society of Great Britain, the Association of the British Pharmaceutical Industry, the British Association of Homoeopathic Manufacturers, the European Pharmacopoeia Commission and the European Directorate for the Quality of Medicines & HealthCare, the Therapeutic Goods Administration (Australia), the Health Protection Branch of the Canadian Department of Health and Welfare, the Committee of Revision of the United States Pharmacopeia, the Essential Drugs and Other Medicines Department of the World Health Organization (WHO) and the WHO Collaborating Centre for Chemical Reference Substances.

The British Pharmacopoeia Commission acknowledges the contribution of H Douglas, T Lau and S Matumo, of the Medicines and Healthcare products Regulatory Agency Laboratory, for their collaboration and advice in the practical evaluation of a number of monographs in this edition.

The British Pharmacopoeia Commission acknowledges the contribution of Professor Frederick A Senese, Department of Chemistry, Frostburg State University, USA, for his kind permission to reproduce the indicator colour chart.

The British Pharmacopoeia Commission also acknowledges the advice of the publishing team at The Stationery Office, in particular, Mr Robert Bullen, Mr Phil Halls, Dr Gill Hodgson and Ms Anna Wilson, in the production of this edition.

Expert Advisory Groups, Panels of Experts and Working Parties

Members of Expert Advisory Groups, Panels of Experts and Working Parties are appointed by the British Pharmacopoeia Commission.

The duties of the members are as follows:

(a) To collaborate in the preparation and revision of Monographs, Appendices and Supplementary Chapters for inclusion in the British Pharmacopoeia and British Pharmacopoeia (Veterinary).

(b) To collaborate in the preparation and revision of Monographs, Methods and General Chapters of the European Pharmacopoeia.

(c) To collaborate in the preparation and revision of the list of names to be used as titles for monographs of the British Pharmacopoeia and British Pharmacopoeia (Veterinary).

Members of Expert Advisory Groups, Panels of Experts and Working Parties are usually appointed for a (renewable) term of 4 years.

Foreword

Since 1864, the British Pharmacopoeia has been providing authoritative official standards for pharmaceutical substances and medicinal products. The 2009 edition (BP 2009) continues this tradition. It makes an important contribution, therefore, to the role of the Medicines and Healthcare products Regulatory Agency in protecting public health by setting publicly available standards for the quality of medicines.

In addition to expanding the numbers of monographs for licensed formulated products, this edition supports the new regulatory work in the fields of herbal and complementary medicines by providing new monographs for traditional herbal medicinal products and for homoeopathic stocks and mother tinctures. The 2009 edition continues to improve the control of the quality of unlicensed medicines by providing standards for extensively used unlicensed formulations together with legal and ethical guidance on the preparation and supply of these products.

The British Pharmacopoeia maintains close ties with the work of the European Pharmacopoeia and continues to play a significant role in the standard-setting process in Europe, participating in the activities of the European Directorate for the Quality of Medicines and HealthCare, and influencing the decisions of the European Pharmacopoeia Commission through the United Kingdom Delegation. The texts and monographs of the European Pharmacopoeia form an integral part of the BP 2009.

Annually updated, the British Pharmacopoeia is the only comprehensive collection of standards for UK medicinal substances. It is essential for all individuals and organisations involved in pharmaceutical research, development, manufacture, quality control and analysis.

Sir Alasdair Breckenridge

Chairman, MHRA

Part I

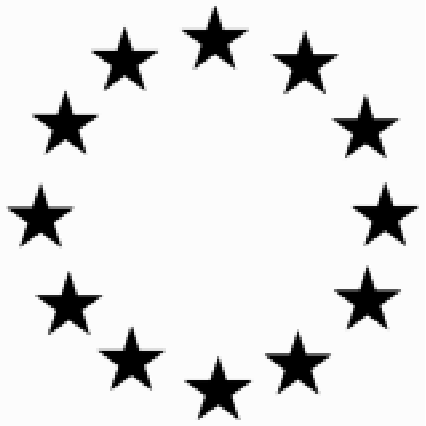
General Notices

Part I

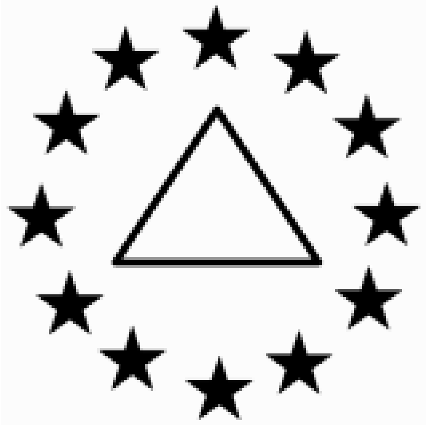
The British Pharmacopoeia comprises the entire text within this publication. The word official' is used in the Pharmacopoeia to signify 'of the Pharmacopoeia'. It applies to any title, substance, preparation, method or statement included in the general notices, monographs and appendices of the Pharmacopoeia. The abbreviation for British Pharmacopoeia is BP.

European Pharmacopoeia

Monographs of the European Pharmacopoeia are reproduced in this edition of the British Pharmacopoeia by incorporation of the text published under the direction of the Council of Europe (Partial Agreement) in accordance with the Convention on the Elaboration of a European Pharmacopoeia (Treaty Series No. 32 (1974) CMND 5763) as amended by the Protocol to the Convention (Treaty Series No. MISC16 (1990) CMND 1133). They are included for the convenience of users of the British Pharmacopoeia. In cases of doubt or dispute reference should be made to the Council of Europe text.



Monographs of the European Pharmacopoeia are distinguished by a chaplet of stars against the title and by reference to the European Pharmacopoeia monograph number included immediately below the title in italics. The beginning and end of text from the European Pharmacopoeia are denoted by means of horizontal lines with the symbol '*Ph Eur*' ranged left and right, respectively.



Inclusion of a triangle within the chaplet of stars denotes monographs that have been adopted by the European Pharmacopoeia Commission following their preparation according to a procedure of harmonisation agreed between the bodies responsible for the European Pharmacopoeia and those of Japan and the United States of America.

The general provisions of the European Pharmacopoeia relating to different types of dosage form are included in the appropriate general monograph in that section of the British Pharmacopoeia entitled Monographs: Formulated Preparations. These general provisions apply to all dosage forms of the type defined, whether an individual monograph is included in the British Pharmacopoeia or not.

Texts of the European Pharmacopoeia are governed by the General Notices of the European Pharmacopoeia. These are reproduced as Part III of these notices.

Part II

General Notices Part II

The following general notices apply to the statements made in the monographs of the British Pharmacopoeia other than those reproduced from the European Pharmacopoeia and to the statements made in the Appendices of the British Pharmacopoeia other than when a method, test or other matter described in an appendix is invoked in a monograph reproduced from the European Pharmacopoeia.

Official Standards

The requirements stated in the monographs of the Pharmacopoeia apply to articles that are intended for medicinal use but not necessarily to articles that may be sold under the same name for other purposes. An article intended for medicinal use that is described by means of an official title must comply with the requirements of the relevant monograph. A formulated preparation must comply throughout its assigned shelf-life (period of validity). The subject of any other monograph must comply throughout its period of use.

A monograph is to be construed in accordance with any general monograph or notice or any appendix, note or other explanatory material that is contained in this edition and that is applicable to that monograph. All statements contained in the monographs, except where a specific general notice indicates otherwise and with the exceptions given below, constitute standards for the official articles. An article is not of pharmacopoeial quality unless it complies with all of the requirements stated. This does not imply that a manufacturer is obliged to perform all the tests in a monograph in order to assess compliance with the Pharmacopoeia before release of a product. The manufacturer may assure himself that a product is of pharmacopoeial quality by other means, for example, from data derived from validation studies of the manufacturing process, from in-process controls or from a combination of the two. Parametric release in appropriate circumstances is thus not precluded by the need to comply with the Pharmacopoeia. The general notice on Assays and Tests indicates that analytical methods other than those described in the Pharmacopoeia may be employed for routine purposes.

Requirements in monographs have been framed to provide appropriate limitation of potential impurities rather than to provide against all possible impurities. Material found to contain an impurity not detectable by means of the prescribed tests is not of pharmacopoeial quality if the nature or amount of the impurity found is incompatible with good pharmaceutical practice.

The status of any statement given under the headings Definition, Production, Characteristics, Storage, Labelling or Action and use is defined within the general notice relating to the relevant heading. In addition to any exceptions indicated by one of the general notices referred to above, the following parts of a monograph do not constitute standards: (a) a graphic or molecular formula given at the beginning of a monograph; (b) a molecular weight; (c) a Chemical Abstracts Service Registry Number; (d) any information given at the end of a monograph concerning impurities known to be limited by that monograph; (e) information in any annex to a monograph. Any statement containing the word 'should' constitutes non-mandatory advice or recommendation.

The expression 'unless otherwise justified and authorised' means that the requirement in question has to be met, unless a competent authority authorises a modification or exemption where justified in a particular case. The term 'competent authority' means the national, supranational or international body or organisation vested with the authority for making decisions concerning the issue in question. It may, for example, be a licensing authority or an official control laboratory. For a formulated preparation that is the subject of monograph in the British Pharmacopoeia any justified and authorised modification to, or exemption from, the requirements of the relevant general monograph of the European Pharmacopoeia is stated in the individual monograph. For example, the general monograph for Tablets requires that Uncoated Tablets, except for chewable tablets, disintegrate within 15 minutes; for Calcium Lactate Tablets a time of 30 minutes is permitted.

Many of the general monographs for formulated preparations include statements and requirements additional to those of the European Pharmacopoeia that are applicable to the individual monographs of the British Pharmacopoeia. Such statements and requirements apply to all monographs for that dosage form included in the Pharmacopoeia unless otherwise indicated in the individual monograph.

Where a monograph on a biological substance or preparation refers to a strain, a test, a method, a substance, etc., using the qualifications 'suitable' or 'appropriate' without further definition in the text, the choice of such strain, test, method, substance, etc., is made in accordance with any international agreements or national regulations affecting the subject concerned.

Definition of Terms

Where the term "about" is included in a monograph or test it should be taken to mean approximately (fairly correct or accurate; near to the actual value).

Where the term "corresponds" is included in a monograph or test it should be taken to mean similar or equivalent in character or quantity.

Where the term "similar" is included in a monograph or test it should be taken to mean alike though not necessarily identical.

Further qualifiers (such as numerical acceptance criteria) for the above terms are not included in the BP. The acceptance criteria for any individual case is set based on the range of results obtained from known reference samples, the level of precision of the equipment or apparatus used and the level of accuracy required for the particular application. The user should determine the variability seen in his/her own laboratory and set in-house acceptance criteria that he/she judges to be appropriate based on the local operating conditions.

Expression of Standards

Where the standard for the content of a substance described in a monograph is expressed in terms of the chemical formula for that substance an upper limit exceeding 100% may be stated. Such an upper limit applies to the result of the assay calculated in terms of the equivalent content of the specified chemical formula. For example, the statement 'contains not less than 99.0% and not more than 101.0% of $C_{20}H_{24}N_2O_2$,HCl' implies that the result of the assay is not less than 99.0% and not more than 101.0%, calculated in terms of the equivalent content of $C_{20}H_{24}N_2O_2$,HCl.

Where the result of an assay or test is required to be calculated with reference to the dried, anhydrous or ignited substance, the substance free from a specified solvent or to the peptide content, the determination of loss on drying, water content, loss on ignition, content of the specified solvent or peptide content is carried out by the method prescribed in the relevant test in the monograph.

Temperature

The Celsius thermometric scale is used in expressing temperatures.

Weights and Measures

The metric system of weights and measures is employed; SI Units have generally been adopted. Metric measures are required to have been graduated at 20°C and all measurements involved in the analytical operations of the Pharmacopoeia are intended, unless otherwise stated, to be made at that temperature. Graduated glass apparatus used in analytical operations should comply with Class A requirements of the appropriate International Standard issued by the International Organization for Standardization.

Atomic Weights

The atomic weights adopted are the values given in the Table of Relative Atomic Weights 2001 published by the International Union of Pure and Applied Chemistry (Appendix XXV).

Constant Weight

The term 'constant weight', used in relation to the process of drying or the process of ignition, means that two consecutive weighings do not differ by more than 0.5 mg, the second weighing being made after an additional period of drying or ignition under the specified conditions appropriate to the nature and quantity of the residue (1 hour is usually suitable).

Expression of Concentrations

The term 'per cent' or more usually the symbol '%' is used with one of four different meanings in the expression of concentrations according to circumstances. In order that the meaning to be attached to the expression in each instance is clear, the following notation is used:

Per cent w/w (% w/w) (percentage weight in weight) expresses the number of grams of solute in 100 g of product.

Per cent w/v (% w/v) (percentage weight in volume) expresses the number of grams of solute in 100 ml of product.

Per cent v/v (% v/v) (percentage volume in volume) expresses the number of millilitres of solute in 100 ml of product.

Per cent v/w (% v/w) (percentage volume in weight) expresses the number of millilitres of solute in 100 g of product.

Usually the strength of solutions of solids in liquids is expressed as percentage weight in volume, of liquids in liquids as percentage volume in volume and of gases in liquids as percentage weight in weight.

When the concentration of a solution is expressed as parts per million (p.p.m.), it means weight in weight, unless otherwise specified.

When the concentration of a solution is expressed as parts of dissolved substance in parts of the solution, it means parts by weight (g) of a solid in parts by volume (ml) of the final solution; or parts by volume (ml) of a liquid in parts by volume (ml) of the final solution; or parts by weight (g) of a gas in parts by weight (g) of the final solution.

When the concentration of a solution is expressed in molarity designated by the symbol M preceded by a number, it denotes the number of moles of the stated solute contained in sufficient Purified Water (unless otherwise stated) to produce 1 litre of solution.

Water Bath

The term 'water bath' means a bath of boiling water, unless water at some other temperature is indicated in the text. An alternative form of heating may be employed providing that the required temperature is approximately maintained but not exceeded.

Reagents

The reagents required for the assays and tests of the Pharmacopoeia are defined in appendices. The descriptions set out in the appendices do not imply that the materials are suitable for use in medicine.

Indicators

Indicators, the colours of which change over approximately the same range of pH, may be substituted for one another but in the event of doubt or dispute as to the equivalence of indicators for a particular purpose, the indicator specified in the text is alone authoritative.

The quantity of an indicator solution appropriate for use in acid-base titrations described in assays or tests is 0.1 ml unless otherwise stated in the text.

Any solvent required in an assay or test in which an indicator is specified is previously neutralised to the indicator, unless a blank test is prescribed.

Caution Statements

A number of materials described in the monographs and some of the reagents specified for use in the assays and tests of the Pharmacopoeia may be injurious to health unless adequate precautions are taken. The principles of good laboratory practice and the provisions of any appropriate regulations such as those issued in the United Kingdom in accordance with the Health and Safety at Work etc. Act 1974 should be observed at all times in carrying out the assays and tests of the Pharmacopoeia.

Attention is drawn to particular hazards in certain monographs by means of an italicised statement; the absence of such a statement should not however be taken to mean that no hazard exists.

Titles

Subsidiary titles, where included, have the same significance as the main titles. An abbreviated title constructed in accordance with the directions given in Appendix XXI A has the same significance as the main title.

Titles that are derived by the suitable inversion of words of a main or subsidiary title, with the addition of a preposition if appropriate, are also official titles. Thus, the following are all official titles: Aspirin Tablets, Tablets of Aspirin; Ginger Tincture, Tincture of Ginger; Atropine Injection, Injection of Atropine.

A title of a formulated preparation that includes the full nonproprietary name of the active ingredient or ingredients, where this is not included in the title of the monograph, is also an official title. For example, the title Promethazine Hydrochloride Oral Solution has the same significance as Promethazine Oral Solution and the title Brompheniramine Maleate Tablets has the same significance as Brompheniramine Tablets.

Where the English title at the head of a monograph in the European Pharmacopoeia is different from that at the head of the text incorporated into the British Pharmacopoeia, an Approved Synonym has been declared in accordance with section 65(8) of the Medicines Act 1968. The titles and subsidiary titles, if any, are thus official titles. A cumulative list of such Approved Synonyms is provided in Appendix XXI B.

Where the names of pharmacopoeial substances, preparations and other materials occur in the text they are printed with capital initial letters and this indicates that materials of Pharmacopoeial quality must be used. Words in the text that name a reagent or other material, a physical characteristic or a process that is described or defined in an appendix are printed in italic type, for example, *methanol*, *absorbance*, *gas chromatography*, and these imply compliance with the requirements specified in the appropriate appendix.

Chemical Formulae

When the chemical composition of an official substance is known or generally accepted, the graphic and molecular formulae, the molecular weight and the Chemical Abstracts Service Registry Number are normally given at the beginning of the monograph for information. This information refers to the chemically pure substance and is not to be regarded as an indication of the purity of the official material. Elsewhere, in statements of standards of purity and strength and in descriptions of processes of assay, it is evident from the context that the formulae denote the chemically pure substances.

Where the absolute stereochemical configuration is specified, the International Union of Pure and Applied Chemistry (IUPAC) *R/S* and *E/Z* systems of designation have been used. If the substance is an enantiomer of unknown absolute stereochemistry the sign of the optical rotation, as determined in the solvent and under the conditions specified in the monograph, has been attached to the systematic name. An indication of sign of rotation has also been given where this is incorporated in a trivial name that appears on an IUPAC preferred list.

All amino acids, except glycine, have the L-configuration unless otherwise indicated. The three-letter and one-letter symbols used for amino acids in peptide and protein sequences are those recommended by the Joint Commission on Biochemical Nomenclature of the International Union of Pure and Applied Chemistry and the International Union of Biochemistry.

In the graphic formulae the following abbreviations are used:

Me	$-CH_3$	Bu^s-	$CH(CH_3)CH_2CH_3$
Et	$-CH_2CH_3$	Bu^n-	$CH_2CH_2CH_2CH_3$
Pr^i	$-CH(CH_3)_2$	Bu^t-	$C(CH_3)_3$
Pr^n	$-CH_2CH_2CH_3$	Ph–	C_6H_5
Bu^i	$-CH_2CH(CH_3)_2$	Ac–	$COCH_3$

Definition

Statements given under the heading Definition constitute an official definition of the substance, preparation or other article that is the subject of the monograph. They constitute instructions or requirements and are mandatory in nature.

Certain medicinal or pharmaceutical substances and other articles are defined by reference to a particular method of manufacture. A statement that a substance or article *is* prepared or obtained by a certain method constitutes part of the official definition and implies that other methods are not permitted. A statement that a substance *may be* prepared or obtained by a certain method, however, indicates that this is one possible method and does not imply that other methods are proscribed.

Additional statements concerning the definition of formulated preparations are given in the general notice on Manufacture of Formulated Preparations.

Production

Statements given under the heading Production draw attention to particular aspects of the manufacturing process but are not necessarily comprehensive. They constitute mandatory instructions to manufacturers. They may relate, for example, to source materials, to the manufacturing process itself and its validation and control, to in-process testing or to testing that is to be carried out by the manufacturer on the final product (bulk material or dosage form) either on selected batches or on each batch prior to release. These statements cannot necessarily be verified on a sample of the final product by an independent analyst. The competent authority may establish that the instructions have been followed, for example, by examination of data received from the manufacturer, by inspection or by testing appropriate samples.

The absence of a section on Production does not imply that attention to features such as those referred to above is not required. A substance, preparation or article described in a monograph of the Pharmacopoeia is to be manufactured in accordance with the principles of good manufacturing practice and in accordance with relevant international agreements and supranational and national regulations governing medicinal products.

Where in the section under the heading Production a monograph on a vaccine defines the characteristics of the vaccine strain to be used, any test methods given for confirming these characteristics are provided as examples of suitable methods. The use of these methods is not mandatory.

Additional statements concerning the production of formulated preparations are given in the general notice on Manufacture of Formulated Preparations.

Manufacture of Formulated Preparations

Attention is drawn to the need to observe adequate hygienic precautions in the preparation and dispensing of pharmaceutical formulations. The principles of good pharmaceutical manufacturing practice should be observed.

The Definition in certain monographs for pharmaceutical preparations is given in terms of the principal ingredients only. Any ingredient, other than those included in the Definition, must comply with the general notice on Excipients and the product must conform with the Pharmacopoeial requirements.

The Definition in other monographs for pharmaceutical preparations is presented as a full formula. No deviation from the stated formula is permitted except those allowed by the general notices on Colouring Agents and Antimicrobial Preservatives. Where additionally directions are given under the heading Extemporaneous Preparation these are intended for the extemporaneous preparation of relatively small quantities for short-term supply and use. When so prepared, no deviation from the stated directions is permitted. If, however, such a pharmaceutical preparation is manufactured on a larger scale with the intention that it may be stored, deviations from the stated directions are permitted provided that the final product meets the following criteria:

(1) compliance with all of the requirements stated in the monograph;

(2) retention of the essential characteristics of the preparation made strictly in accordance with the directions of the Pharmacopoeia.

Monographs for yet other pharmaceutical preparations include both a Definition in terms of the principal ingredients and, under the side-heading Extemporaneous Preparation, a full formula together with, in some cases, directions for their preparation. Such full formulae and directions are intended for the extemporaneous preparation of relatively small quantities for short-term supply and use. When so prepared, no deviation from the stated formula and directions is permitted. If, however, such a pharmaceutical preparation is manufactured on a larger scale with the intention that it may be stored, deviations from the formula and directions stated under the heading Extemporaneous Preparation are permitted provided that any ingredient, other than those included in the Definition, complies with the general notice on Excipients and that the final product meets the following criteria:

(1) accordance with the Definition stated in the monograph;

(2) compliance with all of the requirements stated in the monograph;

(3) retention of the essential characteristics of the preparation made strictly in accordance with the formula and directions of the Pharmacopoeia.

In the manufacture of any official preparation on a large scale with the intention that it should be stored, in addition to following any instruction under the heading Production, it is necessary to ascertain that the product is satisfactory with respect to its physical and chemical stability and its state of preservation over the claimed shelf-life. This applies irrespective of whether the formula of the Pharmacopoeia and any instructions given under the heading Extemporaneous Preparation are followed precisely or modified. Provided that the preparation has been shown to be stable in other respects, deterioration due to microbial contamination may be inhibited by the incorporation of a suitable antimicrobial preservative. In such circumstances the label states appropriate storage conditions, the date after which the product should not be used and the identity and concentration of the antimicrobial preservative.

Freshly and Recently Prepared

The direction, given under the heading Extemporaneous Preparation, that a preparation must be freshly prepared indicates that it must be made not more than 24 hours before it is issued for use. The direction that a preparation should be recently prepared indicates that deterioration is likely if the preparation is stored for longer than about 4 weeks at 15°C to 25°C.

Methods of Sterilisation

The methods of sterilisation used in preparing the sterile materials described in the Pharmacopoeia are given in Appendix XVIII. For aqueous preparations, steam sterilisation (heating in an autoclave) is the method of choice wherever it is known to be suitable. Any method of sterilisation must be validated with respect to both the assurance of sterility and the integrity of the product and to ensure that the final product complies with the requirements of the monograph.

Water

The term water used without qualification in formulae for formulated preparations means either potable water freshly drawn direct from the public supply and suitable for drinking or freshly boiled and cooled Purified Water. The latter should be used if the public supply is from a local storage tank or if the potable water is unsuitable for a particular preparation.

Excipients

Where an excipient for which there is a pharmacopoeial monograph is used in preparing an official preparation it shall comply with that monograph. Any substance added in preparing an official preparation shall be innocuous, shall have no adverse influence on the therapeutic efficacy of the active ingredients and shall not interfere with the assays and tests of the Pharmacopoeia. Particular care should be taken to ensure that such substances are free from harmful organisms.

Colouring Agents

If in a monograph for a formulated preparation defined by means of a full formula a specific colouring agent or agents is prescribed, suitable alternatives approved in the country concerned may be substituted.

Antimicrobial Preservatives

When the term 'suitable antimicrobial preservative' is used it is implied that the preparation concerned will be effectively preserved according to the appropriate criteria applied and interpreted as described in the test for *efficacy of antimicrobial preservation* (Appendix XVI C). In certain monographs for formulated preparations defined by means of a full formula, a specific antimicrobial agent or agents may be prescribed; suitable alternatives may be substituted provided that their identity and concentration are stated on the label.

Characteristics

Statements given under the heading Characteristics are not to be interpreted in a strict sense and are not to be regarded as official requirements. Statements on taste are provided only in cases where this property is a guide to the acceptability of the material (for example, a material used primarily for flavouring). The status of statements on solubility is given in the general notice on Solubility.

Solubility Statements on solubility given under the heading Characteristics are intended as information on the approximate solubility at a temperature between 15°C and 25°C, unless otherwise stated, and are not to be considered as official requirements.

Statements given under headings such as Solubility in ethanol express exact requirements and constitute part of the standards for the substances under which they occur.

The following table indicates the meanings of the terms used in statements of approximate solubilities.

Descriptive term	Approximate volume of solvent in millilitres per gram of solute
very soluble	less than 1
freely soluble	from 1 to 10
soluble	from 10 to 30
sparingly soluble	from 30 to 100
slightly soluble	from 100 to 1000
very slightly soluble	from 1000 to 10 000
practically insoluble	more than 10 000

The term 'partly soluble' is used to describe a mixture of which only some of the components dissolve.

Identification

The tests described or referred to under the heading Identification are not necessarily sufficient to establish absolute proof of identity. They provide a means of verifying that the identity of the material being examined is in accordance with the label on the container.

Unless otherwise prescribed, identification tests are carried out at a temperature between 15°C and 25°C.

Reference spectra Where a monograph refers to an infrared reference spectrum, this spectrum is provided in a separate section of the Pharmacopoeia. A sample spectrum is considered to be concordant with a reference spectrum if the transmission minima (absorption maxima) of the principal bands in the sample correspond in position, relative intensities and shape to those of the reference. Instrumentation software may be used to calculate concordance with a previously recorded reference spectrum.

When tests for infrared absorption are applied to material extracted from formulated preparations, strict concordance with the specified reference spectrum may not always be possible, but nevertheless a close resemblance between the spectrum of the extracted material and the specified reference spectrum should be achieved.

Assays and Tests

The assays and tests described are the official methods upon which the standards of the Pharmacopoeia depend. The analyst is not precluded from employing alternative methods, including methods of micro-analysis, in any assay or test if it is known that the method used will give a result of equivalent accuracy. Local reference materials may be used for routine analysis, provided that these are calibrated against the official reference materials. In the event of doubt or dispute, the methods of analysis, the reference materials and the reference spectra of the Pharmacopoeia are alone authoritative.

Where the solvent used for a solution is not named, the solvent is Purified Water.

Unless otherwise prescribed, the assays and tests are carried out at a temperature between 15°C and 25°C.

A temperature in a test for Loss on drying, where no temperature range is given, implies a range of ±2°C about the stated value.

Visual comparative tests, unless otherwise prescribed, are carried out using identical tubes of colourless, transparent, neutral glass with a flat base. The volumes of liquid prescribed are for use with tubes 16 mm in internal diameter; tubes with a larger internal diameter may be used but the volume of liquid examined must be increased so that the depth of liquid in the tubes is not less than that obtained when the prescribed volume of liquid and tubes 16 mm in internal diameter are used. Equal volumes of the liquids to be compared are examined down the vertical axis of the tubes against a white background or, if necessary, against a black background. The examination is carried out in diffuse light.

Where a direction is given that an analytical operation is to be carried out in subdued light', precautions should be taken to avoid exposure to direct sunlight or other strong light. Where a direction is given that an analytical operation is to be carried out 'protected from light', precautions should be taken to exclude actinic light by the use of low-actinic glassware, working in a dark room or similar procedures.

For preparations other than those of fixed strength, the quantity to be taken for an assay or test is usually expressed in terms of the active ingredient. This means that the quantity of the active ingredient expected to be present and the quantity of the preparation to be taken are calculated from the strength stated on the label.

In assays the approximate quantity to be taken for examination is indicated but the quantity actually used must not deviate by more than 10% from that stated. The quantity taken is accurately weighed or measured and the result of the assay is calculated from this exact quantity. Reagents are measured and the procedures are carried out with an accuracy commensurate with the degree of precision implied by the standard stated for the assay.

In tests the stated quantity to be taken for examination must be used unless any divergence can be taken into account in conducting the test and calculating the result. The quantity taken is accurately weighed or measured with the degree of precision implied by the standard or, where the standard is not stated numerically (for example, in tests for Clarity and colour of solution), with the degree of precision implied by the number of significant figures stated. Reagents are measured and the procedures are carried out with an accuracy commensurate with this degree of precision.

The limits stated in monographs are based on data obtained in normal analytical practice; they take account of normal analytical errors, of acceptable variations in manufacture and of deterioration to an extent considered acceptable. No further tolerances are to be applied to the limits prescribed to determine whether the article being examined complies with the requirements of the monograph.

In determining compliance with a numerical limit, the calculated result of a test or assay is first rounded to the number of significant figures stated, unless otherwise prescribed. The last figure is increased by 1 when the part rejected is equal to or exceeds one half-unit, whereas it is not modified when the part rejected is less than a half-unit.

In certain tests, the concentration of impurity is given in parentheses either as a percentage or in parts per million by weight (ppm). In chromatographic tests such concentrations are stated as a percentage irrespective of the limit. In other tests they are usually stated in ppm unless the limit exceeds 500 ppm. In those chromatographic tests in which a secondary spot or peak in a chromatogram obtained with a solution of the substance being examined is described as corresponding to a named impurity and is compared with a spot or peak in a chromatogram obtained with a reference solution of the same impurity, the percentage given in parentheses indicates the limit for that impurity. In those chromatographic tests in which a spot or peak in a chromatogram obtained with a solution of the substance being examined is described in terms other than as corresponding to a named impurity (commonly, for example, as any (other) *secondary spot* or *peak*) but is compared with a spot or peak in a chromatogram obtained with a reference solution of a named impurity, the percentage given in parentheses indicates an impurity limit expressed in terms of a nominal concentration of the named impurity. In chromatographic tests in which a comparison is made between spots or peaks in chromatograms obtained with solutions of different concentrations of the substance being examined, the percentage given in parentheses indicates an impurity limit expressed in terms of a nominal concentration of the medicinal substance itself. In some monographs, in particular those for certain formulated preparations, the impurity limit is expressed in terms of a nominal concentration of the active moiety rather than of the medicinal substance itself. Where necessary for clarification the terms in which the limit is expressed are stated within the monograph.

In all cases where an impurity limit is given in parentheses, the figures given are approximations for information only; conformity with the requirements is determined on the basis of compliance or otherwise with the stated test.

The use of a proprietary designation to identify a material used in an assay or test does not imply that another equally suitable material may not be used.

Biological Assays and Tests

Methods of assay described as Suggested methods are not obligatory, but when another method is used its precision must be not less than that required for the Suggested method.

For those antibiotics for which the monograph specifies a microbiological assay the potency requirement is expressed in the monograph in International Units (IU) per milligram. The material is not of pharmacopoeial quality if the upper fiducial limit of error is less than the stated potency. For such antibiotics the required precision of the assay is stated in the monograph in terms of the fiducial limits of error about the estimated potency.

For other substances and preparations for which the monograph specifies a biological assay, unless otherwise stated, the precision of the assay is such that the fiducial limits of error, expressed as a percentage of the estimated potency, are within a range not wider than that obtained by multiplying by a factor of 10 the square roots of the limits given in the monograph for the fiducial limits of error about the stated potency.

In all cases fiducial limits of error are based on a probability of 95% ($P = 0.95$).

Where the biological assay is being used to ascertain the purity of the material, the stated potency means the potency stated on the label in terms of International Units (IU) or other Units per gram, per milligram or per millilitre. When no such statement appears on the label, the stated potency means the fixed or minimum potency required in the monograph. This interpretation of stated potency applies in all cases except where the monograph specifically directs otherwise.

Where the biological assay is being used to determine the total activity in the container, the stated potency means the total number of International Units (IU) or other Units stated on the label or, if no such statement appears, the total activity calculated in accordance with the instructions in the monograph.

Wherever possible the primary standard used in an assay or test is the respective International Standard or Reference Preparation established by the World Health Organization for international use and the biological activity is expressed in International Units (IU).

In other cases, where Units are referred to in an assay or test, the Unit for a particular substance or preparation is, for the United Kingdom, the specific biological activity contained in such an amount of the respective primary standard as the appropriate international or national organisation indicates. The necessary information is provided with the primary standard.

Unless otherwise directed, animals used in an assay or a test are healthy animals, drawn from a uniform stock, that have not previously been treated with any material that will interfere with the assay or test. Unless otherwise stated, guinea-pigs weigh not less than 250 g or, when used in systemic toxicity tests, not less than 350 g. When used in skin tests they are white or light coloured. Unless otherwise stated, mice weigh not less than 17 g and not more than 22 g.

Certain of the biological assays and tests of the Pharmacopoeia are such that in the United Kingdom they may be carried out only in accordance with the Animals (Scientific Procedures) Act 1986. Instructions included in such assays and tests in the Pharmacopoeia, with respect to the handling of animals, are therefore confined to those concerned with the accuracy and reproducibility of the assay or test.

Reference Substances and Reference Preparations

Certain monographs require the use of a reference substance, a reference preparation or a reference spectrum. These are chosen with regard to their intended use as prescribed in the monographs of the Pharmacopoeia and are not necessarily suitable in other circumstances.

Any information necessary for proper use of the reference substance or reference preparation is given on the label or in the accompanying leaflet or brochure. Where no drying conditions are stated in the leaflet or on the label, the substance is to be used as received. No certificate of analysis or other data not relevant to the prescribed use of the product are provided. The products are guaranteed to be suitable for use for a period of three months from dispatch when stored under the appropriate conditions. The stability of the contents of opened containers cannot be guaranteed. The current lot is listed in the BP Laboratory website catalogue. Additional information is provided in Supplementary Chapter III E.

Chemical Reference Substances The abbreviation BPCRS indicates a Chemical Reference Substance established by the British Pharmacopoeia Commission. The abbreviation CRS or EPCRS indicates a Chemical Reference Substance established by the European Pharmacopoeia Commission. Some Chemical Reference Substances are used for the microbiological assay of antibiotics and their activity is stated, in International Units, on the label or on the accompanying leaflet and defined in the same manner as for Biological Reference Preparations.

Biological Reference Preparations The majority of the primary biological reference preparations referred to are the appropriate International Standards and Reference Preparations established by the World Health Organisation. Because these reference materials are usually available only in limited quantities, the European Pharmacopoeia has established Biological Reference Preparations (indicated by the abbreviation BRP or EPBRP) where appropriate. Where applicable, the potency of the Biological Reference Preparations is expressed in International Units. For some Biological Reference Preparations, where an international standard or reference preparation does not exist, the potency is expressed in European Pharmacopoeia Units.

Storage

Statements under the side-heading Storage constitute non-mandatory advice. The substances and preparations described in the Pharmacopoeia are to be stored under conditions that prevent contamination and, as far as possible, deterioration. Unless otherwise stated in the monograph, the substances and preparations described in the Pharmacopoeia are kept in well-closed containers and stored at a temperature not exceeding 25°. Precautions that should be taken in relation to the effects of the atmosphere, moisture, heat and light are indicated, where appropriate, in the monographs. Further precautions may be necessary when some materials are stored in tropical climates or under other severe conditions.

The expression 'protected from moisture' means that the product is to be stored in an airtight container. Care is to be taken when the container is opened in a damp atmosphere. A low moisture content may be maintained, if necessary, by the use of a desiccant in the container provided that direct contact with the product is avoided.

The expression 'protected from light' means that the product is to be stored either in a container made of a material that absorbs actinic light sufficiently to protect the contents from change induced by such light or in a container enclosed in an outer cover that provides such protection or stored in a place from which all such light is excluded.

The expression 'tamper-evident container' means a closed container fitted with a device that reveals irreversibly whether the container has been opened, whereas, the expression 'tamper-proof container' means a closed container in which access to the contents is prevented under normal conditions of use. The two terms are considered to be synonymous by the European Pharmacopoeia Commission.

Labelling

The labelling requirements of the Pharmacopoeia are not comprehensive, and the provisions of regulations issued in accordance with the requirements of the territory in which the medicinal product is to be used should be met.

Licensed medicines intended for use within the United Kingdom must comply with the requirements of the Medicines Act 1968 and EU Directive 2001/83/EC, Title V (as amended) in respect of their labelling and package leaflets, together with those regulations for the labelling of hazardous materials.

Best practice guidance on the labelling and packaging of medicines for use in the United Kingdom advises that certain items of information are deemed critical for the safe use of the medicine (see MHRA Guidance Note No. 25: Best Practice Guidance on Labelling and Packaging of Medicines). Further information and guidance on the labelling of medicinal products can be found in Supplementary Chapter I G.

Such matters as the exact form of wording to be used and whether a particular item of information should appear on the primary label and additionally, or alternatively, on the package or exceptionally in a leaflet are, in general, outside the scope of the Pharmacopoeia. When the term 'label' is used in Labelling statements of the Pharmacopoeia, decisions as to where the particular statement should appear should therefore be made in accordance with relevant legislation.

The label of every official formulated preparation other than those of fixed strength also states the content of the active ingredient or ingredients expressed in the terms required by the monograph. Where the content of active ingredient is required to be expressed in terms other than the weight of the official medicinal substance used in making the formulation, this is specifically stated under the heading Labelling. Unless otherwise stated in the monograph, the content of the active ingredient is expressed in terms of the official medicinal substance used in making the formulation.

These requirements do not necessarily apply to unlicensed preparations supplied in accordance with a prescription. For requirements for unlicensed medicines see the general monograph on Unlicensed Medicines.

Action and Use

The statements given under this heading in monographs are intended only as information on the principal pharmacological actions or the uses of the materials in medicine or pharmacy. It should not be assumed that the substance has no other action or use. The statements are not intended to be binding on prescribers or to limit their discretion.

Crude Drugs; Traditional Herbal and Complementary Medicines

Herbal and complementary medicines are classed as medicines under European Directive 2001/83/EC as amended. It is emphasised that, although requirements for the quality of the material are provided in the monograph to assist the registration scheme by the UK Licensing Authority, the British Pharmacopoeia Commission has not assessed the safety or efficacy of the material in traditional use.

Monograph Title For traditional herbal medicines, the monograph title is a combination of the established English name together with a description of use. Monographs for the material that has not been processed (the herbal drug) and the processed material (the herbal drug preparation) are published where possible. To distinguish between the two, the word 'Processed' is included in the relevant monograph title. The acronym 'THM' is used in the title to indicate 'Traditional Herbal Medicine'. This refers to the general use of the material that has not been processed. Where the acronym 'THMP' is used, this indicates the use of the processed herb in a 'Traditional Herbal Medicinal Product'.

Definition Under the heading Definition, the botanical name together with any synonym is given. Where appropriate, for material that has not been processed, information on the collection/harvesting and/or treatment/drying of the whole herbal drug may be given. For processed materials, the method of processing, where appropriate, will normally be given in a separate section.

Characteristics References to odour are included only where this is highly characteristic. References to taste are not included.

Control methods Where applicable, the control methods to be used in monographs are:

(a) macroscopical and microscopical descriptions and chemical/chromatographic tests for identification

(b) tests for absence of any related species

(c) microbial test to assure microbial quality

(d) tests for inorganic impurities and non-specific purity tests, including extractive tests, sulphated ash and heavy metals where appropriate

(e) test for Loss on drying or Water

(f) wherever possible, a method for assaying the active constituent(s) or suitable marker constituent(s).

The macroscopical characteristics include those features that can be seen by the unaided eye or by the use of a hand lens. When two species/subspecies of the same plant are included in the Definition, individual differences between the two are indicated where possible.

The description of the microscopical characteristics of the powdered drug includes information on the dominant or the most specific characters. Where it is considered to be an aid to identification, illustrations of the powdered drug may be provided.

The following aspects are controlled by the general monograph for Herbal Drugs, that is, they are required to be free from moulds, insects, decay, animal matter and animal excreta. Unless otherwise prescribed the amount of foreign matter is not more than 2% w/w. Microbial contamination should be minimal.

In determining the content of the active principle(s) or the suitable marker principle(s) measurements are made with reference to the dried or anhydrous herbal drug. In the tests for Acid-insoluble ash, Ash, Extractive soluble in ethanol, Loss on drying, Sulphated ash, Water, Water-soluble ash and Water-soluble extractive of herbal drugs, the calculations are made with reference to the herbal drug that has not been specifically dried unless otherwise prescribed in the monograph.

Homoeopathic Medicines

Homoeopathic medicines are classed as medicines under European Directive 2001/83/EC as amended. It is emphasised that, although requirements for the quality of the material are provided in the monograph to assist the simplified registration scheme by the UK Licensing Authority, the British Pharmacopoeia Commission has not assessed the safety or efficacy of the material in use.

The statements under Crude Drugs; Traditional Herbal and Complementary Medicines are also applicable to homoeopathic stocks and mother tinctures.

Specific BP monographs for homoeopathic medicines only apply to homoeopathic stocks and mother tinctures. These monographs also include general statements on the methods of preparation of homoeopathic stocks and mother tinctures. Specifications have not been set for final homeopathic products due to the high dilution used in their preparation and the subsequent difficulty in applying analytical methodology.

Identification tests rely predominantly on macroscopical description and thin-layer chromatography. Tests for foreign matter are included when there is the hazard of contamination.

Unlicensed Medicines

The General Monograph for Unlicensed Medicines applies to those formulations used in human medicine that are prepared under a manufacturing specials licence or prepared extemporaneously under the supervision of a pharmacist, whether or not there is a published monograph for the specific dosage form.

An article intended for medicinal use that is described by means of an official title must comply with the requirements of the relevant monograph. A formulated preparation must comply throughout its assigned shelf-life (period of validity). The subject of any other monograph must comply throughout its period of use.

Unlicensed medicines that are prepared under a manufacturing specials licence comply with the requirements of the general monograph and, where applicable, the requirements of the individual monograph for the specific dosage form.

Unlicensed medicines prepared extemporaneously under the supervision of a pharmacist comply with the requirements of the general monograph and, where applicable, the requirements of the individual monograph for the specific dosage form. While it is expected that extemporaneous preparations will demonstrate pharmacopoeial compliance when tested, it is recognised that it might not be practicable to carry out the pharmacopoeial tests routinely on such formulations. In the event of doubt or dispute, the methods of analysis, the reference materials and the reference spectra of the Pharmacopoeia are alone authoritative.

Part III

General Notices Part III

Monographs and other texts of the European Pharmacopoeia that are incorporated in this edition of the British Pharmacopoeia are governed by the general notices of the European Pharmacopoeia; these are reproduced below.

General Notices of the European Pharmacopoeia

1.1. General statements

The General Notices apply to all monographs and other texts of the European Pharmacopoeia.

The official texts of the European Pharmacopoeia are published in English and French. Translations in other languages may be prepared by the signatory States of the European Pharmacopoeia Convention. In case of doubt or dispute, the English and French versions are alone authoritative.

In the texts of the European Pharmacopoeia, the word 'Pharmacopoeia' without qualification means the European Pharmacopoeia. The official abbreviation Ph. Eur. may be used to indicate the European Pharmacopoeia.

The use of the title or the subtitle of a monograph implies that the article complies with the requirements of the relevant monograph. Such references to monographs in the texts of the Pharmacopoeia are shown using the monograph title and reference number in *italics*.

A preparation must comply throughout its period of validity; a distinct period of validity and/or specifications for opened or broached containers may be decided by the competent authority. The subject of any other monograph must comply throughout its period of use. The period of validity that is assigned to any given article and the time from which that period is to be calculated are decided by the competent authority in the light of experimental results of stability studies.

Unless otherwise indicated in the General Notices or in the monographs, statements in monographs constitute mandatory requirements. General chapters become mandatory when referred to in a monograph, unless such reference is made in a way that indicates that it is not the intention to make the text referred to mandatory but rather to cite it for information.

The active ingredients (medicinal substances), excipients (auxiliary substances), pharmaceutical preparations and other articles described in the monographs are intended for human and veterinary use (unless explicitly restricted to one of these uses). An article is not of Pharmacopoeia quality unless it complies with all the requirements stated in the monograph. This does not imply that performance of all the tests in a monograph is necessarily a prerequisite for a manufacturer in assessing compliance with the Pharmacopoeia before release of a product. The manufacturer may obtain assurance that a product is of Pharmacopoeia quality from data derived, for example, from validation studies of the manufacturing process and from in-process controls. Parametric release in circumstances deemed appropriate by the competent authority is thus not precluded by the need to comply with the Pharmacopoeia.

The tests and assays described are the official methods upon which the standards of the Pharmacopoeia are based. With the agreement of the competent authority, alternative methods of analysis may be used for control purposes, provided that the methods used enable an unequivocal decision to be made as to whether compliance with the standards of the monographs would be achieved if the official methods were used. In the event of doubt or dispute, the methods of analysis of the Pharmacopoeia are alone authoritative.

Certain materials that are the subject of a pharmacopoeial monograph may exist in different grades suitable for different purposes. Unless otherwise indicated in the monograph, the requirements apply to all grades of the material. In some monographs, particularly those on excipients, a list of functionality-related characteristics that are relevant to the use of the substance may be appended to the monograph for information. Test methods for determination of one or more of these characteristics may be given, also for information.

Quality Systems

The quality standards represented by monographs are valid only where the articles in question are produced within the framework of a suitable quality system.

General Monographs

Substances and preparations that are the subject of an individual monograph are also required to comply with relevant, applicable general monographs. Cross-references to applicable general monographs are not normally given in individual monographs.

General monographs apply to all substances and preparations within the scope of the Definition section of the general monograph, except where a preamble limits the application, for example to substances and preparations that are the subject of a monograph of the Pharmacopoeia.

General monographs on dosage forms apply to all preparations of the type defined. The requirements are not necessarily comprehensive for a given specific preparation and requirements additional to those prescribed in the general monograph may be imposed by the competent authority.

General monographs and individual monographs are complementary. If the provisions of a general monograph do not apply to a particular product, this is expressly stated in the individual monograph.

Validation of Pharmacopoeial Methods

The test methods given in monographs and general chapters have been validated in accordance with accepted scientific practice and current recommendations on analytical validation. Unless otherwise stated in the monograph or general chapter, validation of the test methods by the analyst is not required.

Conventional Terms

The term 'competent authority' means the national, supranational or international body or organisation vested with the authority for making decisions concerning the issue in question. It may, for example, be a national pharmacopoeia authority, a licensing authority or an official control laboratory.

The expression 'unless otherwise justified and authorised' means that the requirements have to be met, unless the competent authority authorises a modification or an exemption where justified in a particular case.

Statements containing the word 'should' are informative or advisory.

In certain monographs or other texts, the terms 'suitable' and 'appropriate' are used to describe a reagent, micro-organism, test method etc.; if criteria for suitability are not described in the monograph, suitability is demonstrated to the satisfaction of the competent authority.

Interchangeable Methods

Certain general chapters contain a statement that the text in question is harmonised with the corresponding text of the Japanese Pharmacopoeia and/or the United States Pharmacopeia and that these texts are interchangeable. This implies that if a substance or preparation is found to comply with a requirement using an interchangeable method from one of these pharmacopoeias it complies with the requirements of the European Pharmacopoeia. In the event of doubt or dispute, the text of the European Pharmacopoeia is alone authoritative.

References to Regulatory Documents

Monographs and general chapters may contain references to documents issued by regulatory authorities for medicines, for example directives and notes for guidance of the European Union. These references are provided for information for users for the Pharmacopoeia. Inclusion of such a reference does not modify the status of the documents referred to, which may be mandatory or for guidance.

1.2. Other provisions applying to general chapters and monographs

Quantities

In tests with numerical limits and assays, the quantity stated to be taken for examination is approximate. The amount actually used, which may deviate by not more than 10 per cent from that stated, is accurately weighed or measured and the result is calculated from this exact quantity. In tests where the limit is not numerical, but usually depends upon comparison with the behaviour of a reference substance in the same conditions, the stated quantity is taken for examination. Reagents are used in the prescribed amounts.

Quantities are weighed or measured with an accuracy commensurate with the indicated degree of precision. For weighings, the precision corresponds to plus or minus 5 units after the last figure stated (for example, 0.25 g is to be interpreted as 0.245 g to 0.255 g). For the measurement of volumes, if the figure after the decimal point is a zero or ends in a zero (for example, 10.0 ml or 0.50 ml), the volume is measured using a pipette, a volumetric flask or a burette, as appropriate; otherwise, a graduated measuring cylinder or a graduated pipette may be used. Volumes stated in microlitres are measured using a micropipette or microsyringe.

It is recognised, however, that in certain cases the precision with which quantities are stated does not correspond to the number of significant figures stated in a specified numerical limit. The weighings and measurements are then carried out with a sufficiently improved accuracy.

Apparatus and Procedures

Volumetric glassware complies with Class A requirements of the appropriate International Standard issued by the International Organisation for Standardisation.

Unless otherwise prescribed, analytical procedures are carried out at a temperature between 15 °C and 25 °C.

Unless otherwise prescribed, comparative tests are carried out using identical tubes of colourless, transparent, neutral glass with a flat base; the volumes of liquid prescribed are for use with tubes having an internal diameter of 16 mm, but tubes with a larger internal diameter may be used provided the volume of liquid used is adjusted *(2.1.5)*. Equal volumes of the liquids to be compared are examined down the vertical axis of the tubes against a white background, or if necessary against a black background. The examination is carried out in diffuse light.

Any solvent required in a test or assay in which an indicator is to be used is previously neutralised to the indicator, unless a blank test is prescribed.

Water-bath

The term 'water-bath' means a bath of boiling water unless water at another temperature is indicated. Other methods of heating may be substituted provided the temperature is near to but not higher than 100 °C or the indicated temperature.

Drying and Ignition to Constant Mass

The terms 'dried to constant mass' and 'ignited to constant mass' mean that 2 consecutive weighings do not differ by more than 0.5 mg, the 2nd weighing following an additional period of drying or of ignition respectively appropriate to the nature and quantity of the residue.

Where drying is prescribed using one of the expressions 'in a desiccator' or '*in vacuo*', it is carried out using the conditions described in chapter *2.2.32. Loss on drying*.

Reagents

The proper conduct of the analytical procedures described in the Pharmacopoeia and the reliability of the results depend, in part, upon the quality of the reagents used. The reagents are described in general chapter *4*. It is assumed that reagents of analytical grade are used; for some reagents, tests to determine suitability are included in the specifications.

Solvents

Where the name of the solvent is not stated, the term 'solution' implies a solution in water.

Where the use of water is specified or implied in the analytical procedures described in the Pharmacopoeia or for the preparation of reagents, water complying with the requirements of the monograph *Purified water (0008)* is used, except that for many purposes the requirements for bacterial endotoxins *(Purified water in bulk)* and microbial contamination *(Purified water in containers)* are not relevant. The term 'distilled water' indicates purified water prepared by distillation.

The term 'ethanol' without qualification means anhydrous ethanol. The term 'alcohol' without qualification means ethanol (96 per cent). Other dilutions of ethanol are indicated by the term 'ethanol' or 'alcohol' followed by a statement of the percentage by volume of ethanol (C_2H_6O) required.

Expression of Content

In defining content, the expression 'per cent' is used according to circumstances with one of 2 meanings:

— per cent *m/m* (percentage, mass in mass) expresses the number of grams of substance in 100 grams of final product;

— per cent *V/V* (percentage, volume in volume) expresses the number of millilitres of substance in 100 millilitres of final product.

The expression 'parts per million' (or ppm) refers to mass in mass, unless otherwise specified.

Temperature

Where an analytical procedure describes temperature without a figure, the general terms used have the following meaning:

— in a deep-freeze: below - 15 °C;

— in a refrigerator: 2 °C to 8 °C;

— cold or cool: 8 °C to 15 °C;

— room temperature: 15 °C to 25 °C.

1.3. General chapters

Containers

Materials used for containers are described in general chapter *3.1*. General names used for materials, particularly plastic materials, each cover a range of products varying not only in the properties of the principal constituent but also in the additives used. The test methods and limits for materials depend on the formulation and are therefore applicable only for materials whose formulation is covered by the preamble to the specification. The use of materials with different formulations, and the test methods and limits applied to them, are subject to agreement by the competent authority.

The specifications for containers in general chapter *3.2* have been developed for general application to containers of the stated category, but in view of the wide variety of containers available and possible new developments, the publication of a specification does not exclude the use, in justified circumstances, of containers that comply with other specifications, subject to agreement by the competent authority.

Reference may be made within the monographs of the Pharmacopoeia to the definitions and specifications for containers provided in chapter *3.2*. *Containers*. The general monographs for pharmaceutical dosage forms may, under the heading Definition/Production, require the use of certain types of container; certain other monographs may, under the heading Storage, indicate the type of container that is recommended for use.

1.4. Monographs

Titles

Monograph titles are in English and French in the respective versions and there is a Latin subtitle.

Relative Atomic and Molecular Masses

The relative atomic mass (A_r) or the relative molecular mass (M_r) is shown, as and where appropriate, at the beginning of each monograph. The relative atomic and molecular masses and the molecular and graphic formulae do not constitute analytical standards for the substances described.

Chemical Abstracts Service (CAS) Registry Number

CAS registry numbers are included for information in monographs, where applicable, to provide convenient access to useful information for users. CAS Registry Number® is a Registered Trademark of the American Chemical Society.

Definition

Statements under the heading Definition constitute an official definition of the substance, preparation or other article that is the subject of the monograph.

Limits of content Where limits of content are prescribed, they are those determined by the method described under Assay.

Herbal drugs In monographs on herbal drugs, the definition indicates whether the subject of the monograph is, for example, the whole drug or the drug in powdered form. Where a monograph applies to the drug in several states, for example both to the whole drug and the drug in powdered form, the definition states this.

Production

Statements under the heading Production draw attention to particular aspects of the manufacturing process but are not necessarily comprehensive. They constitute mandatory requirements for manufacturers, unless otherwise stated. They may relate, for example, to source materials; to the manufacturing process itself and its validation and control; to in-process testing; or to testing that is to be carried out by the manufacturer on the final article, either on selected batches or on each batch prior to release. These statements cannot necessarily be verified on a sample of the final article by an independent analyst. The competent authority may establish that the instructions have been followed, for example, by examination of data received from the manufacturer, by inspection of manufacture or by testing appropriate samples.

The absence of a Production section does not imply that attention to features such as those referred to above is not required.

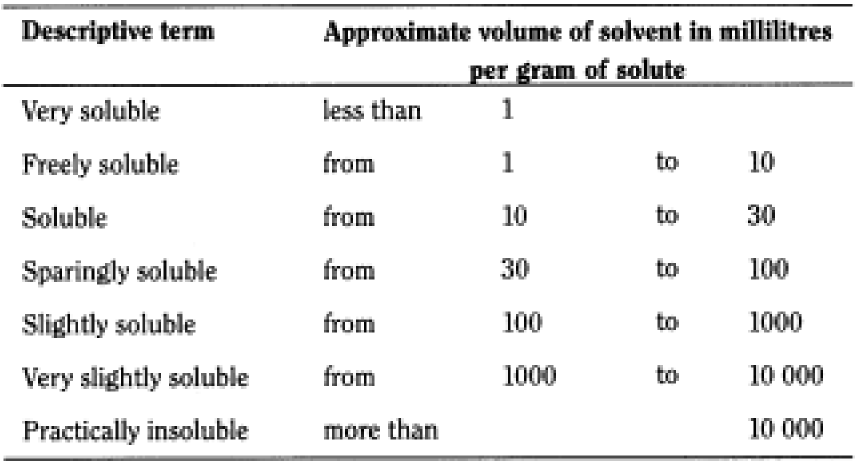
Choice of Vaccine Strain, Choice of Vaccine Composition

The Production section of a monograph may define the characteristics of a vaccine strain or vaccine composition. Unless otherwise stated, test methods given for verification of these characteristics are provided for information as examples of suitable methods. Subject to approval by the competent authority, other test methods may be used without validation against the method shown in the monograph.

Characters

The statements under the heading Characters are not to be interpreted in a strict sense and are not requirements.

Solubility In statements of solubility in the Characters section, the terms used have the following significance referred to a temperature between 15 °C and 25 °C.



Descriptive term	Approximate volume of solvent in millilitres per gram of solute			
Very soluble	less than	1		
Freely soluble	from	1	to	10
Soluble	from	10	to	30
Sparingly soluble	from	30	to	100
Slightly soluble	from	100	to	1000
Very slightly soluble	from	1000	to	10 000
Practically insoluble	more than			10 000

The term 'partly soluble' is used to describe a mixture where only some of the components dissolve. The term 'miscible' is used to describe a liquid that is miscible in all proportions with the stated solvent.

Identification

Scope The tests given in the Identification section are not designed to give a full confirmation of the chemical structure or composition of the product; they are intended to give confirmation, with an acceptable degree of assurance, that the article conforms to the description on the label.

First and second identifications Certain monographs have subdivisions entitled First identification' and 'Second identification'. The test or tests that constitute the 'First identification' may be used for identification in all circumstances. The test or tests that constitute the 'Second identification' may be used for identification provided it can be demonstrated that the substance or preparation is fully traceable to a batch certified to comply with all the other requirements of the monograph.

Powdered herbal drugs Monographs on herbal drugs may contain schematic drawings of the powdered drug. These drawings complement the description given in the relevant identification test.

Tests and Assays

Scope The requirements are not framed to take account of all possible impurities. It is not to be presumed, for example, that an impurity that is not detectable by means of the prescribed tests is tolerated if common sense and good pharmaceutical practice require that it be absent. See also below under Impurities.

Calculation Where the result of a test or assay is required to be calculated with reference to the dried or anhydrous substance or on some other specified basis, the determination of loss on drying, water content or other property is carried out by the method prescribed in the relevant test in the monograph. The words 'dried substance' or 'anhydrous substance' etc. appear in parentheses after the result.

Limits The limits prescribed are based on data obtained in normal analytical practice; they take account of normal analytical errors, of acceptable variations in manufacture and compounding and of deterioration to an extent considered acceptable. No further tolerances are to be applied to the limits prescribed to determine whether the article being examined complies with the requirements of the monograph.

In determining compliance with a numerical limit, the calculated result of a test or assay is first rounded to the number of significant figures stated, unless otherwise prescribed. The last figure is increased by one when the part rejected is equal to or exceeds one half-unit, whereas it is not modified when the part rejected is less than a half-unit.

Indication of permitted limit of impurities For comparative tests, the approximate content of impurity tolerated, or the sum of impurities, may be indicated for information only. Acceptance or rejection is determined on the basis of compliance or non-compliance with the stated test. If the use of a reference substance for the named impurity is not prescribed, this content may be expressed as a nominal concentration of the substance used to prepare the reference solution specified in the monograph, unless otherwise described.

Herbal drugs For herbal drugs, the sulphated ash, total ash, water-soluble matter, alcohol-soluble matter, water content, content of essential oil and content of active principle are calculated with reference to the drug that has not been specially dried, unless otherwise prescribed in the monograph.

Equivalents Where an equivalent is given, for the purposes of the Pharmacopoeia only the figures shown are to be used in applying the requirements of the monograph.

Culture media The culture media described in monographs and general chapters have been found to be satisfactory for the intended purpose. However, the components of media, particularly those of biological origin, are of variable quality, and it may be necessary for optimal performance to modulate the concentration of some ingredients, notably:

— peptones and meat or yeast extracts, with respect to their nutritive properties;

— buffering substances;

— bile salts, bile extract, deoxycholate, and colouring matter, depending on their selective properties;

— antibiotics, with respect to their activity.

Storage

The information and recommendations given under the heading Storage do not constitute a pharmacopoeial requirement but the competent authority may specify particular storage conditions that must be met.

The articles described in the Pharmacopoeia are stored in such a way as to prevent contamination and, as far as possible, deterioration. Where special conditions of storage are recommended, including the type of container (see section 1.3. General chapters) and limits of temperature, they are stated in the monograph.

The following expressions are used in monographs under Storage with the meaning shown.

In an airtight container means that the product is stored in an airtight container *(3.2)*. Care is to be taken when the container is opened in a damp atmosphere. A low moisture content may be maintained, if necessary, by the use of a desiccant in the container provided that direct contact with the product is avoided.

Protected from light means that the product is stored either in a container made of a material that absorbs actinic light sufficiently to protect the contents from change induced by such light, or in a container enclosed in an outer cover that provides such protection, or is stored in a place from which all such light is excluded.

Labelling

In general, labelling of medicines is subject to supranational and national regulation and to international agreements. The statements under the heading Labelling are not therefore comprehensive and, moreover, for the purposes of the Pharmacopoeia only those statements that are necessary to demonstrate compliance or non-compliance with the monograph are mandatory. Any other labelling statements are included as recommendations. When the term 'label' is used in the Pharmacopoeia, the labelling statements may appear on the container, the package, a leaflet accompanying the package, or a certificate of analysis accompanying the article, as decided by the competent authority.

Warnings

Materials described in monographs and reagents specified for use in the Pharmacopoeia may be injurious to health unless adequate precautions are taken. The principles of good quality control laboratory practice and the provisions of any appropriate regulations are to be observed at all times. Attention is drawn to particular hazards in certain monographs by means of a warning statement; absence of such a statement is not to be taken to mean that no hazard exists.

Impurities

A list of all known and potential impurities that have been shown to be detected by the tests in a monograph may be given. See also chapter *5.10. Control of impurities in substances for pharmaceutical use*. The impurities are designated by a letter or letters of the alphabet. Where a letter appears to be missing, the impurity designated by this letter has been deleted from the list during monograph development prior to publication or during monograph revision.

Functionality-related Characteristics of Excipients

Monographs on excipients may have a section on functionality-related characteristics. The characteristics, any test methods for determination and any tolerances are not mandatory requirements; they may nevertheless be relevant for use of the excipient and are given for information (see also section 1.1. General statements).

Reference Standards

Certain monographs require the use of reference standards (chemical reference substances, biological reference preparations, reference spectra). See also chapter *5.12. Reference standards.* The European Pharmacopoeia Commission establishes the official reference standards, which are alone authoritative in case of arbitration. These reference standards are available from the European Directorate for the Quality of Medicines & HealthCare (EDQM). Information on the available reference standards and a batch validity statement can be obtained via the EDQM website.

1.5. Abbreviations and Symbols

A	Absorbance
$[\alpha]_{D}^{20}$	Specific absorbance

A_r	Relative atomic mass
$[\alpha]_D^{20}$	Specific optical rotation
bp	Boiling point
BRP	Biological Reference Preparation
CRS	Chemical Reference Substance
d_{20}^{20}	Relative density
IU	International Unit
λ	Wavelength
M	Molarity
M_r	Relative molecular mass
mp	Melting point
n_D^{20}	Refractive index
Ph. Eur. U.	European Pharmacopoeia Unit
ppm	Parts per million
R	Substance or solution defined under *4. Reagents*
R_F	Retardation factor (see Chapter 2.2.46)
R_{st}	Used in chromatography to indicate the ratio of the distance travelled by a substance to the distance travelled by a reference substance
RV	Substance used as a primary standard in volumetric analysis (chapter *4.2.1*)

Abbreviations used in the monographs on immunoglobulins, immunosera and vaccines

LD_{50}	The statistically determined quantity of a substance that, when administered by the specified route, may be expected to cause the death of 50 per cent of the test animals within a given period
MLD	Minimum lethal dose
L+/10 dose	The smallest quantity of a toxin that, in the conditions of the test, when mixed with 0.1 IU of antitoxin and administered by the specified route, causes the death of the test animals within a given period

L+ dose	The smallest quantity of a toxin that, in the conditions of the test, when mixed with 1 IU of antitoxin and administered by the specified route, causes the death of the test animals within a given period
lr/100 dose	The smallest quantity of a toxin that, in the conditions of the test, when mixed with 0.01 IU of antitoxin and injected intracutaneously causes a characteristic reaction at the site of injection within a given period
Lp/10 dose	The smallest quantity of toxin that, in the conditions of the test, when mixed with 0.1 IU of antitoxin and administered by the specified route, causes paralysis in the test animals within a given period
Lo/10 dose	The largest quantity of a toxin that, in the conditions of the test, when mixed with 0.1 IU of antitoxin and administered by the specified route, does not cause symptoms of toxicity in the test animals within a given period
Lf dose	The quantity of toxin or toxoid that flocculates in the shortest time with 1 IU of antitoxin
CCID$_{50}$	The statistically determined quantity of virus that may be expected to infect 50 per cent of the cell cultures to which it is added
EID$_{50}$	The statistically determined quantity of virus that may be expected to infect 50 per cent of fertilised eggs into which it is inoculated
ID$_{50}$	The statistically determined quantity of a virus that may be expected to infect 50 per cent of the animals into which it is inoculated
PD$_{50}$	The statistically determined dose of a vaccine that, in the conditions of the test, may be expected to protect 50 per cent of the animals against a challenge dose of the micro-organisms or toxins against which it is active
ED$_{50}$	The statistically determined dose of a vaccine that, in the conditions of the test, may be expected to induce specific antibodies in 50 per cent of the animals for the relevant vaccine antigens
PFU	Pock-forming units or plaque-forming units
SPF	Specified-pathogen-free.

1.6. Units of the international system (SI) used in the Pharmacopoeia and equivalence with other units

International System Of Units (SI)

The International System of Units comprises 3 classes of units, namely base units, derived units and supplementary units[1]. The base units and their definitions are set out in Table 1.6-1.

The derived units may be formed by combining the base units according to the algebraic relationships linking the corresponding quantities. Some of these derived units have special names and symbols. The SI units used in the European Pharmacopoeia are shown in Table 1.6-2.

Some important and widely used units outside the International System are shown in Table 1.6-3.

The prefixes shown in Table 1.6-4 are used to form the names and symbols of the decimal multiples and submultiples of SI units.

Notes

1. In the Pharmacopoeia, the Celsius temperature is used (symbol t). This is defined by the equation:

$$t = T - T_0$$

where T_0 = 273.15 K by definition. The Celsius or centigrade temperature is expressed in degree Celsius (symbol °C). The unit 'degree Celsius' is equal to the unit 'kelvin'.

2. The practical expressions of concentrations used in the Pharmacopoeia are defined in the General Notices.

3. The radian is the plane angle between two radii of a circle that cut off on the circumference an arc equal in length to the radius.

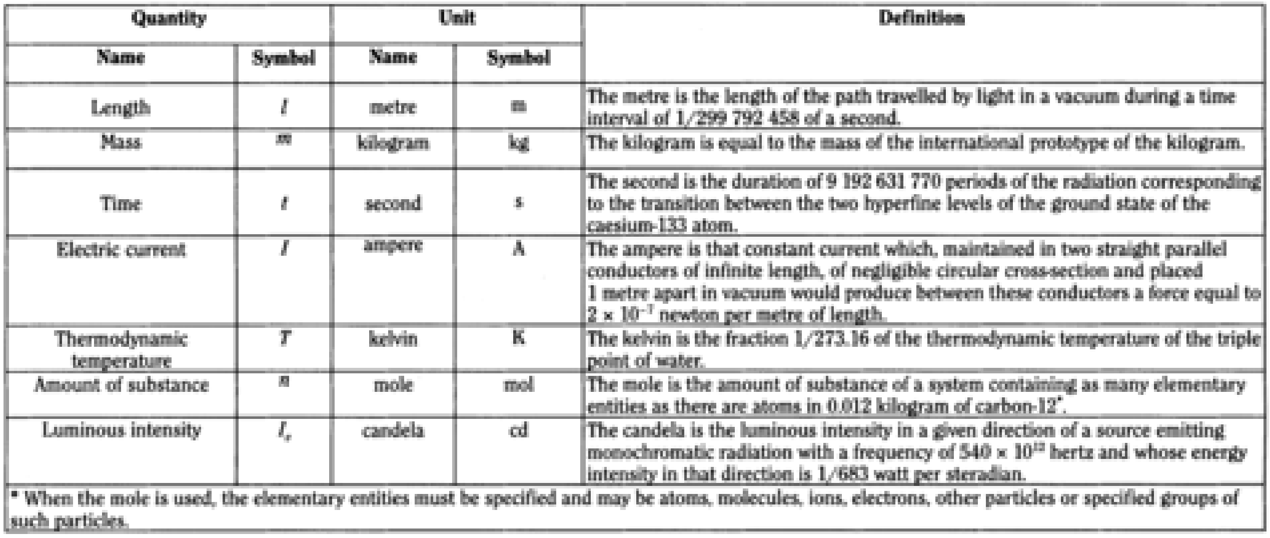
4. In the Pharmacopoeia, conditions of centrifugation are defined by reference to the acceleration due to gravity (g):

$$g = 9.80665\ m \bullet s^{-2}$$

5. Certain quantities without dimensions are used in the Pharmacopoeia: relative density *(2.2.5)*, absorbance *(2.2.25)*, specific absorbance *(2.2.25)* and refractive index *(2.2.6)*.

6. The microkatal is defined as the enzymic activity that, under defined conditions, produces the transformation (e.g. hydrolysis) of 1 micromole of the substrate per second.

Table 1.6.-1. – *SI base units*



Quantity		Unit		Definition
Name	Symbol	Name	Symbol	
Length	l	metre	m	The metre is the length of the path travelled by light in a vacuum during a time interval of 1/299 792 458 of a second.
Mass	m	kilogram	kg	The kilogram is equal to the mass of the international prototype of the kilogram.
Time	t	second	s	The second is the duration of 9 192 631 770 periods of the radiation corresponding to the transition between the two hyperfine levels of the ground state of the caesium-133 atom.
Electric current	I	ampere	A	The ampere is that constant current which, maintained in two straight parallel conductors of infinite length, of negligible circular cross-section and placed 1 metre apart in vacuum would produce between these conductors a force equal to 2×10^{-7} newton per metre of length.
Thermodynamic temperature	T	kelvin	K	The kelvin is the fraction 1/273.16 of the thermodynamic temperature of the triple point of water.
Amount of substance	n	mole	mol	The mole is the amount of substance of a system containing as many elementary entities as there are atoms in 0.012 kilogram of carbon-12*.
Luminous intensity	I_v	candela	cd	The candela is the luminous intensity in a given direction of a source emitting monochromatic radiation with a frequency of 540×10^{12} hertz and whose energy intensity in that direction is 1/683 watt per steradian.

* When the mole is used, the elementary entities must be specified and may be atoms, molecules, ions, electrons, other particles or specified groups of such particles.

Acacia

General Notices

(Ph Eur monograph 0307)

Action and use

Bulk-forming laxative; excipient.

When Powdered Acacia is prescribed or demanded, material complying with the requirements below with the exception of Identification test A shall be dispensed or supplied.

Ph Eur

DEFINITION

Air-hardened, gummy exudate flowing naturally from or obtained by incision of the trunk and branches of *Acacia senegal* L. Willdenow, other species of *Acacia* of African origin and *Acacia seyal Del*.

CHARACTERS

Acacia is almost completely but very slowly soluble, after about 2 h, in twice its mass of water leaving only a very small residue of vegetable particles; the liquid obtained is colourless or yellowish, dense, viscous, adhesive, translucent and weakly acid to blue litmus paper. Acacia is practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Acacia occurs as yellowish-white, yellow or pale amber, sometimes with a pinkish tint, friable, opaque, spheroidal, oval or reniform pieces (tears) of a diameter from about 1-3 cm, frequently with a cracked surface, easily broken into irregular, whitish or slightly yellowish angular fragments with conchoidal fracture and a glassy and transparent appearance. In the centre of an unbroken tear there is sometimes a small cavity.

B. Reduce to a powder (355) *(2.9.12)*. The powder is white or yellowish-white. Examine under a microscope using a 50 per cent *V/V* solution of *glycerol R*. The powder shows the following diagnostic characters: angular, irregular, colourless, transparent fragments. Only traces of starch or vegetable tissues are visible. No stratified membrane is apparent.

C. Examine the chromatograms obtained in the test for glucose and fructose.

Results The chromatogram obtained with the test solution shows 3 zones due to galactose, arabinose and rhamnose. No other important zones are visible, particularly in the upper part of the chromatogram.

D. Dissolve 1 g of the powdered drug (355) *(2.9.12)* in 2 ml of *water R* by stirring frequently for 2 h. Add 2 ml of *ethanol (96 per cent) R*. After shaking, a white, gelatinous mucilage is formed which becomes fluid on adding 10 ml of *water R*.

TESTS

Solution S

Dissolve 3.0 g of the powdered drug (355) *(2.9.12)* in 25 ml of *water R* by stirring for 30 min. Allow to stand for 30 min and dilute to 30 ml with *water R*.

Insoluble matter

Maximum 0.5 per cent.

To 5.0 g of the powdered drug (355) *(2.9.12)* add 100 ml of *water R* and 14 ml of *dilute hydrochloric acid R*, boil gently for 15 min, shaking frequently and filter while hot through a tared sintered-glass filter *(2.1.2)*. Wash with hot *water R* and dry at 100-105 °C. The residue weighs a maximum of 25 mg.

Glucose and fructose

Thin-layer chromatography *(2.2.27)*.

Test solution To 0.100 g of the powdered drug (355) *(2.9.12)* in a thick-walled centrifuge tube add 2 ml of a 100 g/l solution of *trifluoroacetic acid R*, shake vigorously to dissolve the forming gel, stopper the tube and heat the mixture at 120 °C for 1 h. Centrifuge the hydrolysate, transfer the clear supernatant carefully into a 50 ml flask, add 10 ml of *water R* and evaporate the solution to dryness under reduced pressure. To the resulting clear film add 0.1 ml of *water R* and 0.9 ml of *methanol R*. Centrifuge to separate the amorphous precipitate. Dilute the supernatant, if necessary, to 1 ml with *methanol R*.

Reference solution Dissolve 10 mg of *arabinose R*, 10 mg of *galactose R*, 10 mg of *glucose R*, 10 mg of *rhamnose R* and 10 mg of *xylose R* in 1 ml of *water R* and dilute to 10 ml with *methanol R*.

Plate TLC silica gel plate R.

Mobile phase 16 g/l solution of *sodium dihydrogen phosphate R, butanol R, acetone R* (10:40:50 *V/V/V*).

Application 10 µl as bands.

Development A Over a path of 10 cm.

Drying A In a current of warm air for a few minutes.

Development B Over a path of 15 cm using the same mobile phase.

Drying B At 110 °C for 10 min.

Detection Spray with *anisaldehyde solution R* and heat at 110 °C for 10 min.

Results The chromatogram obtained with the reference solution shows 5 clearly separated coloured zones due to galactose (greyish-green or green), glucose (grey), arabinose (yellowish-green), xylose (greenish-grey or yellowish-grey) and rhamnose (yellowish-green), in order of increasing R_F value. The chromatogram obtained with the test solution shows no grey zone and no greyish-green zone between the zones corresponding to galactose and arabinose in the chromatogram obtained with the reference solution.

Starch, dextrin and agar

To 10 ml of solution S previously boiled and cooled add 0.1 ml of *0.05 M iodine*. No blue or reddish-brown colour develops.

Sterculia gum

A. Place 0.2 g of the powdered drug (355) *(2.9.12)* in a 10 ml ground-glass-stoppered cylinder graduated in 0.1 ml. Add 10 ml of *ethanol (60 per cent V/V) R* and shake. Any gel formed occupies a maximum of 1.5 ml.

B. To 1.0 g of the powdered drug (355) *(2.9.12)* add 100 ml of *water R* and shake. Add 0.1 ml of *methyl red solution R*. Not more than 5.0 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Tannins

To 10 ml of solution S add 0.1 ml of *ferric chloride solution R1.* A gelatinous precipitate is formed, but neither the precipitate nor the liquid are dark blue.

Tragacanth

Examine the chromatograms obtained in the test for glucose and fructose.

Results The chromatogram obtained with the test solution shows no greenish-grey or yellowish-grey zone corresponding to the zone of xylose in the chromatogram obtained with the reference solution.

Loss on drying *(2.2.32)*

Maximum 15.0 per cent, determined on 1.000 g of the powdered drug (355) *(2.9.12)* by drying in an oven at 105 °C.

Total ash *(2.4.16)*

Maximum 4.0 per cent.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^4 micro-organisms per gram, determined by plate count. It complies with the test for *Escherichia coli (2.6.13)*.

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristic may be relevant for acacia used as a viscosity-increasing agent and/or suspending agent in aqueous preparations.

Apparent viscosity

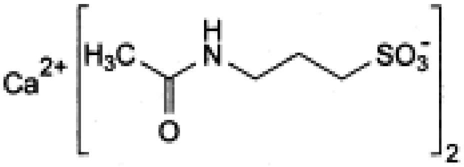
Determine the dynamic viscosity using a capillary viscometer *(2.2.9)* or a rotating viscometer *(2.2.10)* on a 100 g/l solution of acacia (dried substance).

Ph Eur

Acamprosate Calcium

General Notices

(Ph Eur monograph 1585)



$C_{10}H_{20}CaN_2O_8S_2$ 400.5 *77337-73-6*

Action and use

Treatment of alcoholism.

Ph Eur

DEFINITION

Calcium bis[3-(acetylamino)propane-1-sulphonate].

Content 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Freely soluble in water, practically insoluble in alcohol and in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison Ph. Eur. reference spectrum of acamprosate calcium.

B. It gives reaction (a) of calcium *(2.3.1)*.

TESTS

Solution S

Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

5.5 to 7.0 for solution S.

Impurity A

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 0.40 g of the substance to be examined in *distilled water R* and dilute to 20.0 ml with the same solvent. Dilute 10.0 ml of this solution to 100.0 ml with *borate buffer solution pH 10.4 R*. Place 3.0 ml of the solution obtained in a 25 ml ground-glass-stoppered tube. Add 0.15 ml of a freshly prepared 5 g/l solution of *fluorescamine R* in *acetonitrile R*. Shake immediately and vigorously for 30 s. Place in a water-bath at 50 °C for 30 min. Cool under a stream of cold water. Centrifuge and filter the supernatant through a suitable membrane filter (0.45 µm), 25 mm in diameter.

Reference solution Dissolve 50 mg of *acamprosate impurity A CRS* in *distilled water R* and dilute to 200.0 ml with the same solvent. Dilute 0.4 ml of the solution to 100.0 ml with *borate buffer solution pH 10.4 R*. Treat 3.0 ml of this solution in the same way as the test solution

Column:

— *size:* l = 0.15 m, Ø = 4.6 mm,

— *stationary phase: spherical octadecylsilyl silica gel for chromatography R* (5 µm) with a specific surface area of 170 m2/g and a pore size of 12 nm.

Mobile phase *acetonitrile R, methanol R, 0.1 M phosphate buffer solution pH 6.5 R* (10:10:80 *V/V/V*).

Flow rate 1 ml/min.

Detection Spectrophotometer at 261 nm.

Injection 20 µl.

Run time 6 times the retention time of impurity A

Retention times Fluorescamine = about 4 min; impurity A = about 8 min; acamprosate is not detected by this system.

Limits:

— *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 10 ppm.

Dissolve 2.0 g in *distilled water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with limit test A. Prepare the standard using 10 ml of *lead standard solution (1 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 0.4 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

To 4 g of *cation exchange resin R* (75-150 µm) add 20 ml of *distilled water R* and stir magnetically for 10 min. Introduce this suspension into a glass column, 45 cm long and 2.2 cm in internal diameter, equipped with a polytetrafluoroethylene flow cap covered by a glass-wool plug. Allow a few millilitres of this solution to flow, then place a plug of glass wool over the resin. Pass 50 ml of *1 M hydrochloric acid* through the column. The pH of the eluate is close to 1. Wash with 3 quantities, each of 200 ml, of *distilled water R* to obtain an eluate at pH 6. Dissolve 0.100 g of the substance to be examined in 15 ml of *distilled water R*. Pass through the column and wash with 3 quantities, each of 25 ml, of *distilled water R*, collecting the eluate. Allow to elute until an eluate at pH 6 is obtained. Titrate the solution obtained with *0.1 M sodium hydroxide*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M sodium hydroxide* corresponds to 20.02 mg of $C_{10}H_{20}CaN_2O_8S_2$.

IMPURITIES

IMPURITIES

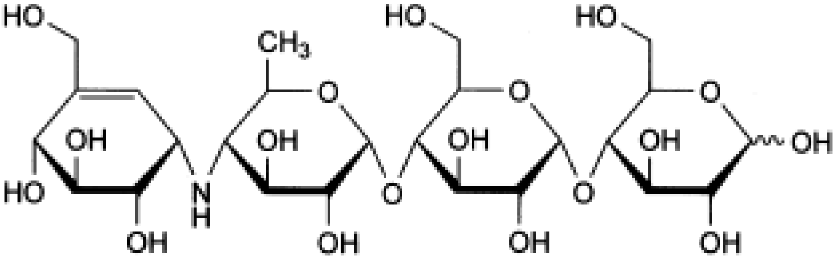
A. 3-aminopropane-1-sulphonic acid (homotaurine).

Ph Eur

Acarbose

General Notices

(Ph Eur monograph 2089)



$C_{25}H_{43}NO_{18}$ 646 *561-94-0*

Action and use

Alpha-glucosidase inhibitor; treatment of diabetes mellitus.

Ph Eur

DEFINITION

O-4,6-Dideoxy-4-[[(1*S*,4*R*,5*S*,6*S*)-4,5,6-trihydroxy-3-(hydroxymethyl)cyclohex-2-enyl]amino]-α-D-glucopyranosyl-(1→4)-*O*-α-D-glucopyranosyl-(1→4)-D-glucopyranose, which is produced by certain strains of *Actinoplanes utahensis*.

Content

95.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or yellowish, amorphous powder, hygroscopic.

Solubility

Very soluble in water, soluble in methanol, practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison acarbose for identification CRS.

B. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

TESTS

Solution S

Dissolve 1.00 g in *carbon dioxide-free water R* and dilute to 20.0 ml with the same solvent.

pH *(2.2.3)*

5.5 to 7.5 for solution S.

Specific optical rotation *(2.2.7)*

+ 168 to + 183 (anhydrous substance).

Dilute 2.0 ml of solution S to 10.0 ml with *water R*.

Absorbance *(2.2.25)*

Maximum 0.15 at 425 nm for solution S.

Related substances.

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 0.200 g of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve the contents of a vial of *acarbose CRS* in 5.0 ml of *water R*.

Reference solution (b) Dissolve 20 mg of *acarbose for peak identification CRS* (acarbose containing impurities A, B, C, D, E, F, G and H) in 1 ml of *water R*.

Reference solution (c) Dilute 1.0 ml of the test solution to 100.0 ml with *water R*.

Column:
- *size: l* = 0.25 m, Ø = 4 mm,
- *stationary phase: aminopropylsilyl silica gel for chromatography R* (5 µm),
- *temperature*: 35 °C.

Mobile phase Mix 750 volumes of *acetonitrile R1* and 250 volumes of a solution containing 0.60 g/l of *potassium dihydrogen phosphate R* and 0.35 g/l of *disodium hydrogen phosphate dihydrate R*.

Flow rate 2.0 ml/min.

Detection Spectrophotometer at 210 nm.

Injection 10 µl of the test solution and reference solutions (b) and (c).

Run time 2.5 times the retention time of acarbose.

Identification of impurities Use the chromatogram supplied with *acarbose for peak identification CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C, D, E, F, G and H.

Relative retention With reference to acarbose (retention time = about 16 min): impurity D = about 0.5; impurity H = about 0.6; impurity B = about 0.8; impurity A = about 0.9; impurity C = about 1.2; impurity E = about 1.7; impurity F = about 1.9; impurity G = about 2.2.

System suitability Reference solution (b):

— *peak-to-valley ratio*: minimum 1.2, where H_p = height above the baseline of the peak due to impurity A and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to acarbose,

— the chromatogram obtained is similar to the chromatogram supplied with *acarbose for peak identification CRS*.

Limits:

— *correction factors*: for the calculation of contents, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 0.63; impurity D = 0.75; impurity E = 1.25; impurity F = 1.25; impurity G = 1.25;

— *impurity A*: not more than 0.6 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.6 per cent);

— *impurity B*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);

— *impurity C*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (1.5 per cent);

— *impurity D*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent);

— *impurity E*: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);

— *impurities F, G*: for each impurity, not more than 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.3 per cent);

— *impurity H*: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);

— *any other impurities*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);

— *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (c) (3.0 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

Dissolve 1.5 g in *water R* and dilute to 15 ml with the same solvent. If the solution is not clear, carry out prefiltration and use the filtrate. 10 ml complies with limit test E. Prepare the reference solution using 20 ml of *lead standard solution (1 ppm Pb) R*.

Water *(2.5.12)*

Maximum 4.0 per cent, determined on 0.300 g.

Sulphated ash *(2.4.14)*

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

Injection   Test solution and reference solution (a).

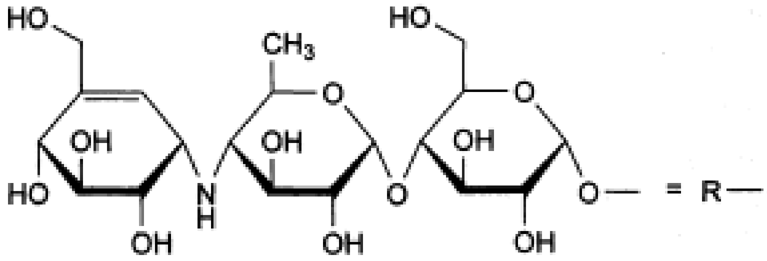
Calculate the percentage content of $C_{25}H_{43}NO_{18}$ from the areas of the peaks and the declared content of *acarbose CRS*.

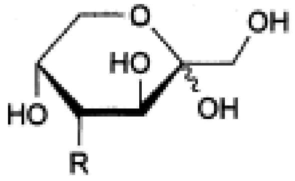
STORAGE

In an airtight container.

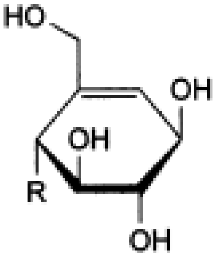
IMPURITIES

Specified impurities   *A, B, C, D, E, F, G, H.*





A. *O*-4,6-dideoxy-4-[[(1*S*,4*R*,5*S*,6*S*)-4,5,6-trihydroxy-3-(hydroxymethyl)cyclohex-2-enyl] amino]-α-D-glucopyranosyl-(1→4)-*O*-α-D-glucopyranosyl-(1→4)-D-*arabino*-hex-2-ulopyranose,



B. (1*R*,4*R*,5*S*,6*R*)-4,5,6-trihydroxy-2-(hydroxymethyl)cyclohex-2-enyl 4-*O*-[4,6-dideoxy-4-[[(1*S*,4*R*,5*S*,6*S*)-4,5,6-trihydroxy-3-(hydroxymethyl)cyclohex-2-enyl]amino]-α-D-glucopyranosyl]-α-D-glucopyranoside,

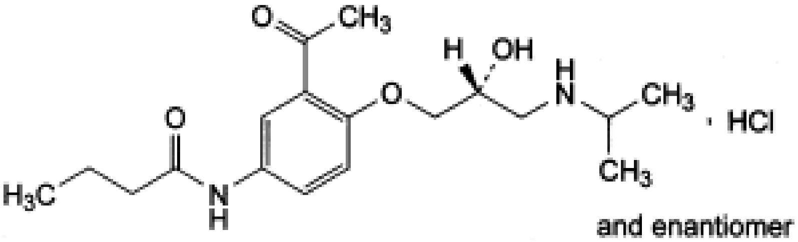
Ph Eur

Acebutolol Hydrochloride

General Notices

(Ph Eur monograph 0871)



$C_{18}H_{28}N_2O_4$,HCl 372.9 *34381-68-5*

Action and use

Beta-adrenoceptor antagonist.

Preparations

Acebutolol Capsules

Acebutolol Tablets

Ph Eur

DEFINITION

N-[3-Acetyl-4-[(2*RS*)-2-hydroxy-3-[(1-methylethyl)amino]propoxy]phenyl]butanamide hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water and in ethanol (96 per cent), very slightly soluble in acetone and in methylene chloride.

mp

About 143 °C.

IDENTIFICATION

First identification *B, D.*

Second identification *A, C, D.*

A. Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution Dissolve 20.0 mg in a 0.1 per cent *V/V* solution of *hydrochloric acid R* and dilute to 100.0 ml with the same acid solution. Dilute 5.0 ml of this solution to 100.0 ml with a 0.1 per cent *V/V* solution of *hydrochloric acid R*.

Spectral range 220-350 nm.

Absorption maxima At 233 nm and 322 nm.

Specific absorbance at the absorption maximum 555 to 605 at 233 nm.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *acebutolol hydrochloride CRS*.

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 20 mg of the substance to be examined in *methanol R* and dilute to 20 ml with the same solvent.

Reference solution (a) Dissolve 20 mg of *acebutolol hydrochloride CRS* in *methanol R* and dilute to 20 ml with the same solvent.

Reference solution (b) Dissolve 20 mg of *pindolol CRS* in *methanol R* and dilute to 20 ml with the same solvent. To 1 ml of this solution add 1 ml of reference solution (a).

Plate *TLC silica gel* F_{254} *plate R.*

Mobile phase *Perchloric acid R, methanol R, water R* (5:395:600 *V/V/V*).

Application 10 µl.

Development Over 3/4 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability The chromatogram obtained with reference solution (b) shows 2 clearly separated principal spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Appearance of solution

The solution is not more opalescent than reference suspension II *(2.2.1)* and not more intensely coloured than reference solution BY_5 *(2.2.2, Method II)*.

Dissolve 0.5 g in *water R* and dilute to 10 ml with the same solvent.

pH *(2.2.3)*

5.0 to 7.0.

Dissolve 0.20 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 0.100 g of the substance to be examined in mobile phase A and dilute to 50.0 ml with mobile phase A.

Reference solution (a) Dissolve 20.0 mg of the substance to be examined in mobile phase A and dilute to 100.0 ml with mobile phase A. Dilute 0.5 ml of this solution to 50.0 ml with mobile phase A.

Reference solution (b) Dissolve the contents of a vial of *acebutolol impurity I CRS* in 1.0 ml of mobile phase A.

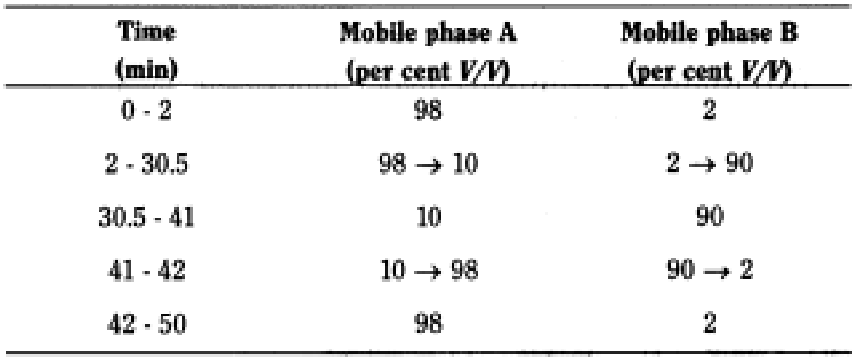
Reference solution (c) Mix 2.0 ml of reference solution (a) and 1.0 ml of reference solution (b) and dilute to 10.0 ml with mobile phase A.

Reference solution (d) Dissolve 5.0 mg of *acebutolol impurity C CRS* in 10 ml of *acetonitrile R* and dilute to 25.0 ml with mobile phase A. Dilute 0.5 ml of this solution to 50.0 ml with mobile phase A.

Reference solution (e) Dissolve 5.0 mg of *acebutolol impurity B CRS* in 10.0 ml of *acetonitrile R* and dilute to 25.0 ml with mobile phase A. Dilute 1.0 ml of this solution to 50.0 ml with mobile phase A.

Column:
- *size: l* = 0.125 m, Ø = 4 mm,
- *stationary phase: end-capped octadecylsilyl silica gel for chromatography R* (5 µm),
- *temperature*: 40 °C.

Mobile phase:
- *mobile phase A*: mix 2.0 ml of *phosphoric acid R*, and 3.0 ml of *triethylamine R* and dilute to 1000 ml with *water R*;
- *mobile phase B*: mix equal volumes of *acetonitrile R* and mobile phase A;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 2	98	2
2 - 30.5	98 → 10	2 → 90
30.5 - 41	10	90
41 - 42	10 → 98	90 → 2
42 - 50	98	2

Flow rate 1.2 ml/min.

Detection Spectrophotometer at 240 nm.

Injection 25 µl.

System suitability Reference solution (c):

— *resolution*: minimum 7.0 between the peaks due to impurity I and acebutolol.

Limits:

— *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (e) (0.2 per cent);

— *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (d) (0.1 per cent);

— *impurity I*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

Dissolve 0.50 g in 20.0 ml of *water R*. The solution complies with test E. Prepare the reference solution by diluting 10.0 ml of *lead standard solution (1 ppm Pb) R* to 20.0 ml with *water R*.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 50 ml of *ethanol (96 per cent) R* and add 1 ml of *0.1 M hydrochloric acid* . Carry out a potentiometric titration *(2.2.20)*, using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

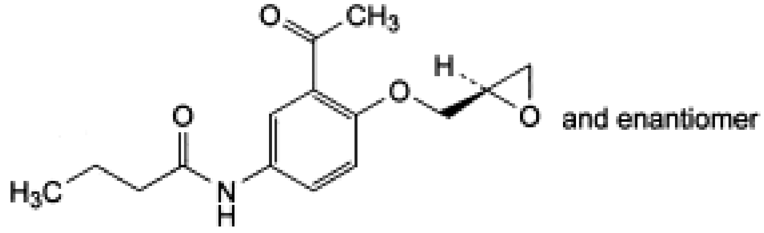
1 ml of *0.1 M sodium hydroxide* is equivalent to 37.29 mg of $C_{18}H_{29}ClN_2O_4$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C, D, E, F, G, H, I, J, K.



A. *N*-[3-acetyl-4-[(2*RS*)-oxiran-2-ylmethoxy]phenyl]butanamide,

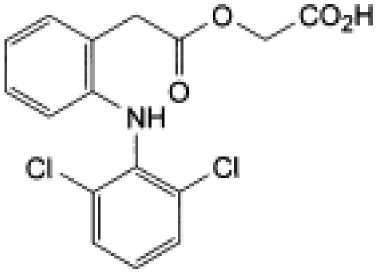
Ph Eur

Aceclofenac

General Notices

(Ph Eur monograph 1281)



$C_{16}H_{13}Cl_2NO_4$ 354.2 *89796-99-6*

Action and use

Cyclo-oxygenase inhibitor; analgesic; anti-inflammatory.

Ph Eur

DEFINITION

[[[2-[(2,6-Dichlorophenyl)amino]phenyl]acetyl]oxy]acetic acid.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in acetone, soluble in ethanol (96 per cent).

IDENTIFICATION

First identification B.

Second identification A, C.

A. Dissolve 50.0 mg in *methanol R* and dilute to 100.0 ml with the same solvent. Dilute 2.0 ml of the solution to 50.0 ml with *methanol R*. Examined between 220 nm and 370 nm *(2.2.25)*, the solution shows an absorption maximum at 275 nm. The specific absorbance at the absorption maximum is 320 to 350.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *Ph. Eur. reference spectrum of aceclofenac.*

C. Dissolve about 10 mg in 10 ml of *ethanol (96 per cent) R*. To 1 ml of the solution, add 0.2 ml of a mixture, prepared immediately before use, of equal volumes of a 6 g/l solution of *potassium ferricyanide R* and a 9 g/l solution of *ferric chloride R*. Allow to stand protected from light for 5 min. Add 3 ml of a 10.0 g/l solution of *hydrochloric acid R*. Allow to stand protected from light for 15 min. A blue colour develops and a precipitate is formed.

TESTS

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the solutions immediately before use*.

Test solution Dissolve 50.0 mg of the substance to be examined in a mixture of 30 volumes of mobile phase A and 70 volumes of mobile phase B and dilute to 25.0 ml with the same mixture of solvents.

Reference solution (a) Dissolve 21.6 mg of *diclofenac sodium CRS* (impurity A) in a mixture of 30 volumes of mobile phase A and 70 volumes of mobile phase B and dilute to 50.0 ml with the same mixture of solvents.

Reference solution (b) Dilute 2.0 ml of the test solution to 10.0 ml with a mixture of 30 volumes of mobile phase A and 70 volumes of mobile phase B.

Reference solution (c) Mix 1.0 ml of reference solution (a) and 1.0 ml of reference solution (b) and dilute to 100.0 ml with a mixture of 30 volumes of mobile phase A and 70 volumes of mobile phase B.

Reference solution (d) Dissolve 4.0 mg of *aceclofenac impurity F CRS* and 2.0 mg of *aceclofenac impurity H CRS* in a mixture of 30 volumes of mobile phase A and 70 volumes of mobile phase B then dilute to 10.0 ml with the same mixture of solvents.

Reference solution (e) Mix 1.0 ml of reference solution (b) and 1.0 ml of reference solution (d) and dilute to 100.0 ml with a mixture of 30 volumes of mobile phase A and 70 volumes of mobile phase B.

Reference solution (f) Dissolve the contents of a vial of *diclofenac impurity A CRS* (aceclofenac impurity I) in 1.0 ml of a mixture of 30 volumes of mobile phase A and 70 volumes of mobile phase B, add 1.5 ml of the same mixture of solvents and mix.

Column:

— *size:* *l* = 0.25 m, Ø = 4.6 mm;

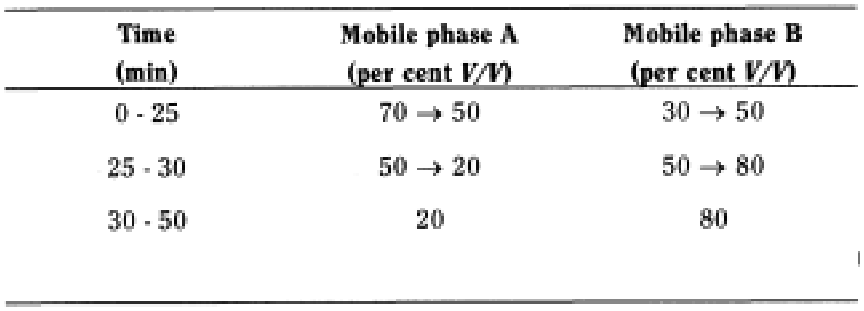
— *stationary phase: spherical end-capped octadecylsilyl silica gel for chromatography R* (5 µm) with a pore size of 10 nm and a carbon loading of 19 per cent;

— *temperature*: 40 °C.

Mobile phase:

— *mobile phase A*: 1.12 g/l solution of *phosphoric acid R* adjusted to pH 7.0 using a 42 g/l solution of *sodium hydroxide R*;

— *mobile phase B*: *water R, acetonitrile R* (1:9 *V/V*);



Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 25	70 → 50	30 → 50
25 - 30	50 → 20	50 → 80
30 - 50	20	80

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 275 nm.

Injection 10 µl of the test solution and reference solutions (c), (e) and (f).

Relative retention Wth reference to aceclofenac (retention time = about 14 min): impurity A = about 0.8; impurity G = about 1.3; impurity H = about 1.5; impurity I = about 2.3; impurity D = about 2.6; impurity B = about 2.7; impurity E = about 2.8; impurity C = about 3.0; impurity F = about 3.2.

System suitability Reference solution (c):

— *resolution*: minimum 5.0 between the peaks due to impurity A and aceclofenac.

Limits:

— *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.2 per cent);

— *impurities B, C, D, E, G*: for each impurity, not more than the area of the peak due to aceclofenac in the chromatogram obtained with reference solution (e) (0.2 per cent);

— *impurity F*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (e) (0.2 per cent);

— *impurity H*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (e) (0.1 per cent);

— *impurity I*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (0.1 per cent);

— *unspecified impurities*: not more than 0.5 times the area of the peak due to aceclofenac in the chromatogram obtained with reference solution (e) (0.10 per cent);

— *total*: not more than 0.7 per cent;

— *disregard limit*: 0.1 times the area of the peak due to aceclofenac in the chromatogram obtained with reference solution (e) (0.02 per cent).

Heavy metals *(2.4.8)*

Maximum 10 ppm.

To 2.0 g in a silica crucible, add 2 ml of *sulphuric acid R* to wet the substance. Heat progressively to ignition and continue heating until an almost white or at most a greyish residue is obtained. Carry out the ignition at a temperature not exceeding 800 °C. Allow to cool. Add 3 ml of *hydrochloric acid R* and 1 ml of *nitric acid R*. Heat and evaporate slowly to dryness. Cool and add 1 ml of a 100 g/l solution of *hydrochloric acid R* and 10.0 ml of *distilled water R*. Neutralise with a 1.0 g/l solution of *ammonia R* using *0.1 ml of phenolphthalein solution R* as indicator. Add 2.0 ml of a 60 g/l solution of *anhydrous acetic acid R* and dilute to

20 ml with *distilled water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 40 ml of *methanol R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M sodium hydroxide* is equivalent to 35.42 mg of $C_{16}H_{13}Cl_2NO_4$.

STORAGE

In an airtight container, protected from light.

DEFINITION

[[[1-(4-Chlorobenzoyl)-5-methoxy-2-methyl-1*H*-indol-3-yl]acetyl]oxy]acetic acid.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

Yellow or greenish-yellow, crystalline powder.

Solubility

Practically insoluble in water, soluble in acetone, slightly soluble in anhydrous ethanol.

It shows polymorphism *(5.9)*.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)*.

Comparison acemetacin CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *acetone R*, evaporate to dryness and record new spectra using the residues.

TESTS

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 0.100 g of the substance to be examined in *acetonitrile for chromatography R* and dilute to 20.0 ml with the same solvent.

Reference solution (a) Dilute 5.0 ml of the test solution to 50.0 ml with *acetonitrile for chromatography R*. Dilute 1.0 ml of this solution to 100.0 ml with *acetonitrile for chromatography R.*

Reference solution (b) Dissolve 5.0 mg of *acemetacin impurity A CRS* and 10.0 mg of *indometacin CRS* (impurity B) in *acetonitrile for chromatography R*, and dilute to 50.0 ml with the same solvent.

Reference solution (c) Dilute 1.0 ml of reference solution (b) to 20.0 ml with *acetonitrile for chromatography R*.

Reference solution (d) To 1 ml of reference solution (b), add 10 ml of the test solution and dilute to 20 ml with *acetonitrile for chromatography R.*

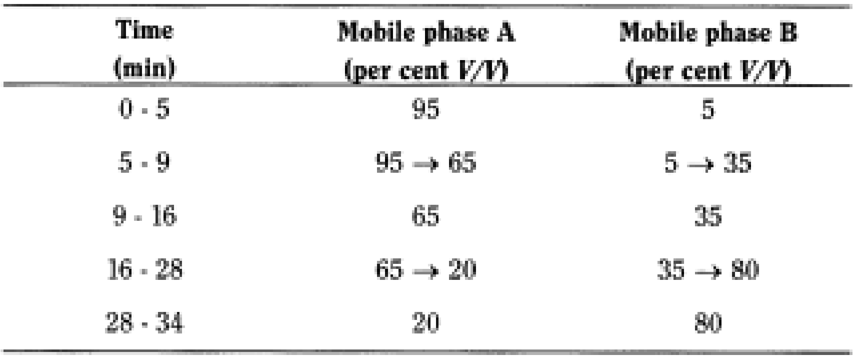
Reference solution (e) Dissolve the contents of a vial of *acemetacin impurity mixture CRS* (containing impurities C, D, E and F) in 2 ml of the test solution.

Column:

- — *size: l* = 0.25 m, Ø = 4 mm;
- — *stationary phase*: spherical *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- — *temperature*: 40 °C.

Mobile phase:

- — *mobile phase A*: dissolve 1.0 g of *potassium dihydrogen phosphate R* in 900 ml of *water R*, adjust to pH 6.5 with *1 M sodium hydroxide* and dilute to 1000 ml with *water R*;
- — *mobile phase B*: *acetonitrile for chromatography R*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 5	95	5
5 - 9	95 → 65	5 → 35
9 - 16	65	35
16 - 28	65 → 20	35 → 80
28 - 34	20	80

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 235 nm.

Injection 20 µl.

Identification of impurities:

— use the chromatogram supplied with *acemetacin impurity mixture CRS* and the chromatogram obtained with reference solution (e) to identify the peaks due to impurities C, D, E and F;

— use the chromatogram obtained with reference solution (b) to identify the peak due to impurity B.

Relative retention With reference to acemetacin (retention time = about 15 min): impurity A = about 0.7; impurity B = about 0.9; impurity F = about 1.2; impurity C = about 1.3; impurity D = about 1.5; impurity E = about 2.2.

System suitability Reference solution (d):

— *peak-to-valley ratio*: minimum 15, where H_p = height above the baseline of the peak due to impurity B and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to acemetacin.

Limits:

— *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity C = 1.3; impurity D = 1.4; impurity F = 1.3;

— *impurity E*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.2 per cent);

— *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.1 per cent);

— *impurities C, D, F*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Heavy metals

Maximum 20 ppm.

Solvent mixture *methanol R*, *acetone R* (10:90 *V/V*).

Test solution Dissolve 0.250 g of the substance to be examined in 20 ml of the solvent mixture.

Reference solution Dilute 0.5 ml of *lead standard solution (10 ppm Pb) R* to 20 ml with the solvent mixture.

Blank solution 20 ml of the solvent mixture.

Monitor solution Dissolve 0.250 g of the substance to be examined in 0.5 ml of *lead standard solution (10 ppm Pb) R* and dilute to 20 ml with the solvent mixture.

To each solution, add 2 ml of *buffer solution pH 3.5 R.* Mix and add to 1.2 ml of *thioacetamide reagent R*. Mix immediately. Filter the solutions through a membrane filter (pore size 0.45 µm) *(2.4.8)*. Compare the spots on the filters obtained with the different solutions. The test is invalid if the reference solution does not show a slight brown colour compared to the blank solution. The substance to be examined complies with the test if the brown colour of the spot resulting from the test solution is not more intense than that of the spot resulting from the reference solution.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.350 g in 20 ml of *acetone R* and add 10 ml of *water R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M sodium hydroxide* is equivalent to 41.58 mg of $C_{21}H_{18}ClNO_6$.

STORAGE

Protected from light.

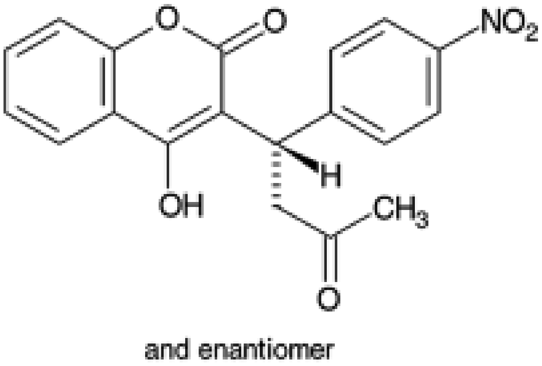
Ph Eur

Acenocoumarol

General Notices



$C_{19}H_{15}NO_6$ 353.3 *152-72-7*

Action and use

Vitamin K epoxide reductase inhibitor; oral anticoagulant.

Preparation

Acenocoumarol Tablets

DEFINITION

Acenocoumarol is (*RS*)-4-hydroxy-3-(1-*p*-nitrophenyl-3-oxobutyl)coumarin. It contains not less than 98.5% and not more than 100.5% of $C_{19}H_{15}NO_6$, calculated with reference to the dried substance.

CHARACTERISTICS

An almost white to buff powder.

Practically insoluble in *water* and in *ether*; slightly soluble in *ethanol (96%).* It dissolves in aqueous solutions of the alkali hydroxides. It exhibits polymorphism.

IDENTIFICATION

The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of acenocoumarol *(RS 001)*. If the spectra are not concordant, dissolve 0.1 g of the substance being examined in 10 ml of *acetone* and add *water* drop wise until the solution becomes turbid. Heat on a water bath until the solution is clear and allow to stand. Filter, wash the crystals with a mixture of equal volumes of *acetone* and *water* and dry at 100° at a pressure of 2 kPa for 30 minutes. Prepare a new spectrum of the residue.

TESTS

Clarity and colour of solution

A. A 2.0% w/v solution in *acetone* is *clear*, Appendix IV A.

B. The *absorbance* of a 4-cm layer of a 2.0% w/v solution in *acetone* at 460 nm is not more than 0.12, Appendix II B.

C. A 2.0% w/v solution in 0.1M *sodium hydroxide* is *clear*, Appendix IV A, and yellow.

Light absorption

Absorbance of a 0.001% w/v solution in a mixture of 1 volume of 1M *hydrochloric acid* and 9 volumes of *methanol* at the maximum at 306 nm, 0.50 to 0.54, calculated with reference to the dried substance, Appendix II B.

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, using *silica gel* GF_{254} as the coating substance and a mixture of 50 volumes of *dichloromethane*, 50 volumes of *cyclohexane* and 20 volumes of *glacial acetic acid* as the mobile phase. Apply separately to the plate 20 µl of each of two solutions of the substance being examined in *acetone* containing (1) 2.0% w/v and (2) 0.0020% w/v. After removal of the plate, allow it to dry in air and immediately examine under *ultraviolet light (254 nm)*. Any *secondary spot* in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (2) (0.1%).

Loss on drying

When dried to constant weight at 105°, loses not more than 0.5% of its weight. Use 1 g.

Sulphated ash

Not more than 0.1%, Appendix IX A.

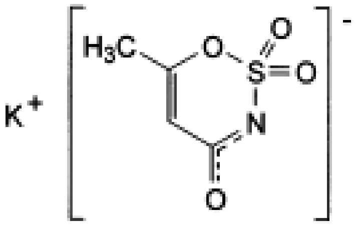
ASSAY

Dissolve 0.6 g in 50 ml of *acetone* and titrate with 0.1M *sodium hydroxide VS* using *bromothymol blue solution R3* as indicator. Repeat the operation without the substance being examined. The difference between the titrations represents the amount of sodium hydroxide required. Each ml of 0.1M *sodium hydroxide VS* is equivalent to 35.33 mg of $C_{19}H_{15}NO_6$.

Acesulfame Potassium

General Notices

(Ph Eur monograph 1282)



$C_4H_4KNO_4S$ 201.2   *55589-62-3*

Action and use

Sweetening agent.

Ph Eur

DEFINITION

Potassium 6-methyl-1,2,3-oxathiazin-4-olate 2,2-dioxide.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals.

Solubility

Soluble in water, very slightly soluble in acetone and in ethanol (96 per cent).

IDENTIFICATION

First identification A, C.

Second identification B, C.

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison acesulfame potassium CRS.

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 5 mg of the substance to be examined in *water R* and dilute to 5 ml with the same solvent.

Reference solution (a) Dissolve 5 mg of *acesulfame potassium CRS* in *water R* and dilute to 5 ml with the same solvent.

Reference solution (b) Dissolve 5 mg of *acesulfame potassium CRS* and 5 mg of *saccharin sodium R* in *water R* and dilute to 5 ml with the same solvent.

Plate *Cellulose for chromatography R* as the coating substance.

Mobile phase *Concentrated ammonia R*, *acetone R*, *ethyl acetate R* (10:60:60 *V/V/V*).

Application 5 µl as bands.

Development Twice over a path of 15 cm.

Drying In a current of warm air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated bands.

Results The principal band in the chromatogram obtained with the test solution is similar in position and size to the principal band in the chromatogram obtained with reference solution (a).

C. 0.5 ml of solution S (see Tests) gives reaction (b) of potassium *(2.3.1)*.

TESTS

Solution S

Dissolve 10.0 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Acidity or alkalinity

To 20 ml of solution S add 0.1 ml of *bromothymol blue solution R1*. Not more than 0.2 ml of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Impurity A

Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 0.80 g of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 50 mg of *acetylacetamide R* (impurity A) in *water R* and dilute to 25 ml with the same solvent. To 5 ml of the solution add 45 ml of *water R* and dilute to 100 ml with *methanol R*.

Reference solution (b) To 10 ml of reference solution (a) add 1 ml of the test solution and dilute to 20 ml with *methanol R*.

Plate *TLC silica gel plate R.*

Mobile phase *water R, ethanol (96 per cent) R, ethyl acetate R* (2:15:74 *V/V/V*).

Application 5 µl.

Development Over a path of 15 cm.

Drying In air until the solvents are completely removed.

Detection Spray with *phosphoric vanillin solution R* and heat at 120 °C for about 10 min; examine in daylight.

System suitability The chromatogram obtained with reference solution (a) shows a clearly visible spot and the chromatogram obtained with reference solution (b) shows 2 clearly separated spots.

Limit:

— *impurity A*: any spot due to impurity A is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.125 per cent).

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 0.100 g of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve 4.0 mg of *acesulfame potassium impurity B CRS* in *water R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of this solution to 200.0 ml with *water R*.

Reference solution (b) Dissolve 0.100 g of the substance to be examined in reference solution (a) and dilute to 10.0 ml with the same solution.

Reference solution (c) Dilute 1.0 ml of the test solution to 100.0 ml with *water R*. Dilute 1.0 ml of this solution to 10.0 ml with *water R*.

Column:

— *size:* l = 0.25 m, Ø = 4.6 mm,

— *stationary phase: octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase Mix 40 volumes of *acetonitrile R* and 60 volumes of a 3.3 g/l solution of *tetrabutylammonium hydrogen sulphate R*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 234 nm.

Injection 20 µl.

Run time 3 times the retention time of acesulfame.

Relative retention With reference to acesulfame

(retention time = about 5.3 min): impurity B = about 1.6.

System suitability:

— *peak-to-valley ratio*: minimum 1.2, where H_p = height above the baseline of the peak due to impurity B and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to acesulfame in the chromatogram obtained with reference solution (b).

Limits:

— *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (20 ppm),

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent),

— *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent),

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) except for the peak due to impurity B (0.05 per cent).

Fluorides

Maximum 3 ppm.

Potentiometry *(2.2.36, Method I)*.

Test solution Dissolve 3.000 g of the substance to be examined in *distilled water R*, add 15.0 ml of *total-ionic-strength-adjustment buffer R1* and dilute to 50.0 ml with *distilled water R*.

Reference solutions To 0.5 ml, 1.0 ml, 1.5 ml and 3.0 ml of *fluoride standard solution (10 ppm F) R* add 15.0 ml of *total-ionic-strength-adjustment buffer R1* and dilute to 50.0 ml with *distilled water R*.

Indicator electrode Fluoride-selective.

Reference electrode Silver-silver chloride.

Heavy metals *(2.4.8)*

Maximum 5 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

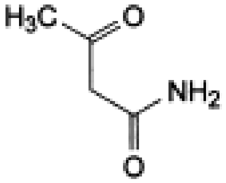
ASSAY

Dissolve 0.150 g in 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

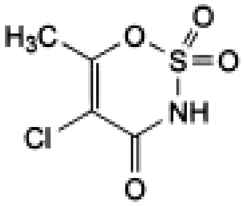
1 ml of *0.1 M perchloric acid* is equivalent to 20.12 mg of $C_4H_4KNO_4S$.

IMPURITIES

Specified impurities *A, B.*



A. 3-oxobutanamide (acetylacetamide),



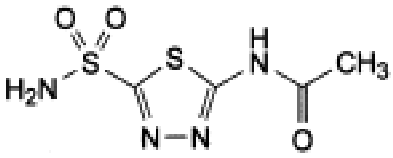
B. 5-chloro-6-methyl-1,2,3-oxathiazin-4(3*H*)-one 2,2-dioxide.

Ph Eur

Acetazolamide

General Notices

(Ph Eur monograph 0454)



$C_4H_6N_4O_3S_2$ 222.2 *59-66-5*

Action and use

Carbonic anhydrase inhibitor; diuretic; treatment of glaucoma and ocular hypertension; treatment of mountain sickness.

Preparation

Acetazolamide Tablets

Ph Eur

DEFINITION

Acetazolamide contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of *N*-(5-sulphamoyl-1,3,4-thiadiazol-2-yl)acetamide, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, very slightly soluble in water, slightly soluble in alcohol. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification A, B.

Second identification A, C, D.

A. Dissolve 30.0 mg in *0.01 M sodium hydroxide* and dilute to 100.0 ml with the same solvent. Dilute 10.0 ml of the solution to 100.0 ml with *0.01 M sodium hydroxide* (solution A). Examined between 230 nm and 260 nm *(2.2.25)*, solution A shows an absorption maximum at 240 nm. The specific absorbance at the maximum is 162 to 176. Dilute 25.0 ml of solution A to 100.0 ml with *0.01 M sodium hydroxide*. Examined between 260 nm and 350 nm, the solution shows an absorption maximum at 292 nm. The specific absorbance at the maximum is 570 to 620.

B. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *acetazolamide CRS*. If the spectra obtained in the solid state with the substance to be examined and the reference substance show differences, dissolve separately the substance to be examined and the reference substance in *alcohol R*, evaporate to dryness, prepare new discs and record the spectra.

C. Introduce about 20 mg into a test-tube and add 4 ml of *dilute hydrochloric acid R* and 0.2 g of *zinc powder R*. Immediately place a piece of *lead acetate paper R* over the mouth of the tube. The paper shows a brownish-black colour.

D. Dissolve about 25 mg in a mixture of 0.1 ml of *dilute sodium hydroxide solution R* and 5 ml of *water R*. Add 0.1 ml of *copper sulphate solution R*. A greenish-blue precipitate is formed.

TESTS

Appearance of solution

Dissolve 1.0 g in 10 ml of *1 M sodium hydroxide*. The solution is not more opalescent than reference suspension II *(2.2.1)* and not more intensely coloured than reference solution Y_5 or BY_5 *(2.2.2, Method II)*.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel* GF_{254} *R* as the coating substance.

Test solution Dissolve 50 mg of the substance to be examined in a mixture of equal volumes of *alcohol R* and *ethyl acetate R* and dilute to 10 ml with the same mixture of solvents.

Reference solution Dilute 1 ml of the test solution to 100 ml with a mixture of equal volumes of *alcohol R* and *ethyl acetate R*.

Apply separately to the plate 20 µl of each solution. Use the tank without lining the walls and allow to saturate for 1 h before development. Develop over a path of 15 cm using a freshly prepared mixture of 20 volumes of *concentrated ammonia R*, 30 volumes of *ethyl acetate R* and 50 volumes of *2-propanol R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (1 per cent).

Sulphates *(2.4.13)*

To 0.4 g add 20 ml of *distilled water R* and dissolve by heating to boiling. Allow to cool with frequent shaking and filter. 15 ml of the filtrate complies with the limit test for sulphates (500 ppm).

Heavy metals *(2.4.8)*

1.0 g complies with limit test C for heavy metals (20 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 25 ml of *dimethylformamide R*. Titrate with *0.1 M ethanolic sodium hydroxide*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M ethanolic sodium hydroxide* is equivalent to 22.22 mg of $C_4H_6N_4O_3S_2$.

Ph Eur

Acetic Acid (33 per cent)

General Notices

Acetic Acid

Preparation

Acetic Acid (6 per cent)

DEFINITION

Acetic Acid (33 per cent) contains not less than 32.5% and not more than 33.5% w/w of acetic acid, $C_2H_4O_2$.

CHARACTERISTICS

A clear, colourless liquid.

Miscible with *water*, with *ethanol (96%)* and with *glycerol*.

IDENTIFICATION

A. Strongly acidic, even when diluted freely.

B. When neutralised, yields the reactions characteristic of *acetates*, Appendix VI.

TESTS

Weight per ml

1.040 to 1.042 g, Appendix V G.

Heavy metals

Evaporate 10.0 ml to dryness and add 20 ml of *water*. 12 ml of the resulting solution complies with *limit test A for heavy metals*, Appendix VII. Use *lead standard solution (1 ppm Pb)* to prepare the standard (2 ppm).

Chloride

Dilute 5.0 ml with sufficient *water* to produce 100 ml. 15 ml of the resulting solution complies with the *limit test for chlorides*, Appendix VII (70 ppm).

Sulphate

12.5 ml of the solution used in the test for Chloride, diluted to 15 ml with *water*, complies with the *limit test for sulphates*, Appendix VII (240 ppm).

Aldehydes

Distil 15 ml. To the first 5 ml of the distillate add 10 ml of a 5% w/v solution of *mercury(II) chloride*, make alkaline with 5M *sodium hydroxide*, allow to stand for 5 minutes and make acidic with 1M *sulphuric acid*. The solution shows not more than a faint turbidity.

Formic acid and oxidisable impurities

Mix 5 ml with 6 ml of *sulphuric acid* and cool to 20°. Add 2 ml of 0.0167M *potassium dichromate VS*, allow to stand for 1 minute, add 25 ml of *water* and 1 ml of freshly prepared *dilute potassium iodide solution* and titrate the liberated iodine with 0.1M *sodium thiosulphate VS* using *starch mucilage* as indicator. Not less than 1.0 ml of 0.1M *sodium thiosulphate VS* is required.

Readily oxidisable impurities

To 5.0 ml add 20 ml of *water* and 0.2 ml of 0.02M *potassium permanganate VS* and allow to stand for 1 minute. The pink colour is not entirely discharged.

Non-volatile matter

When evaporated to dryness and dried at 105°, leaves not more than 0.01% w/w of residue.

ASSAY

Weigh 5 g into a stopper flask containing 50 ml of *water* and titrate with 1M *sodium hydroxide VS* using *phenolphthalein solution R1* as indicator. Each ml of 1M *sodium hydroxide VS* is equivalent to 60.05 mg of $C_2H_4O_2$.

Acetic Acid (6 per cent)

General Notices

Dilute Acetic Acid

DEFINITION

Acetic Acid (6 per cent) contains not less than 5.7% and not more than 6.3% w/w of acetic acid, $C_2H_4O_2$. It may be prepared by mixing 182 g of Acetic Acid (33 per cent) with 818 g of Purified Water.

IDENTIFICATION

A. Strongly acidic.

B. When neutralised, yields the reactions characteristic of *acetates*, Appendix VI.

TESTS

Weight per ml

About 1.005 g, Appendix V G.

Heavy metals

Evaporate 20.0 ml to dryness and add 20 ml of *water*. 12 ml of the resulting solution complies with *limit test A for heavy metals*, Appendix VII. Use *lead standard solution (1 ppm Pb)* to prepare the standard (1 ppm).

Chloride

Dilute 5.0 ml with sufficient *water* to produce 100 ml. 15 ml of the resulting solution complies with the *limit test for chlorides*, Appendix VII (70 ppm).

Sulphate

12.5 ml of the solution used in the test for Chloride, diluted to 15 ml with *water*, complies with the *limit test for sulphates*, Appendix VII (240 ppm).

Aldehydes

Distil 75 ml. To the first 5 ml of the distillate add 10 ml of a 5% w/v solution of *mercury(II) chloride*, make alkaline with 5M *sodium hydroxide*, allow to stand for 5 minutes and acidify with 1M *sulphuric acid*. The solution shows not more than a faint turbidity.

Formic acid and oxidisable impurities

Mix 5 ml with 6 ml of *sulphuric acid* and cool to 20°. Add 0.4 ml of 0.0167M *potassium dichromate VS*, allow to stand for 1 minute, add 25 ml of *water* and 1 ml of freshly prepared *dilute potassium iodide solution* and titrate the liberated iodine with 0.1M *sodium thiosulphate VS* using *starch mucilage* as indicator. Not less than 0.2 ml of 0.1M *sodium thiosulphate VS* is required.

Readily oxidisable impurities

To 25 ml add 0.2 ml of 0.02M *potassium permanganate VS* and allow to stand for 1 minute. The pink colour is not entirely discharged.

Non-volatile matter

When evaporated to dryness and dried at 105°, leaves not more than 0.01% w/w of residue.

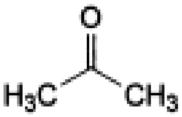
ASSAY

Add 30 ml of *water* to 20 g in a stopper flask and titrate with 1M *sodium hydroxide VS* using *phenolphthalein solution R1* as indicator. Each ml of 1M *sodium hydroxide VS* is equivalent to 60.05 mg of $C_2H_4O_2$.

Acetone

General Notices

(Ph Eur monograph 0872)



C_3H_6O 58.08 *67-64-1*

Ph Eur

DEFINITION

Propanone.

CHARACTERS

Appearance

Volatile, clear, colourless liquid.

Solubility

Miscible with water and with ethanol (96 per cent).

The vapour is flammable.

IDENTIFICATION

A. It complies with the test for relative density (see Tests).

B. To 1 ml, add 3 ml of *dilute sodium hydroxide solution R* and 0.3 ml of a 25 g/l solution of *sodium nitroprusside R*. An intense red colour is produced which becomes violet with the addition of 3.5 ml of *acetic acid R*.

C. To 10 ml of a 0.1 per cent *V/V* solution of the substance to be examined in *ethanol (50 per cent V/V) R*, add 1 ml of a 10 g/l solution of *nitrobenzaldehyde R* in *ethanol (50 per cent V/V) R* and 0.5 ml of *strong sodium hydroxide solution R*. Allow to stand for about 2 min and acidify with *acetic acid R*. A greenish-blue colour is produced.

TESTS

Appearance of solution

To 10 ml add 10 ml of *water R*. The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Acidity or alkalinity

To 5 ml add 5 ml of *carbon dioxide-free water R*, 0.15 ml of *phenolphthalein solution R* and 0.5 ml of *0.01 M sodium hydroxide*. The solution is pink. Add 0.7 ml of *0.01 M hydrochloric acid* and 0.05 ml of *methyl red solution R*. The solution is red or orange.

Relative density *(2.2.5)*

0.790 to 0.793.

Reducing substances

To 30 ml add 0.1 ml of *0.02 M potassium permanganate* and allow to stand in the dark for 2 h. The mixture is not completely decolourised.

Related substances

Gas chromatography *(2.2.28)*.

Test solution The substance to be examined.

Reference solution (a) To 0.5 ml of *methanol R* add 0.5 ml of *2-propanol R* and dilute to 100.0 ml with the test solution. Dilute 1.0 ml of this solution to 10.0 ml with the test solution.

Reference solution (b) Dilute 100 µl of *benzene R* to 100.0 ml with the test solution. Dilute 0.20 ml of this solution to 100.0 ml with the test solution.

Column:

— *material*: fused silica,

— *size: l* = 50 m, Ø = 0.3 mm,

— *stationary phase: macrogol 20 000 R* (film thickness 1 µm).

Carrier gas *helium for chromatography R.*

Linear velocity 21 cm/s.

Split ratio 1:50.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 11	45 → 100
	11 - 20	100
Injection port		150
Detector		250

Detection Flame ionisation.

Injection 1 µl.

Retention time Impurity C = about 7.5 min.

System suitability:

— *resolution*: minimum 5.0 between the peak due to impurity A (2nd peak) and the peak due to impurity B (3rd peak) in the chromatogram obtained with reference solution (a),

— *signal-to-noise ratio*: minimum 5 for the peak due to impurity C in the chromatogram obtained with reference solution (b).

Limits:

— *impurities A, B*: for each impurity, not more than the difference between the areas of the corresponding peaks in the chromatogram obtained with reference solution (a) and the areas of the corresponding peaks in the chromatogram obtained with the test solution (0.05 per cent *V/V*),

— *impurity C*: not more than the difference between the area of the peak due to impurity C in the chromatogram obtained with reference solution (b) and the area of the corresponding peak in the chromatogram obtained with the test solution (2 ppm *V/V*),

— *any other impurity*: for each impurity, not more than the difference between the area of the peak due to impurity A in the chromatogram obtained with reference solution (a) and the area of the corresponding peak in the chromatogram obtained with the test solution (0.05 per cent *V/V*).

Matter insoluble in water

Dilute 1.0 ml to 20 ml with *water R*. The solution is clear *(2.2.1)*.

Residue on evaporation

Maximum 50 ppm.

Evaporate 20.0 g to dryness on a water-bath and dry at 100-105 °C. The residue weighs a maximum of 1 mg.

Water *(2.5.12)*

Maximum 3 g/l, determined on 10.0 ml. Use 20 ml of *anhydrous pyridine R* as solvent.

STORAGE

Protected from light.

IMPURITIES

Specified impurities   A, B, C.

A. CH_3-OH: methanol,

B. CH_3-CHOH-CH_3: propan-2-ol (isopropanol),

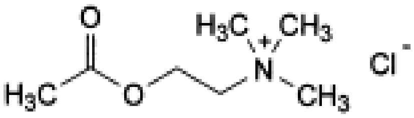
C. C_6H_6: benzene.

Ph Eur

Acetylcholine Chloride

General Notices

(Ph Eur monograph 1485)



$C_7H_{16}ClNO_2$ 181.7 *60-31-1*

Action and use

Cholinoceptor agonist.

Ph Eur

DEFINITION

2-(Acetyloxy)-*N,N,N*-trimethylethanaminium chloride.

Content

98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white crystalline powder or colourless crystals, very hygroscopic.

Solubility

Very soluble in water, freely soluble in alcohol, slightly soluble in methylene chloride.

IDENTIFICATION

First identification *B, E.*

Second identification *A, C, D, E.*

A. Melting point *(2.2.14)*: 149 °C to 152 °C.

Introduce the substance to be examined into a capillary tube. Dry in an oven at 100-105 °C for 3 h. Seal the tube and determine the melting point.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *acetylcholine chloride CRS.*

C. Examine the chromatograms obtained in the test for related substances.

Results The principal band in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal band in the chromatogram obtained with reference solution (b).

D. To 15 mg add 10 ml of *dilute sodium hydroxide solution R*, 2 ml of *0.02 M potassium permanganate* and heat. The vapours formed change the colour of *red litmus paper R* to blue.

E. 0.5 ml of solution S (see Tests) gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 or BY_6 *(2.2.2, Method II)*.

Acidity

Dilute 1 ml of solution S to 10 ml with *carbon dioxide-free water R*. Add 0.05 ml of *phenolphthalein solution R*. Not more than 0.4 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to pink.

Related substances

Thin-layer chromatography *(2.2.27)*. *Prepare the solutions immediately before use*.

Test solution (a) Dissolve 0.30 g of the substance to be examined in *methanol R* and dilute to 3.0 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with *methanol R*.

Reference solution (a) Dilute 1 ml of test solution (a) to 100 ml with *methanol R*.

Reference solution (b) Dissolve 20.0 mg of *acetylcholine chloride CRS* in *methanol R* and dilute to 2.0 ml with the same solvent.

Reference solution (c) Dissolve 20 mg of *choline chloride R* in *methanol R*, add 0.4 ml of test solution (a) and dilute to 2.0 ml with *methanol R*.

Plate *TLC silica gel plate R.*

Mobile phase Mix 20 volumes of a 40 g/l solution of *ammonium nitrate R*, 20 volumes of *methanol R* and 60 volumes of *acetonitrile R*.

Application 5 µl as bands of 10 mm by 2 mm.

Development Over 2/3 of the plate.

Detection Spray with *potassium iodobismuthate solution R3*.

System suitability The chromatogram obtained with reference solution (c) shows 2 clearly separated bands.

Limits:

— *any impurity*: any bands in the chromatogram obtained with test solution (a), apart from the principal band, are not more intense than the principal band in the chromatogram obtained with reference solution (a) (1 per cent).

Trimethylamine

Dissolve 0.1 g in 10 ml of *sodium carbonate solution R* and heat to boiling. No vapours appear which turn *red litmus paper R* blue.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

12 ml of solution S complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on the residue obtained in the test for loss on drying.

ASSAY

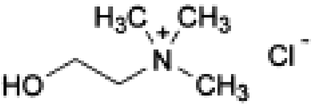
Dissolve 0.200 g in 20 ml of *carbon dioxide-free water R*. Neutralise with *0.01 M sodium hydroxide* using 0.15 ml of *phenolphthalein solution R* as indicator. Add 20.0 ml of *0.1 M sodium hydroxide* and allow to stand for 30 min. Titrate with *0.1 M hydrochloric acid* .

1 ml of *0.1 M sodium hydroxide* is equivalent to 18.17 mg of $C_7H_{16}ClNO_2$.

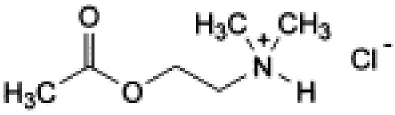
STORAGE

In ampoules, protected from light.

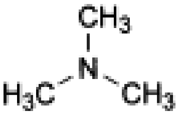
IMPURITIES



A. 2-hydroxy-*N,N,N*-trimethylethanaminium chloride (choline chloride),



B. 2-(acetyloxy)-*N,N*-dimethylethanaminium chloride,

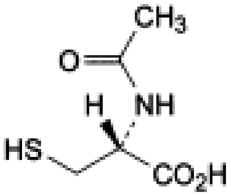


C .*N,N*-dimethylmethanamine.

Acetylcysteine

General Notices

(Ph Eur monograph 0967)



$C_5H_9NO_3S$ 163.2 *616-91-1*

Action and use

Sulphydryl donor; antidote to paracetamol poisoning; mucolytic.

Preparation

Acetylcysteine Injection

Ph Eur

DEFINITION

(2*R*)-2-(Acetylamino)-3-sulfanylpropanoic acid.

Content

98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals.

Solubility

Freely soluble in water and in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

First identification A, C.

Second identification A, B, D, E.

A. Specific optical rotation (see Tests).

B. Melting point *(2.2.14)*: 104 °C to 110 °C.

C. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs of *potassium bromide R*.

Comparison acetylcysteine CRS.

D. Examine the chromatograms obtained in the test for related substances.

Results The principal peak in the chromatogram obtained with test solution (b) is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (b).

E. To 0.5 ml of solution S (see Tests) add 0.05 ml of a 50 g/l solution of *sodium nitroprusside R* and 0.05 ml of *concentrated ammonia R*. A dark violet colour develops.

TESTS

Solution S

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

2.0 to 2.8.

To 2 ml of solution S add 8 ml of *carbon dioxide-free water R* and mix.

Specific optical rotation *(2.2.7)*

+ 21.0 to + 27.0 (dried substance).

In a 25 ml volumetric flask, mix 1.25 g with 1 ml of a 10 g/l solution of *sodium edetate R*. Add 7.5 ml of a 40 g/l solution of *sodium hydroxide R*, mix and dissolve. Dilute to 25.0 ml with *phosphate buffer solution pH 7.0 R2*.

Related substances

Liquid chromatography *(2.2.29)*. *Except where otherwise prescribed, prepare the solutions immediately before use.*

Test solution (a) Suspend 0.80 g of the substance to be examined in 1 ml of *1 M hydrochloric acid* and dilute to 100.0 ml with *water R*.

Test solution (b) Dilute 5.0 ml of test solution (a) to 100.0 ml with *water R*. Dilute 5.0 ml of this solution to 50.0 ml with *water R*.

Test solution (c) Use test solution (a) after storage for at least 1 h.

Reference solution (a) Suspend 4.0 mg of *acetylcysteine CRS*, 4.0 mg of *L-cystine R* (impurity A), 4.0 mg of *L-cysteine R* (impurity B), 4.0 mg of *acetylcysteine impurity C CRS* and 4.0 mg of *acetylcysteine impurity D CRS* in 1 ml of *1 M hydrochloric acid* and dilute to 100.0 ml with *water R*.

Reference solution (b) Suspend 4.0 mg of *acetylcysteine CRS* in 1 ml of *1 M hydrochloric acid* and dilute to 100.0 ml with *water R*.

Column:

— *size:* l = 0.25 m, Ø = 4 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Stir 3 volumes of *acetonitrile R* and 97 volumes of *water R* in a beaker; adjust to pH 3.0 with *phosphoric acid R*.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 20 µl, 3 times; inject *0.01 M hydrochloric acid* as a blank.

Run time 5 times the retention time of acetylcysteine (about 30 min).

Retention time Impurity A = about 2.2 min; impurity B = about 2.4 min; 2-methyl-2-thiazoline-4-carboxylic acid, originating in test solution (c) = about 3.3 min; acetylcysteine = about 6.4 min; impurity C = about 12 min; impurity D = about 14 min.

System suitability Reference solution (a):

— *resolution*: minimum 1.5 between the peaks due to impurities A and B and minimum 2.0 between the peaks due to impurities C and D.

From the chromatogram obtained with test solution (a), calculate the percentage content of the known impurities (T_1) and the unknown impurities (T_2) using the following equations:

$$T_1 = \frac{A_1 \times m_2 \times 100}{A_2 \times m_1}$$

$$T_2 = \frac{A_3 \times m_3 \times 100}{A_4 \times m_1}$$

A_1 = peak area of individual impurity (impurity A, impurity B, impurity C and impurity D) in the chromatogram obtained with test solution (a);

A_2 = peak area of the corresponding individual impurity (impurity A, impurity B, impurity C and impurity D) in the chromatogram obtained with reference solution (a);

A_3 = peak area of unknown impurity in the chromatogram obtained with test solution (a);

A_4 = peak area of acetylcysteine in the chromatogram obtained with reference solution (b);

m_1 = mass of the substance to be examined in test solution (a);

m_2 = mass of the individual impurity in reference solution (a);

m_3 = mass of acetylcysteine in reference solution (b).

Limits:

- *impurities A, B, C, D*: for each impurity, maximum 0.5 per cent;
- *any other impurity*: for each impurity, maximum 0.5 per cent;
- *total*: maximum 0.5 per cent;
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak with a retention time of about 3.3 min due to 2-methyl-2-thiazoline-4-carboxylic acid.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard (10 ppm Pb) R*.

Zinc

Maximum 10.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method II)*.

Test solution Dissolve 1.00 g in *0.001 M hydrochloric acid* and dilute to 50.0 ml with the same acid.

Reference solutions Prepare the reference solutions using *zinc standard solution (5 mg/ml Zn) R*, diluting with *0.001 M hydrochloric acid*.

Source Zinc hollow-cathode lamp.

Wavelength 213.8 nm.

Atomisation device Air-acetylene flame.

Use a correction procedure for non-specific absorption.

Loss on drying *(2.2.32)*

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven *in vacuo* at 70 °C for 3 h.

Sulphated ash *(2.4.14)*

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.140 g in 60 ml of *water R* and add 10 ml of *dilute hydrochloric acid R*. After cooling in iced water, add 10 ml of *potassium iodide solution R* and titrate with *0.05 M iodine*, using 1 ml of *starch solution R* as indicator.

1 ml of *0.05 M iodine* is equivalent to 16.32 mg of $C_5H_9NO_3S$.

STORAGE

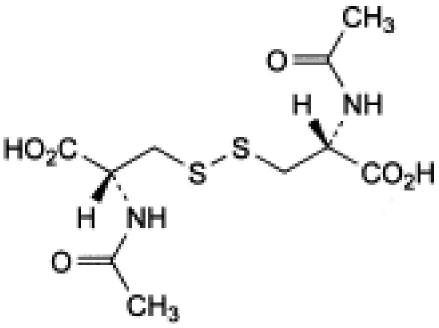
Protected from light.

IMPURITIES

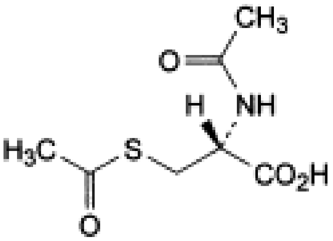
Specified impurities *A, B, C, D.*

A. L-cystine,

B. L-cysteine,



C. *N,N′*-diacetyl-l-cystine,



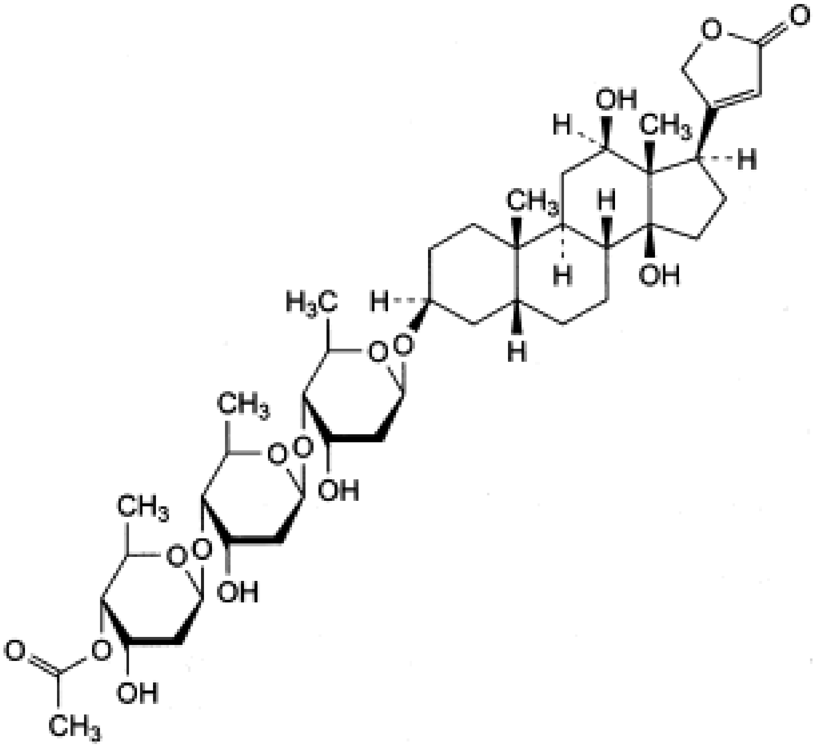
D. *N,S*-diacetyl-l-cysteine.

Ph Eur

Acetyldigoxin

General Notices

(β-Acetyldigoxin, Ph Eur monograph 2168)



$C_{43}H_{66}O_{15}$ 823 *5355-48-6*

Action and use

Cardiac Glycoside.

Ph Eur

DEFINITION

3β-[(4-*C*-Acetyl-2,6-dideoxy-β-D-*ribo*-hexopyranosyl-(1→4)- 2,6-dideoxy-β-D-*ribo*-hexopyranosyl-(1→4)-2,6-dideoxy-β-D-*ribo*-hexopyranosyl)oxy]-12β,14-dihydroxy-5β-card-20 (22)-enolide.

Content

97.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, sparingly soluble in methylene chloride, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)*.

Comparison β*-acetyldigoxin CRS.*

TESTS

Specific optical rotation *(2.2.7)*

+ 26.2 to + 28.2 (dried substance).

Dissolve 0.50 g in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 25.0 ml with the same mixture of solvents.

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the solutions immediately before use.*

Solvent mixture Mix equal volumes of *methanol R2* and *acetonitrile for chromatography R*.

Test solution Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 100.0 ml with the solvent mixture.

Reference solution (a) Dissolve 10.0 mg of β*-acetyldigoxin CRS* in the solvent mixture and dilute to 20.0 ml with the solvent mixture.

Reference solution (b) Dilute 1.0 ml of the test solution to 20.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 10.0 ml with the solvent mixture.

Reference solution (c) Dissolve 5 mg of *gitoxin CRS* (impurity D) in the solvent mixture and dilute to 100.0 ml with the solvent mixture. To 5.0 ml of this solution, add 0.5 ml of reference solution (a) and dilute to 100.0 ml with the solvent mixture.

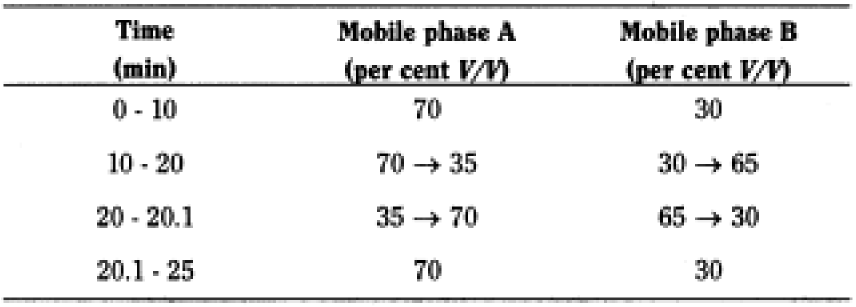
Reference solution (d) Dissolve 5.0 mg of β*-acetyldigoxin for peak identification CRS* (containing impurities A and B) in 10.0 ml of the solvent mixture.

Column:

- *size:* l = 0.125 m, Ø = 4.0 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (4 µm).

Mobile phase:

- *mobile phase A: water for chromatography R*;
- *mobile phase B: acetonitrile for chromatography R*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 10	70	30
10 - 20	70 → 35	30 → 65
20 - 20.1	35 → 70	65 → 30
20.1 - 25	70	30

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 225 nm.

Injection 10 µl of the test solution and reference solutions (b), (c) and (d).

Identification of impurities Use the chromatograms obtained with reference solutions (c) and (d) to identify the peaks due to impurities A, B and D.

Relative retention With reference to β-acetyldigoxin (retention time = about 9 min): impurity about 0.3; impurity A = about 0.7; impurity D = about 1.2.

System suitability Reference solution (c):

— *resolution*: minimum 1.5 between the peaks due to β-acetyldigoxin and impurity D;

— *symmetry factor*: maximum 2.5 for the peak due to β-acetyldigoxin.

Limits:

— *impurities A, B*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *impurity D*: not more than 0.6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

— *any other impurity*: for each impurity, not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

— *sum of impurities other than A, B and D*: not more than 1.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.6 per cent);

— *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

Loss on drying *(2.2.32)*

Maximum 1.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on the residue obtained in the test for loss on drying.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

Injection Test solution and reference solution (a).

Calculate the percentage content of $C_{43}H_{66}O_{15}$ from the declared content of β*-acetyldigoxin CRS*.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, D.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *C, E, F, G, H.*

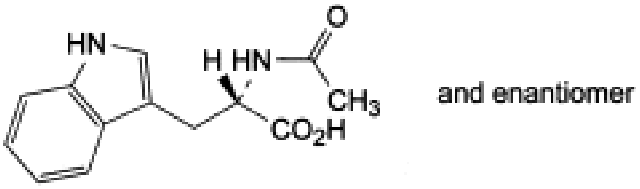
Ph Eur

Acetyltryptophan

General Notices

(*N*-Acetyltryptophan, Ph Eur monograph 1383)



$C_{13}H_{14}N_2O_3$ 246.3 *87-32-1*

Ph Eur

DEFINITION

(*RS*)-2-Acetylamino-3-(1*H*-indol-3-yl)propanoic acid.

Content

99.0 per cent to 101.0 per cent (dried substance).

PRODUCTION

Tryptophan used for the production of *N*-acetyltryptophan complies with the test for impurity A and other related substances in the monograph on *Tryptophan (1272)*.

CHARACTERS

Appearance

White or almost white, crystalline powder, or colourless crystals.

Solubility

Slightly soluble in water, very soluble in ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

mp: about 205 °C.

IDENTIFICATION

First identification A, B.

Second identification A, C, D, E.

A. Optical rotation (see Tests).

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *N-acetyltryptophan CRS.*

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 50 mg of the substance to be examined in 0.2 ml of *concentrated ammonia R* and dilute to 10 ml with *water R*.

Reference solution (a) Dissolve 50 mg of *N-acetyltryptophan CRS* in 0.2 ml of *concentrated ammonia R* and dilute to 10 ml with *water R*.

Reference solution (b) Dissolve 10 mg of *tryptophan R* in the test solution and dilute to 2 ml with the test solution.

Plate *TLC silica gel F_{254} plate R.*

Mobile phase *glacial acetic acid R, water R, butanol R* (25:25:40 *V/V/V*).

Application 2 µl.

Development Over a path of 10 cm.

Drying In an oven at 100-105 °C for 15 min.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 2 mg in 2 ml of *water R*. Add 2 ml of *dimethylaminobenzaldehyde solution R6*. Heat on a water-bath. A blue or greenish-blue colour develops.

E. It gives the reaction of acetyl *(2.3.1)*. Proceed as described for substances hydrolysable only with difficulty.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7 or GY_7 *(2.2.2, Method II)*.

Dissolve 1.0 g in a 40 g/l solution of *sodium hydroxide R* and dilute to 100 ml with the same alkaline solution.

Optical rotation *(2.2.7)*

- 0.1 ° to + 0.1 °.

Dissolve 2.50 g in a 40 g/l solution of *sodium hydroxide R* and dilute to 25.0 ml with the same alkaline solution.

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the test and reference solutions immediately before use.*

Buffer solution pH 2.3 Dissolve 3.90 g of *sodium dihydrogen phosphate R* in 1000 ml of *water R*. Add about 700 ml of a 2.9 g/l solution of *phosphoric acid R* and adjust to pH 2.3 with the same acidic solution.

Solvent mixture *acetonitrile R, water R* (10:90 *V/V*).

Test solution Dissolve 0.10 g of the substance to be examined in a mixture of 50 volumes of *acetonitrile R* and 50 volumes of *water R* and dilute to 20.0 ml with the same mixture of solvents.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the solvent mixture.

Reference solution (b) Dissolve 1.0 mg of *1,1′-ethylidenebis(tryptophan) CRS* in the solvent mixture and dilute to 100.0 ml with the solvent mixture.

Reference solution (c) To 4.0 ml of reference solution (a), add 20.0 ml of reference solution (b) and dilute to 100.0 ml with the solvent mixture.

Column:

— *size: l* = 0.25 m, Ø = 4.6 mm;

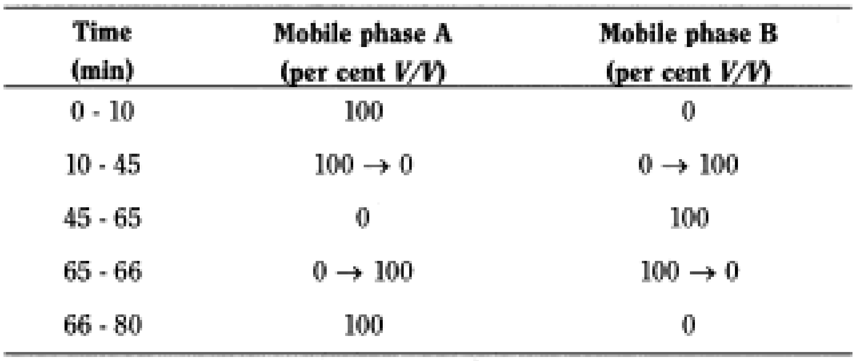
— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm);

— *temperature*: 40 °C.

Mobile phase:

— *mobile phase A: acetonitrile R*, buffer solution pH 2.3 (115:885 *V/V*);

— *mobile phase B: acetonitrile R*, buffer solution pH 2.3 (350:650 *V/V*);



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 10	100	0
10 - 45	100 → 0	0 → 100
45 - 65	0	100
65 - 66	0 → 100	100 → 0
66 - 80	100	0

Flow rate 0.7 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 20 µl of the test solution and reference solutions (a) and (c).

Retention time *N*-acetyltryptophan = about 29 min; 1,1′-ethylidenebis(tryptophan) = about 34 min.

System suitability Reference solution (c):

— *resolution*: minimum 8.0 between the peaks due to *N*-acetyltryptophan and 1,1′-ethylidenebis(tryptophan); if necessary, adjust the time programme for the elution gradient (an increase in the duration of elution with mobile phase A produces longer retention times and a better resolution).

Limits:

— *impurities A, B, C, D, E, F, G, H, I, J, K, L*: for each impurity, not more than 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.25 per cent);

— *total*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *disregard limit*: 0.01 times the area of the principal peak the chromatogram obtained with reference solution (a) (0.01 per cent).

Ammonium ***(2.4.1, Method B)***

Maximum 200 ppm, determined on 0.10 g.

Prepare the standard using 0.2 ml of *ammonium standard solution (100 ppm* NH_4*) R*.

Iron ***(2.4.9)***

Maximum 10 ppm.

Dissolve 1.0 g in 50 ml of *hydrochloric acid R1*, with heating at 50 °C. Allow to cool. In a separating funnel, shake with 3 quantities, each of 10 ml, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 ml of *water R* and shake for 3 min. Examine the aqueous layer.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 5 ml of *methanol R*. Add 50 ml of *anhydrous ethanol R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M sodium hydroxide* is equivalent to 24.63 mg of $C_{13}H_{14}N_2O_3$.

STORAGE

Protected from light.

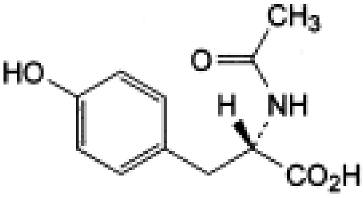
Ph Eur

Acetyltyrosine

General Notices

(N-Acetyltyrosine, Ph Eur monograph 1384)



$C_{11}H_{13}NO_4$ 223.2 *537-55-3*

Ph Eur

DEFINITION

N-Acetyltyrosine contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (2*S*)-2-(acetylamino)-3-(4-hydroxyphenyl)propanoic acid, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, freely soluble in water, practically insoluble in cyclohexane.

IDENTIFICATION

First identification *A, B.*

Second identification *A, C, D.*

A. It complies with the test for specific optical rotation (see Tests).

B. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *N-acetyltyrosine CRS*. Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for related substances in ultraviolet light at 254 nm. The principal spot obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Solution S (see Tests) is strongly acid *(2.2.4)*.

TESTS

Solution S

Dissolve 2.50 g in *water R* and dilute to 100.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Specific optical rotation *(2.2.7)*

Dilute 10.0 ml of solution S to 25.0 ml with *water R*. The specific optical rotation is + 46 to + 49, calculated with reference to the dried substance.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using a *TLC silica gel* F_{254} *plate R*.

Test solution (a) Dissolve 0.80 g of the substance to be examined in 6 ml of a mixture of equal volumes of *glacial acetic acid R* and *water R* and dilute to 10 ml with *ethanol R*.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with *ethanol R*.

Reference solution (a) Dissolve 80 mg of *N-acetyltyrosine CRS* in a mixture of 3 volumes of *water R*, 3 volumes of *glacial acetic acid R* and 94 volumes of *ethanol R* and dilute to 10 ml with the same mixture of solvents.

Reference solution (b) Dilute 0.5 ml of test solution (b) to 10 ml with *ethanol R*.

Reference solution (c) Dissolve 40 mg of *tyrosine CRS* in 20 ml of a mixture of equal volumes of *water R* and *glacial acetic acid R* and dilute to 50 ml with *ethanol R*.

Apply separately to the plate 5 µl of each solution. Develop over a path of 10 cm using a mixture of 10 volumes of *water R*, 15 volumes of *glacial acetic acid R* and 75 volumes of *ethyl acetate R*. Allow the plate to dry in air. Examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). Spray with *ninhydrin solution R* and heat at 100 °C to 105 °C for 10 min. Examine in daylight. Any spot corresponding to tyrosine is not more intense that the spot in the chromatogram obtained with reference solution (c) (1 per cent).

Chlorides *(2.4.4)*

Dilute 10 ml of solution S to 15 ml with *water R*. The solution complies with the limit test for chlorides (200 ppm).

Sulphates *(2.4.13)*

Dissolve 1.0 g in *distilled water R* and dilute to 20 ml with the same solvent. The solution complies with the limit test for sulphates (200 ppm).

Ammonium

Prepare a cell consisting of two watch-glasses 60 mm in diameter placed edge to edge. To the inner wall of the upper watch-glass stick a piece of *red litmus paper R 5* mm square and wetted with a few drops of *water R*. Finely powder the substance to be examined, place 50 mg in the lower watch-glass and dissolve in 0.5 ml of *water R*. To the solution add 0.30 g of *heavy magnesium oxide R*. Briefly triturate with a glass rod. Immediately close the cell by putting the two watch-glasses together. Heat at 40 °C for 15 min. The litmus paper is not more intensely blue coloured than a standard prepared at the same time and in the same manner using 0.1 ml of *ammonium standard solution (100 ppm* NH_4*) R*, 0.5 ml of *water R* and 0.30 g of *heavy magnesium oxide R* (200 ppm).

Iron ***(2.4.9)***

In a separating funnel, dissolve 0.5 g in 10 ml of *dilute hydrochloric acid R*. Shake with three quantities, each of 10 ml, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 ml of *water R* and shake for 3 min. The aqueous layer complies with the limit test for iron (20 ppm).

Heavy metals ***(2.4.8)***

Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with limit test A for heavy metals (10 ppm). Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Loss on drying ***(2.2.32)***

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Not more than 0.1 per cent, determined on 1.0 g.

Pyrogens ***(2.6.8)***

If intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of pyrogens, it complies with the test for pyrogens. Inject per kilogram of the rabbit's mass 1.0 ml of a freshly prepared solution in *water for injections R* containing per millilitre 10.0 mg of the substance to be examined and 9.0 mg of *pyrogen-free sodium chloride R*.

ASSAY

Dissolve 0.180 g in 50 ml of *carbon dioxide-free water R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically *(2.2.20)*.

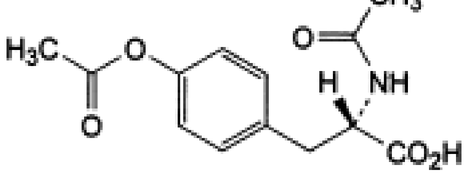
1 ml of *0.1 M sodium hydroxide* is equivalent to 22.32 mg of $C_{11}H_{13}NO_4$.

STORAGE

Store protected from light. If the substance is sterile, store in a sterile, airtight, tamper-proof container .

IMPURITIES

A. tyrosine,



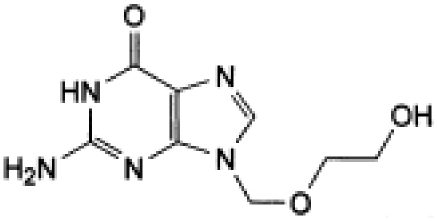
B. (2*S*)-2-(acetylamino)-3-[4-(acetoxy)phenyl]propanoic acid (diacetyltyrosine).

Ph Eur

Aciclovir

General Notices

(Ph Eur monograph 0968)



$C_8H_{11}N_5O_3$ 225.2 *59277-89-3*

Action and use

Purine nucleoside analogue; antiviral (herpesviruses).

Preparations

Aciclovir Cream

Aciclovir Eye Ointment

Aciclovir Intravenous Infusion

Aciclovir Oral Suspension

Aciclovir Tablets

Dispersible Aciclovir Tablets

Ph Eur

DEFINITION

Aciclovir contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of 2-amino-9-[(2-hydroxyethoxy)methyl]-1,9-dihydro-6*H*-purin-6-one, calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white, crystalline powder, slightly soluble in water, freely soluble in dimethyl sulphoxide, very slightly soluble in ethanol (96 per cent). It dissolves in dilute solutions of mineral acids and alkali hydroxides.

IDENTIFICATION

Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *aciclovir CRS*.

TESTS

Appearance of solution

Dissolve 0.25 g in *0.1 M sodium hydroxide* and dilute to 25 ml with the same solvent. The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7 *(2.2.2, Method II)*.

Related substances

A. Examine by thin-layer chromatography *(2.2.27)*, using *silica gel* GF_{254} *R* as the coating substance.

Prepare the solutions immediately before use.

Test solution Dissolve 0.1 g of the substance to be examined in *dimethyl sulphoxide R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 5 mg of *aciclovir impurity A CRS* in *dimethyl sulphoxide R* and dilute to 10 ml with the same solvent. Dilute 1 ml of the solution to 10 ml with *dimethyl sulphoxide R*.

Apply to the plate 10 µl of each solution. Keep the spots compact by drying in a current of warm air. Allow the plate to cool and develop over a path of 10 cm with a mixture of 2 volumes of *concentrated ammonia R*, 20 volumes of *methanol R* and 80 volumes of *methylene chloride R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. In the chromatogram obtained with the test solution, any spot with an R_F value greater than that of the principal spot is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

B. Examine by liquid chromatography *(2.2.29)*.

Test solution Dissolve 50.0 mg of the substance to be examined in 10 ml of a mixture of 20 volumes of *glacial acetic acid R* and 80 volumes of *water R* and dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 200.0 ml with the mobile phase.

Reference solution (b) Dissolve 5 mg of *aciclovir CRS* and 5 mg of *aciclovir impurity A CRS* in a mixture of 20 volumes of *glacial acetic acid R* and 80 volumes of *water R* and dilute to 25.0 ml with the same mixture of solvents. Dilute 1.0 ml of the solution to 10.0 ml with the mobile phase.

Reference solution (c) Dissolve 7 mg of *guanine R* in *0.1 M sodium hydroxide* and dilute to 100.0 ml with the same solution. Dilute 1.0 ml to 20.0 ml with the mobile phase.

The chromatographic procedure may be carried out using:

— a stainless steel column 0.10 m long and 4.6 mm in internal diameter packed with *octadecylsilyl silica gel for chromatography R* (3 µm),

— as mobile phase at a flow rate of 2 ml/min a mixture prepared as follows: dissolve 6.0 g of *sodium dihydrogen phosphate R* and 1.0 g of *sodium decanesulphonate R* in 900 ml of *water R* and adjust to pH 3 ± 0.1 with *phosphoric acid R*; add 40 ml of *acetonitrile R* and dilute to 1 litre with *water R*,

— as detector a spectrophotometer set at 254 nm,

— a loop injector.

Inject 20 µl of each solution. Record the chromatograms for 7 times the retention time of aciclovir. The test is not valid unless in the chromatogram obtained with reference solution (b), the number of theoretical plates calculated for the peak due to impurity A is at least 1500 and its mass distribution ratio is at least 7 (V_0 can be calculated using *dimethyl sulphoxide R*). In the chromatogram obtained with the test solution: the area of any peak corresponding to guanine is not greater than that of the peak in the chromatogram obtained with reference solution (c) (0.7 per cent); the area of any peak apart from the principal peak and any peak corresponding to guanine is not greater than the area of the peak in the chromatogram obtained with reference solution (a) (0.5 per cent) and the sum of the areas of such peaks is not greater than twice the area of the peak in the chromatogram obtained with reference solution (a) (1 per cent). Disregard any peak with an area less than 0.05 times that of the principal peak in the chromatogram obtained with reference solution (a).

Water *(2.5.12)*

Not more than 6.0 per cent, determined on 0.500 g.

Sulphated ash *(2.4.14)*

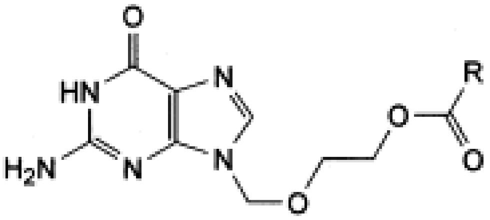
Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 60 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*. Carry out a blank titration.

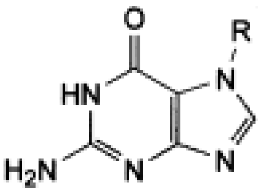
1 ml of *0.1 M perchloric acid* is equivalent to 22.52 mg of $C_8H_{11}N_5O_3$.

IMPURITIES



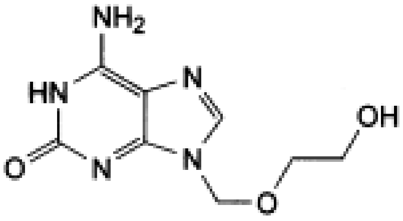
A. R = CH_3: 2-[(2-amino-6-oxo-1,6-dihydro-9*H*-purin-9-yl)methoxy]ethyl acetate,

D. R = C_6H_5: 2-[(2-amino-6-oxo-1,6-dihydro-9*H*-purin-9-yl)methoxy]ethyl benzoate,

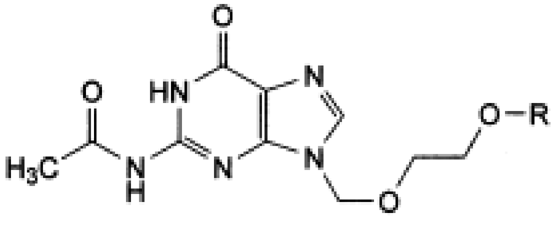


B. R = H: 2-amino-1,7-dihydro-6*H*-purin-6-one (guanine),

C. R = CH_2-O-CH_2-CH_2-OH: 2-amino-7-[(2-hydroxyethoxy)methyl]-1,7-dihydro-6*H*-purin-6-one,



E. 6-amino-9-[(2-hydroxyethoxy)methyl]-1,9-dihydro-2*H*-purin-2-one,



F. R = H: *N*-[9-[(2-hydroxyethoxy)methyl]-6-oxo-6,9-dihydro-1*H*-purin-2-yl]acetamide,

G. R = CO-CH_3: 2-[[2-(acetylamino)-6-oxo-1,6-dihydro-9*H*-purin-9-yl]methoxy]ethyl acetate,

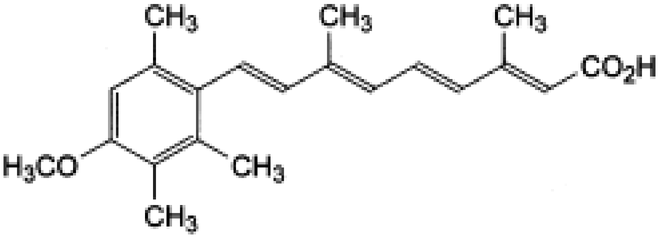
H. R = CO-C_6H_5: 2-[[2-(acetylamino)-6-oxo-1,6-dihydro-9*H*-purin-9-yl]methoxy]ethyl benzoate.

Ph Eur

Acitretin

General Notices

(Ph Eur monograph 1385)



$C_{21}H_{26}O_3$ 326.4 *55079-83-9*

Action and use

Vitamin A analogue (retinoid); treatment of psoriasis; ichthyosis; Darier's disease.

Ph Eur

DEFINITION

(all-*E*)-9-(4-Methoxy-2,3,6-trimethylphenyl)-3,7-dimethylnona-2,4,6,8-tetraenoic acid.

Content

98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

Yellow or greenish-yellow, crystalline powder.

Solubility

Practically insoluble in water, sparingly soluble in tetrahydrofuran, slightly soluble in acetone and in ethanol (96 per cent), very slightly soluble in cyclohexane.

It is sensitive to air, heat and light, especially in solution.

Carry out all operations as rapidly as possible and avoid exposure to actinic light; use freshly prepared solutions.

IDENTIFICATION

First identification *B.*

Second identification *A, C.*

A. Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution Dissolve 15.0 mg in 10 ml of *tetrahydrofuran R* and dilute immediately to 100.0 ml with the same solvent. Dilute 2.5 ml of this solution to 100.0 ml with *tetrahydrofuran R*.

Spectral range 300-400 nm.

Absorption maximum At 358 nm.

Specific absorbance at the absorption maximum 1350 to 1475.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *acitretin CRS.*

C. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with test solution (b) is similar in retention time to the principal peak in the chromatogram obtained with reference solution (a).

TESTS

Related substances

Liquid chromatography *(2.2.29)*. Maintain the sampler at 4 °C.

Test solution (a) Dissolve 25.0 mg of the substance to be examined in 5 ml of *tetrahydrofuran R* and dilute immediately to 100.0 ml with *anhydrous ethanol R*.

Test solution (b) Dilute 10.0 ml of test solution (a) to 25.0 ml with *anhydrous ethanol R*.

Reference solution (a) Dissolve 25.0 mg of *acitretin CRS* in 5 ml of *tetrahydrofuran R* and dilute immediately to 100.0 ml with *anhydrous ethanol R*. Dilute 10.0 ml of this solution to 25.0 ml with *anhydrous ethanol R*.

Reference solution (b) Dissolve 1.0 mg of *tretinoin CRS* in *anhydrous ethanol R* and dilute to 20.0 ml with the same solvent. Mix 5.0 ml of this solution with 2.5 ml of reference solution (a) and dilute to 100.0 ml with *anhydrous ethanol R*.

Reference solution (c) Dilute 2.5 ml of reference solution (a) to 50.0 ml with *anhydrous ethanol R*. Dilute 3.0 ml of this solution to 20.0 ml with *anhydrous ethanol R*.

Column:

— *size* l = 0.25 m, Ø = 4 mm;

— *stationary phase*: microparticulate *octadecylsilyl silica gel for chromatography R* (5 µm) with a specific surface area of 200 m^2/g, a pore size of 15 nm and a carbon loading of 20 per cent;

— *temperature*: 25 °C.

Mobile phase A 0.3 per cent *V/V* solution of *glacial acetic acid R* in a mixture of 8 volumes of *water R* and 92 volumes of *anhydrous ethanol R*.

Flow rate 0.6 ml/min.

Detection Spectrophotometer at 360 nm.

Injection 10 µl of test solution (a) and reference solutions (b) and (c).

Run time 2.5 times the retention time of acitretin.

Retention time Impurity A = about 4.8 min; tretinoin = about 5.2 min; acitretin = about 6.2 min; impurity B = about 10.2 min.

System suitability Reference solution (b):

— *resolution*: minimum 2.0 between the peaks due to acitretin and tretinoin; if necessary, adjust the concentration of *anhydrous ethanol R*.

Limits:

— *impurities A, B*: for each impurity, not more than the area of the peak due to acitretin in the chromatogram obtained with reference solution (c) (0.3 per cent);

— *total*: not more than the area of the peak due to acitretin in the chromatogram obtained with reference solution (b) (1.0 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (c).

Palladium

Maximum 10.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Introduce 2.0 g into a quartz beaker and add 3 ml of *magnesium nitrate solution R*. Heat in a muffle furnace to 350 °C at a rate of 40 °C/min to incinerate the content. Ignite at about 450 °C for 8 h and then at 550 ± 50 °C for a further hour. Dissolve the residue in a mixture of 0.75 ml of *hydrochloric acid R* and 0.25 ml of *nitric acid R*, warming gently. Cool, then transfer the solution into a volumetric flask containing *water R* and dilute to 50.0 ml with the same solvent.

Reference solution Dissolve 0.163 g of *heavy magnesium oxide R* in a mixture of 0.5 ml of *nitric acid R*, 1.5 ml of *hydrochloric acid R* and 50 ml of *water R*, add 2.0 ml of *palladium standard solution (20 ppm Pd R*) and dilute to 100.0 ml with *water R*.

Source Palladium hollow-cathode lamp.

Wavelength 247.6 nm.

Atomisation device Air-acetylene flame.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 100 °C for 4 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Carry out the assay protected from light, use amber volumetric flasks and prepare the solutions immediately before use.

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Injection Test solution (b) and reference solution (a).

System suitability:

— *repeatability*: maximum relative standard deviation of 1.0 per cent after 6 injections of reference solution (a); if necessary, adjust the integration parameters.

Calculate the percentage content of $C_{21}H_{26}O_3$ from the declared content of *acitretin CRS*.

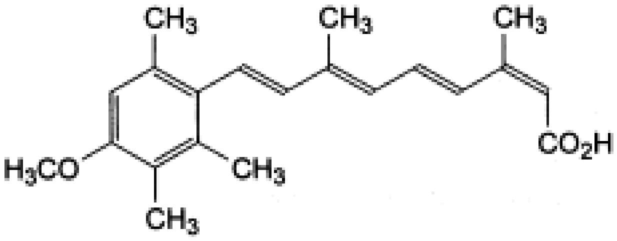
STORAGE

In an airtight container, protected from light, at a temperature of 2 °C to 8 °C.

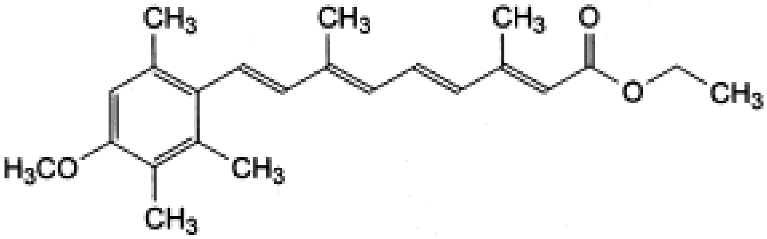
It is recommended that the contents of an opened container be used as soon as possible and any unused part be protected by an atmosphere of inert gas.

IMPURITIES

Specified impurities *A, B.*



A. (2*Z*,4*E*,6*E*,8*E*)-9-(4-methoxy-2,3,6-trimethylphenyl)-3,7-dimethylnona-2,4,6,8-tetraenoic acid,



B. ethyl (all-*E*)-9-(4-methoxy-2,3,6-trimethylphenyl)-3,7-dimethylnona-2,4,6,8-tetraenoate.

Ph Eur

Activated Attapulgite

General Notices

Action and use

Antidiarrhoeal.

DEFINITION

Activated Attapulgite is a purified native hydrated magnesium aluminium silicate essentially consisting of the clay mineral palygorskite that has been carefully heated to increase its adsorptive capacity.

CHARACTERISTICS

A light, cream or buff, very fine powder, free or almost free from gritty particles.

IDENTIFICATION

Complies with tests A to D for Identification stated under Attapulgite.

TESTS

Acidity or alkalinity; Arsenic; Heavy metals; Acid-soluble matter; Water-soluble matter

Complies with the requirements stated under Attapulgite.

Adsorptive capacity

In a stoppered bottle shake 1.0 g, in *very fine powder*, with 50 ml of a 0.12% w/v solution of *methylene blue* for 5 minutes, allow to settle and centrifuge. The colour of the clear supernatant solution is not more intense than that of a 0.0012% w/v solution of *methylene blue*.

Loss on drying

When dried to constant weight at 105°, loses not more than 4.0% of its weight. Use 1 g.

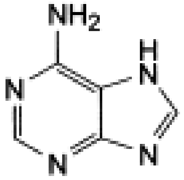
Loss on ignition

When ignited at 600°, loses not more than 9.0% of its weight. Use 1 g.

Adenine

General Notices

(Ph Eur monograph 0800)



$C_5H_5N_5$ 135.1 *73-24-5*

Action and use

Constituent of anticoagulant and preservative solutions for blood.

Ph Eur

DEFINITION

Adenine contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of 7*H*-purin-6-amine, calculated with reference to the dried substance.

CHARACTERS

A white or almost white powder, very slightly soluble in water and in alcohol. It dissolves in dilute mineral acids and in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification A.

Second identification B, C.

A. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *adenine CRS*. Examine the substances prepared as discs.

B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. To 1 g add 3.5 ml of *propionic anhydride R* and boil for 15 min with stirring. Cool. To the resulting crystalline mass add 15 ml of *light petroleum R* and heat to boiling with vigorous stirring. Cool and filter. Wash the precipitate with two quantities, each of 5 ml, of *light petroleum R*. Dissolve the precipitate in 10 ml of *water R* and boil for 1 min. Filter the mixture at 30 °C to 40 °C. Allow to cool. Filter, and dry the precipitate at 100 °C to 105 °C for 1 h. The melting point *(2.2.14)* of the precipitate is 237 °C to 241 °C.

TESTS

Solution S

Suspend 2.5 g in 50 ml of *distilled water R* and boil for 3 min. Cool and dilute to 50 ml with *distilled water R*. Filter. Use the filtrate as solution S.

Appearance of solution

Dissolve 0.5 g in *dilute hydrochloric acid R* and dilute to 50 ml with the same acid. The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Acidity or alkalinity

To 10 ml of solution S add 0.1 ml of *bromothymol blue solution R1* and 0.2 ml of *0.01 M sodium hydroxide*. The solution is blue. Add 0.4 ml of *0.01 M hydrochloric acid*. The solution is yellow.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel* GF_{254} *R* as the coating substance.

Test solution (a) Dissolve 0.10 g of the substance to be examined in *dilute acetic acid R*, with heating if necessary, and dilute to 10 ml with the same acid.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with *dilute acetic acid R*.

Reference solution (a) Dissolve 10 mg of *adenine CRS* in *dilute acetic acid R*, with heating if necessary, and dilute to 10 ml with the same acid.

Reference solution (b) Dilute 1 ml of test solution (b) to 20 ml with *dilute acetic acid R*.

Reference solution (c) Dissolve 10 mg of *adenine CRS* and 10 mg of *adenosine R* in *dilute acetic acid R*, with heating if necessary, and dilute to 10 ml with the same acid.

Apply to the plate 5 µl of each solution. Develop over a path of 12 cm using a mixture of 20 volumes of *concentrated ammonia R*, 40 volumes of *ethyl acetate R* and 40 volumes of *propanol R*. Dry the plate in a current of warm air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated spots.

Chlorides *(2.4.4)*

To 10 ml of solution S add 1 ml of *concentrated ammonia R* and 3 ml of *silver nitrate solution R2*. Filter. Wash the precipitate with a little *water R* and dilute the filtrate to 15 ml with *water R*. The solution complies with the limit test for chlorides (100 ppm). When carrying out the test, add 2 ml of *dilute nitric acid R* instead of 1 ml of *dilute nitric acid R*.

Sulphates *(2.4.13)*

Dilute 10 ml of solution S to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates (300 ppm).

Ammonium

Prepare a cell consisting of two watch-glasses 60 mm in diameter placed edge to edge. To the inner wall of the upper watch-glass stick a piece of *red litmus paper R* 5 mm square and wetted with a few drops of *water R*. Finely powder the substance to be examined, place 0.5 g in the lower watch-glass and suspend in 0.5 ml of *water R*. To the suspension add 0.30 g of *heavy magnesium oxide R*. Briefly triturate with a glass rod. Immediately close the cell by putting the two watch-glasses together. Heat at 40 °C for 15 min. The litmus paper is not more intensely blue coloured than a standard prepared at the same time and in the same manner using 0.05 ml of *ammonium standard solution (100 ppm* NH_4*) R*, 0.5 ml of *water R* and 0.30 g of *heavy magnesium oxide R* (10 ppm).

Heavy metals ***(2.4.8)***

1.0 g complies with limit test C for heavy metals (20 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying ***(2.2.32)***

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in a mixture of 20 ml of *acetic anhydride R* and 30 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

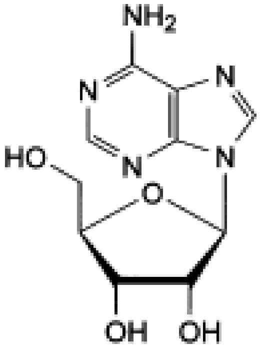
1 ml of *0.1 M perchloric acid* is equivalent to 13.51 mg of $C_5H_5N_5$.

Ph Eur

Adenosine

General Notices

(Ph Eur monograph 1486)



$C_{10}H_{13}N_5O_4$ 267.2 *58-61-7*

Action and use

Antiarrhythmic.

DEFINITION

9-β-D-Ribofuranosyl-9*H*-purin-6-amine.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Slightly soluble in water, soluble in hot water, practically insoluble in ethanol (96 per cent) and in methylene chloride. It dissolves in dilute mineral acids.

mp: about 234 °C.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *adenosine CRS.*

TESTS

Solution S

Suspend 5.0 g in 100 ml of *distilled water R* and heat to boiling. Allow to cool, filter with the aid of vacuum and dilute to 100 ml with *distilled water R*.

Appearance of solution

Solution S is colourless *(2.2.2, Method II)*.

Acidity or alkalinity

To 10 ml of solution S, add *0.1 ml of bromocresol purple solution R* and 0.1 ml of *0.01 M hydrochloric acid*. The solution is yellow. Add 0.4 ml of *0.01 M sodium hydroxide*. The solution is violet-blue.

Specific optical rotation *(2.2.7)*

- 45 to - 49 (dried substance).

Dissolve 1.25 g in *1 M hydrochloric acid* and dilute to 50.0 ml with the same acid. Examine within 10 min of preparing the solution.

Related substances

A. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 0.20 g of the substance to be examined in *dilute acetic acid R* with slight heating and dilute to 5 ml with the same acid.

Reference solution (a) Dilute 1 ml of the test solution to 100 ml with *water R*.

Reference solution (b) Dissolve 10 mg of *adenosine CRS* and 10 mg of *adenine CRS* in *dilute acetic acid R*, with heating if necessary, and dilute to 10 ml with the same acid.

Plate *TLC silica gel* F_{254} *plate R.*

Mobile phase *water R, concentrated ammonia R, propanol R* (10:30:60 *V/V/V*).

Application 5 µl.

Development Over a path of 12 cm.

Drying In a current of warm air.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Detection A Examine in ultraviolet light at 254 nm.

Results A Any spot, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (1 per cent).

Detection B Spray with a 5 g/l solution of *potassium permanganate R* in *1 M sodium hydroxide*. Allow the plate to dry in a current of warm air and examine in daylight.

Results B Any spot, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (1 per cent).

B. Liquid chromatography *(2.2.29)*.

Solvent mixture Dissolve 6.8 g of *potassium hydrogen sulphate R* and 3.4 g of *tetrabutylammonium hydrogen sulphate R* in *water R*, adjust to pH 6.5 with a 60 g/l solution of *potassium hydroxide R* and dilute to 1000 ml with the same solvent. Use freshly prepared solvent mixture.

Test solution Dissolve 20 mg of the substance to be examined in the mobile phase and dilute to 20 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve 5 mg of *adenine R* (impurity A) and 5 mg of *inosine R* (impurity G) in the mobile phase and dilute to 50 ml with the mobile phase. Dilute 4 ml of this solution to 100 ml with the mobile phase.

Column:

— *size:* *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *water R*, solvent mixture (40:60 *V/V*).

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 20 µl.

Run time 1.5 times the retention time of adenosine.

Relative retention With reference to adenosine (retention time = about 13 min): impurity A = about 0.3; impurity G = about 0.4.

System suitability Reference solution (b):

— *resolution*: minimum 1.5 between the peaks due to impurities A and G.

Limits:

— *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.6; impurity G = 1.4;

— *impurity A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *impurity G*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Chlorides *(2.4.4)*

Maximum 100 ppm.

Dilute 10 ml of solution S to 15 ml with *water R*.

Sulphates *(2.4.13)*

Maximum 200 ppm, determined on solution S.

Ammonium *(2.4.1, Method B)*

Maximum 10 ppm, determined on 0.5 g.

Prepare the standard using 5 ml of *ammonium standard solution (1 ppm NH_4) R*.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g, warming slightly if necessary, in a mixture of 20 ml of *acetic anhydride R* and 30 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 26.72 mg of $C_{10}H_{13}N_5O_4$.

IMPURITIES

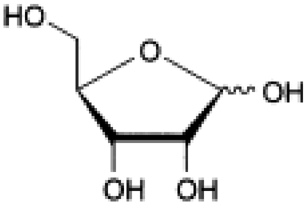
Specified impurities *A, B, C, D, E, G.*

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *F, H.*

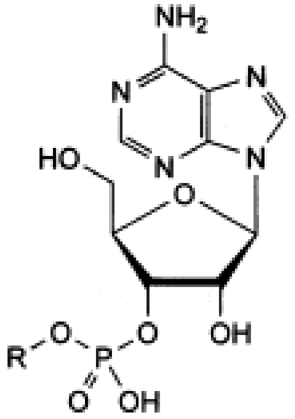
By thin-layer chromatography: B, C, D, E.

By liquid chromatography: A, F, G, H.

A. adenine,



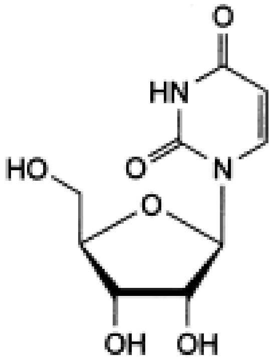
B. D-ribose,



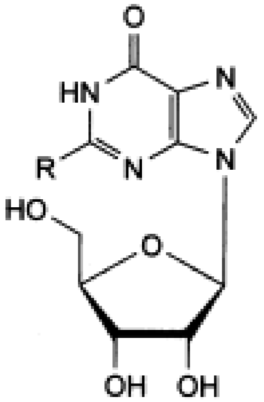
C. R = H: adenosine 3′-(dihydrogen phosphate),

D. R = PO_3H_2: adenosine 3′-(trihydrogen diphosphate),

E. R = PO_2H-O-PO_3H_2: adenosine 3′-(tetrahydrogen triphosphate),



F. 1-β-D-ribofuranosylpyrimidine-2,4(1*H*,3*H*)-dione (uridine),



G. R = H: 9-β-D-ribofuranosyl-1,9-dihydro-6*H*-purin-6-one (inosine),

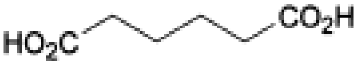
H. R = NH_2: 2-amino-9-β-D-ribofuranosyl-1,9-dihydro-6*H*-purin-6-one (guanosine).

Ph Eur

Adipic Acid

General Notices

(Ph Eur monograph 1586)



$C_6H_{10}O_4$ 146.1 *124-04-9*

Action and use

Excipient.

Ph Eur

DEFINITION

Hexanedioic acid.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Sparingly soluble in water, soluble in boiling water, freely soluble in alcohol and in methanol, soluble in acetone.

IDENTIFICATION

A. Melting point *(2.2.14)*: 151 °C to 154 °C.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison adipic acid CRS.

TESTS

Solution S

Dissolve 5.0 g with heating in *distilled water R* and dilute to 50 ml with the same solvent. Allow to cool and to crystallise. Filter through a sintered-glass filter (40) *(2.1.2)*. Wash the filter with *distilled water R*. Collect the filtrate and the washings until a volume of 50 ml is obtained.

Appearance of solution

The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Dissolve 1.0 g in *methanol R* and dilute to 20 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 0.20 g of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dissolve 20 mg of *glutaric acid R* in 1.0 ml of the test solution and dilute to 10.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase, dilute 1.0 ml of the solution to 10.0 ml with the mobile phase.

Column:

— *size:* l = 0.125 m, Ø = 4.0 mm,

— *stationary phase*: *spherical octadecylsilyl silica gel for chromatography R* (5 µm) with a specific surface area of 350 m^2/g and a pore size of 10 nm,

— *temperature*: 30 °C.

Mobile phase Mix 3 volumes of *acetonitrile R* and 97 volumes of a 24.5 g/l solution of *dilute phosphoric acid R*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 209 nm.

Injection 20 µl.

Run time 3 times the retention time of adipic acid.

System suitability Reference solution (a):

— *resolution*: minimum 9.0 between the peaks due to glutaric acid and adipic acid.

Limits:

— *any impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),

— *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Chlorides *(2.4.4)*

Maximum 200 ppm.

2.5 ml of solution S diluted to 15 ml with *water R* complies with the limit test for chlorides.

Nitrates

Maximum 30 ppm.

To 1 ml of solution S add 2 ml of *concentrated ammonia R*, 0.5 ml of a 10 g/l solution of *manganese sulphate R*, 1 ml of a 10 g/l solution of *sulfanilamide R* and dilute to 20 ml with *water R*. Add 0.10 g of *zinc powder R* and cool in iced water for 30 min; shake from time to time. Filter and cool 10 ml of the filtrate in iced water. Add 2.5 ml of *hydrochloric acid R1* and 1 ml of a 10 g/l solution of *naphthylethylenediamine dihydrochloride R*. Allow to stand at room temperature. After 15 min the mixture is not more intensely coloured than a standard prepared at the same time and in the same manner, using 1.5 ml of *nitrate standard solution (2 ppm* NO_3*) R* instead of 1 ml of solution S. The test is invalid if a blank solution prepared at the same time and in the same manner, using 1 ml of *water R* instead of 1 ml of solution S, is more intensely coloured than a 2 mg/l solution of *potassium permanganate R*.

Sulphates ***(2.4.13)***

Maximum 500 ppm.

3 ml of solution S diluted to 15 ml with *distilled water R* complies with the limit test for sulphates.

Iron ***(2.4.9)***

Maximum 10 ppm.

10 ml of solution S complies with the limit test for iron.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

12 ml of solution S complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Loss on drying ***(2.2.32)***

Maximum 0.2 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent.

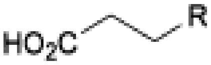
Melt 1.0 g completely over a gas burner, then ignite the melted substance with the burner. After ignition, lower or remove the flame in order to prevent the substance from boiling and keep it burning until completely carbonised. Carry out the test for sulphated ash using the residue.

ASSAY

Dissolve 60.0 mg in 50 ml of *water R*. Add 0.2 ml of *phenolphthalein solution R* and titrate with *0.1 M sodium hydroxide*.

1 ml of *0.1 M sodium hydroxide* is equivalent to 7.31 mg of $C_6H_{10}O_4$.

IMPURITIES



A. R = CH_2-CO_2H: pentanedioic acid (glutaric acid),

B. R = CO_2H: butanedioic acid (succinic acid),

C. R = $[CH_2]_3$-CO_2H: heptanedioic acid (pimelic acid).

Ph Eur

DEFINITION

(1*R*)-1-(3,4-Dihydroxyphenyl)-2-(methylamino)ethanol hydrogen (2*R*,3*R*)-2,3-dihydroxybutanedioate.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or greyish-white, crystalline powder.

Solubility

Freely soluble in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Dissolve 5 g in 50 ml of a 5 g/l solution of *sodium metabisulphite R* and make alkaline by addition of *ammonia R*. Keep the mixture at room temperature for at least 15 min and filter. Reserve the filtrate for identification test C. Wash the precipitate with 3 quantities, each of 10 ml, of *methanol R*. Dry at 80 °C. The specific optical rotation *(2.2.7)* of the residue (adrenaline base) is - 50 to - 53.5, determined using a 20.0 g/l solution in *0.5 M hydrochloric acid* .

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs of adrenaline base prepared as described under identification test A.

Comparison Use adrenaline base prepared as described under identification test A from 50 mg of *adrenaline tartrate CRS* dissolved in 5 ml of a 5 g/l solution of *sodium metabisulphite R*. Keep the mixture at room temperature for at least 30 min. Filter through a sintered-glass filter *(2.1.2)*.

C. 0.2 ml of the filtrate obtained in identification test A gives reaction (b) of tartrates *(2.3.1)*.

TESTS

Appearance of solution

The solution is not more opalescent than reference suspension II *(2.2.1)* and not more intensely coloured than reference solution BY_5 *(2.2.2, Method II)*.

Dissolve 0.5 g in *water R* and dilute to 10 ml with the same solvent. Examine the solution immediately.

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the solutions protected from light.*

Solvent mixture A Dissolve 5.0 g of *potassium dihydrogen phosphate R* and then 2.6 g of *sodium octanesulphonate R* in *water for chromatography R*, and dilute to 1000 ml with the same solvent (it is usually necessary to stir for at least 30 min to achieve complete dissolution) . Adjust to pH 2.8 with *phosphoric acid R*.

Solvent mixture B *acetonitrile R1*, solvent mixture A (130:870 *V/V*).

Test solution Dissolve 75 mg of the substance to be examined in 5 ml of *0.1 M hydrochloric acid* and dilute to 50 ml with solvent mixture B.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with solvent mixture B. Dilute 1.0 ml of this solution to 10.0 ml with solvent mixture B.

Reference solution (b) Dissolve 1.5 mg of *noradrenaline tartrate CRS* (impurity B) and 1.5 mg of *adrenalone hydrochloride R* (impurity C) in solvent mixture B, add 1.0 ml of the test solution and dilute to 100.0 ml with solvent mixture B.

Reference solution (c) Dissolve the contents of a vial of *adrenaline impurity mixture CRS* (impurities D and E) in 0.1 ml of *0.1 M hydrochloric acid* and 0.9 ml of solvent mixture B.

Reference solution (d) Dissolve 7.5 mg of *adrenaline tartrate with impurity A CRS* in 0.5 ml of *0.1 M hydrochloric acid* and dilute to 5.0 ml with solvent mixture B.

Blank solution *0.1 M hydrochloric acid* , solvent mixture B (1:9 *V/V*).

Column:

— *size: l* = 0.10 m, Ø = 4.6 mm;

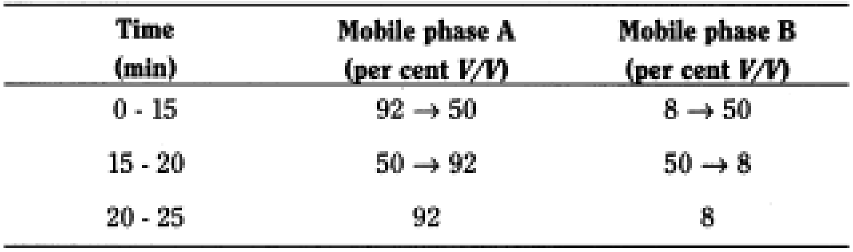
— *stationary phase: end-capped octadecylsilyl silica gel for chromatography R* (3 µm);

— *temperature*: 50 °C.

Mobile phase:

— *mobile phase A*: *acetonitrile R1*, solvent mixture A (5:95 *V/V*);

— *mobile phase B*: *acetonitrile R1*, solvent mixture A (45:55 *V/V*);



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 15	92 → 50	8 → 50
15 - 20	50 → 92	50 → 8
20 - 25	92	8

Flow rate 2.0 ml/min.

Detection Spectrophotometer at 210 nm.

Injection 20 µl.

Identification of impurities Use the chromatogram supplied with *adrenaline impurity mixture CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities D and E; use the chromatogram supplied with *adrenaline tartrate with impurity A CRS* and the chromatogram obtained with reference solution (d) to identify the peak due to impurity A.

Relative retention With reference to adrenaline

(retention time = about 4 min): impurity B = about 0.8; impurity C = about 1.3; impurity A = about 3.2; impurity D = about 3.3; impurity E = about 3.7.

System suitability Reference solution (b):

— *resolution*: minimum 3.0 between the peaks due to impurity B and adrenaline.

Limits:

— *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity D = 0.7; impurity E = 0.6;

— *impurity A*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *impurities B, C*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *impurities D, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.6 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* for 18 h.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 50 ml of *anhydrous acetic acid R*, heating gently if necessary. Titrate with *0.1 M perchloric acid* until a bluish-green colour is obtained, using 0.1 ml of *crystal violet solution R* as indicator.

1 ml of *0.1 M perchloric acid* is equivalent to 33.33 mg of $C_{13}H_{19}NO_9$.

STORAGE

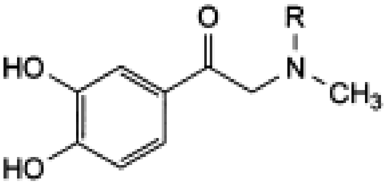
In an airtight container, or preferably in a sealed tube under vacuum or under an inert gas, protected from light.

IMPURITIES

Specified impurities A, B, C, D, E.

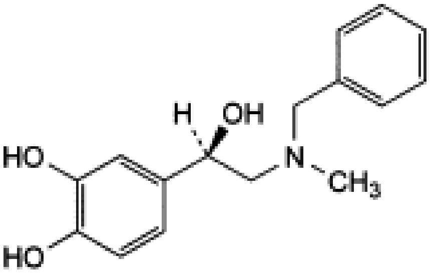
A. unknown structure,

B. noradrenaline,



C. R = H: 1-(3,4-dihydroxyphenyl)-2-(methylamino)ethanone (adrenalone),

E. R = CH_2-C_6H_5: 2-(benzylmethylamino)-1-(3,4-dihydroxyphenyl)ethanone,



D. (1*R*)-2-(benzylmethylamino)-1-(3,4-dihydroxyphenyl)ethanol.

Ph Eur

Agar

General Notices

(Ph Eur monograph 0310)

Action and use

Excipient.

Ph Eur

DEFINITION

Polysaccharides from various species of Rhodophyceae mainly belonging to the genus *Gelidium*. It is prepared by treating the algae with boiling water; the extract is filtered whilst hot, concentrated and dried.

CHARACTERS

Appearance

Powder or crumpled strips 2-5 mm wide or sometimes flakes, colourless or pale yellow, translucent, somewhat tough and difficult to break, becoming more brittle on drying.

Mucilaginous taste.

IDENTIFICATION

A. Examine under a microscope. When mounted in *0.005 M iodine*, the strips or flakes are partly stained brownish-violet. Magnified 100 times, they show the following diagnostic characters: numerous minute, colourless, ovoid or rounded grains on an amorphous background; occasional brown, round or ovoid spores with a reticulated surface, measuring up to 60 µm, may be present. Reduce to a powder, if necessary. The powder is yellowish-white. Examine under a microscope using *0.005 M iodine*. The powder presents angular fragments with numerous grains similar to those seen in the strips and flakes; some of the fragments are stained brownish-violet.

B. Dissolve 0.1 g with heating in 50 ml of *water R*. Cool. To 1 ml of the mucilage carefully add 3 ml of *water R* so as to form 2 separate layers. Add 0.1 ml of *0.05 M iodine*. A dark brownish-violet colour appears at the interface. Mix. The liquid becomes pale yellow.

C. Heat 5 ml of the mucilage prepared for identification test B on a water-bath with 0.5 ml of *hydrochloric acid R* for 30 min. Add 1 ml of *barium chloride solution R1*. A white turbidity develops within 30 min.

D. Heat 0.5 g with 50 ml of *water R* on a water-bath until dissolved. Only a few fragments remain insoluble. During cooling, the solution gels between 35 °C and 30 °C. Heat the gel thus obtained on a water-bath; it does not liquefy below 80 °C.

TESTS

Swelling index *(2.8.4)*

Minimum 10 and within 10 per cent of the value stated on the label, determined on the powdered drug (355) *(2.9.12)*.

Insoluble matter

Maximum 1.0 per cent.

To 5.00 g of the powdered drug (355) *(2.9.12)* add 100 ml of *water R* and 14 ml of dilute *hydrochloric acid R*. Boil gently for 15 min with frequent stirring. Filter the hot liquid through a tared, sintered-glass filter (160) *(2.1.2)*, rinse the filter with hot *water R* and dry at 100-105 °C. The residue weighs a maximum of 50 mg.

Gelatin

To 1.00 g add 100 ml of *water R* and heat on a water-bath until dissolved. Allow to cool to 50 °C. To 5 ml of this solution add 5 ml of *picric acid solution R*. No turbidity appears within 10 min.

Loss on drying *(2.2.32)*

Maximum 20.0 per cent, determined on 1.000 g of the powdered drug (355) *(2.9.12)* by drying in an oven at 105 °C.

Total ash *(2.4.16)*

Maximum 5.0 per cent.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^3 micro-organisms per gram, determined by plate-count. It complies with the tests for *Escherichia coli* and *Salmonella (2.6.13)*.

LABELLING

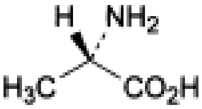
The label states the swelling index.

Ph Eur

Alanine

General Notices

(Ph Eur monograph 0752)



$C_3H_7NO_2$ 89.1 *56-41-7*

Action and use

Amino acid.

Ph Eur

DEFINITION

Alanine contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (*S*)-2-aminopropanoic acid, calculated with reference to the dried substance.

CHARACTERS

White or almost white, crystalline powder or colourless crystals, freely soluble in water, very slightly soluble in alcohol.

IDENTIFICATION

First identification A, B.

Second identification A, C, D.

A. It complies with the test for specific optical rotation (see Tests).

B. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *alanine CRS*. Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for ninhydrin-positive substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve 0.5 g in a mixture of 1 ml of *water R*, 0.5 ml of a 100 g/l solution of *sodium nitrite R* and 0.25 ml of *hydrochloric acid R1*. Shake. Gas is given off. Add 2 ml of *dilute sodium hydroxide solution R*, followed by 0.25 ml of *iodinated potassium iodide solution R*. After about 30 min, a yellow precipitate with a characteristic odour is formed.

TESTS

Solution S

Dissolve 2.5 g in *distilled water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Dilute 10 ml of solution S to 20 ml with *water R*. The solution is clear *(2.2.1)* and not more intensely coloured than reference solution BY_6 *(2.2.2, Method II)*.

Specific optical rotation *(2.2.7)*

Dissolve 2.50 g in *hydrochloric acid R1* and dilute to 25.0 ml with the same acid. The specific optical rotation is + 13.5 to + 15.5, calculated with reference to the dried substance.

Ninhydrin-positive substances

Examine by thin-layer chromatography *(2.2.27)*, using a *TLC silica gel plate R*.

Test solution (a) Dissolve 0.10 g in *water R* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 50 ml with *water R*.

Reference solution (a) Dissolve 10 mg of *alanine CRS* in *water R* and dilute to 50 ml with the same solvent.

Reference solution (b) Dilute 5 ml of test solution (b) to 20 ml with *water R*.

Reference solution (c) Dissolve 10 mg of *alanine CRS* and 10 mg of *glycine CRS* in *water R* and dilute to 25 ml with the same solvent.

Apply separately to the plate 5 µl of each solution. Allow the plate to dry in air. Develop over a path of 15 cm with a mixture of 20 volumes of *glacial acetic acid R*, 20 volumes of *water R* and 60 volumes of *butanol R*. Allow the plate to dry in air. Spray with *ninhydrin solution R*. Heat the plate at 100 °C to 105 °C for 15 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated spots.

Chlorides *(2.4.4)*

Dilute 5 ml of solution S to 15 ml with *water R*. The solution complies with the limit test for chlorides (200 ppm).

Sulphates *(2.4.13)*

Dilute 10 ml of solution S to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates (300 ppm).

Ammonium *(2.4.1)*

50 mg complies with limit test B for ammonium (200 ppm). Prepare the standard using 0.1 ml of *ammonium standard solution (100 ppm* NH_4*) R*.

Iron *(2.4.9)*

In a separating funnel, dissolve 1.0 g in 10 ml of *dilute hydrochloric acid R*. Shake with three quantities, each of 10 ml, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 ml of *water R* and shake for 3 min. The aqueous layer complies with the limit test for iron (10 ppm).

Heavy metals *(2.4.8)*

Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with limit test A for heavy metals (10 ppm). Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 80.0 mg in 3 ml of *anhydrous formic acid R*. Add 30 ml of *anhydrous acetic acid R*. Using 0.1 ml of *naphtholbenzein solution R* as indicator, titrate with *0.1 M perchloric acid*, until the colour changes from brownish-yellow to green.

1 ml of *0.1 M perchloric acid* is equivalent to 8.91 mg of $C_3H_7NO_2$.

STORAGE

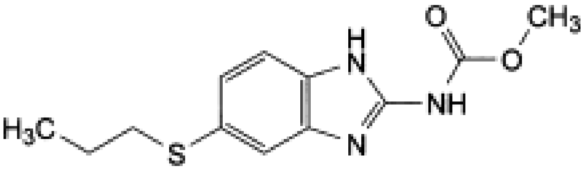
Store protected from light.

Ph Eur

Albendazole

General Notices

(Ph Eur monograph 1386)



$C_{12}H_{15}N_3O_2S$ 265.3 *54965-21-8*

Action and use

Benzimidazole antihelminthic.

Preparations

Albendazole Oral Suspension

Albendazole Oral Suspension with Minerals

Ph Eur

DEFINITION

Methyl [5-(propylsulphanyl)-1*H*-benzimidazol-2-yl]carbamate.

Content

98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or slightly yellowish powder.

Solubility

Practically insoluble in water, freely soluble in anhydrous formic acid, very slightly soluble in methylene chloride, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *albendazole CRS.*

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution BY_6 *(2.2.2, Method II)*.

Dissolve 0.10 g in a mixture of 1 volume of *anhydrous formic acid R* and 9 volumes of *methylene chloride R* and dilute to 10 ml with the same mixture of solvents.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 25.0 mg of the substance to be examined in 5 ml of *methanol R* containing 1 per cent *V/V* of *sulphuric acid R* and dilute to 50.0 ml with the mobile phase.

Reference solution (a) Dissolve 10.0 mg of the substance to be examined in 10 ml of *methanol R* containing 1 per cent *V/V* of *sulphuric acid R* and dilute to 100.0 ml with the mobile phase. Dilute 0.5 ml of this solution to 20.0 ml with the mobile phase.

Reference solution (b) Dissolve 50.0 mg of the substance to be examined and 50 mg of *oxibendazole CRS* in 5 ml of *methanol R* containing 1 per cent *V/V* of *sulphuric acid R* and dilute to 100.0 ml with the mobile phase.

Column:
— *size:* *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *spherical end-capped octadecylsilyl silica gel for chromatography R* (5 µm) with a pore size of 10 nm and a carbon loading of 19 per cent.

Mobile phase Mix 300 volumes of a 1.67 g/l solution of *ammonium dihydrogen phosphate R* and 700 volumes of *methanol R*.

Flow rate 0.7 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 20 µl.

Run time 1.5 times the retention time of albendazole.

Relative retention With reference to albendazole: impurity D = about 0.40; impurities B and C = about 0.43; impurity E = about 0.47; impurity F = about 0.57; impurity A = about 0.80.

System suitability Reference solution (b):

— *resolution*: minimum 3.0 between the peaks due to albendazole and oxibendazole.

Limits:
— *impurities A, B, C, D, E, F*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.75 per cent);

— *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.5 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Sulphated ash *(2.4.14)*

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

In order to avoid overheating during the titration, mix thoroughly throughout and stop the titration immediately after the end-point has been reached.

Dissolve 0.250 g in 3 ml of *anhydrous formic acid R* and add 40 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

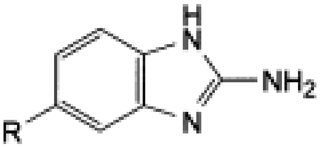
1 ml of *0.1 M perchloric acid* is equivalent to 26.53 mg of $C_{12}H_{15}N_3O_2S$.

STORAGE

Protected from light.

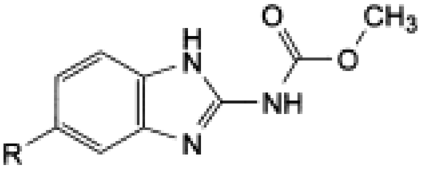
IMPURITIES

Specified impurities A, B, C, D, E, F.



A. R = $S\text{-}CH_2\text{-}CH_2\text{-}CH_3$: 5-(propylsulphanyl)-1*H*-benzimidazol-2-amine,

D. R = $SO_2\text{-}CH_2\text{-}CH_2\text{-}CH_3$: 5-(propylsulphonyl)-1*H*-benzimidazol-2-amine,



B. R = $SO\text{-}CH_2\text{-}CH_2\text{-}CH_3$: methyl [5-(propylsulphinyl)-1*H*-benzimidazol-2-yl]carbamate,

C. R = $SO_2\text{-}CH_2\text{-}CH_2\text{-}CH_3$: methyl [5-(propylsulphonyl)-1*H*-benzimidazol-2-yl]carbamate,

E. R = H: methyl (1*H*-benzimidazol-2-yl)carbamate,

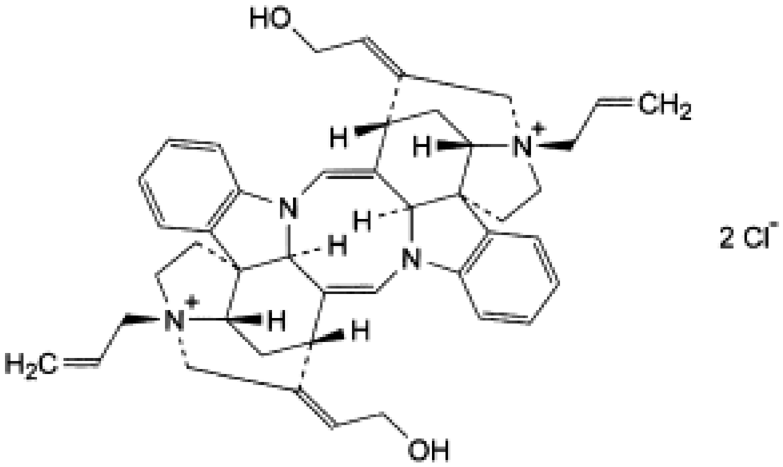
F. R = $S\text{-}CH_3$: methyl [5-(methylsulphanyl)-1*H*-benzimidazol-2-yl]carbamate.

Ph Eur

Alcuronium Chloride

General Notices

(Ph Eur monograph 1285)



$C_{44}H_{50}Cl_2N_4O_2$ 738.0 *151180-03-7*

Action and use

Non-depolarizing neuromuscular blocker.

Ph Eur

DEFINITION

(1*R*,3a*S*,10*S*,11a*S*,12*R*,14a*S*,19a*S*,20b*S*,21*S*,22a*S*,23*E*,26*E*)-23,26-bis(2-Hydroxyethylidene)-1,12-bis(prop-2-enyl)-2,3,11,11a,13,14,22,22a-octahydro-10*H*,21*H*-1,21:10,12-diethano-19a*H*,20b*H*-[1,5]diazocino[1,2,3-*lm*:5,6,7-*l′m′*]dipyrrolo[2′,3′-*d*:2′′,3′′:*d′*]dicarbazolediium dichloride (4,4′-didesmethyl-4,4′-bis(prop-2-enyl)toxiferin I dichloride).

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or slightly greyish-white, crystalline powder.

Solubility

Freely soluble in water and in methanol, soluble in ethanol (96 per cent), practically insoluble in cyclohexane.

Carry out the identification, tests and assay as rapidly as possible avoiding exposure to actinic light.

IDENTIFICATION

First identification A, C.

Second identification B, C.

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison alcuronium chloride CRS.

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 10 mg of *alcuronium chloride CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Plate TLC silica gel plate R.

Mobile phase Mix 15 volumes of a 58.4 g/l solution of *sodium chloride R*, 35 volumes of *dilute ammonia R2* and 50 volumes of *methanol R*.

Application 10 µl.

Development Over a path of 15 cm.

Drying In air for 10 min.

Detection Spray with *0.1 M ammonium and cerium nitrate*.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 0.250 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6, BY_6 or B_6 *(2.2.2, Method I)*.

Acidity or alkalinity

To 10 ml of solution S add 0.1 ml of *methyl red solution R* and 0.2 ml of *0.01 M hydrochloric acid* . The solution is red. Add 0.4 ml of *0.01 M sodium hydroxide*. The solution is yellow.

Specific optical rotation *(2.2.7)*

- 430 to - 451 (anhydrous substance), determined on solution S.

Propan-2-ol ***(2.4.24, System A)***

Maximum 1.0 per cent.

Related substances

Liquid chromatography *(2.2.29)*.

Solvent mixture Mix 100 ml of *methanol R*, 200 ml of *acetonitrile R* and 200 ml of a 6.82 g/l solution of *potassium dihydrogen phosphate R*. Dissolve 1.09 g of *sodium laurylsulphonate for chromatography R* in the mixture and adjust the apparent pH to 8.0 with a 100 g/l solution of *sodium hydroxide R*.

Test solution Dissolve 0.20 g of the substance to be examined in the solvent mixture and dilute to 100.0 ml with the solvent mixture.

Reference solution (a) Dilute 0.5 ml of the test solution to 100.0 ml with the solvent mixture.

Reference solution (b) Dilute 4.0 ml of reference solution (a) to 10.0 ml with the solvent mixture.

Reference solution (c) Dilute 1.0 ml of reference solution (a) to 10.0 ml with the solvent mixture.

Reference solution (d) To 5.0 ml of the test solution add 5.0 mg of *allylstrychnine bromide CRS*, dissolve in the solvent mixture and dilute to 100.0 ml with the solvent mixture.

Column:
- *size: l* = 0.25 m, Ø = 4 mm;
- *stationary phase: octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 200 ml of *methanol R*, 400 ml of *acetonitrile R* and 400 ml of a 6.82 g/l solution of *potassium dihydrogen phosphate R*. Dissolve 2.18 g of *sodium laurylsulphonate for chromatography R* in the mixture and adjust the apparent pH to 5.4 with a 100 g/l solution of *phosphoric acid R*.

Flow rate 1.2 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 10 µl.

Run time Twice the retention time of alcuronium.

System suitability Reference solution (d):
- *resolution*: minimum 4.0 between the peaks due to *N*-allylstrychnine and alcuronium.

Limits:
- *impurities A, B*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent) and not more than one of the peaks has an area greater than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (1 per cent);
- *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Water ***(2.5.12)***

Maximum 5.0 per cent, determined on 0.500 g.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g by stirring in 70 ml of *acetic anhydride R* for 1 min. Titrate with *0.1 M perchloric acid* until the colour changes from violet-blue to greenish-blue, using 0.1 ml of *crystal violet solution R* as indicator.

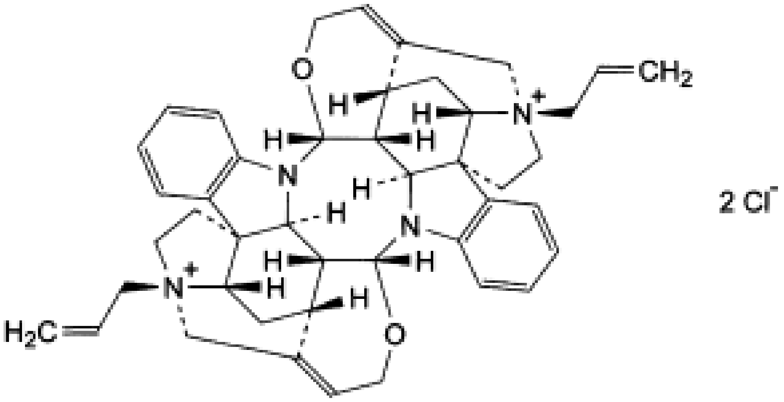
1 ml of *0.1 M perchloric acid* is equivalent to 36.9 mg of $C_{44}H_{50}Cl_2N_4O_2$.

STORAGE

In an airtight container under nitrogen, protected from light, at a temperature of 2 °C to 8 °C.

IMPURITIES

Specified impurities *A, B.*



A. (1*R*,3a*S*,9*R*,9a*R*,10*R*,11a*S*,12*R*,14a*S*,19a*S*,20*R*, 20a*R*,20b*S*,21*R*,22a*S*)-1,12-bis(prop-2-enyl)-2,3,9a,11,11a,13,14,19a,20a,21,22,22a-dodecahydro-10*H*,20b*H*-1,23:12,27-dimethano-9,10:20,21-bis(epoxyprop[2]eno)-9*H*,20*H*-[1,5]diazocino[1,2,3-*lm*:5,6,7-*l′m′*]dipyrrolo[2′,3′-*d*:2′′,3′′:*d′*]dicarbazolediium dichloride (4,4′-diallylcaracurin V dichloride),

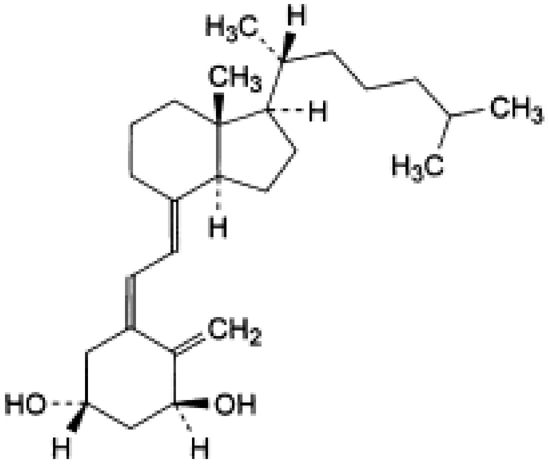
Ph Eur

Alfacalcidol

General Notices

(Ph Eur monograph 1286)



$C_{27}H_{44}O_2$ 400.6 *41294-56-8*

Action and use

Vitamin D analogue.

Ph Eur

DEFINITION

(5*Z*,7*E*)-9,10-Secocholesta-5,7,10(19)-triene-1α,3β-diol.

Content

97.0 per cent to 102.0 per cent.

CHARACTERS

Appearance

White or almost white crystals.

Solubility

Practically insoluble in water, freely soluble in ethanol (96 per cent), soluble in fatty oils.

It is sensitive to air, heat and light.

A reversible isomerisation to pre-alfacalcidol takes place in solution, depending on temperature and time. The activity is due to both compounds.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *Ph. Eur. reference spectrum of alfacalcidol.*

B. Examine the chromatograms obtained in the test for related substances.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

TESTS

Related substances

Liquid chromatography *(2.2.29)*: use the normalisation procedure. *Carry out the test as rapidly as possible, avoiding exposure to actinic light and air.*

Test solution Dissolve 1.0 mg of the substance to be examined without heating in 10.0 ml of the mobile phase.

Reference solution (a) Dissolve 1.0 mg of *alfacalcidol CRS* without heating in 10.0 ml of the mobile phase.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 100.0 ml with the mobile phase.

Reference solution (c) Heat 2 ml of reference solution (a) in a water-bath at 80 °C under a reflux condenser for 2 h and cool.

Column:
— *size:* *l* = 0.25 m, Ø = 4.0 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R2* (5 µm).

Mobile phase *ammonia R, water R, acetonitrile R* (1:200:800 *V/V/V*).

Flow rate 2.0 ml/min.

Detection Spectrophotometer at 265 nm.

Injection 100 µl of the test solution and reference solutions (b) and (c).

Run time Twice the retention time of alfacalcidol.

Relative retention With reference to alfacalcidol: pre-alfacalcidol = about 1.3.

System suitability Reference solution (c):

— *resolution*: minimum 4.0 between the peaks due to pre-alfacalcidol and alfacalcidol; if necessary, adjust the proportions of the constituents of the mobile phase.

Limits:
— *impurities A, B, C*: for each impurity, maximum 0.5 per cent;

— *total*: maximum 1.0 per cent;

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent); disregard the peak due to pre-alfacalcidol.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

Injection The test solution and reference solutions (a) and (c).

System suitability Reference solution (c):

— *repeatability*: maximum relative standard deviation of 1 per cent for the peak due to alfacalcidol after 6 injections.

Calculate the percentage content of $C_{27}H_{44}O_2$ from the declared content of *alfacalcidol CRS*.

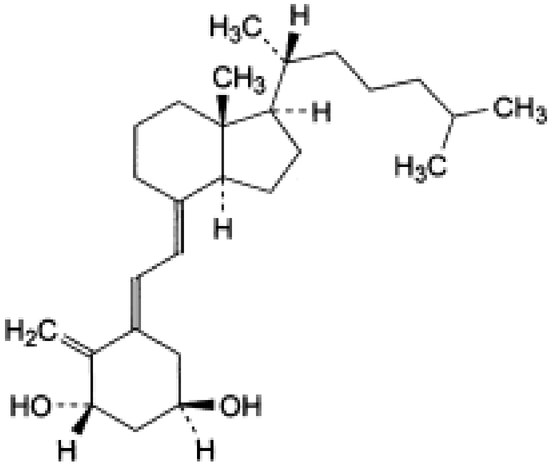
STORAGE

Under nitrogen, in an airtight container, protected from light, at a temperature of 2 °C to 8 °C.

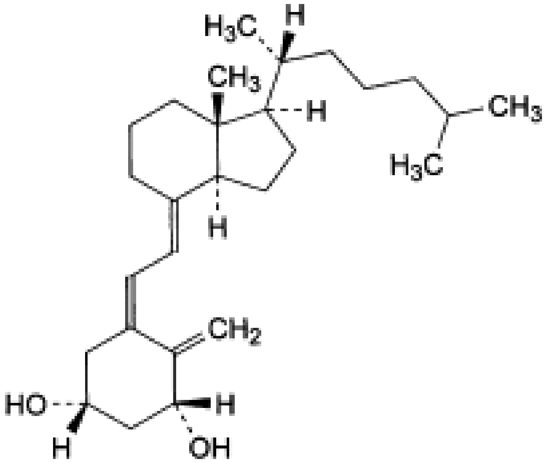
The contents of an opened container are to be used immediately.

IMPURITIES

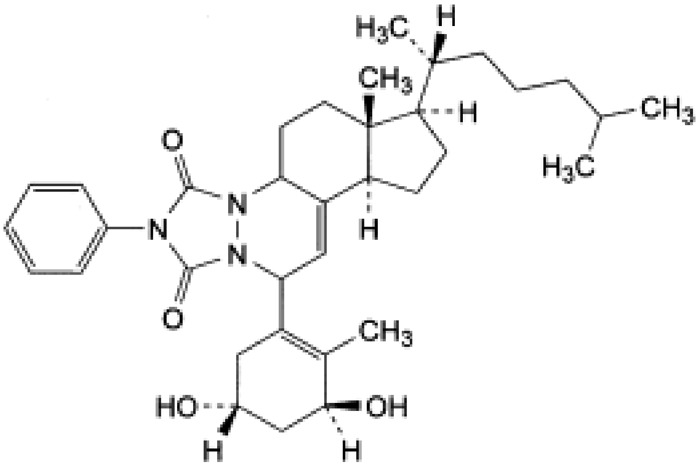
Specified impurities A, B, C.



A. (5*E*,7*E*)-9,10-secocholesta-5,7,10(19)-triene-1α,3β-diol (*trans*-alfacalcidol),



B. (5*Z*,7*E*)-9,10-secocholesta-5,7,10(19)-triene-1β,3β-diol (1β-calcidol),



C. triazoline adduct of pre-alfacalcidol.

$[C_6H_{10}O_5]_6$ 973 *10016-20-3*

Action and use

Cyclodextran; carrier molecule for drug delivery systems.

Ph Eur

DEFINITION

Cyclohexakis-(1→4)-(α-D -glucopyranosyl) (cyclomaltohexaose or α-cyclodextrin).

Content

98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, amorphous or crystalline powder.

Solubility

Freely soluble in water and in propylene glycol, practically insoluble in anhydrous ethanol and in methylene chloride.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Examine the chromatograms obtained in the assay.

Results   The principal peak in the chromatogram obtained with test solution (b) is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (c).

C. Dissolve 0.2 g in 2 ml of *iodine solution R4* by warming on a water-bath, and allow to stand at room temperature; a yellowish-brown precipitate is formed.

TESTS

Solution S

Dissolve 1.000 g in *carbon dioxide-free water R* and dilute to 100.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)*.

pH *(2.2.3)*

5.0 to 8.0.

Mix 1 ml of a 223.6 g/l solution of *potassium chloride R* and 30 ml of solution S.

Specific optical rotation *(2.2.7)*

+ 147 to + 152 (dried substance), determined on solution S.

Reducing sugars

Maximum 0.2 per cent.

Test solution   To 1 ml of solution S add 1 ml of *cupri-tartaric solution R4*. Heat on a water-bath for 10 min, cool to room temperature. Add 10 ml of *ammonium molybdate reagent R1* and allow to stand for 15 min.

Reference solution   Prepare a reference solution at the same time and in the same manner as the test solution, using 1 ml of a 0.02 g/l solution of *glucose R*.

Measure the absorbance *(2.2.25)* of the test solution and the reference solution at the absorption maximum at 740 nm using *water R* as the compensation liquid. The absorbance of the test solution is not greater than that of the reference solution.

Light-absorbing impurities

Examine solution S between 230 nm and 750 nm. Between 230 nm and 350 nm, the absorbance *(2.2.25)* is not greater than 0.10. Between 350 nm and 750 nm, the absorbance *(2.2.25)* is not greater than 0.05.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution (a) Dissolve 0.25 g of the substance to be examined in *water R* with heating, cool and dilute to 25.0 ml with the same solvent.

Test solution (b) Dilute 5.0 ml of test solution (a) to 50.0 ml with *water R*.

Reference solution (a) Dissolve 25.0 mg of *betadex CRS* (impurity A), 25.0 mg of *gammacyclodextrin CRS* (impurity B) and 50.0 mg of *alfadex CRS* in *water R*, then dilute to 50.0 ml with the same solvent.

Reference solution (b) Dilute 5.0 ml of reference solution (a) to 50.0 ml with *water R*.

Reference solution (c) Dissolve 25.0 mg of *alfadex CRS* in *water R* and dilute to 25.0 ml with the same solvent.

Column:
- *size: l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (10 µm).

Mobile phase *methanol R, water R* (10:90 *V/V*).

Flow rate 1.5 ml/min.

Detection Differential refractometer.

Equilibration With the mobile phase for about 3 h.

Injection 50 µl of test solution (a) and reference solutions (a) and (b).

Run time 3.5 times the retention time of alfadex.

Relative retention With reference to alfadex (retention time = about 10 min): impurity B = about 0.7; impurity A = about 2.2.

System suitability Reference solution (a):

- *resolution*: minimum 1.5 between the peaks due to impurity B and alfadex; if necessary, adjust the concentration of methanol in the mobile phase.

Limits:
- *impurities A, B*: for each impurity, not more than 0.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.25 per cent);
- *sum of impurities other than A and B*: not more than 0.5 times the area of the peak due to alfadex in the chromatogram obtained with reference solution (b) (0.5 per cent).

Heavy metals *(2.4.8)*

Maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 11 per cent, determined on 1.000 g by drying in an oven at 120 °C for 2 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Injection Test solution (b) and reference solutions (a) and (c).

System suitability Reference solution (a):

— *repeatability*: maximum relative standard deviation of 2.0 per cent for the peak due to alfadex after 5 injections.

Calculate the percentage content of $[C_6H_{10}O_5]_6$ from the declared content of *alfadex CRS.*

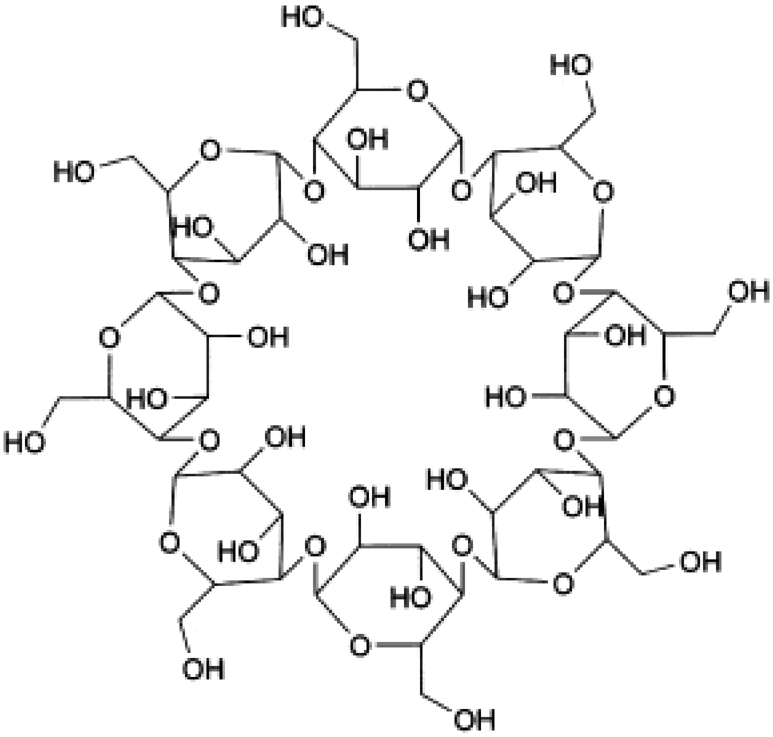
STORAGE

In an airtight container.

IMPURITIES

Specified impurities A, B.

A. betadex,



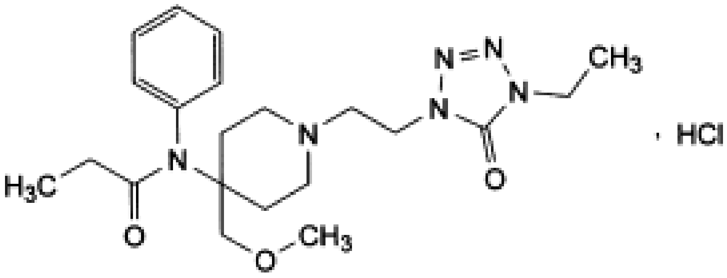
B. cyclooctakis-(1→4)-(α-D-glucopyranosyl) (cyclomaltooctaose or γ-cyclodextrin).

Ph Eur

Alfentanil Hydrochloride

General Notices

(Ph Eur monograph 1062)



$C_{21}H_{32}N_6O,HCl$ 453.0 *69049-06-5*

Action and use

Opioid receptor agonist; analgesic.

Ph Eur

DEFINITION

N-[1-[2-(4-Ethyl-4,5-dihydro-5-oxo-1*H*-tetrazol-1-yl)ethyl]-4-(methoxymethyl)piperidin-4-yl]-*N*-phenylpropanamide hydrochloride.

Content

98.5 per cent to 101.5 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Freely soluble in water, in ethanol (96 per cent) and in methanol.

mp

About 140 °C, with decomposition.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *Ph. Eur. reference spectrum of alfentanil hydrochloride.*

B. Dissolve 50 mg in a mixture of 0.4 ml of *ammonia R* and 2 ml of *water R*. Mix, allow to stand for 5 min and filter. Acidify the filtrate with *dilute nitric acid R*. It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Dissolve 0.2 g in *water R* and dilute to 20 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

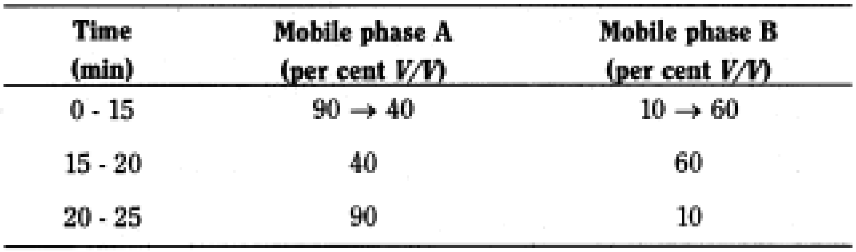
Test solution Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) In order to produce impurity E *in situ*, dissolve 10 mg of the substance to be examined in 10.0 ml of *dilute hydrochloric acid R*. Heat on a water-bath under a reflux condenser for 4 h. Neutralise with 10.0 ml of *dilute sodium hydroxide solution R*. Evaporate to dryness on a water-bath. Cool and take up the residue in 10 ml of *methanol R*. Filter.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with *methanol R*. Dilute 5.0 ml of this solution to 20.0 ml with *methanol R*.

Column:
- *size:* *l* = 0.1 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase:
- *mobile phase A*: 5 g/l solution of *ammonium carbonate R* in a mixture of 10 volumes of *tetrahydrofuran R* and 90 volumes of *water R*;
- *mobile phase B*: *acetonitrile R*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 15	90 → 40	10 → 60
15 - 20	40	60
20 - 25	90	10

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 220 nm.

Equilibration With *acetonitrile R* for at least 30 min and then with the mobile phase at the initial composition for at least 5 min.

Injection 10 µl; inject *methanol R* as a blank.

Retention time Impurity E = about 6 min; alfentanil = about 7 min.

Identification of impurities Use the chromatogram obtained with reference solution (a) to identify the peak due to impurity E; disregard any other peak.

System suitability Reference solution (a):

- — *resolution*: minimum 4.0 between the peaks due to alfentanil and impurity E; if necessary, adjust the concentration of acetonitrile in the mobile phase or adjust the time programme for the linear-gradient elution.

Limits:

- — *impurities A, B, C, D, E, F, G, H*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);
- — *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- — *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak due to the blank.

Water *(2.5.12)*

3.0 per cent to 4.0 per cent, determined on 0.500 g.

ASSAY

Dissolve 0.350 g in 50 ml of a mixture of 1 volume of *ethanol (96 per cent) R* and 4 volumes of *water R* and add 5.0 ml of *0.01 M hydrochloric acid*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically *(2.2.20)*. Read the volume added between the 2 points of inflexion.

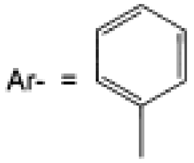
1 ml of *0.1 M sodium hydroxide* is equivalent to 45.30 mg of $C_{21}H_{33}ClN_6O_3$.

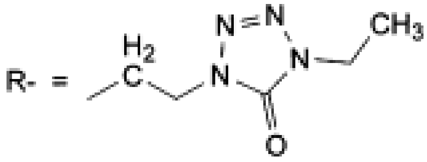
STORAGE

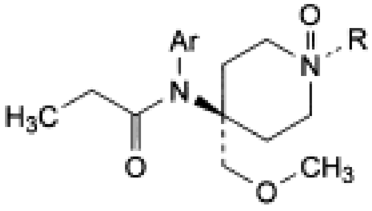
Protected from light.

IMPURITIES

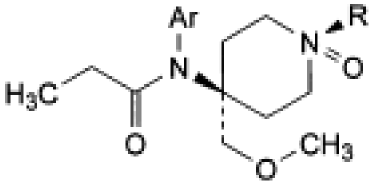
Specified impurities *A, B, C, D, E, F, G, H.*



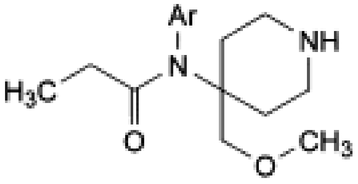




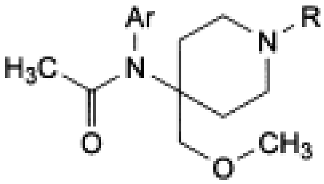
A. *cis*-*N*-[1-[2-(4-ethyl-4,5-dihydro-5-oxo-1*H*-tetrazol-1-yl)ethyl]-4-(methoxymethyl)piperidin-4-yl]-*N*-phenylpropanamide *N*-oxide,



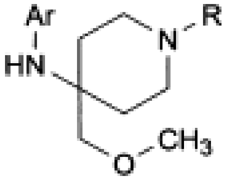
B. *trans*-*N*-[1-[2-(4-ethyl-4,5-dihydro-5-oxo-1*H*-tetrazol-1-yl)ethyl]-4-(methoxymethyl) piperidin-4-yl]-*N*-phenylpropanamide *N*-oxide,



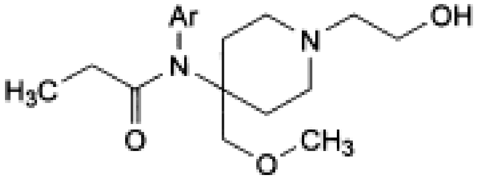
C. *N*-[4-(methoxymethyl)piperidin-4-yl]-*N*-phenylpropanamide,



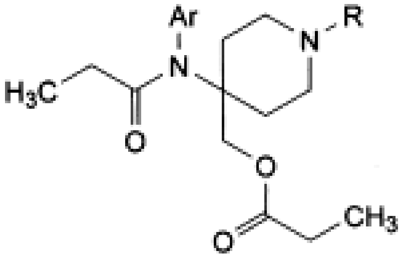
D. *N*-[1-[2-(4-ethyl-4,5-dihydro-5-oxo-1*H*-tetrazol-1-yl)ethyl]-4-(methoxymethyl)piperidin-4-yl] -*N*-phenylacetamide,



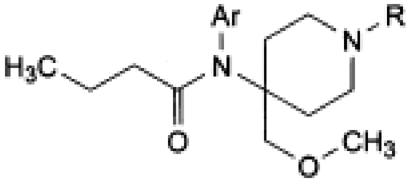
E. 1-ethyl-1,4-dihydro-4-[2-[[4-(methoxymethyl)-4-phenylamino]piperidin-1-yl]ethyl]-5*H*-tetrazol-5-one,



F. *N*-[1-(2-hydroxyethyl)-4-(methoxymethyl)piperidin-4-yl]-*N*-phenylpropanamide,



G. *N*-[1-[2-(4-ethyl-4,5-dihydro-5-oxo-1*H*-tetrazol-1-yl)ethyl]-4-(propanoyloxymethyl) piperidin-4-yl]-*N*-phenylpropanamide,



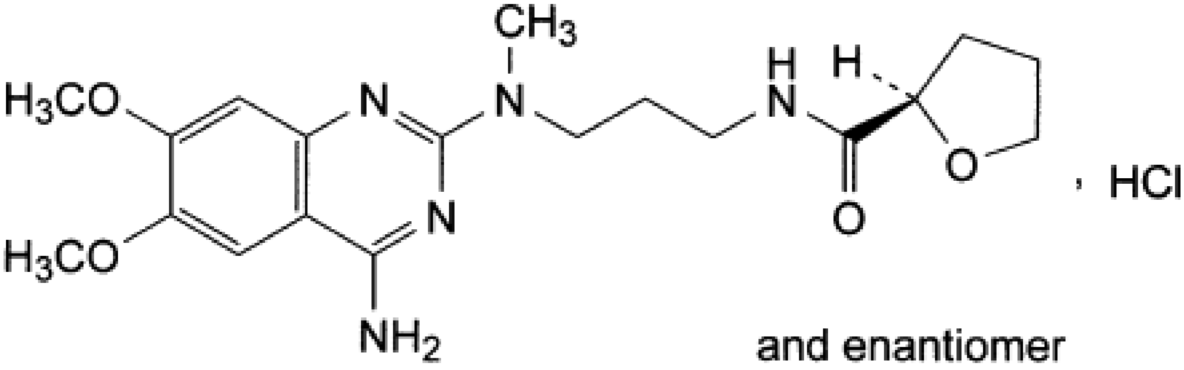
H. *N*-[1-[2-(4-ethyl-4,5-dihydro-5-oxo-1*H*-tetrazol-1-yl)ethyl]-4-(methoxymethyl)piperidin-4-yl]-*N*-phenylbutanamide.

Ph Eur

Alfuzosin Hydrochloride

General Notices

(Ph Eur monograph 1287)



$C_{19}H_{27}N_5O_4$,HCl 425.9 *81403-68-1*

Action and use

Alpha$_1$-adrenoceptor antagonist.

Ph Eur

DEFINITION

(2*RS*)-*N*-[3-[(4-Amino-6,7-dimethoxyquinazolin-2-yl)methylamino]propyl]tetrahydrofuran-2-carboxamide hydrochloride.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder, slightly hygroscopic.

Solubility

Freely soluble in water, sparingly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison *alfuzosin hydrochloride CRS.*

B. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

pH (*2.2.3*)

4.0 to 5.5.

Dissolve 0.500 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent. Use a freshly prepared solution.

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 40 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve 4 mg of *alfuzosin for system suitability CRS* (containing impurities A and D) in the mobile phase and dilute to 10 ml with the mobile phase.

Column:
- — *size*: *l* = 0.15 m, Ø = 4.6 mm;
- — *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 1 volume of *tetrahydrofuran R*, 20 volumes of *acetonitrile R* and 80 volumes of a solution prepared as follows: dilute 5.0 ml of *perchloric acid R* in 900 ml of *water R*, adjust to pH 3.5 with *dilute sodium hydroxide solution R* and dilute to 1000 ml with *water R*.

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 10 µl.

Run time Twice the retention time of alfuzosin.

Identification of impurities Use the chromatogram supplied with alfuzosin for system suitability CRS and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A and D.

Relative retention With reference to alfuzosin (retention time = about 8 min): impurity D = about 0.4; impurity A = about 1.2.

System suitability Reference solution (b):

- — *peak-to-valley ratio*: minimum 5.0, where H_p = height above the baseline of the peak due to impurity A and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to alfuzosin.

Limits:
- — *impurity D*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- — *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Water (*2.5.12*)

Maximum 0.5 per cent, determined on 1.000 g.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in a mixture of 40 ml of *anhydrous acetic acid R* and 40 ml of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 42.59 mg of $C_{19}H_{28}ClN_5O_4$.

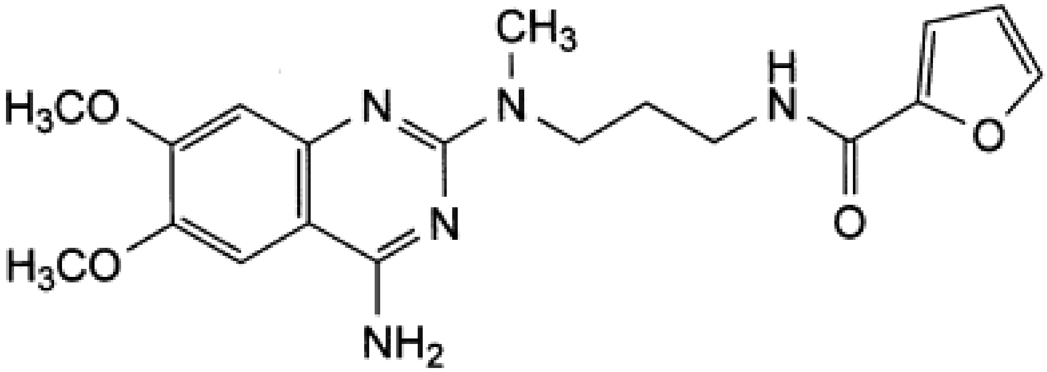
STORAGE

In an airtight container, protected from light.

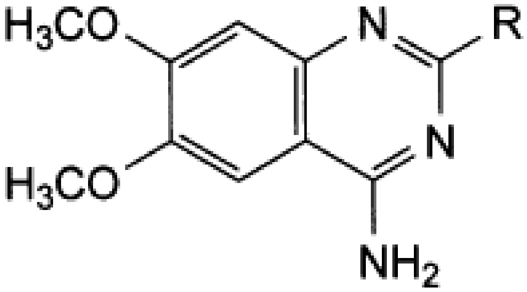
IMPURITIES

Specified impurities *D.*

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, E.*



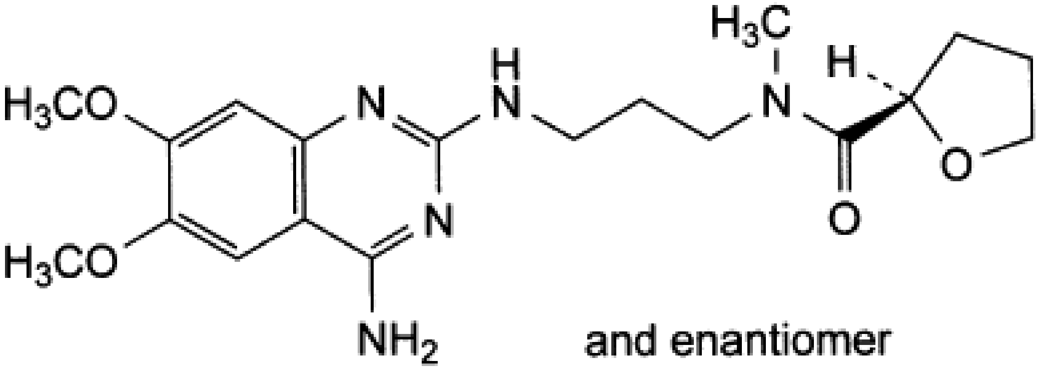
A. *N*-[3-[(4-amino-6,7-dimethoxyquinazolin-2-yl)methylamino]propyl]furan-2-carboxamide



B. R = Cl: 2-chloro-6,7-dimethoxyquinazolin-4-amine,

D. R = $N(CH_3)$-$[CH_2]_3$-NH_2: *N*-(4-amino-6,7-dimethoxyquinazolin-2-yl)-*N*-methylpropane-1,3-diamine,

E. R = $N(CH_3)$-$[CH_2]_3$-NH-CO-H: *N*-[3-[(4-amino-6,7-dimethoxyquinazolin-2-yl)methylamino] propyl]formamide,



C. (2*RS*)-*N*-[3-[(4-amino-6,7-dimethoxyquinazolin-2-yl)amino]propyl]-*N*-methyltetrahydrofuran-2-carboxamide.

Ph Eur

Alginic Acid

General Notices

(Ph Eur monograph 0591)

Action and use

Treatment of gastro-oesophageal reflux disease; excipient; thickening agent.

Ph Eur

DEFINITION

Mixture of polyuronic acids [$(C_6H_8O_6)_n$] composed of residues of D-mannuronic and L-guluronic acids, obtained mainly from algae belonging to the Phaeophyceae. A small proportion of the carboxyl groups may be neutralised.

Content

19.0 per cent to 25.0 per cent of carboxyl groups ($-CO_2H$) (dried substance).

CHARACTERS

Appearance

White or pale yellowish-brown, crystalline or amorphous powder.

Solubility

Very slightly soluble or practically insoluble in ethanol (96 per cent), practically insoluble in organic solvents. It swells in water but does not dissolve; it dissolves in solutions of alkali hydroxides.

IDENTIFICATION

A. To 0.2 g add 20 ml of *water R* and 0.5 ml of *sodium carbonate solution R*. Shake and filter. To 5 ml of the filtrate add 1 ml of *calcium chloride solution R*. A voluminous gelatinous mass is formed.

B. To 5 ml of the filtrate obtained in identification test A add 0.5 ml of a 123 g/l solution of *magnesium sulphate R*. No voluminous gelatinous mass is formed.

C. To 5 mg add 5 ml of *water R*, 1 ml of a freshly prepared 10 g/l solution of *1,3-dihydroxynaphthalene R* in *ethanol (96 per cent) R* and 5 ml of *hydrochloric acid R*. Boil gently for 3 min, cool, add 5 ml of *water R*, and shake with 15 ml of *di-isopropyl ether R*. Carry out a blank test. The upper layer obtained with the substance to be examined exhibits a deeper bluish-red colour than that obtained with the blank.

TESTS

Chlorides

Maximum 1,0 per cent.

To 2.50 g add 50 ml of *dilute nitric acid R*, shake for 1 h and dilute to 100.0 ml with *dilute nitric acid R*. Filter. To 50.0 ml of the filtrate add 10.0 ml of *0.1 M silver nitrate* and 5 ml of *toluene R*. Titrate with *0.1 M ammonium thiocyanate*, using 2 ml of *ferric ammonium sulphate solution R2* as indicator and shaking vigorously towards the end-point.

1 ml of *0.1 M silver nitrate* is equivalent to 3.545 mg of Cl.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test F. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 15.0 per cent, determined on 0.1000 g by drying in an oven at 105 °C for 4 h.

Sulphated ash *(2.4.14)*

Maximum 8.0 per cent (dried substance), determined on 0.100 g.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^2 micro-organisms per gram, determined by plate-count. It complies with the tests for *Escherichia coli* and *Salmonella (2.6.13)*.

ASSAY

To 0.2500 g add 25 ml of *water R*, 25.0 ml of *0.1 M sodium hydroxide* and 0.2 ml of *phenolphthalein solution R*. Titrate with *0.1 M hydrochloric acid*.

1 ml of *0.1 M sodium hydroxide* is equivalent to 4.502 mg of carboxyl groups ($-CO_2H$).

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.The following characteristics may be relevant for alginic acid used as disintegrant and/or binder.

Particle-size distribution *(2.9.31* or *2.9.38)*.

Settling volume

Place 75 ml of *water R* in a 100 ml graduated cylinder and add 1.5 g of the substance to be examined in 0.5 g portions, shaking vigorously after each addition. Dilute to 100.0 ml with *water R* and shake again until the substance is homogeneously distributed. Allow to stand for 4 h and determine the volume of the settled mass.

The following characteristic may be relevant for alginic acid used as gelling agent or viscosity-increasing agent.

Apparent viscosity

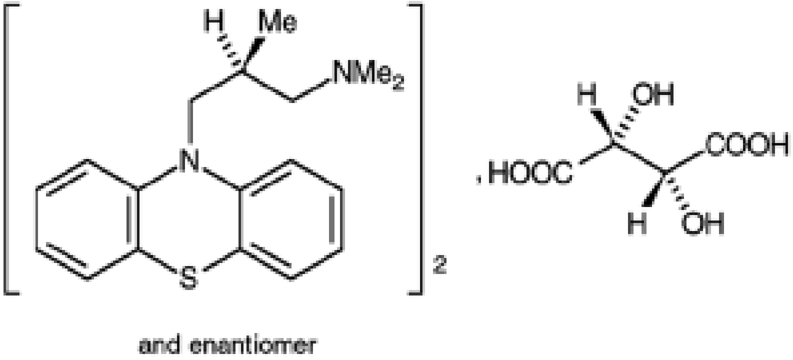
Determine the dynamic viscosity using a rotating viscometer *(2.2.10)*.

Prepare a 20 g/l suspension of alginic acid (dried substance) and add *0.1 M sodium hydroxide* until a solution is obtained.

Ph Eur

Alimemazine Tartrate

General Notices



$(C_{18}H_{22}N_2S)_2,C_4H_6O_6$ 747.0   *4330-99-8*

Action and use

Histamine H_1 receptor antagonist; antihistamine.

Preparations

Paediatric Alimemazine Oral Solution

Strong Paediatric Alimemazine Oral Solution

Alimemazine Tablets

DEFINITION

Alimemazine Tartrate is (*RS*)-dimethyl (2-methyl-3-phenothiazin-10-ylpropyl)amine (2*R*,3*R*)-tartrate. It contains not less than 99.0% and not more than 101.0% of $(C_{18}H_{22}N_2S)_2,C_4H_6O_6$, calculated with reference to the dried substance.

CHARACTERISTICS

A white or slightly cream powder. It darkens on exposure to light.

Freely soluble in *water*; sparingly soluble in *ethanol (96%)*; very slightly soluble in *ether* .

IDENTIFICATION

A. Dissolve 0.1 g in 10 ml of *water* and add 2 ml of 1M *sodium hydroxide*. Extract with 25 ml of *ether* , wash the extract with 5 ml of *water*, dry over *anhydrous sodium sulphate*, evaporate to dryness and dissolve the residue in 1 ml of *dichloromethane*. The *infrared absorption spectrum* of the resulting solution, Appendix II A, is concordant with the reference spectrum of alimemazine *(RS 005).*

B. *Melting point*, 159° to 163°, Appendix V A.

TESTS

Acidity

pH of a 2% w/v solution, 5.0 to 6.5, Appendix V L.

Related substances

Complies with the test for *related substances in phenothiazines*, Appendix III A, using *mobile phase A*.

Loss on drying

When dried to constant weight at 100° at a pressure not exceeding 0.7 kPa, loses not more than 0.5% of its weight. Use 1 g.

Sulphated ash

Not more than 0.1%, Appendix IX A.

ASSAY

Carry out Method I for *non-aqueous titration*, Appendix VIII A, using 1 g and *crystal violet solution* as indicator. Each ml of 0.1M *perchloric acid VS* is equivalent to 37.35 mg of $(C_{18}H_{22}N_2S)_2,C_4H_6O_6$.

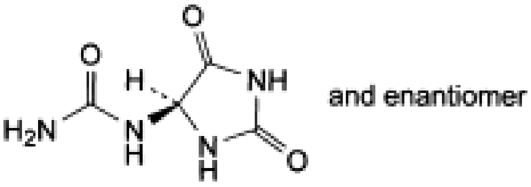
STORAGE

Alimemazine Tartrate should be protected from light.

Allantoin

General Notices

(Ph Eur monograph 1288)



$C_4H_6N_4O_3$ 158.1 *97-59-6*

Action and use

Astringent; keratolytic.

Ph Eur

DEFINITION

Allantoin contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (*RS*)-(2,5-dioxoimidazolidin-4-yl)urea.

CHARACTERS

A white or almost white, crystalline powder, slightly soluble in water, very slightly soluble in alcohol.

It melts at about 225 °C, with decomposition.

IDENTIFICATION

First identification A.

Second identification B, C, D.

A. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *allantoin CRS*.

B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Boil 20 mg with a mixture of 1 ml of *dilute sodium hydroxide solution R* and 1 ml of *water R*. Allow to cool. Add 1 ml of *dilute hydrochloric acid R*. To 0.1 ml of the solution add 0.1 ml of a 100 g/l solution of *potassium bromide R*, 0.1 ml of a 20 g/l solution of *resorcinol R* and 3 ml of *sulphuric acid R*. Heat for 5 min to 10 min on a water-bath. A dark blue colour develops, which becomes red after cooling and pouring into about 10 ml of *water R*.

D. Heat about 0.5 g. Ammonia vapour is evolved, which turns *red litmus paper R* blue.

TESTS

Solution S

Dissolve 0.5 g in *carbon dioxide-free water R*, with heating if necessary, and dilute to 100 ml with the same solvent.

Acidity or alkalinity

To 5 ml of solution S add 5 ml of *carbon dioxide-free water R*, 0.1 ml of *methyl red solution R* and 0.2 ml of *0.01 M sodium hydroxide*. The solution is yellow. Add 0.4 ml of *0.01 M hydrochloric acid*. The solution is red.

Optical rotation *(2.2.7)*

The angle of optical rotation, determined on solution S, is - 0.10° to + 0.10°.

Reducing substances

Shake 1.0 g with 10 ml of *water R* for 2 min. Filter. Add 1.5 ml of *0.02 M potassium permanganate*. The solution must remain violet for at least 10 min.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using a suitable *cellulose for chromatography R* as the coating substance.

Test solution (a) Dissolve 0.10 g of the substance to be examined in 5.0 ml of *water R* with heating. Allow to cool. Dilute to 10 ml with *methanol R*. *Use the solution immediately after preparation.*

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with a mixture of 1 volume of *methanol R* and 1 volume of *water R*.

Reference solution (a) Dissolve 10 mg of *allantoin CRS* in a mixture of 1 volume of *methanol R* and 1 volume of *water R* and dilute to 10 ml with the same mixture of solvents.

Reference solution (b) Dissolve 10 mg of *urea R* in 10 ml of *water R*. Dilute 1 ml of this solution to 10 ml with *methanol R*.

Reference solution (c) Mix 1 ml of reference solution (a) and 1 ml of reference solution (b).

Apply to the plate 10 µl of test solution (a) and 5 µl each of test solution (b), reference solution (a), reference solution (b) and reference solution (c). Develop over a path of 10 cm using a mixture of 15 volumes of *glacial acetic acid R*, 25 volumes of *water R* and 60 volumes of *butanol R*. Allow the plate to dry in air. Spray the plate with a 5 g/l solution of *dimethylaminobenzaldehyde R* in a mixture of 1 volume of *hydrochloric acid R* and 3 volumes of *methanol R*. Dry the plate in a current of hot air. Examine in daylight after 30 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated principal spots.

Loss on drying *(2.2.32)*

Not more than 0.1 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

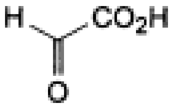
Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 120.0 mg in 40 ml of *water R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M sodium hydroxide* is equivalent to 15.81 mg of $C_4H_6N_4O_3$.

IMPURITIES



A. glyoxylic acid,

B. urea.

Ph Eur

Allergen Products

General Notices

(Ph Eur monograph 1063)

Ph Eur

DEFINITION

Allergen products are pharmaceutical preparations derived from extracts of naturally occurring source materials containing allergens, which are substances that cause or provoke allergic (hypersensitivity) disease. The allergenic components are most often of a proteinaceous nature. Allergen products are intended for *in vivo* diagnosis or treatment of allergic (hypersensitivity) diseases attributed to these allergens.

Allergen products are available as finished products, as bulk preparations in dried form, solutions or suspensions intended to be further concentrated or diluted prior to use or as final preparations in solutions, suspensions or freeze-dried. Allergen products intended for parenteral, bronchial and conjunctival administration are sterile.

For *diagnostic use*, allergen products are usually prepared as unmodified extracts in a 50 per cent *V/V* solution of glycerol for skin-prick testing. For intradermal diagnosis or for provocation tests by nasal, ocular or bronchial routes, suitable dilutions of allergen products may be prepared by dilution of aqueous or glycerinated extracts, or by reconstitution immediately before use of unmodified freeze-dried extracts.

For *immunotherapy*, allergen products may be either unmodified extracts or extracts modified chemically and/or by adsorption onto different carriers (for example, aluminium hydroxide, calcium phosphate or tyrosine).

This monograph does not apply to: chemicals that are used solely for diagnosis of contact dermatitis; chemically synthesised products; allergens derived by rDNA technology; finished products used on a named-patient basis. It does not necessarily apply to allergen products for veterinary use.

PRODUCTION

Allergen products are derived from a wide range of allergenic source materials. They are often prepared as bulk products intended to be further diluted or concentrated prior to use. They may be treated to modify or reduce the allergenic activity or remain unmodified.

Where allergen products are manufactured using materials of human or animal origin, the requirements of chapter *5.1.7. Viral safety* apply.

SOURCE MATERIALS

Source materials for the preparation of allergen products are mostly pollens, moulds, mites, animal epithelia, hymenoptera venoms and certain foods.

They are described by their origin, nature, method of collection or production and pretreatment, and are stored under defined conditions that minimise deterioration.

The collection or production, as well as the handling of the source materials are such that uniform qualitative and quantitative composition is ensured as far as possible from batch to batch.

Pollens

Potential chemical contaminants, such as pesticides and heavy metals, must be minimised. Pollens contain not more than 1 per cent of foreign pollens as determined by microscopic examination. Pollens contain not more than 1 per cent of mould spores as determined by microscopic examination.

Mites and moulds

Biologically active contaminants such as mycotoxins in moulds must be minimised and any presence justified. Care must be taken to minimise any allergenic constituents of the media used for the cultivation of mites and moulds as source materials. Culture media that contain substances of human or animal origin must be justified and, when required must be suitably treated to ensure the inactivation or elimination of possible transmissible agents of disease.

Animal epithelia

Animal epithelia must be obtained from healthy animals selected to avoid possible transmissible agents of disease.

MANUFACTURING PROCESS

Allergen products are generally obtained by extraction, and may be purified, from the source materials using appropriate methods shown to preserve the biological properties of the allergenic components. Allergen products are manufactured under conditions designed to minimise microbial growth and enzymatic degradation.

A purification procedure, if any, is designed to minimise the content of any potential irritant low-molecular-mass components or other non-allergenic components.

Allergen products may contain a suitable antimicrobial preservative. The nature and the concentration of the antimicrobial preservative have to be justified.

The manufacturing process comprises various stages.

Native allergen extracts result after separation from the extracted source materials.

Intermediate allergen products are obtained by further processing or modification of the native allergen extracts. The modification may be achieved by chemical processes (chemical conjugation) or physical processes (physical adsorption onto different carriers, for example, aluminium hydroxide, calcium phosphate or tyrosine). They may also be modified by inclusion into such vehicles as liposomes or microspheres, or by the addition of other biologically active agents to enhance efficacy or safety. Intermediate allergen products may be freeze-dried.

Bulk allergen preparations consist of products in solution or suspension which will not be further processed or modified, and are ready for dilution or filling into final containers.

IN-HOUSE REFERENCE PREPARATION

An appropriate representative preparation is selected as the In-House Reference Preparation (IHRP), characterised and used to verify batch-to-batch consistency. The IHRP is stored in suitably sized aliquots under conditions ensuring its stability, usually freeze-dried.

Characterisation of the In-House Reference Preparation

The extent of characterisation of the IHRP depends on the nature of the allergenic source material, knowledge of the allergenic components and availability of suitable reagents, as well as the intended use. The characterised IHRP is used as reference in the batch control of native allergen extracts or intermediate allergen products and, if possible, in the batch control of final allergen preparations.

The In-House Reference Preparation (IHRP) is characterised by the protein content determination and a protein profile using relevant methods (such as isoelectric focusing, polyacrylamide gel electrophoresis, immunoelectrophoresis or molecular-mass profiling). Allergenic components may be detected by appropriate methods (for example, immunoblotting or crossed radio-immunoelectrophoresis). Characterisation of the allergenic components may include identification of relevant allergens based on serological or other techniques using a pool or individual sera from allergic patients, or allergen-specific polyclonal or monoclonal antibodies. When allergen reference substances are available, determination of the content of individual allergens may be performed. Individual allergens are identified according to internationally established nomenclature whenever possible.

Where possible, the biological potency of the IHRP is established by *in vivo* techniques such as skin testing, and expressed in units of biological activity. If not, for certain extracts, potency may be established by suitable immunoassays (for example, those based on the inhibition of the binding capacity of specific immunoglobulin E antibodies) or by quantitative techniques for a single major component.

IDENTIFICATION

Identity is confirmed at the intermediate or other applicable stage by comparison with the IHRP using protein profiling by appropriate methods (for example, isoelectric focusing, sodium dodecyl sulphate-polyacrylamide gel electrophoresis or immunoelectrophoresis).

TESTS

Various biochemical and immunological tests have been developed in order to characterise allergens qualitatively and quantitatively. However, some of the methods, particularly for the determination of allergenic activity and allergen profile, are not applicable to all products at present. This is because knowledge of the allergenic components or the required reagents is not available. Accordingly, allergen products have been classified in different categories with increasing test requirements, according to quality and intended use.

Where possible the following tests are applied to the final preparations. If not, they must be performed on the extracts as late as possible in the manufacturing process, for example, at the stage immediately prior to that stage (modification, dilution etc.) which renders the test not feasible on the final preparation.

Water *(2.5.12)*

Not more than 5 per cent for freeze-dried products.

Sterility *(2.6.1)*

Allergen products intended for parenteral, bronchial and conjunctival administration comply with the test for sterility.

Protein content

80 per cent to 120 per cent of the stated content of a given batch. If the biological potency can be determined then the test for protein content may be omitted.

Protein profile

The protein composition determined by suitable methods corresponds to that of the IHRP.

Abnormal toxicity *(2.6.9)*

Allergen products obtained from moulds and intended for parenteral administration (except skin-prick tests) comply with the test for abnormal toxicity for immunosera and vaccines for human use.

Various additional tests, some with increasing selectivity, depending on the allergen product concerned can be applied, but in any case for allergen products intended for therapeutic use, a validated test measuring the potency (total allergenic activity, determination of individual allergens or any other justified tests) must be applied.

Aluminium *(2.5.13)*

Not less than 80 per cent and not more than 120 per cent of the stated amount but in any case not more than 1.25 mg per human dose unless otherwise justified and authorised, when aluminium hydroxide or aluminium phosphate is used as adsorbent.

Calcium *(2.5.14)*

Not less than 80 per cent and not more than 120 per cent of the stated amount when calcium phosphate is used as adsorbent.

Antigen profile

The antigens are identified by means of suitable techniques using antigen-specific animal antibodies.

Allergen profile

Relevant allergenic components are identified by means of suitable techniques using allergen-specific human antibodies.

Total allergenic activity

The activity is 50 per cent to 200 per cent of the stated amount as assayed by inhibition of the binding capacity of specific immunoglobulin E antibodies or a suitable equivalent *in vitro* method.

Individual allergens

50 per cent to 200 per cent of the stated amount, determined by a suitable method.

STORAGE

Adsorbed allergen products should not be frozen.

LABELLING

The label states:

— the biological potency and/or the protein content and/or the extraction concentration;

— the route of administration and the intended use;

— the storage conditions;

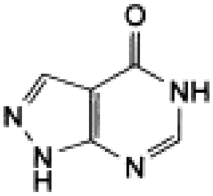
- where applicable, the name and amount of added antimicrobial preservative;
- for freeze-dried preparations:
  - the name, composition and volume of the reconstituting liquid to be added
  - the period of time within which the preparation is to be used after reconstitution;
- where applicable, that the preparation is sterile;
- where applicable, the name and amount of adsorbent.

Ph Eur

Allopurinol

General Notices

(Ph Eur monograph 0576)



$C_5H_4N_4O$ 136.1 *315-30-0*

Action and use

Xanthine oxidase inhibitor; treatment of gout and hyperuricaemia.

Preparation

Allopurinol Tablets

Ph Eur

DEFINITION

1,5-Dihydro-4*H*-pyrazolo[3,4-*d*]pyrimidin-4-one.

Content

97.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Very slightly soluble in water and in ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification B.

Second identification A, C, D.

A. Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution Dissolve 10 mg in 1 ml of a 4 g/l solution of *sodium hydroxide R* and dilute to 100.0 ml with a 10.3 g/l solution of *hydrochloric acid R*. Dilute 10.0 ml of this solution to 100.0 ml with a 10.3 g/l solution of *hydrochloric acid R*.

Spectral range 220-350 nm.

Absorption maximum At 250 nm.

Absorption minimum At 231 nm.

Absorbance ratio A_{231}/A_{250} = 0.52 to 0.62.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *allopurinol CRS.*

C. Dissolve 0.3 g in 2.5 ml of *dilute sodium hydroxide solution R* and add 50 ml of *water R*. Add slowly and with shaking 5 ml of *silver nitrate solution R1*. A white precipitate is formed which does not dissolve on the addition of 5 ml of *ammonia R*.

D. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 20 mg of the substance to be examined in *concentrated ammonia R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 20 mg of *allopurinol CRS* in concentrated *ammonia R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel F_{254} plate R.*

Mobile phase *anhydrous ethanol R, methylene chloride R* (40:60 *V/V*).

Application 10 µl.

Development Over 2/3 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Related substances

Liquid chromatography *(2.2.29)*. *Use freshly prepared solutions. Store and inject them at 8 °C, using a cooled autosampler.*

Test solution (a) Dissolve 25.0 mg of the substance to be examined in 2.5 ml of a 4 g/l solution of *sodium hydroxide R* and dilute immediately to 50.0 ml with the mobile phase.

Test solution (b) Dissolve 20.0 mg of the substance to be examined in 5.0 ml of a 4 g/l solution of *sodium hydroxide R* and dilute immediately to 250.0 ml with the mobile phase.

Reference solution (a) Dilute 2.0 ml of test solution (a) to 100.0 ml with the mobile phase. Dilute 5.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (b) Dissolve 5 mg of *allopurinol impurity A CRS*, 5 mg of *allopurinol impurity B CRS* and 5.0 mg of *allopurinol impurity C CRS* in 5.0 ml of a 4 g/l solution of *sodium hydroxide R* and dilute immediately to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (c) Dissolve 20.0 mg of *allopurinol CRS* in 5.0 ml of a 4 g/l solution of *sodium hydroxide R* and dilute immediately to 250.0 ml with the mobile phase.

Column:
- *size: l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase 1.25 g/l solution of *potassium dihydrogen phosphate R*.

Flow rate 1.4 ml/min.

Detection Spectrophotometer at 230 nm.

Injection 20 µl of test solution (a) and reference solutions (a) and (b).

Run time Twice the retention time of allopurinol.

Elution order Impurity A, impurity B, impurity C, allopurinol.

Retention time allopurinol = about 10 min.

System suitability Reference solution (b):
- *resolution*: minimum 1.1 between the peaks due to impurities B and C.

Limits:
- *impurity A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *impurity C*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *sum of impurities other than A, B and C*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Impurities D and E

Liquid chromatography *(2.2.29)*. *Use freshly prepared solutions. Store and inject them at 8 °C, using a cooled autosampler.*

Solution A 1.25 g/l solution of *potassium dihydrogen phosphate R*.

Test solution Dissolve 50.0 mg of the substance to be examined in 5.0 ml of a 4 g/l solution of *sodium hydroxide R* and dilute immediately to 100.0 ml with solution A.

Reference solution Dissolve 5.0 mg of *allopurinol impurity D CRS* and 5.0 mg of *allopurinol impurity E CRS* in 5.0 ml of a 4 g/l solution of *sodium hydroxide R* and dilute immediately to 100.0 ml with solution A. Dilute 1.0 ml of this solution to 100.0 ml with solution A.

Column:
- *size: l* = 0.05 m, Ø = 4.6 mm;
- *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase *methanol R*, 1.25 g/l solution of *potassium dihydrogen phosphate R* (10:90 *V/V*)
.

Flow rate 2 ml/min.

Detection Spectrophotometer at 230 nm.

Injection 20 µl.

Run time 1.5 times the retention time of impurity E.

Retention times Impurity D = about 3.6 min; impurity E = about 4.5 min.

System suitability Reference solution:

— *resolution*: minimum 2.0 between the peaks due to impurities D and E.

Limits:

— *impurity D*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.1 per cent);

— *impurity E*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.1 per cent).

Impurity F

Liquid chromatography *(2.2.29)*.

Under the following conditions, any hydrazine in the sample reacts with benzaldehyde to give benzaldehyde azine.

Solvent mixture Mix equal volumes of *dilute sodium hydroxide solution R* and *methanol R*.

Solution A Dissolve 2.0 g of *benzaldehyde R* in the solvent mixture and dilute to 50.0 ml with the solvent mixture. Prepare immediately before use.

Test solution Dissolve 250.0 mg of the substance to be examined in 5 ml of the solvent mixture. Add 4 ml of solution A, mix and allow to stand for 2.5 h at room temperature. Add 5.0 ml of *hexane R* and shake for 1 min. Allow the layers to separate and use the upper layer.

Reference solution Dissolve 10.0 mg of *hydrazine sulphate R* in the solvent mixture by sonicating for about 2 min and dilute to 50.0 ml with the solvent mixture. Dilute 1.0 ml to 20.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 20.0 ml with the solvent mixture. To 5.0 ml of the solution obtained, add 4 ml of solution A, mix and allow to stand for 2.5 h at room temperature. Add 5.0 ml of *hexane R* and shake for 1 min. Allow the layers to separate and use the upper layer.

Blank solution To 5 ml of the solvent mixture add 4 ml of solution A, mix and allow to stand for 2.5 h at room temperature. Add 5.0 ml of *hexane R* and shake for 1 min. Allow the layers to separate and use the upper layer.

Column:

— *size: l* = 0.25 m, Ø = 4.0 mm;

— *stationary phase*: *cyanosilyl silica gel for chromatography R* (5 µm) with a pore size of 100 nm;

— *temperature*: 30 °C.

Mobile phase *2-propanol R, hexane R* (5:95 *V/V*).

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 310 nm.

Injection 20 µl.

Relative retention With reference to benzaldehyde (retention time = about 2.8 min): benzaldehyde azine = about 0.8.

System suitability Reference solution:

— *resolution*: minimum 2 between the peaks due to benzaldehyde azine and benzaldehyde;

— *signal-to-noise ratio*: minimum 20 for the peak due to benzaldehyde azine.

Limit:

— *impurity F*: the area of the peak due to benzaldehyde azine in the chromatogram obtained with the test solution is not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (10 ppm of hydrazine sulphate equivalent to 2.5 ppm of hydrazine).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

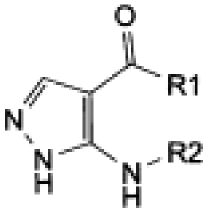
Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

Injection Test solution (b) and reference solution (c).

Calculate the percentage content of $C_5H_4N_4O$ from the declared content of *allopurinol CRS*.

IMPURITIES

Specified impurities *A, B, C, D, E, F.*

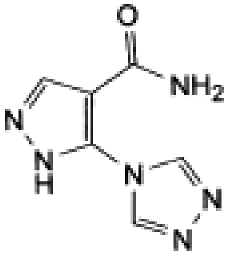


A. R1 = NH_2, R2 = H: 5-amino-1*H*-pyrazole-4-carboxamide,

B. R1 = NH_2, R2 = CHO: 5-(formylamino)-1*H*-pyrazole-4-carboxamide,

D. R1 = O-C_2H_5, R2 = H: ethyl 5-amino-1*H*-pyrazole-4-carboxylate,

E. R1 = O-C_2H_5, R2 = CHO: ethyl 5-(formylamino)-1*H*-pyrazole-4-carboxylate,



C. 5-(4*H*-1,2,4-triazol-4-yl)-1*H*-pyrazole-4-carboxamide,

F. H_2N-NH_2: diazane (hydrazine).

Almagate

General Notices

(Ph Eur monograph 2010)

$Al_2Mg_6C_2O_{20}H_{14},4H_2O$ 630 *66827-12-1*

Action and use

Antacid.

Ph Eur

DEFINITION

Hydrated aluminium magnesium hydroxycarbonate.

Content:

- — aluminium: 15.0 per cent to 17.0 per cent (calculated as Al_2O_3),
- — magnesium: 36.0 per cent to 40.0 per cent (calculated as MgO),
- — carbonic acid: 12.5 per cent to 14.5 per cent (calculated as CO_2).

CHARACTERS

Appearance

White or almost white, fine crystalline powder.

Solubility

Practically insoluble in water, in ethanol (96 per cent) and in methylene chloride. It dissolves with effervescence and heating in dilute mineral acids.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison Ph. Eur. reference spectrum of almagate.

B. Dissolve 150 mg in *dilute hydrochloric acid R* and dilute to 20 ml with the same acid. 2 ml of the solution gives the reaction of aluminium *(2.3.1)*.

C. 2 ml of the solution prepared under identification test B gives the reaction of magnesium *(2.3.1)*.

TESTS

pH *(2.2.3)*

9.1 to 9.7.

Disperse 4.0 g in 100 ml of *carbon dioxide-free water R*, stir for 2 min and filter.

Neutralising capacity

Carry out the test at 37 °C. Disperse 0.5 g in 100 ml of *water R*, heat, add 100.0 ml of *0.1 M hydrochloric acid*, previously heated and stir continuously; the pH *(2.2.3)* of the solution between 5 min and 20 min is not less than 3.0 and not greater than 4.5. Add 10.0 ml of *0.5 M hydrochloric acid*, previously heated, stir continuously for 1 h and titrate with *0.1 M sodium hydroxide* to pH 3.5; not more than 20.0 ml of *0.1 M sodium hydroxide* is required.

Chlorides *(2.4.4)*

Maximum 0.1 per cent.

Dissolve 0.33 g in 5 ml of *dilute nitric acid R* and dilute to 100 ml with *water R*. 15 ml of the solution complies with the limit test for chlorides. Prepare simultaneously the standard by diluting 0.7 ml of *dilute nitric acid R* to 5 ml with *water R* and adding 10 ml of *chloride standard solution (5 ppm Cl) R*.

Sulphates *(2.4.13)*

Maximum 0.4 per cent.

Dissolve 0.25 g in 5 ml of *dilute hydrochloric acid R* and dilute to 100 ml with *distilled water R*. 15 ml of the solution complies with the limit test for sulphates. Prepare simultaneously the standard by adding 0.8 ml of *dilute hydrochloric acid R* to 15 ml of *sulphate standard solution (10 ppm* SO_4*) R*.

Sodium

Maximum 1.50 × 102 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Dissolve 0.25 g in 50 ml of a 103 g/l solution of *hydrochloric acid R*.

Reference solutions Prepare the reference solutions using *sodium standard solution (200 ppm Na) R*, diluted as necessary with a 103 g/l solution of *hydrochloric acid R*.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

Dissolve 1.0 g in *dilute hydrochloric acid R* and dilute to 20.0 ml with the same acid. 12 ml of the solution complies with limit test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on ignition

43.0 per cent to 49.0 per cent, determined on 1.000 g by ignition at 900 ± 50 °C.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 103 micro-organisms per gram determined by plate count. It complies with the tests for *Escherichia coli* and *Pseudomonas aeruginosa (2.6.13)*.

ASSAY

Aluminium

Dissolve 1.000 g in 5 ml of *hydrochloric acid R*, heating if necessary. Allow to cool to room temperature and dilute to 100.0 ml with *water R* (solution A). Introduce 10.0 ml of solution A into a 250 ml conical flask, add 25.0 ml of *0.05 M sodium edetate*, 20 ml of *buffer solution pH* 3.5 R, 40 ml of *ethanol R* and 2 ml of a freshly prepared 0.25 g/l solution of *dithizone R* in *ethanol R*. Titrate the excess of sodium edetate with *0.05 M zinc sulphate* until the colour changes from greenish-violet to pink.

1 ml of *0.05 M sodium edetate* is equivalent to 2.549 mg of Al_2O_3.

Magnesium

Introduce 10.0 ml of solution A prepared in the assay of aluminium into a 500 ml conical flask, add 200 ml of *water R*, 20 ml of *triethanolamine R* with shaking, 10 ml of *ammonium chloride buffer solution pH 10.0 R* and 50 mg of *mordant black 11 triturate R*. Titrate with *0.05 M sodium edetate* until the colour changes from violet to pure blue.

1 ml of 0.05 M sodium edetate is equivalent to 2.015 mg of MgO.

Carbonic acid

12.5 per cent to 14.5 per cent.

Test sample Place 7.00 mg of the substance to be examined in a tin capsule. Seal the capsule.

Reference sample Place 7.00 mg of *almagate CRS* in a tin capsule. Seal the capsule.

Introduce separately the test sample and the reference sample into a combustion chamber of a CHN analyser purged with *helium for chromatography R* and maintained at a temperature of 1020 °C. Simultaneously, introduce *oxygen R* at a pressure of 40 kPa and a flow rate of 20 ml/min and allow complete combustion of the sample. Sweep the combustion gases through a reduction reactor and separate the gases formed by gas chromatography *(2.2.28)*.

Column:
— *size: l* = 2 m, Ø = 4 mm,

— *stationary phase*: *ethylvinylbenzene-divinylbenzene copolymer R1*.

Carrier gas *helium for chromatography R.*

Flow rate 100 ml/min.

Temperature:
— *column*: 65 °C,

— *detector*: 190 °C.

Detection Thermal conductivity.

Run time 16 min.

System suitability:
— average percentage of carbon in 5 reference samples must be within ± 0.2 per cent of the value assigned to the CRS. The difference between the upper and the lower values of the percentage of carbon in these samples must be below 0.2 per cent.

Calculate the percentage content of carbonic acid in the test sample according to the following formula:

$$C \times K \times \frac{A}{m}$$

C = percentage content of carbonic acid in the reference sample,

K = mean value for the 5 reference samples of the ratio of the mass in milligrams to the area of the peak due to carbonic acid,

A = area of the peak due to carbonic acid in the chromatogram obtained with the test sample,

m = sample mass, in milligrams.

STORAGE

In an airtight container.

Ph Eur

Aloxiprin

General Notices

9014-67-9

Action and use

Salicylate; non-selective cyclo-oxygenase inhibitor; antipyretic; analgesic; anti-inflammatory.

Preparation

Aloxiprin Tablets

DEFINITION

Aloxiprin is a polymeric condensation product of aluminium oxide and *O*-acetylsalicylic acid. It contains not less than 7.5% and not more than 8.5% of aluminium, Al, and not less than 79.0% and not more than 87.4% of total salicylates, calculated as *O*-acetylsalicylic acid, $C_9H_8O_4$, both calculated with reference to the dried substance.

CHARACTERISTICS

A fine, white or slightly pink powder.

Practically insoluble in *water*; practically insoluble in *ethanol (96%)* and in *ether*.

IDENTIFICATION

A. Boil 1 g with 20 ml of 2M *hydrochloric acid*, cool, filter and reserve the filtrate. Dissolve the residue in 10 ml of 0.1M *sodium hydroxide* and neutralise with 1M *acetic acid*. 1 ml of the resulting solution yields reaction A characteristic of *salicylates*, Appendix VI.

B. The filtrate reserved in test A yields the reaction characteristic of *aluminium salts*, Appendix VI.

TESTS

Heavy metals

Carefully ignite 2.0 g at a low temperature until completely charred, cool, add 2 ml of *nitric acid* and 0.25 ml of *sulphuric acid*, heat cautiously until white fumes are evolved and ignite at 500° to 600°. Cool, add 2 ml of *hydrochloric acid*, evaporate to dryness on a water bath and carry out the procedure for *limit test C for heavy metals*, Appendix VII, beginning at the words 'Dissolve the residue...'. Use 2 ml of *lead standard solution (10 ppm Pb)* to prepare the standard (10 ppm).

Free acetylsalicylic acid

To a quantity containing the equivalent of 1.0 g of total salicylates add 50 ml of dry *ether* and shake for 30 minutes. Filter quickly through fluted filter paper, wash the paper with several portions of dry *ether* and dilute the combined filtrate and washings to 100 ml with dry *ether*. The *absorbance* of the solution at the maximum at 278 nm is not more than 0.36, Appendix II

B (0.5%, calculated with reference to the content of total salicylates).

Salicylic acid

The *absorbance* of the solution used in the test for Free acetylsalicylic acid at the maximum at 308 nm is not more than 0.50, Appendix II B (0.15%, calculated with reference to the content of total salicylates).

Combined salicylate

Not more than 9.5%, calculated as salicylic acid, $C_7H_6O_3$, with reference to the content of total salicylates calculated as *O*-acetylsalicylic acid when determined in the following manner. To 0.1 g add 40 ml of a 0.5% w/v solution of *sodium fluoride* in 0.1M *hydrochloric acid* and shake for 5 minutes. Allow the solution to stand for 10 minutes, shaking at frequent intervals. Extract with six 20 ml quantities of *dichloromethane*, filter the combined extracts through a layer of *anhydrous sodium sulphate*, wash with 30 ml of *dichloromethane* and dilute the combined filtrate and washings to 200 ml with *dichloromethane*. Dilute 20 ml of the solution to 50 ml with *dichloromethane* and measure the *absorbance* of the resulting solution at the maximum at 308 nm, Appendix II B. Calculate the content of $C_7H_6O_3$ taking 293 as the value of A (1%, 1 cm) at the maximum at 308 nm.

Loss on drying

When dried to constant weight over *phosphorus pentoxide* at a pressure not exceeding 0.7 kPa, loses not more than 2.0% of its weight. Use 1 g.

ASSAY

For aluminium

Ignite 2 g in a tared silica crucible, heat gently until the organic matter is destroyed and then ignite to constant weight at 1000°. Each g of residue is equivalent to 0.5292 g of Al.

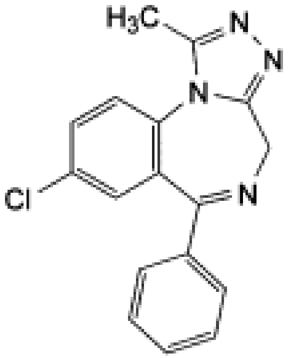
For total salicylates

To 0.25 g add 50 ml of 1M *sodium hydroxide* and boil gently until dissolved. Cool, add 50 ml of *water*, adjust the pH to between 2.40 and 2.50 with 1M *hydrochloric acid* and dilute to 500 ml with *water*. To 5 ml add 4 ml of *iron(III) chloride solution*, allow to stand for 30 minutes, dilute to 50 ml with *water* and measure the *absorbance* of the resulting solution at the maximum at 530 nm, Appendix II B, using in the reference cell a solution prepared by diluting 4 ml of *iron (III) chloride solution* to 50 ml with *water*. Calculate the content of total salicylates as $C_9H_8O_4$ from the *absorbance* obtained by repeating the procedure using 4 ml of a 0.05% w/v solution of *salicylic acid* in place of the solution being examined and beginning at the words add 4 ml of *iron(III) chloride solution*...'. Each g of salicylic acid is equivalent to 1.305 g of $C_9H_8O_4$.

Alprazolam

General Notices

(Ph Eur monograph 1065)



$C_{17}H_{13}ClN_4$ 308.8 *28981-97-7*

Action and use

Benzodiazepine.

Ph Eur

DEFINITION

8-Chloro-1-methyl-6-phenyl-4*H*-[1,2,4]triazolo[4,3-*a*][1,4]-benzodiazepine.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in methylene chloride, sparingly soluble in acetone and in ethanol (96 per cent).

It shows polymorphism *(5.9)*.

IDENTIFICATION

First identification B.

Second identification *A, C.*

A. Dissolve the substance to be examined in the smallest necessary quantity of *ethyl acetate R* and evaporate to dryness on a water-bath. Thoroughly mix 5.0 mg of the substance to be examined with 5.0 mg of *alprazolam CRS*. The melting point *(2.2.14)* of the mixture does not differ by more than 2 °C from the melting point of the substance to be examined.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *alprazolam CRS .*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *ethyl acetate R*, evaporate to dryness on a water-bath and record new spectra using the residues.

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 10 mg of *alprazolam CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 10 mg of *alprazolam CRS* and 10 mg of *midazolam CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel* GF_{254} *plate R.*

Mobile phase *glacial acetic acid R, water R, methanol R, ethyl acetate R* (2:15:20:80 *V/V/V/V*).

Application 5 µl.

Development Over a path of 12 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separately spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

Related substances

Liquid chromatography *(2.2.29)*.

Buffer solution Dissolve 7.7 g of *ammonium acetate R* in 1000 ml of *water R* and adjust to pH 4.2 with *glacial acetic acid R*.

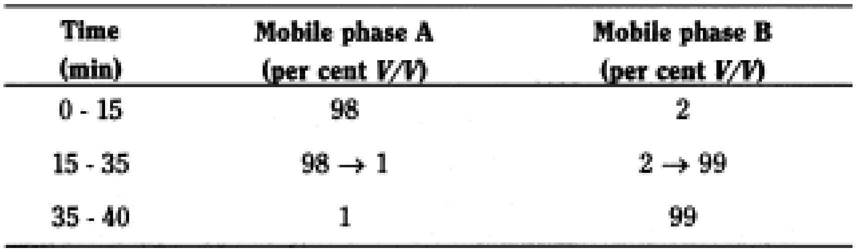
Test solution Dissolve 0.100 g of the substance to be examined in *dimethylformamide R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve 2 mg of *alprazolam CRS* and 2 mg of *triazolam CRS* in *dimethylformamide R* and dilute to 100.0 ml with the same solvent.

Reference solution (b) Dilute 5.0 ml of the test solution to 100.0 ml with *dimethylformamide R*. Dilute 0.5 ml of this solution to 10.0 ml with *dimethylformamide R*.

Column:
- *size: l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase: phenylsilyl silica gel for chromatography R1* (5 µm).

Mobile phase:
- *mobile phase A*: buffer solution, *methanol R* (44:56 *V/V*);
- *mobile phase B*: buffer solution, *methanol R* (5:95 *V/V*);
- *temperature*: 40 °C;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 15	98	2
15 - 35	98 → 1	2 → 99
35 - 40	1	99

Flow rate 2 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 10 µl; inject *dimethylformamide R* as a blank.

Retention time triazolam = about 9 min; alprazolam = about 10 min.

System suitability Reference solution (a):

- *resolution*: minimum 1.5 between the peaks due to triazolam and alprazolam.

Limits:
- *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);
- *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.140 g in 50 ml of a mixture of 2 volumes of *acetic anhydride R* and 3 volumes of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*. Titrate to the 2nd point of inflexion.

1 ml of *0.1 M perchloric acid* is equivalent to 15.44 mg of $C_{17}H_{13}ClN_4$.

STORAGE

Protected from light.

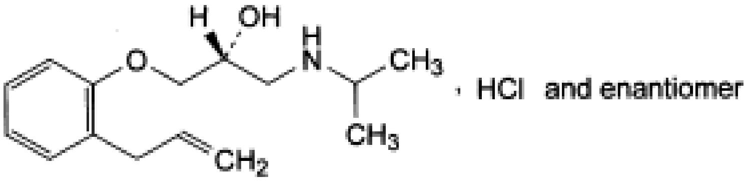
Ph Eur

Alprenolol Hydrochloride

General Notices

(Ph Eur monograph 0876)



$C_{15}H_{23}NO_2$,HCl 285.8 *13707-88-5*

Action and use

Beta-adrenoceptor antagonist.

Ph Eur

DEFINITION

(2*RS*)-1-[(1-Methylethyl)amino]-3-[2-(prop-2-enyl)phenoxy]propan-2-ol hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals.

Solubility

Very soluble in water, freely soluble in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

First identification B, D.

Second identification A, C, D.

A. Melting point *(2.2.14)*: 108 °C to 112 °C.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison alprenolol hydrochloride CRS.

C. Examine the chromatograms obtained in test A for related substances.

Detection Examine in daylight, after exposure to iodine vapour for 30 min.

Results The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution B_9 *(2.2.2, Method II)*.

Acidity or alkalinity

To 10 ml of solution S add 0.2 ml of *methyl red solution R* and 0.2 ml of *0.01 M hydrochloric acid* ; the solution is red. Add 0.4 ml of *0.01 M sodium hydroxide*; the solution is yellow.

Impurity C

Maximum 0.1 per cent.

Dissolve 0.25 g in *ethanol (96 per cent) R* and dilute to 25 ml with the same solvent. The absorbance *(2.2.25)* measured at 297 nm is not greater than 0.20.

Related substances

A. Thin-layer chromatography *(2.2.27)*.

Test solution (a) Dissolve 0.50 g of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 50 ml with *methanol R*.

Reference solution (a) Dissolve 10 mg of *alprenolol hydrochloride CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 10 mg of *alprenolol hydrochloride CRS* and 10 mg of *oxprenolol hydrochloride CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (c) Dilute 5 ml of test solution (b) to 50 ml with *methanol R*.

Plate *TLC silica gel G plate R.*

Mobile phase Place 2 beakers each containing 30 ml of *ammonia R* at the bottom of the tank containing a mixture of 5 volumes of *methanol R* and 95 volumes of *ethyl acetate R*.

Application 5 µl.

Development Over a path of 15 cm in a tank saturated for at least 1 h.

Drying At 100 °C for 15 min.

Detection Expose to iodine vapour for up to 6 h.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Limits Test solution (a):

— *impurity D*: any spot with an R_F value greater than that of the principal spot is not more intense than the principal spot in the chromatogram obtained with reference solution (c) (0.2 per cent).

B. Liquid chromatography *(2.2.29)*.

Test solution Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dissolve 4.0 mg of *alprenolol hydrochloride CRS* and 0.8 mg of *4-isopropylphenol R* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 4.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Column:
— *size: l* = 0.15 m, Ø = 4 mm;

— *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 0.656 g of *sodium octanesulphonate R* with 150 ml of *acetonitrile R* and dilute to 500 ml with phosphate buffer pH 2.8 prepared as follows: mix 1.78 g of *phosphoric acid R* and 15.6 g of *sodium dihydrogen phosphate R* and dilute to 2000 ml with *water R*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 280 nm.

Equilibration With the mobile phase for about 1 h.

Injection 20 µl.

Run time Twice the retention time of alprenolol.

Retention time Alprenolol = about 11 min; 4-isopropylphenol = about 18 min.

System suitability Reference solution (a):

— *resolution*: minimum 5 between the peaks due to alprenolol and 4-isopropylphenol; if necessary, adjust the concentration of sodium octanesulphonate and/or acetonitrile in the mobile phase (increase the concentration of sodium octanesulphonate to increase the retention time of alprenolol and increase the concentration of acetonitrile to decrease the retention times of both compounds).

Limits:
— *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.4 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.04 per cent).

Heavy metals *(2.4.8)*

Maximum 10 ppm.

Dissolve 2.0 g in 20 ml of *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying over *diphosphorus pentoxide R* at a pressure not exceeding 2.7 kPa.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.400 g in 25 ml of a mixture of equal volumes of *anhydrous ethanol R* and *water R*. Add 10 ml of *0.01 M hydrochloric acid* . Carry out a potentiometric titration *(2.2.20)*, using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 28.58 mg of $C_{15}H_{24}ClNO_2$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities *C, D.*

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B.*

Action and use

Prostaglandin E_1 (PGE_1).

Ph Eur

DEFINITION

7-[(1*R*,2*R*,3*R*)-3-Hydroxy-2-[(1*E*,3*S*)-3-hydroxyoct-1-enyl]-5-oxocyclopentyl]heptanoic acid.

Content

95.0 per cent to 102.5 per cent (anhydrous substance).

CHARACTERS

Appearance

White or slightly yellowish, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in alcohol, soluble in acetone, slightly soluble in ethyl acetate.

IDENTIFICATION

A. Specific optical rotation *(2.2.7)*: - 60 to - 70 (anhydrous substance).

Immediately before use, dissolve 50 mg in *alcohol R* and dilute to 10.0 ml with the same solvent.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *alprostadil CRS.*

C. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with the reference solution.

TESTS

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the solutions protected from light.*

Test solution Dissolve 10.0 mg of the substance to be examined in a mixture of equal volumes of *acetonitrile R1* and *water R* and dilute to 10.0 ml with the same mixture of solvents.

Reference solution (a) Dilute 100 µl of the test solution to 20.0 ml with a mixture of equal volumes of *acetonitrile R1* and *water R*.

Reference solution (b) Dissolve 1.0 mg of *dinoprostone impurity C CRS* (alprostadil impurity H) and 1.0 mg of *alprostadil CRS* in a mixture of equal volumes of *acetonitrile R1* and *water R* and dilute to 20.0 ml with the same mixture of solvents.

Reference solution (c) In order to prepare in situ the degradation compounds (impurity A and impurity B), dissolve 1 mg of the substance to be examined in 100 µl of *1 M sodium hydroxide* (the solution becomes brownish-red), wait for 3 min and add 100 µl of *1 M phosphoric acid* (yellowish-white opalescent solution); dilute to 5.0 ml with a mixture of equal volumes of *acetonitrile R1* and *water R*.

System A

Column:

— *size:* *l* = 0.25 m, Ø = 4.0 mm,

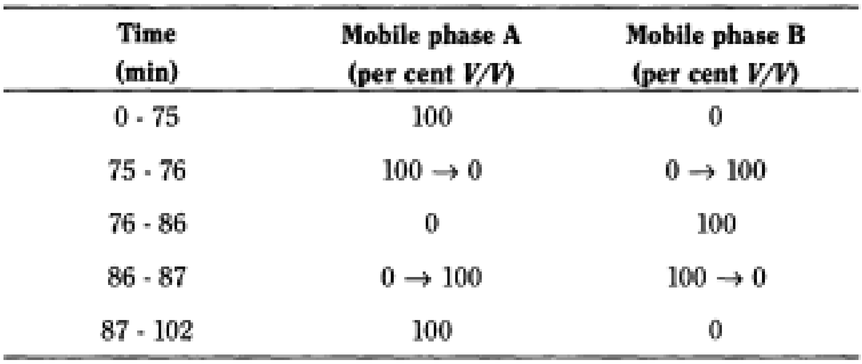
— *stationary phase*: *octylsilyl base-deactivated silica gel for chromatography R* (4 µm) with a pore size of 6 nm,

— *temperature*: 35 °C.

Mobile phase:

— *mobile phase A*. Dissolve 3.9 g of *sodium dihydrogen phosphate R* in *water R* and dilute to 1000.0 ml with the same solvent; adjust to pH 2.5 with a 2.9 g/l solution of *phosphoric acid R* (approximately 600 ml is required); to 740 ml of the buffer solution add 260 ml of *acetonitrile R1*;

— *mobile phase B*. Dissolve 3.9 g of *sodium dihydrogen phosphate R* in *water R* and dilute to 1000.0 ml with the same solvent; adjust to pH 2.5 with a 2.9 g/l solution of *phosphoric acid R* (approximately 600 ml is required); to 200 ml of the buffer solution add 800 ml of *acetonitrile R1*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 75	100	0
75 - 76	100 → 0	0 → 100
76 - 86	0	100
86 - 87	0 → 100	100 → 0
87 - 102	100	0

Flow rate 1 ml/min.

Detection Spectrophotometer at 200 nm.

Injection 20 µl loop injector.

System suitability:

— *retention time*: alprostadil = about 63 min,

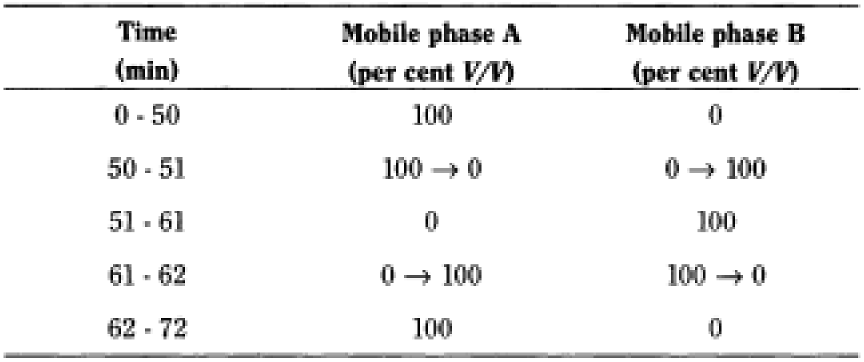
— *resolution*: minimum of 1.5 between the peaks due to impurity H and alprostadil in the chromatogram obtained with reference solution (b).

System B

Use the same conditions as for system A with the following mobile phase and elution programme:

— *mobile phase A*. Dissolve 3.9 g of *sodium dihydrogen phosphate R* in *water R* and dilute to 1000.0 ml with the same solvent; adjust to pH 2.5 with a 2.9 g/l solution of *phosphoric acid R* (approximately 600 ml is required); to 600 ml of the buffer solution add 400 ml of *acetonitrile R1*;

— *mobile phase B*. Use mobile phase B as described under system A;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 50	100	0
50 - 51	100 → 0	0 → 100
51 - 61	0	100
61 - 62	0 → 100	100 → 0
62 - 72	100	0

System suitability:

— *relative retentions* with reference to alprostadil (retention time = about 7 min): impurity A = about 2.4; impurity B = about 2.6,

— *resolution*: minimum of 1.5 between the peaks due to impurity A and impurity B in the chromatogram obtained with reference solution (c).

Carry out the test according to system A and B.

Limits:

— *correction factors*: multiply the areas of the corresponding peaks using the correction factors in Table 1488.-1 to obtain the corrected areas,

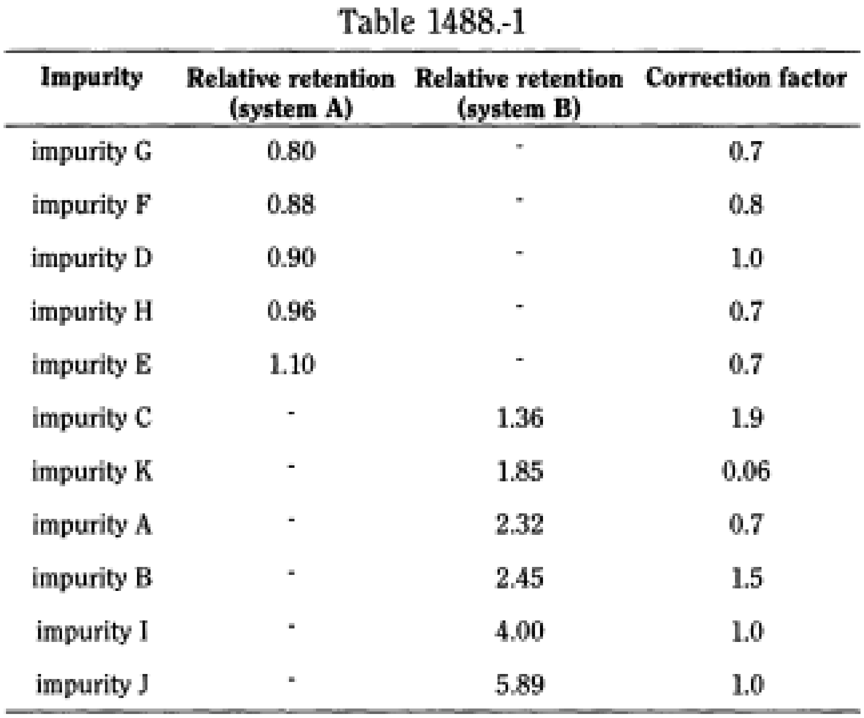


Table 1488.-1

Impurity	Relative retention (system A)	Relative retention (system B)	Correction factor
impurity G	0.80	-	0.7
impurity F	0.88	-	0.8
impurity D	0.90	-	1.0
impurity H	0.96	-	0.7
impurity E	1.10	-	0.7
impurity C	-	1.36	1.9
impurity K	-	1.85	0.06
impurity A	-	2.32	0.7
impurity B	-	2.45	1.5
impurity I	-	4.00	1.0
impurity J	-	5.89	1.0

— *impurity A (corrected area)*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.5 per cent),

— *impurity B (corrected area)*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),

— *any other impurity (corrected area)*: not more than 1.8 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.9 per cent), and not more than 1 such peak has an area greater than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent). Evaluate impurities appearing at relative retentions less than 1.2 by system A and impurities appearing at relative retentions greater than 1.2 by system B,

— *total (corrected area)*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.5 per cent),

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Water *(2.5.32)*

Maximum 0.5 per cent, determined on 50 mg.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances, system A. *Prepare the solutions protected from light.*

Test solution Dissolve 10.0 mg of the substance to be examined in a mixture of equal volumes of *acetonitrile R1* and *water R* and dilute to 25.0 ml with the same mixture of solvents. Dilute 3.0 ml of the solution to 20.0 ml with a mixture of equal volumes of *acetonitrile R1* and *water R*.

Reference solution   Dissolve 10.0 mg of *alprostadil CRS* in a mixture of equal volumes of *acetonitrile R1* and *water R* and dilute to 25.0 ml with the same mixture of solvents. Dilute 3.0 ml of the solution to 20.0 ml with a mixture of equal volumes of *acetonitrile R1* and *water R*.

Injection   20 µl.

Calculate the percentage content of $C_{20}H_{34}O_5$.

STORAGE

At a temperature of 2 °C to 8 °C.

IMPURITIES

$C_{2736}H_{4174}N_{914}O_{824}S_{45}$ (non-glycosylated protein) *105857-23-6*

Action and use

Tissue-type plasminogen activator; fibrinolytic.

Ph Eur

DEFINITION

Alteplase for injection is a sterile, freeze-dried preparation of alteplase, a tissue plasminogen activator produced by recombinant DNA technology. It has a potency of not less than 500 000 IU per milligram of protein.

Tissue plasminogen activator binds to fibrin clots and activates plasminogen, leading to the generation of plasmin and to the degradation of fibrin clots or blood coagulates.

Alteplase consists of 527 amino acids with a calculated relative molecular mass of 59 050 without consideration of the carbohydrate moieties attached at positions Asn 117, Asn 184 and Asn 448. The total relative molecular mass is approximately 65 000. Alteplase is cleaved by plasmin between amino-acids 275 and 276 into a two-chain form (A chain and B chain) that are connected by a disulphide bridge between Cys 264 and Cys 395. The single-chain form and the two-chain form show comparable fibrinolytic activity *in vitro*.

PRODUCTION

Alteplase is produced by recombinant DNA synthesis in cell culture; the fermentation takes place in serum-free medium.

The purification process is designed to remove efficiently potential impurities, such as antibiotics, DNA and protein contaminants derived both from the host cell and from the production medium, and potential viral contaminants.

If alteplase is stored in bulk form, stability (maintenance of potency) in the intended storage conditions must be demonstrated.

The production, purification and product consistency are checked by a number of analytical methods described below, carried out routinely as in-process controls.

Protein content

The protein concentration of alteplase solutions is determined by measuring the absorbance *(2.2.25)* of the protein solution at 280 nm and at 320 nm, using formulation buffer as the compensation liquid. If dilution of alteplase samples is necessary, the samples are diluted in formulation buffer. For the calculation of the alteplase concentration the absorbance value (A_{280} - A_{320}) is divided by the specific absorption coefficient for alteplase of 1.9.

Potency

The potency of alteplase is determined in an *in-vitro* clot-lysis assay as described under Assay. The specific activity of bulk alteplase is approximately 580 000 IU per milligram of alteplase.

N-terminal sequence

N-terminal sequencing is applied to determine the correct *N*-terminal sequence and to determine semiquantitatively additional cleavage sites in the alteplase molecule, for example at position AA 275-276 or at position AA 27-28. The *N*-terminal sequence must conform with the sequence of human tissue plasminogen activator.

Isoelectric focusing

The consistency in the microheterogeneity of glycosylation of the alteplase molecule can be demonstrated by isoelectric focusing (IEF). A complex banding pattern with ten major and several minor bands in the pH range 6.5-8.5 is observed. Denaturing conditions are applied to achieve a good separation of differently charged variants of alteplase. The broad charge distribution observed is due to a population of molecules, which differ in the fine structure of biantenary and triantenary complex-type carbohydrate residues, with different degrees of substitution with sialic acids. The banding pattern of alteplase test samples must be consistent with the pattern of alteplase reference standard.

Single-chain alteplase content

The alteplase produced by CHO (Chinese hamster ovary) cells in serum-free medium is predominantly single-chain alteplase. The single-chain form can be separated from the two-chain form by gel-permeation liquid chromatography under reducing conditions as described under Single-chain content (see Tests). The single-chain alteplase content in bulk samples must be higher than 60 per cent.

Tryptic-peptide mapping

The primary structure of the alteplase molecule is verified by tryptic-peptide mapping as described under Identification B. The reduced and carboxymethylated molecule is cleaved by trypsin into about fifty peptides, which are separated by reverse-phase liquid chromatography. A characteristic chromatogram (fingerprint) is obtained. The identity of the tryptic-peptide map of a given alteplase sample with the profile of a well-characterised reference standard is an indirect confirmation of the amino-acid sequence, because even single amino-acid exchanges in individual peptides can be detected by this sensitive technique. In addition, complex peaks of the glycopeptides can be isolated from the tryptic-peptide map and separated in a second dimension, either by reverse-phase liquid chromatography under modified conditions or by capillary electrophoresis. By this two-dimensional separation of glycopeptide variants, lot-to-lot consistency of the microheterogeneity of glycosylation can be demonstrated.

The tryptic-peptide map of alteplase samples must be consistent with the tryptic-peptide map of alteplase reference standard.

Monomer content

The monomer content of alteplase is measured by gel-permeation liquid chromatography under non-reduced conditions as described under Monomer content (see Tests). The monomer content of alteplase bulk samples must be higher than 95 per cent.

Type I/Type II alteplase content

CHO cells produce two glycosylation variants of alteplase. Type I alteplase contains one polymannose-type glycosylation at position Asn 117 and two complex-type glycosylation sites at positions Asn 184 and Asn 448. Type II alteplase is only glycosylated at positions Asn 117 and Asn 448.

The ratio of Type I/Type II alteplase is constant in the range of 45 to 65 per cent of Type I and 35 to 55 per cent of Type II. The content of alteplase Type I and Type II can be determined by a densitometric scan of SDS-PAGE (sodium dodecyl sulphate polyacrylamide gel electrophoresis) gel. Plasmin-treated samples of alteplase, which are reduced and carboxymethylated before loading on the gel, are separated into three bands: Type I alteplase A-chain (AA 1-275), Type II alteplase A-chain (AA 1-275) and alteplase B-chain (AA 276-527). The ratio of Type I/Type II alteplase is determined from a calibration curve, which is obtained by a densitometric scan of defined mixtures of purified Type I alteplase and Type II alteplase standards.

SDS-PAGE

SDS-PAGE (silver staining) is used to demonstrate purity of the alteplase bulk material and the integrity of the alteplase molecule. For alteplase bulk samples, no additional protein bands compared to reference standard or degradation products must occur in SDS-PAGE gels at a loading amount of 2.5 µg alteplase protein per lane and a limit of detection of 5 ng per protein (BSA) band.

Bacterial endotoxins *(2.6.14)*

Less than 1 IU per milligram of alteplase.

Sialic acids

Dialyse samples and alteplase reference standard against enzyme buffer (8.9 g/l *sodium chloride R*, 4.1 g/l *sodium acetate R*, pH 5.5) using a membrane with a cut-off point corresponding to a relative molecular mass of 10 000 for globular proteins. After dialysis, determine the protein concentration. Add 5 µl of calcium chloride solution (19.98 per cent *m/m calcium chloride R*) to 1 ml of protein solution. Add 10 milliunits of neuraminidase per milligram of protein. Incubate this solution at 37 °C for about 17 h.

Prepare standard dilutions between 1.56 mg/ml and 25.0 mg/ml from an *N-acetylneuraminic acid R* reference stock solution with a concentration of 50 mg/ml. Pipette 0.2 ml of the sample and of the protein reference standard in duplicate into reagent tubes. Pipette also 0.2 ml of the standard dilutions into reagent tubes. Add 0.25 ml of periodate reagent (5.4 g/l solution of *sodium periodate R* in a 1.25 per cent *V/V* solution of *sulphuric acid R*), mix and incubate for 30 min at 37 °C. Add 0.2 ml of arsenite reagent (20 g/l solution of *sodium arsenite R* in a 1.55 per cent *V/V* solution of *hydrochloric acid R*) and mix. A yellowish-brown colour develops and disappears. Add 2.0 ml of a 28.9 g/l solution of *thiobarbituric acid R* and mix. Heat the closed tubes in boiling water for 7.5 min and then cool them in an ice-bath for 5 min. Add 2.0 ml of a mixture of *butanol R* and *hydrochloric acid R* (95:5) and mix. Centrifuge the tubes at 3000 r/min for 3 min. Measure the absorbance of the butanol-HCl layer at 552 nm within 30 min using the butanol-HCl mixture as the compensation solution. Perform a linear-regression analysis for the *N*-acetylneuraminic acid standard. The molar content of *N*-acetylneuraminic acid for the samples and for alteplase reference standard is calculated from the calibration curve. The sialic acids content for the test samples must be within the range 70 to 130 per cent of alteplase reference standard, which contains about 3 moles of sialic acids per mole of alteplase.

Neutral sugars

Dilute alteplase samples and the reference standard in the assay buffer, containing 34.8 g/l of *arginine R*, 0.1 g/l of *polysorbate 80 R* and adjusted to pH 7.4 with *phosphoric acid R*, to a protein concentration of 50 µg/ml. Prepare the following concentrations of mannose in the same assay buffer for a calibration curve: 20, 30, 40, 50 and 60 µg/ml. Pipette 2 ml of alteplase samples and reference standard, as well as 2 ml of each mannose concentration in duplicate in reagent tubes. Add 50 µl of *phenol R*, followed by 5 ml of *sulphuric acid R* in each reagent tube. Incubate the mixture for 30 min at room temperature. Measure the absorbance at 492 nm for each tube. Read the content of neutral sugars from the mannose calibration curve. The neutral sugar content is expressed in moles of neutral sugar per mole of alteplase, taking into account the dilution factor for alteplase samples and reference standard and using a relative molecular mass of 180.2 for mannose and a relative molecular mass of 59 050 for the alteplase protein moiety. The neutral sugar content of the alteplase samples must be in the range of 70 to 130 per cent compared to alteplase reference standard, which contains about 12 moles of neutral sugar per mole of alteplase.

CHARACTERS

A white or slightly yellow powder or solid friable mass.

Reconstitute the preparation as stated on the label immediately before carrying out the Identification, Tests (except those for solubility and water) and Assay.

IDENTIFICATION

A. The assay serves also to identify the preparation.

B. Tryptic-peptide mapping. Examine by liquid chromatography *(2.2.29)*.

Test solution Dilute the preparation to be examined with *water R* to obtain a solution containing about 1 mg of alteplase per millilitre. Dialyse about 2.5 ml of the solution for at least

12 h into a solution containing 480 g/l of *urea R*, 44 g/l of *tris(hydroxymethyl)aminomethane R* and 1.5 g/l of *disodium edetate R* and adjusted to pH 8.6, using a membrane with a cut-off point corresponding to a relative molecular mass of 10 000 for globular proteins. Measure the volume of the solution, transfer it to a clean test-tube and add per millilitre 10 µl of a 156 g/l solution of *dithiothreitol R*. Allow to stand for 4 h, cool in iced water and add per millilitre of solution 25 µl of a freshly prepared 190 g/l solution of *iodoacetic acid R*. Allow to stand in the dark for 30 min. Add per millilitre 50 µl of dithiothreitol solution to stop the reaction. Dialyse for 24 h against an 8 g/l solution of *ammonium hydrogen carbonate R*. Add 1 part of *trypsin for peptide mapping R* to 100 parts of the protein and allow to stand for 6 h to 8 h. Repeat the addition of trypsin and allow to stand for a total of 24 h.

Reference solution Prepare as for the test solution using a suitable reference standard instead of the preparation to be examined.

The chromatographic procedure may be carried out using:

— a column 0.1 m long and 4.6 mm in internal diameter packed with *octadecylsilyl silica gel for chromatography R* (5 µm to 10 µm);

Mobile phase A A 8 g/l solution of *sodium dihydrogen phosphate R*, adjusted to pH 2.85 with *phosphoric acid R*, filtered and degassed;

Mobile phase B *Acetonitrile R* 75 per cent *V/V* in mobile phase A;

— as detector a spectrophotometer set at 210 nm.

Equilibrate the system with mobile phase A at a flow rate of 1 ml/min. After injection of the solution, increase the proportion of mobile phase B at a rate of 0.44 per cent per minute until the ratio of mobile phase A to mobile phase B is 60:40, then increase the proportion of mobile phase B at a rate of 1.33 per cent per minute until the ratio of mobile phase A to mobile phase B is 20:80 and then continue elution with this mixture for a further 10 min. Record the chromatogram for the reference solution: the test is not valid unless the resolution of peaks 6 (peptides 268-275) and 7 (peptides 1-7) is at least 1.5; $b_{0.5a}$ and $b_{0.5b}$ are not more than 0.4 min. Inject about 100 µl of the test solution and record the chromatogram. Verify the identity of the peaks by comparison with the chromatograms of the reference solution. There should not be any additional significant peaks or shoulders, a significant peak or shoulder being defined as one with an area response equal to or greater than 5 per cent of peak 19 (peptides 278-296); no significant peak is missing. A type chromatogram for identification of the peaks cited is given at the end of the monograph (see Figure 1170.-1).

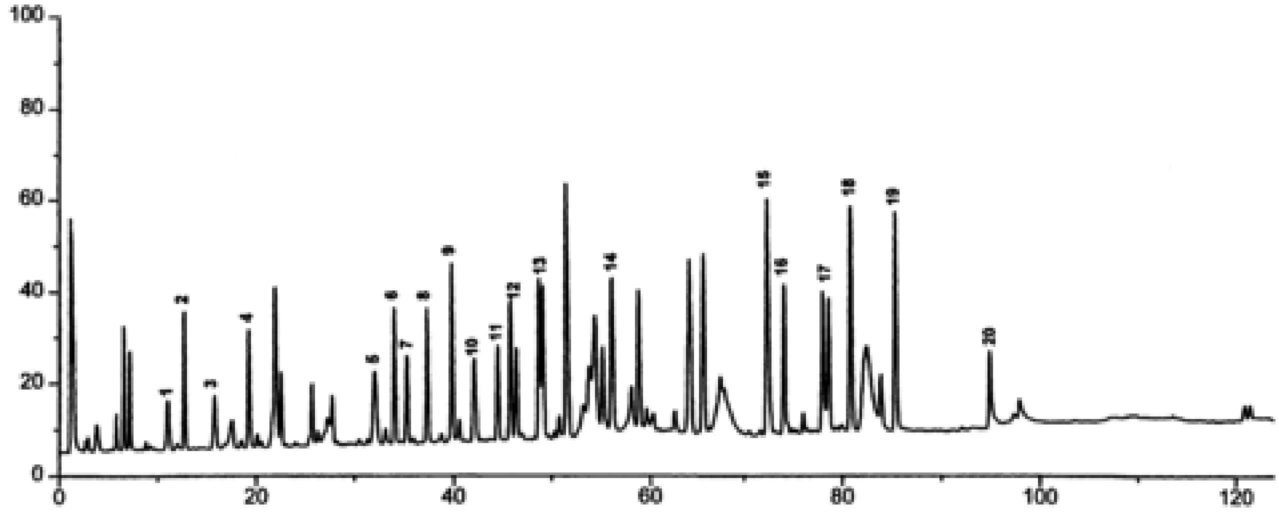

Figure 1170.-1. – *Chromatogram for tryptic-peptide mapping of alteplase*

TESTS

Appearance of solution

The reconstituted preparation is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7 *(2.2.2, Method II)*.

pH *(2.2.3)*

7.1 to 7.5.

Solubility

Add the volume of the liquid stated on the label. The preparation dissolves completely within 2 min at 20 °C to 25 °C.

Protein content

Prepare a solution of the substance to be examined with an accurately known concentration of about 1 g/l. Using a 34.8 g/l solution of *arginine R* adjusted to pH 7.3 with *phosphoric acid R*, dilute an accurately measured volume of the solution of the substance to be examined so that the absorbance measured at the maximum at about 280 nm is 0.5 to 1.0 (*test solution)*. Measure the absorbance *(2.2.25)* of the solution at the maximum at about 280 nm and at 320 nm using the arginine solution as the compensation liquid. Calculate the protein content in the portion of alteplase taken from the following expression:

$$\frac{V\,(A_{280} - A_{320})}{1.9}$$

in which *V* is the volume of arginine solution required to prepare the test solution, A_{280} is the absorbance at the maximum at about 280 nm and A_{320} is the absorbance at 320 nm.

Single-chain content

Examine by liquid chromatography*(2.2.29)*.

Test solution Dissolve the preparation to be examined in *water R* to obtain a solution containing about 1 mg of alteplase per millilitre. Place about 1 ml of the solution in a tube, add 3 ml of a 3 g/l solution of *dithiothreitol R* in the mobile phase, place a cap on the tube and heat at about 80 °C for 3 min to 5 min.

The chromatographic procedure may be carried out using:

— a column 0.6 m long and 7.5 mm in internal diameter packed with silica-based rigid, hydrophilic gel with spherical particles 10 µm to 13 µm in diameter, suitable for size-exclusion chromatography;

— as mobile phase at a flow rate of 0.5 ml/min a solution containing 30 g/l of *sodium dihydrogen phosphate R* and 1 g/l of *sodium dodecyl sulphate R*, adjusted to pH 6.8 with *dilute sodium hydroxide solution R*;

— as detector a spectrophotometer set at 214 nm.

Inject about 50 µl of the test solution and record the chromatogram. The chromatogram shows two major peaks corresponding to single-chain and two-chain alteplase. Calculate the relative amount of single-chain alteplase from the peak area values.

The test is not valid unless: the number of theoretical plates calculated on the basis of the single-chain alteplase peak is at least 1000. The content of single-chain alteplase is not less than 60 per cent of the total amount of alteplase-related substances found.

Monomer content

Examine by liquid chromatography *(2.2.29)*.

Test solution Reconstitute the preparation to be examined to obtain a solution containing about 1 mg per millilitre.

The chromatographic procedure may be carried out using:

— a column 0.6 m long and 7.5 mm in internal diameter packed with silica-based rigid, hydrophilic gel with spherical particles 10 µm to 13 µm in diameter, suitable for size-exclusion chromatography;

— as mobile phase at a flow rate of 0.5 ml/min a solution containing 30 g/l of *sodium dihydrogen phosphate R* and 1 g/l of *sodium dodecyl sulphate R*, adjusted to pH 6.8 with *dilute sodium hydroxide solution R*;

— as detector a spectrophotometer set at 214 nm.

Inject the test solution and record the chromatogram. The test is not valid unless the number of theoretical plates calculated for the alteplase monomer peak is at least 1000. Measure the response for all peaks, i.e. peaks corresponding to alteplase species of different molecular masses. Calculate the relative content of monomer from the area values of these peaks. The monomer content for alteplase must be at least 95 per cent.

Water *(2.5.12)*

Not more than 4.0 per cent, determined by the semi-micro determination of water.

Bacterial endotoxins *(2.6.14)*

Less than 1 IU per milligram of protein.

Sterility *(2.6.1)*

It complies with the test for sterility.

ASSAY

The potency of alteplase is determined by comparing its ability to activate plasminogen to form plasmin with the same capacity of a reference preparation calibrated in International Units. The formation of plasmin is measured by the determination of the lysis time of a fibrin clot in given conditions.

The International Unit is the activity of a stated quantity of the International Standard of alteplase. The equivalence in International Units of the International Standard is stated by the World Health Organisation.

Solvent buffer A solution containing 1.38 g/l of *sodium dihydrogen phosphate monohydrate R*, 7.10 g/l of *anhydrous disodium hydrogen phosphate R*, 0.20 g/l of *sodium azide R* and 0.10 g/l of *polysorbate 80 R*.

Human thrombin solution A solution of *human thrombin R* containing 33 IU/ml in solvent buffer.

Human fibrinogen solution A 2 g/l solution of *fibrinogen R* in solvent buffer.

Human plasminogen solution A 1 g/l solution of *human plasminogen R* in solvent buffer.

Test solutions Using a solution of the substance to be examined containing 1 g/l, prepare serial dilutions using solvent buffer, for example 1:5000, 1:10 000, 1:20 000.

Reference solutions Using a solution of a suitable reference standard having an accurately known concentration of about 1 g/l (580 000 IU of alteplase per millilitre), prepare five serial dilutions using *water R* to obtain reference solutions having known concentrations in the range 9.0 IU/ml to 145 IU/ml.

To each of a set of labelled glass test-tubes, add 0.5 ml of human thrombin solution. Allocate each test and reference solution to a separate tube and add to each tube 0.5 ml of the solution allocated to it. To each of a second set of labelled glass tubes, add 20 µl of human plasminogen solution, and 1 ml of human fibrinogen solution, mix and store on ice. Beginning with the reference/thrombin mixture containing the lowest number of International Units per millilitre, record the time and separately add 200 µl of each of the thrombin mixtures to the test tubes containing the plasminogen-fibrinogen mixture. Using a vortex mixture, intermittently mix the contents of each tube for a total of 15 s and carefully place in a rack in a circulating water-bath at 37 °C. A visibly turbid clot forms within 30 s and bubbles subsequently form within the clot. Record the clot-lysis time as the time between the first addition of alteplase solution and the moment when the last bubble rises to the surface. Using a least-squares fit, determine the equation of the line using the logarithms of the concentrations of the reference preparation in International Units per millilitre versus the logarithms of the values of their clot-lysis times in seconds, according to the following equation:

$$\log t = a + b\,(\log U_s)$$

in which t is the clot-lysis time, U_S the activity in International Units per millilitre of the reference preparation, b is the slope and a the y-intercept of the line. The test is not valid unless the correlation coefficient is - 0.9900 to - 1.0000. From the line equation and the clot-lysis time for the test solution, calculate the logarithm of the activity U_A from the following equation:

$$\log U_A = \frac{[(\log t) - a]}{b}$$

Calculate the alteplase activity in International Units per millilitre from the following expression:

$$D \times U_A$$

in which D is the dilution factor for the test solution. Calculate the specific activity in the portion of the substance to be examined from the following expression:

$$\frac{U_A}{P}$$

in which P is the concentration of protein obtained in the test for protein content.

The estimated potency is not less than 90 per cent and not more than 110 per cent of the stated potency.

STORAGE

Store in a colourless, glass container, under vacuum or under an inert gas, protected from light, at a temperature of 2 °C to 30 °C.

LABELLING

The label states:

— the number of International Units per container;

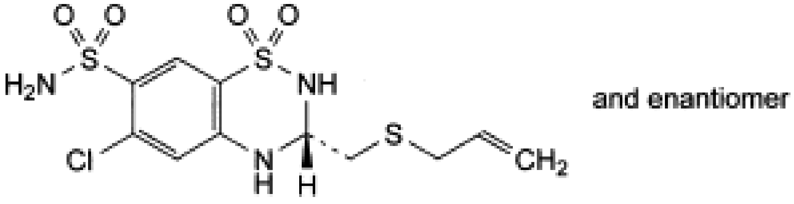
— the amount of protein per container.

Ph Eur

Altizide

General Notices

(Ph Eur monograph 2185)



$C_{11}H_{14}ClN_3O_4S_3$ 383.9 *5588-16-9*

Ph Eur

DEFINITION

(3*RS*)-6-Chloro-3-[(prop-2-enylsulphanyl)methyl]-3,4-dihydro-2*H*-1,2,4-benzothiadiazine-7-sulphonamide 1,1-dioxide.

Content

97.5 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, soluble in methanol, practically insoluble in dichloromethane.

It shows polymorphism *(5.9)*.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)*.

Comparison altizide CRS.

If the spectra obtained show differences, dissolve 50 mg of the substance to be examined and 50 mg of the reference substance separately in 2 ml of *acetone R* and evaporate the solvent. Precipitate by adding 1 ml of *methylene chloride R*. Evaporate to dryness and record new spectra using the residues.

TESTS

Impurity B

Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 0.200 g of the substance to be examined in *acetone R* and dilute to 2.0 ml with the same solvent.

Reference solution (a) Dissolve 10.0 mg of *altizide impurity B CRS* in *acetone R* and dilute to 25.0 ml with the same solvent.

Reference solution (b) To 1.0 ml of reference solution (a) add 1.0 ml of the test solution.

Reference solution (c) Dilute 5.0 ml of reference solution (a) to 10.0 ml with *acetone R*.

Plate *TLC silica gel* F_{254} *plate R.*

Mobile phase *acetone R, methylene chloride R*

(25:75 *V/V*).

Application 10 µl of the test solution and reference solutions (b) and (c).

Development Over 2/3 of the plate.

Drying In air.

Detection Spray with a mixture of equal volumes of a 10 g/l solution of *potassium permanganate R* and a 50 g/l solution of *sodium carbonate R*, prepared immediately before use. Allow to stand for 30 min and examine in daylight.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Limit Any spot due to impurity B is not more intense than the principal spot in the chromatogram obtained with reference solution (c) (0.2 per cent).

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the solutions immediately before use, except reference solution (b)*.

Test solution Dissolve 50 mg of the substance to be examined in 5 ml of *acetonitrile R* and dilute to 25 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) In order to produce impurity A in situ, dissolve 50 mg of the substance to be examined in 5 ml of *acetonitrile R* and dilute to 25 ml with *water R*. Allow to stand for 30 min.

Reference solution (c) Dissolve 4 mg of *furosemide CRS* in 2 ml of *acetonitrile R*, add 2 ml of the test solution and dilute to 100 ml with the mobile phase.

Column:

— *size:* *l* = 0.15 m, Ø = 3.9 mm;

— *stationary phase: end-capped octadecylsilyl silica gel for chromatography R* (5 µm);

— *temperature*: 30 °C.

Mobile phase *acetonitrile R, water R* previously adjusted to pH 2.0 with *perchloric acid R* (25:75 *V/V*).

Flow rate 0.7 ml/min.

Detection Spectrophotometer at 270 nm.

Injection 5 µl.

Run time Twice the retention time of altizide.

Relative retention With reference to altizide (retention time = about 25 min): impurity A = about 0.15; furosemide = about 1.05.

System suitability Reference solution (c):

— *resolution*: minimum 1.0 between the peaks due to altizide and furosemide.

Limits:

— *impurity A*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Water *(2.5.32)*

Maximum 0.5 per cent, determined on 50.0 mg.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances, with the following modifications.

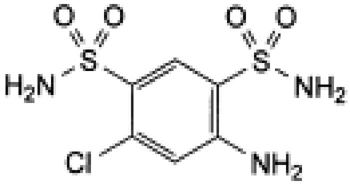
Test solution Dissolve 25.0 mg of the substance to be examined in 2 ml of *acetonitrile R* and dilute to 25.0 ml with the mobile phase.

Reference solution Dissolve 25.0 mg of *altizide CRS* in 2 ml of *acetonitrile R* and dilute to 25.0 ml with the mobile phase.

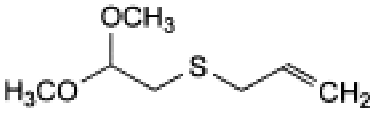
Calculate the percentage content of $C_{11}H_{14}ClN_3O_4S_3$ from the declared content of *altizide CRS*.

IMPURITIES

Specified impurities *A, B.*



A. 4-amino-6-chlorobenzene-1,3-disulphonamide,



B. 3-[(2,2-dimethoxyethyl)sulphanyl]prop-1-ene.

DEFINITION

Content

99.0 per cent to 100.5 per cent of $AlK(SO_4)_2,12H_2O$.

CHARACTERS

Appearance

Granular powder or colourless, transparent, crystalline masses.

Solubility

Freely soluble in water, very soluble in boiling water, soluble in glycerol, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) gives the reactions of sulphates *(2.3.1)*.

B. Solution S gives the reaction of aluminium *(2.3.1)*.

C. Shake 10 ml of solution S with 0.5 g of *sodium bicarbonate R* and filter. The filtrate gives reaction (a) of potassium *(2.3.1)*.

TESTS

Solution S

Dissolve 2.5 g in *water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

3.0 to 3.5.

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Ammonium *(2.4.1)*

Maximum 0.2 per cent.

To 1 ml of solution S add 4 ml of *water R*. Dilute 0.5 ml of this solution to 14 ml with *water R*.

Iron *(2.4.9)*

Maximum 100 ppm.

Dilute 2 ml of solution S to 10 ml with *water R*. Use in this test 0.3 ml of *thioglycollic acid R*.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

ASSAY

Dissolve 0.900 g in 20 ml of *water R* and carry out the complexometric titration of aluminium *(2.5.11)*.

1 ml of *0.1 M sodium edetate* is equivalent to 47.44 mg of $AlK(SO_4)_2,12H_2O$.

Preparation

Aluminium Chloride Solution

Ph Eur

DEFINITION

Content

95.0 per cent to 101.0 per cent.

CHARACTERS

Appearance

White or slightly yellow, crystalline powder or colourless crystals, deliquescent.

Solubility

Very soluble in water, freely soluble in ethanol (96 per cent), soluble in glycerol.

IDENTIFICATION

A. Dilute 0.1 ml of solution S2 (see Tests) to 2 ml with *water R*. The solution gives reaction (a) of chlorides *(2.3.1)*.

B. Dilute 0.3 ml of solution S2 to 2 ml with *water R*. The solution gives the reaction of aluminium *(2.3.1)*.

TESTS

Solution S1

Dissolve 10.0 g in *distilled water R* and dilute to 100 ml with the same solvent.

Solution S2

Dilute 50 ml of solution S1 to 100 ml with *water R*.

Appearance of solution

Solution S2 is clear *(2.2.1)* and not more intensely coloured than reference solution B_7 *(2.2.2, Method II)*.

Sulphates *(2.4.13)*

Maximum 100 ppm, determined on solution S1.

Iron *(2.4.9)*

Maximum 10 ppm, determined on solution S1.

Alkali and alkaline-earth metals

Maximum 0.5 per cent.

To 20 ml of solution S2 add 100 ml of *water R* and heat to boiling. To the hot solution add 0.2 ml of *methyl red solution R*. Add *dilute ammonia R1* until the colour of the indicator changes to yellow and dilute to 150 ml with *water R*. Heat to boiling and filter. Evaporate 75 ml of the filtrate to dryness on a water-bath and ignite to constant mass. The residue weighs a maximum of 2.5 mg.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

12 ml of solution S1 complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

Water *(2.5.12)*

42.0 per cent to 48.0 per cent, determined on 50.0 mg.

ASSAY

Dissolve 0.500 g in 25.0 ml of *water R*. Carry out the complexometric titration of aluminium *(2.5.11)*. Titrate with *0.1 M zinc sulphate* until the colour of the indicator changes from greyish-green to pink. Carry out a blank titration.

1 ml of *0.1 M sodium edetate* is equivalent to 24.14 mg of $AlCl_3,6H_2O$.

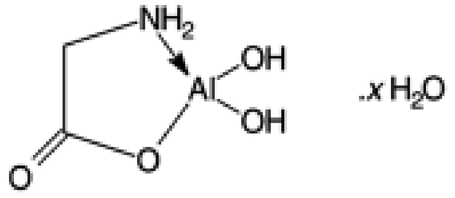
STORAGE

In an airtight container.

Ph Eur

Aluminium Glycinate

General Notices



$C_2H_6AlNO_4,xH_2O$ 135.1   *41354-48-7*

Action and use

Antacid.

DEFINITION

Aluminium Glycinate is a basic aluminium monoglycinate, partly hydrated. It contains not less than 34.5% and not more than 38.5% of Al_2O_3 and not less than 9.9% and not more than 10.8% of N, both calculated with reference to the dried substance.

CHARACTERISTICS

A white or almost white powder.

Practically insoluble in *water* and in organic solvents. It dissolves in dilute mineral acids and in aqueous solutions of the alkali hydroxides.

IDENTIFICATION

A. Add 0.1 g to 10 ml of a solution prepared by dissolving 0.84 g of *citric acid* in 8 ml of *1M sodium hydroxide* and diluting to 20 ml with *water*. Add 0.5 ml of a 0.1% w/v solution of *ninhydrin* in *methanol* and warm. A purple colour is produced.

B. Suspend 1 g in 25 ml of *0.5M hydrochloric acid* and heat gently until a clear solution is produced. Reserve half of the solution. To 2 ml of the solution add 0.15 ml of *liquefied phenol*, shake and add carefully without shaking 5 ml of *dilute sodium hypochlorite solution*. A blue colour is produced.

C. The solution reserved in test B yields the reaction characteristic of *aluminium salts*, Appendix VI.

TESTS

Acidity or alkalinity

pH of a suspension of 1 g in 25 ml of *carbon dioxide-free water*, 6.5 to 7.5, Appendix V L.

Neutralising capacity

Shake 0.2 g vigorously with 25 ml of *0.1M hydrochloric acid* for 5 minutes and allow to stand for 5 minutes. The pH of the mixture is greater than 3.0, Appendix V L.

Arsenic

Dissolve 2.0 g in 18 ml of *brominated hydrochloric acid* and 32 ml of *water*. 25 ml of the resulting solution complies with the *limit test for arsenic*, Appendix VII (1 ppm).

Heavy metals

Dissolve 1.5 g in 20 ml of *2M hydrochloric acid* and 10 ml of *water*, add 0.5 ml of *nitric acid* and boil for about 30 seconds. Cool, add 2 g of *ammonium chloride* and 2 g of *ammonium thiocyanate* and extract with two 10 ml quantities of a mixture of equal parts of *isoamyl alcohol* and *ether*. To the aqueous layer add 2 g of *citric acid*. 12 ml of the resulting solution complies with *limit test A for heavy metals*, Appendix VII. Use *lead standard solution (1 ppm Pb)* to prepare the standard (20 ppm).

Mercuric salts

Dissolve 2.0 g in 10 ml of *1M sulphuric acid*, transfer to a separating funnel with the aid of *water*, dilute to about 50 ml with *water* and add 50 ml of *0.5M sulphuric acid*. Add 100 ml of *water*, 2 g of *hydroxylamine hydrochloride*, 1 ml of *0.05M disodium edetate* and 1 ml of *glacial acetic acid*. Add 5 ml of *chloroform*, shake, allow to separate and discard the chloroform layer. Titrate the aqueous layer with a solution of *dithizone* in *chloroform* containing 8 µg per ml until the chloroform layer remains green. After each addition, shake vigorously, allow the layers to separate and discard the chloroform layer. Repeat the operation using a solution prepared by diluting 1 ml of *mercury standard solution (5 ppm Hg)* to 100 ml with *0.5M sulphuric acid* and beginning at the words 'Add 100 ml of *water* …'. The volume of the dithizone solution required by the substance being examined does not exceed that required by the mercury standard solution.

Chloride

Dissolve 1.0 g in 10 ml of *2M nitric acid* and dilute to 100 ml with *water*. 15 ml of the resulting solution complies with the *limit test for chlorides*, Appendix VII (330 ppm).

Loss on drying

When dried to constant weight at 130°, loses not more than 12.0% of its weight. Use 1 g.

ASSAY

For Al_2O_3

Dissolve 0.25 g in a mixture of 3 ml of *1M hydrochloric acid* and 50 ml of *water*, add 50 ml of *0.05M disodium edetate VS* and neutralise with *1M sodium hydroxide* using *methyl red solution* as indicator. Heat the solution to boiling, allow to stand for 10 minutes on a water bath, cool rapidly, add about 50 mg of *xylenol orange triturate* and 5 g of *hexamine* and titrate the excess of disodium edetate with *0.05M lead nitrate VS* until the solution becomes red. Each ml of *0.05M disodium edetate VS* is equivalent to 2.549 mg of Al_2O_3.

Aluminium Magnesium Silicate

General Notices

(Ph Eur monograph 1388)

12511-31-8

Action and use

Excipient.

Ph Eur

DEFINITION

Mixture of particles with colloidal particle size of montmorillonite and saponite, free from grit and non-swellable ore.

Content:

— *aluminium* (Al; A_r 26.98): 95.0 per cent to 105.0 per cent of the value stated on the label;

— *magnesium* (Mg; A_r 24.30): 95.0 per cent to 105.0 per cent of the value stated on the label.

CHARACTERS

Appearance

Almost white powder, granules or plates.

Solubility

Practically insoluble in water and in organic solvents.

It swells in water to produce a colloidal dispersion.

IDENTIFICATION

A. Fuse 1 g with 2 g of *anhydrous sodium carbonate R*. Warm the residue with *water R* and filter. Acidify the filtrate with *hydrochloric acid R* and evaporate to dryness on a water-bath. 0.25 g of the residue gives the reaction of silicates *(2.3.1)*.

B. Dissolve the remainder of the residue obtained in identification test A in a mixture of 5 ml of *dilute hydrochloric acid R* and 10 ml of *water R*. Filter and add *ammonium chloride buffer solution pH 10.0 R*. A white, gelatinous precipitate is formed. Centrifuge and keep the supernatant for identification C. Dissolve the remaining precipitate in *dilute hydrochloric acid R*. The solution gives the reaction of aluminium *(2.3.1)*.

C. The supernatant liquid obtained after centrifugation in identification test B gives the reaction of magnesium *(2.3.1)*.

TESTS

pH *(2.2.3)*

9.0 to 10.0.

Disperse 5.0 g in 100 ml of *carbon dioxide-free water R*.

Arsenic *(2.4.2, Method A)*

Maximum 3 ppm.

Transfer 16.6 g to a 250 ml beaker containing 100 ml of *dilute hydrochloric acid R*. Mix, cover with a watch glass and boil gently, with occasional stirring, for 15 min. Allow the insoluble matter to settle and decant the supernatant liquid through a rapid-flow filter paper into a 250 ml volumetric flask, retaining as much sediment as possible in the beaker. To the residue in the beaker add 25 ml of hot *dilute hydrochloric acid R*, stir, heat to boiling, allow the insoluble matter to settle and decant the supernatant liquid through the filter into the volumetric flask. Repeat the extraction with 4 additional quantities, each of 25 ml, of hot *dilute hydrochloric acid R*, decanting each supernatant liquid through the filter into the volumetric flask. At the last extraction, transfer as much of the insoluble matter as possible onto the filter. Allow the combined filtrates to cool to room temperature and dilute to 250.0 ml with *dilute hydrochloric acid R*. Dilute 5.0 ml of this solution to 25.0 ml with *dilute hydrochloric acid R*.

Lead

Maximum 15.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Transfer 10.0 g to a 250 ml beaker containing 100 ml of *dilute hydrochloric acid R*. Mix, cover with a watch glass and boil for 15 min. Allow to cool to room temperature and allow the insoluble matter to settle. Decant the supernatant liquid through a rapid-flow filter paper into a 400 ml beaker. To the insoluble matter in the 250 ml beaker add 25 ml of hot *water R*. Stir, allow the insoluble matter to settle and decant the supernatant liquid through the filter into the 400 ml beaker. Repeat the extraction with 2 additional quantities, each of 25 ml, of *water R*, decanting each time the supernatant liquid through the filter into the 400 ml beaker. Wash the filter with 25 ml of hot *water R*, collecting this filtrate in the 400 ml beaker. Concentrate the combined filtrates to about 20 ml by gently boiling. If a precipitate appears, add about 0.1 ml of *nitric acid R*, heat to boiling and allow to cool to room temperature. Filter the concentrated extracts through a rapid-flow filter paper into a 50 ml volumetric flask. Transfer the remaining contents of the 400 ml beaker through the filter paper and into the flask with *water R*. Dilute this solution to 50.0 ml with *water R*.

Reference solutions Prepare the reference solutions using *lead standard solution (10 ppm Pb) R*, diluted as necessary with *water R*.

Source Lead hollow-cathode lamp.

Wavelength 217 nm.

Atomisation device Oxidising air-acetylene flame.

Loss on drying *(2.2.32)*

Maximum 8.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^3 micro-organisms per gram, determined by plate count. It complies with the test for *Escherichia coli (2.6.13)*.

ASSAY

Aluminium

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution In a platinum crucible mix 0.200 g with 1.0 g of *lithium metaborate R*. Heat slowly at first and ignite at 1000-1200 °C for 15 min. Allow to cool, then place the crucible in a 100 ml beaker containing 25 ml of *dilute nitric acid R* and add an additional 50 ml of *dilute nitric acid R*, filling and submerging the crucible. Place a polytetrafluoroethylene-coated magnetic stirring bar in the crucible and stir gently with a magnetic stirrer until dissolution is complete. Pour the contents into a 250 ml beaker and remove the crucible. Warm the solution and transfer through a rapid-flow filter paper into a 250 ml volumetric flask, wash the filter and beaker with *water R* and dilute to 250.0 ml with *water R* (solution A). To 20.0 ml of solution A add 20 ml of a 10 g/l solution of *sodium chloride R* and dilute to 100.0 ml with *water R*.

Reference solutions Dissolve, with gentle heating, 1.000 g of *aluminium R* in a mixture of 10 ml of *hydrochloric acid R* and 10 ml of *water R*. Allow to cool, then dilute to 1000.0 ml with *water R* (1 mg of aluminium per millilitre). Into 3 identical volumetric flasks, each containing 0.20 g of *sodium chloride R*, introduce 2.0 ml, 5.0 ml and 10.0 ml of this solution respectively, and dilute to 100.0 ml with *water R*.

Source Aluminium hollow-cathode lamp.

Wavelength 309 nm.

Atomisation device Oxidising acetylene-nitrous oxide flame.

Magnesium

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Dilute 25.0 ml of solution A, prepared in the assay for aluminium, to 50.0 ml with *water R*. To 5.0 ml of this solution add 20.0 ml of *lanthanum nitrate solution R* and dilute to 100.0 ml with *water R*.

Reference solutions Place 1.000 g of *magnesium R* in a 250 ml beaker containing 20 ml of *water R* and carefully add 20 ml of *hydrochloric acid R*, warming if necessary to dissolve. Transfer the solution to a volumetric flask and dilute to 1000.0 ml with *water R* (1 mg of magnesium per millilitre). Dilute 5.0 ml of this solution to 250.0 ml with *water R*. Into 4 identical volumetric flasks, introduce 5.0 ml, 10.0 ml, 15.0 ml and 20.0 ml of the solution respectively. To each flask add 20.0 ml of *lanthanum nitrate solution R* and dilute to 100.0 ml with *water R*.

Source Magnesium hollow-cathode lamp.

Wavelength 285 nm.

Atomisation device Reducing air-acetylene flame.

LABELLING

The label states the content of aluminium and magnesium.

Ph Eur

Aluminium Phosphate Gel

General Notices

(Ph Eur monograph 2166)

Al(OH)x(PO_4)y 122.0 (anhydrous) *7784-30-7 (anhydrous)*

Action and use

Antacid; vaccine adjuvant.

Ph Eur

DEFINITION

Hydrated $AlPO_4$ in gel form.

Content

19.0 per cent to 21.0 per cent of $AlPO_4$.

CHARACTERS

Appearance

Gel.

Solubility

Practically insoluble in water, in ethanol (96 per cent) and in methylene chloride. It dissolves in dilute solutions of mineral acids.

IDENTIFICATION

A. Solution S (see Tests) gives reaction (b) of phosphates *(2.3.1)*.

B. Solution S gives the reaction of aluminium *(2.3.1)*.

C. It complies with the assay.

TESTS

Solution S

Dissolve 2.00 g in *dilute hydrochloric acid R* and dilute to 100 ml with the same acid.

pH *(2.2.3)*

6.0 to 8.0.

Peroxides

Maximum 150 ppm, expressed as hydrogen peroxide.

Test solution Dissolve with heating 1.0 g of the substance to be examined in 5 ml of *dilute hydrochloric acid R*, then add 5 ml of *water R* and 2 ml of *divanadium pentoxide solution in sulphuric acid R*.

Reference solution Dilute 1.0 ml of *dilute hydrogen peroxide solution R* to 200.0 ml with *water R*. To 1 ml of this solution add 9 ml of *water R* and 2 ml of *divanadium pentoxide solution in sulphuric acid R*.

The test solution is not more intensely coloured than the reference solution.

Chlorides ***(2.4.4)***

Maximum 500 ppm.

Dissolve 1.3 g in 5 ml of *dilute nitric acid R* and dilute to 200 ml with *water R*.

Soluble phosphates

Maximum 0.5 per cent, expressed as PO_4.

Test solution Centrifuge 10.0 g until a clear supernatant is obtained. To 2.00 ml of the supernatant add 20.0 ml of a 10.3 g/l solution of *hydrochloric acid R* and dilute to 100.0 ml with *water R*. To 10.0 ml of this solution add 10.0 ml of *nitro-molybdovanadic reagent R* and dilute to 50.0 ml with *water R*. Allow to stand protected from light for 15 min.

Reference solution Add 10.0 ml of *nitro-molybdovanadic reagent R* to 10.0 ml of a 143 mg/l solution of *potassium dihydrogen phosphate R* and dilute to 50.0 ml with *water R*. Allow to stand protected from light for 15 min.

Measure the absorbances *(2.2.25)* of the 2 solutions at 400 nm. The absorbance of the test solution is not greater than that of the reference solution.

Sulphates ***(2.4.13)***

Maximum 0.2 per cent.

Dilute 25 ml of solution S to 100 ml with *distilled water R*.

Soluble aluminium

Maximum 50 ppm.

To 16.0 g add 50 ml of *water R*. Heat to boiling for 5 min. Cool and centrifuge. Separate the supernatant. Wash the residue with 20 ml of *water R* and centrifuge. Separate the supernatant and add to the first supernatant. To the combined supernatants add 5 ml of *hydrochloric acid R* and 20 ml of *water R*. Introduce all of this solution into a 500 ml conical flask and carry out the complexometric titration of aluminium *(2.5.11)* using *0.01 M sodium edetate*.

Arsenic ***(2.4.2, Method A)***

Maximum 1 ppm, determined on 1.0 g.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

Dissolve 4.0 g in *dilute hydrochloric acid R* and dilute to 20 ml with the same acid. 12 ml of the solution complies with test A. Prepare the reference solution using l*ead standard solution (2 ppm Pb) R*.

Acid neutralising capacity

Add 2.0 g to 30 ml of *0.1 M hydrochloric acid R* heated to 37 °C and maintain at 37 °C while shaking. Determine the pH after 15 min. The pH *(2.2.3)* of the mixture is 2.0 to 2.5.

Residue on ignition

19.0 per cent to 23.0 per cent.

Heat 0.500 g at 50 °C for 5 hours, then ignite at 500 ± 50 °C until constant mass.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^3 micro-organisms per gram, determined by plate count. It complies with the test for enterobacteria and certain other gram-negative bacteria and with the test for *Escherichia coli (2.6.13)*.

ASSAY

Dissolve with heating 0.300 g in 5 ml of *dilute hydrochloric acid R*. Add 45 ml of *water R*, 10.0 ml of *0.1 M sodium edetate* and 30 ml of a mixture of equal volumes of *ammonium acetate solution R* and *dilute acetic acid R*. Heat to boiling and maintain boiling for 3 min. Cool, then add 25 ml of *ethanol (96 per cent) R*. Titrate with *0.1 M zinc sulphate*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M zinc sulphate* is equivalent to 12.2 mg of $AlPO_4$.

STORAGE

In an airtight container.

Ph Eur

Aluminium Powder

General Notices

Al 26.98 *7429-90-5*

Action and use

Topical protective.

Preparation

Compound Aluminium Paste

DEFINITION

Aluminium Powder consists mainly of metallic aluminium in the form of very small flakes, usually with an appreciable proportion of aluminium oxide; it is lubricated with stearic acid to prevent oxidation. It contains not less than 86.0% of Al, calculated with reference to the substance freed from lubricant and volatile matter.

CHARACTERISTICS

A silvery grey powder.

Practically insoluble in *water* and in *ethanol (96%)*. It dissolves in dilute acids and in aqueous solutions of alkali hydroxides, with the evolution of hydrogen.

IDENTIFICATION

A solution in *2M hydrochloric acid* yields the reaction characteristic of *aluminium salts*, Appendix VI.

TESTS

Surface-covering power

Not less than 4000 cm^2 per g when determined by the following method. Fill with *water* a shallow trough measuring approximately 60 cm × 12 cm × 1.5 cm, fitted with a movable partition so constructed that it is a sliding fit and can be used to divide the trough into two rectangular areas. Place the movable partition near one end and sprinkle 50 mg of the substance being examined on the surface of the liquid confined in the smaller area. Using a glass rod, spread the powder evenly over the liquid surface until an unbroken film covers the entire surface. Move the partition so as to increase the area confined and again spread the powder to cover the increased surface. Continue this process and determine the maximum unbroken surface area obtained. The surface-covering power is the area covered per g of the powder at the breaking point of the film.

Iron

Dissolve 10 mg in 20 ml of *2M hydrochloric acid* and dilute to 100 ml with *water*. 10 ml of the resulting solution complies with the *limit test for iron*, Appendix VII (1.0%).

Lead

Use two solutions prepared in the following manner. For solution (1) boil 0.40 g with 20 ml of 2M *hydrochloric acid* and 10 ml of *water* until effervescence ceases, add 0.5 ml of *nitric acid*, boil for 30 seconds and cool; add 2 g of *ammonium chloride* and 2 g of *ammonium thiocyanate*, extract with three 10 ml quantities of a mixture of equal volumes of *amyl alcohol* and *ether*, discard the extracts and add 2 g of *citric acid*. For solution (2) dissolve 2 g of *citric acid* in 10 ml of 2M *hydrochloric acid* and add 4 ml of *lead standard solution (10 ppm Pb)*. Make solutions (1) and (2) alkaline with 5M *ammonia* and to each add 1 ml of *potassium cyanide solution PbT*. The solutions should be not more than faintly opalescent. If the colours of the solutions differ, equalise by the addition of about 0.2 ml of a highly diluted solution of burnt sugar or other non-reactive substance. Dilute each solution to 50 ml with *water*, add 0.1 ml of a 10% w/v solution of *sodium sulphide* to each and mix thoroughly. The colour produced in solution (1) is not more intense than that produced in solution (2), when viewed against a white background (100 ppm).

Other metals

Dissolve 2 g in 40 ml of 2M *hydrochloric acid*. Dilute 20 ml of the solution to 100 ml with *water*, make alkaline to *litmus paper* by the addition of 5M *ammonia*, boil and filter. Evaporate the filtrate to dryness, add 0.05 ml of *sulphuric acid* and ignite. The residue weighs not more than 2 mg.

Lubricant

To 2 g add 100 ml of hot *water*, cover and add, drop wise, sufficient of a mixture of equal volumes of *hydrochloric acid* and *water* to dissolve the metal almost completely. Heat to complete dissolution, cool, filter through a hardened filter paper and wash the vessel and filter paper thoroughly with *water*; dry both the vessel and paper at room temperature. Extract the paper with three 100-ml quantities of boiling, freshly distilled *acetone*, using the original vessel to contain the solvent and then wash the paper with five 10-ml quantities of freshly distilled *acetone*. Evaporate the combined filtrate and washings to dryness using a rotary evaporator. The residue, after drying at 105° for 30 minutes and allowing to cool, weighs 10 to 60 mg.

When the basin containing the residue is floated in a beaker of water suitably stirred and heated, the residue melts between 40° and 60°. The residue is almost completely soluble, with effervescence, in hot *dilute sodium carbonate solution*.

Volatile matter

When heated to constant weight at 105°, loses not more than 0.5% of its weight. Use 1 g.

ASSAY

Transfer 0.2 g, previously freed from lubricant by successive washing with *acetone* and drying, to a three-necked 500 ml flask fitted with a 150 ml dropping funnel, an inlet tube connected to a cylinder of *carbon dioxide* and an outlet tube dipping into a water trap. Add 60 ml of *water* and disperse the substance being examined; replace the air by *carbon dioxide* and add 100 ml of a solution containing 56 g of *ammonium iron(III) sulphate* and 7.5 ml of *sulphuric acid* in *water*. While maintaining an atmosphere of *carbon dioxide* in the flask, heat to boiling, boil for 5 minutes after the sample has dissolved, cool rapidly to 20° and dilute to 250 ml with *water*. To 50 ml add 15 ml of *orthophosphoric acid* and titrate with 0.02M *potassium permanganate VS*. Each ml of 0.02M *potassium permanganate VS* is equivalent to 0.8994 mg of Al.

Aluminium Sulphate

General Notices

(Ph Eur monograph 0165)

Preparation

Aluminium Acetate Ear Drops

Ph Eur

DEFINITION

Content

51.0 per cent to 59.0 per cent of $Al_2(SO_4)_3$.

It contains a variable quantity of water of crystallisation.

CHARACTERS

Appearance

Colourless, lustrous crystals or crystalline masses.

Solubility

Soluble in cold water, freely soluble in hot water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) gives reaction (a) of sulphates *(2.3.1)*.

B. Solution S gives the reaction of aluminium *(2.3.1)*.

TESTS

Solution S

Dissolve 2.5 g in *water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension III *(2.2.1)* and is colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

2.5 to 4.0.

Dissolve 0.5 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Alkali and alkaline-earth metals

Maximum 0.4 per cent.

To 20 ml of solution S add 100 ml of *water R*, heat and add 0.1 ml of *methyl red solution R*. Add *dilute ammonia R1* until the colour of the indicator changes to yellow. Dilute to 150 ml with *water R*, heat to boiling and filter. Evaporate 75 ml of the filtrate to dryness on a water-bath and ignite. The residue weighs a maximum of 2 mg.

Ammonium *(2.4.1)*

Maximum 500 ppm.

Dilute 0.4 ml of solution S to 14 ml with *water R*.

Iron *(2.4.9)*

Maximum 100 ppm.

Dilute 2 ml of solution S to 10 ml with *water R*. Use 0.3 ml of *thioglycollic acid R* in this test.

Heavy metals *(2.4.8)*

Maximum 50 ppm.

Dilute 8 ml of solution S to 20 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

ASSAY

Dissolve 0.500 g in 20 ml of *water R*. Carry out the complexometric titration of aluminium *(2.5.11)*.

1 ml of *0.1 M sodium edetate* is equivalent to 17.11 mg of $Al_2(SO_4)_3$.

STORAGE

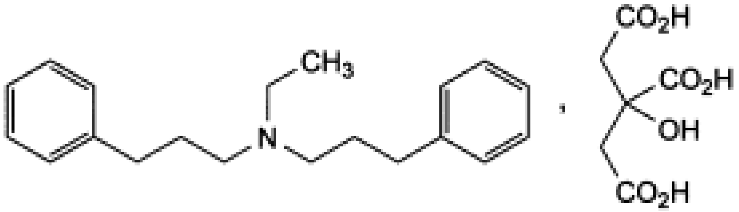
In an airtight container.

Ph Eur

Alverine Citrate

General Notices

(Ph Eur monograph 2156)



$C_{20}H_{27}N,C_6H_8O_7$ 473.6 *5560-59-8*

Action and use

Smooth muscle relaxant; antispasmodic.

Preparation

Alverine Capsules

Ph Eur

DEFINITION

N-Ethyl-3-phenyl-*N*-(3-phenylpropyl)propan-1-amine dihydrogen 2-hydroxypropane-1,2,3-tricarboxylate.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Slightly soluble in water and in methylene chloride, sparingly soluble in ethanol (96 per cent).

mp

About 104 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison *alverine citrate CRS.*

TESTS

pH *(2.2.3)*

3.5 to 4.5.

Dissolve 0.250 g in *carbon dioxide-free water R* and dilute to 50.0 ml with the same solvent.

Related substances

Gas chromatography *(2.2.28)*: use the normalisation procedure. *Use freshly prepared solutions.*

Test solution Dissolve 0.250 g of the substance to be examined in *water R* and dilute to 20 ml with the same solvent. Add 2 ml of *concentrated ammonia R* and shake with 3 quantities, each of 15 ml, of *methylene chloride R*. To the combined lower layers add *anhydrous sodium sulphate R*, shake, filter, and evaporate the filtrate at a temperature not exceeding 30 °C, using a rotary evaporator. Take up the residue with *methylene chloride R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve 5 mg of *alverine impurity D CRS* (impurity D citrate) in 5 ml of *water R*, add 1 ml of *concentrated ammonia R* and shake with 3 quantities, each of 5 ml, of *methylene chloride R*. To the combined lower layers add *anhydrous sodium sulphate R*, shake, filter, and evaporate the filtrate at a temperature not exceeding 30 °C, using a rotary evaporator. Take up the residue with *methylene chloride R*, add 0.2 ml of the test solution and dilute to 2 ml with *methylene chloride R*.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with *methylene chloride R*. Dilute 1.0 ml of this solution to 20.0 ml with *methylene chloride R*.

Reference solution (c) Dissolve the contents of a vial of *alverine for peak identification* CRS (containing impurities C and E) in 1 ml of *methylene chloride R*.

Column:

- *material*: fused silica;
- *size:* l = 25 m, Ø = 0.32 mm;
- *stationary phase*: *poly(dimethyl)(diphenyl)siloxane R* (film thickness 0.45 µm).

Carrier gas *helium for chromatography R*.

Flow rate 2.2 ml/min.

Split ratio 1:11.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 7	120
	7 - 13	120 → 240
	13 - 21	240
	21 - 24	240 → 290
	24 - 39	290
Injection port		290
Detector		290

Detection Flame ionisation.

Injection 1 µl.

Identification of impurities Use the chromatogram supplied with *alverine for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities C and E.

Relative retention With reference to alverine (retention time = about 16 min): impurity A = about 0.28; impurity B = about 0.29; impurity C = about 0.46; impurity D = about 0.97; impurity E = about 1.7.

System suitability Reference solution (a):

— *resolution*: minimum 3.0 between the peaks due to impurity D and alverine.

Limits:

— *impurities A, B*: for each impurity, maximum 0.1 per cent;

— *impurity C*: maximum 0.2 per cent;

— *impurities D, E*: for each impurity, maximum 0.3 per cent;

— *unspecified impurities*: for each impurity, maximum 0.10 per cent;

— *total*: maximum 1.0 per cent;

— *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

0.5 g complies with test G. Prepare the reference solution using 1 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 80 °C for 2 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.375 g in 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

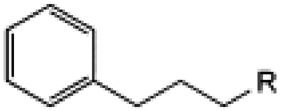
1 ml of *0.1 M perchloric acid* is equivalent to 47.36 mg of $C_{26}H_{35}NO_7$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities *A, B, C, D, E.*



A. R = Cl: 1-chloro-3-phenylpropane,

B. R = OH: 3-phenylpropan-1-ol,

C. R = NH-C_2H_5: *N*-ethyl-3-phenylpropan-1-amine,

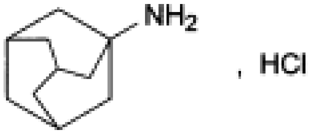
E. 3-phenyl-*N*,*N*-bis(3-phenylpropyl)propan-1-amine.

Ph Eur

Amantadine Hydrochloride

General Notices

(Ph Eur monograph 0463)



$C_{10}H_{17}N,HCl$ 187.7 *665-67-7*

Action and use

Viral replication inhibitor (influenza A); dopamine receptor agonist; treatment of influenza and Parkinson's disease.

Preparations

Amantadine Capsules

Amantadine Oral Solution

Ph Eur

DEFINITION

Tricyclo[3.3.1.1^{3,7}]decan-1-amine hydrochloride.

Content

98.5 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water and in ethanol (96 per cent).

It sublimes on heating.

IDENTIFICATION

First identification A, D.

Second identification *B, C, D.*

A. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *amantadine hydrochloride CRS* .

B. To 0.1 g add 1 ml of *pyridine R*, mix and add 0.1 ml of *acetic anhydride R*. Heat to boiling for about 10 s. Pour the hot solution into 10 ml of *dilute hydrochloric acid R*, cool to 5 °C and filter. The precipitate, washed with *water R* and dried *in vacuo* at 60 °C for 1 h, melts *(2.2.14)* at 147 °C to 151 °C.

C. Dissolve 0.2 g in 1 ml of *0.1 M hydrochloric acid*. Add 1 ml of a 500 g/l solution of *sodium nitrite R*. A white precipitate is formed.

D. 1 ml of solution S (see Tests) gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7 *(2.2.2, Method II)*.

Acidity or alkalinity

Dilute 2 ml of solution S to 10 ml with *carbon dioxide-free water R*. Add 0.1 ml of *methyl red solution R* and 0.2 ml of *0.01 M sodium hydroxide*. The solution is yellow. Add 0.4 ml of *0.01 M hydrochloric acid*. The solution is red.

Related substances

Gas chromatography *(2.2.28)*: use the normalisation procedure.

Test solution Dissolve 0.10 g of the substance to be examined in 2 ml of *water R*. Add 2 ml of a 200 g/l solution of *sodium hydroxide R* and 2 ml of *chloroform R*. Shake for 10 min. Separate the chloroform layer, dry over *anhydrous sodium sulphate R* and filter.

Column:

— *material*: glass;

— *size:* *l* = 1.8 m, Ø = 2 mm;

— *stationary phase*: mix 19.5 g of *silanised diatomaceous earth for gas chromatography R* with 60 ml of a 3.3 g/l solution of *potassium hydroxide R* in *methanol R* and evaporate the solvent under reduced pressure while rotating the mixture slowly (support); dissolve 0.4 g of *low-vapour-pressure hydrocarbons (type L) R* in 60 ml of *toluene R* (dissolution requires up to 5 h), add this solution to the support and evaporate the solvent under reduced pressure while rotating the mixture slowly.

Carrier gas *nitrogen for chromatography R*.

Flow rate 30 ml/min.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 16.7	100 → 200
Injection port		220
Detector		300

Detection Flame ionisation.

Injection 1 µl or the chosen volume.

Run time At least 2.5 times the retention time of amantadine.

Limits:

— *any impurity*: for each impurity, maximum 0.3 per cent;

— *total*: maximum 1 per cent;

— *disregard limit*: disregard the peak due to the solvent.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R.*

Water *(2.5.12)*

Maximum 0.5 per cent, determined on 2.000 g.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in a mixture of 5.0 ml of *0.01 M hydrochloric acid* and 50 ml of *ethanol (96 per cent) R*. Carry out a potentiometric titration *(2.2.20)*, using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

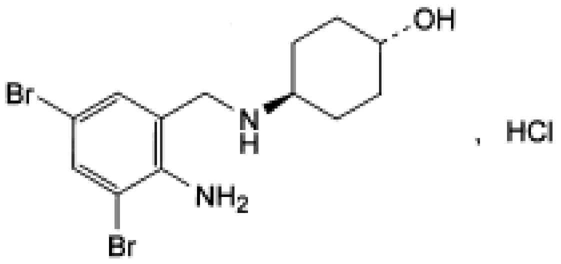
1 ml of *0.1 M sodium hydroxide* is equivalent to 18.77 mg of $C_{10}H_{18}ClN$.

Ph Eur

Ambroxol Hydrochloride

General Notices

(Ph Eur monograph 1489)



$C_{13}H_{18}Br_2N_2O,HCl$ 414.6 *23828-92-4*

Action and use

Mucolytic expectorant.

Ph Eur

DEFINITION

trans-4-[(2-Amino-3,5-dibromobenzyl)amino]cyclohexanol hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or yellowish crystalline powder.

Solubility

Sparingly soluble in water, soluble in methanol, practically insoluble in methylene chloride.

IDENTIFICATION

First identification *B, D.*

Second identification *A, C, D.*

A. Dissolve 20.0 mg in *0.05 M sulphuric acid* and dilute to 100.0 ml with the same acid. Dilute 2.0 ml of the solution to 10.0 ml with *0.05 M sulphuric acid*. Examined between 200 nm and 350 nm *(2.2.25)*, the solution shows two absorption maxima at 245 nm and 310 nm.

The ratio of the absorbance measured at 245 nm to that measured at 310 nm is 3.2 to 3.4.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *ambroxol hydrochloride CRS* .

C. Examine by thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 50 mg of the substance to be examined in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution Dissolve 50 mg of *ambroxol hydrochloride CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Plate *TLC silica gel* F_{254} *plate R*.

Mobile phase *concentrated ammonia R*, *1-propanol R*, *ethyl acetate R*, *hexane R* (1:10:20:70 *V/V/V/V*).

Application 10 µl.

Development Over 2/3 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. Dissolve 25 mg in 2.5 ml of *water R*, mix with 1.0 ml of *dilute ammonia R1* and allow to stand for 5 min. Filter and acidify the filtrate with *dilute nitric acid R*. The filtrate gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 0.75 g in *methanol R* and dilute to 15 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

pH *(2.2.3)*

4.5 to 6.0.

Dissolve 0.2 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the solutions immediately before use.*

Test solution Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 50.0 ml with the same solvent.

Reference solution (a) Dilute 5.0 ml of the test solution to 250.0 ml with *water R*. Dilute 1.0 ml of this solution to 20.0 ml with the mobile phase.

Reference solution (b) Dissolve 5 mg of the substance to be examined in 0.2 ml of *methanol R* and add 0.04 ml of a mixture of 1 volume of *formaldehyde solution R* and 99 volumes of *water R*. Heat at 60 °C for 5 min. Evaporate to dryness under a current of nitrogen. Dissolve the residue in 5 ml of *water R* and dilute to 20 ml with the mobile phase.

Column:

- *size:* *l* = 0.25 m, Ø = 4.0 mm,
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase A mixture of equal volumes of *acetonitrile R* and a solution prepared as follows: dissolve 1.32 g of *ammonium phosphate R* in 900 ml of *water R*, adjust to pH 7.0 with *phosphoric acid R* and dilute to 1000 ml with *water R*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 248 nm.

Injection 20 µl.

Sensitivity Reference solution (a).

Run time 3 times the retention time of the principal peak in the chromatogram obtained with the test solution.

System suitability:

- *resolution*: minimum of 4.0 between the peaks due to impurity B and ambroxol in the chromatogram obtained with reference solution (b).

Limits:

- *any impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
- *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent),
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with limit test C. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

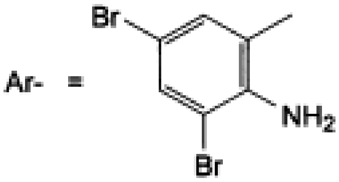
Dissolve 0.300 g in 70 ml of *alcohol R* and add 5 ml of *0.01 M hydrochloric acid*. Carry out a potentiometric titration *(2.2.20)*, using *0.1 M sodium hydroxide*. Read the volume added between the two points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 41.46 mg of $C_{13}H_{19}Br_2ClN_2O$.

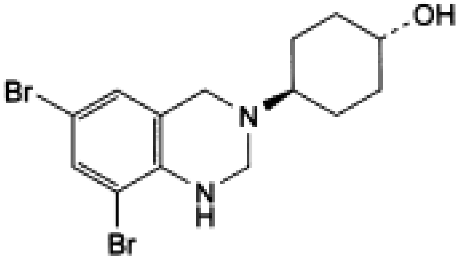
STORAGE

Store protected from light.

IMPURITIES



A. Ar-CH_2OH: (2-amino-3,5-dibromophenyl)methanol,



B. *trans*-4-(6,8-dibromo-1,4-dihydroquinazolin-3(2*H*)-yl)cyclohexanol,

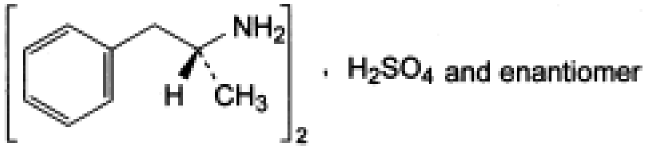
Ph Eur

Amfetamine Sulphate

General Notices

(Ph Eur monograph 0368)



$C_{18}H_{26}N_2,H_2SO_4$ 368.5 *60-13-9*

Action and use

Releases dopamine; central nervous system stimulant.

Ph Eur

DEFINITION

Bis[(2*RS*)-1-phenylpropan-2-amine] sulphate.

Content

99.0 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Freely soluble in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

First identification A, B, E.

Second identification A, C, D, E.

A Optical rotation *(2.2.7)*: - 0.04° to + 0.04° (measured in a 2 dm tube), determined on solution S (see Tests).

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Mulls in *liquid paraffin R*.

Comparison *Ph. Eur. reference spectrum of amfetamine sulphate.*

C. To 50 ml of solution S add 5 ml of *strong sodium hydroxide solution R* and 0.5 ml of *benzoyl chloride R* and shake. Continue to add *benzoyl chloride R* in portions of 0.5 ml until no further precipitate is formed. Filter, wash the precipitate with *water R*, recrystallise twice from a mixture of equal volumes of *ethanol (96 per cent) R* and *water R*, then dry at 100-105 °C. The crystals melt *(2.2.14)* at 131 °C to 135 °C.

D. To about 2 mg add 1 ml of *sulphuric acid-formaldehyde reagent R*. An orange colour develops and quickly becomes dark-brown.

E. Solution S gives reaction (a) of sulphates *(2.3.1)*.

TESTS

Solution S

Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Acidity or alkalinity

To 25 ml of solution S add 0.1 ml of *methyl red solution R*. Not more than 0.1 ml of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Loss on drying *(2.2.32)*

Maximum 1.0 per cent, determined on 1.00 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 30 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 36.85 mg of $C_{18}H_{28}N_2O_4S$.

STORAGE

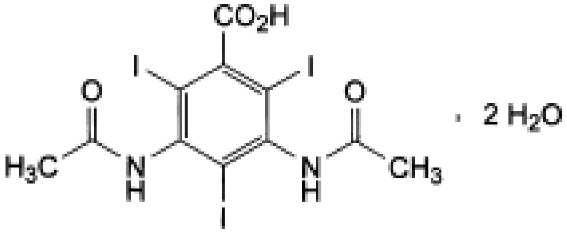
Protected from light.

Ph Eur

Amidotrizoic Acid Dihydrate

General Notices

(Ph Eur monograph 0873)



$C_{11}H_9I_3N_2O_4,2H_2O$ 650 *50978-11-5*

Action and use

Iodinated contrast medium.

Preparation

Meglumine Amidotrizoate Injection

Ph Eur

DEFINITION

Amidotrizoic acid dihydrate contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of 3,5-bis(acetylamino)-2,4,6-triiodobenzoic acid, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, very slightly soluble in water and in alcohol. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification *A.*

Second identification *B, C.*

A. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *amidotrizoic acid dihydrate CRS* .

B. Examine the chromatograms obtained in the test for related substances (see Tests). The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (b).

C. Heat 50 mg gently in a small porcelain dish over a naked flame. Violet vapour is evolved.

TESTS

Appearance of solution

Dissolve 1.0 g in *dilute sodium hydroxide solution R* and dilute to 20 ml with the same solvent. The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel* GF_{254} *R* as the coating substance.

Test solution (a) Dissolve 0.50 g of the substance to be examined in a 3 per cent *V/V* solution of *ammonia R* in *methanol R* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with a 3 per cent *V/V* solution of *ammonia R* in *methanol R*.

Reference solution (a) Dilute 1 ml of test solution (b) to 50 ml with a 3 per cent *V/V* solution of *ammonia R* in *methanol R*.

Reference solution (b) Dissolve 50 mg of *amidotrizoic acid dihydrate CRS* in a 3 per cent *V/V* solution of *ammonia R* in *methanol R* and dilute to 10 ml with the same solvent.

Apply separately to the plate 2 µl of each solution. Develop over a path of 15 cm using a mixture of 20 volumes of *anhydrous formic acid R*, 25 volumes of *methyl ethyl ketone R* and 60 volumes of *toluene R*. Allow the plate to dry until the solvents have evaporated and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.2 per cent).

Halides

Dissolve 0.55 g in a mixture of 4 ml of *dilute sodium hydroxide solution R* and 15 ml of *water R*. Add 6 ml of *dilute nitric acid R* and filter. 15 ml of the filtrate complies with the limit test for chlorides *(2.4.4)* (150 ppm expressed as chloride).

Free aromatic amines

Maintain the solutions and reagents in iced water protected from bright light. To 0.50 g in a 50 ml volumetric flask add 15 ml of *water R*. Shake and add 1 ml of *dilute sodium hydroxide solution R*. Cool in iced water, add 5 ml of a freshly prepared 5 g/l solution of *sodium nitrite R* and 12 ml of *dilute hydrochloric acid R*. Shake gently and allow to stand for exactly 2 min after adding the hydrochloric acid. Add 10 ml of a 20 g/l solution of *ammonium sulphamate R*. Allow to stand for 5 min, shaking frequently, and add 0.15 ml of a 100 g/l solution of *α-naphthol R* in *alcohol R*. Shake and allow to stand for 5 min. Add 3.5 ml of *buffer solution pH 10.9 R*, mix and dilute to 50.0 ml with *water R*. The absorbance *(2.2.25)*, measured within 20 min at 485 nm using as the compensation liquid a solution prepared at the same time and in the same manner but omitting the substance to be examined, is not greater than 0.30.

Heavy metals *(2.4.8)*

Dissolve 2.0 g in 4 ml of *dilute sodium hydroxide solution R* and dilute to 20 ml with *water R*. 12 ml of this solution complies with limit test A for heavy metals (20 ppm). Prepare the standard using *lead standard solution (2 ppm Pb) R.*

Loss on drying *(2.2.32)*

4.5 per cent to 7.0 per cent, determined on 0.500 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

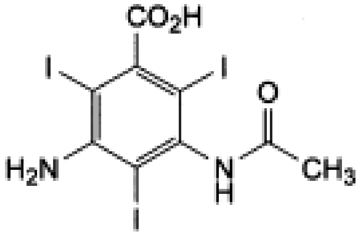
To 0.150 g in a 250 ml round-bottomed flask add 5 ml of *strong sodium hydroxide solution R*, 20 ml of *water R*, 1 g of *zinc powder R* and a few glass beads. Boil under a reflux condenser for 30 min. Allow to cool and rinse the condenser with 20 ml of *water R,* adding the rinsings to the flask. Filter through a sintered-glass filter *(2.1.2)* and wash the filter with several quantities of *water R*. Collect the filtrate and washings. Add 40 ml of *dilute sulphuric acid R* and titrate immediately with *0.1 M silver nitrate*. Determine the end-point potentiometrically *(2.2.20)*, using a suitable electrode system such as silver-mercurous sulphate.

1 ml of *0.1 M silver nitrate* is equivalent to 20.47 mg of $C_{11}H_9I_3N_2O_4$.

STORAGE

Store protected from light.

IMPURITIES



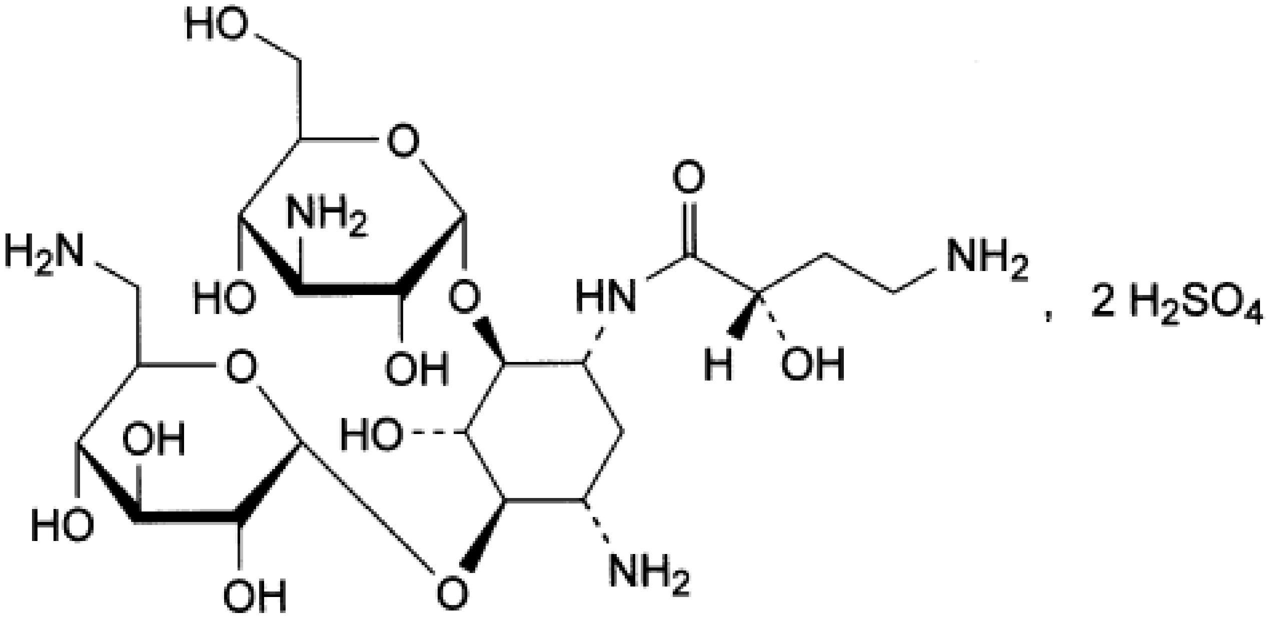
A. 3-(acetylamino)-5-amino-2,4,6-triiodobenzoic acid.

Ph Eur

Amikacin Sulphate

General Notices

(Ph Eur monograph 1290)



$C_{22}H_{43}N_5O_{13},2H_2SO_4$ 782 *149022-22-0*

Action and use

Aminoglycoside antibacterial.

Preparation

Amikacin Injection

Ph Eur

DEFINITION

6-*O*-(3-Amino-3-deoxy-α-D-glucopyranosyl)-4-*O*-(6-amino-6-deoxy-α-D-glucopyranosyl)-1-*N*-[(2*S*)-4-amino-2-hydroxybutanoyl]-2-deoxy-D-streptamine sulphate.

Antimicrobial substance obtained from kanamycin A.

Semi-synthetic product derived from a fermentation product.

Content

96.5 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Freely soluble in water, practically insoluble in acetone and in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison *amikacin sulphate CRS.*

B. Thin-layer chromatography (*2.2.27*).

Test solution Dissolve 25 mg of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 25 mg of *amikacin sulphate CRS* in *water R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 5 mg of *kanamycin monosulphate CRS* in 1 ml of the test solution and dilute to 10 ml with *water R.*

Plate *TLC silica gel plate R*.

Mobile phase The lower layer of a mixture of equal volumes of *concentrated ammonia R*, *methanol R* and *methylene chloride R.*

Application 5 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Spray with *ninhydrin solution R1* and heat at 110 °C for 5 min.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. It gives reaction (a) of sulphates (*2.3.1*).

TESTS

pH (*2.2.3*)

2.0 to 4.0.

Dissolve 0.1 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Specific optical rotation (*2.2.7*)

+ 76 to + 84 (dried substance).

Dissolve 0.50 g in *water R* and dilute to 25.0 ml with the same solvent.

Related substances

Liquid chromatography (*2.2.29*). *Maintain the solutions at 10 °C.*

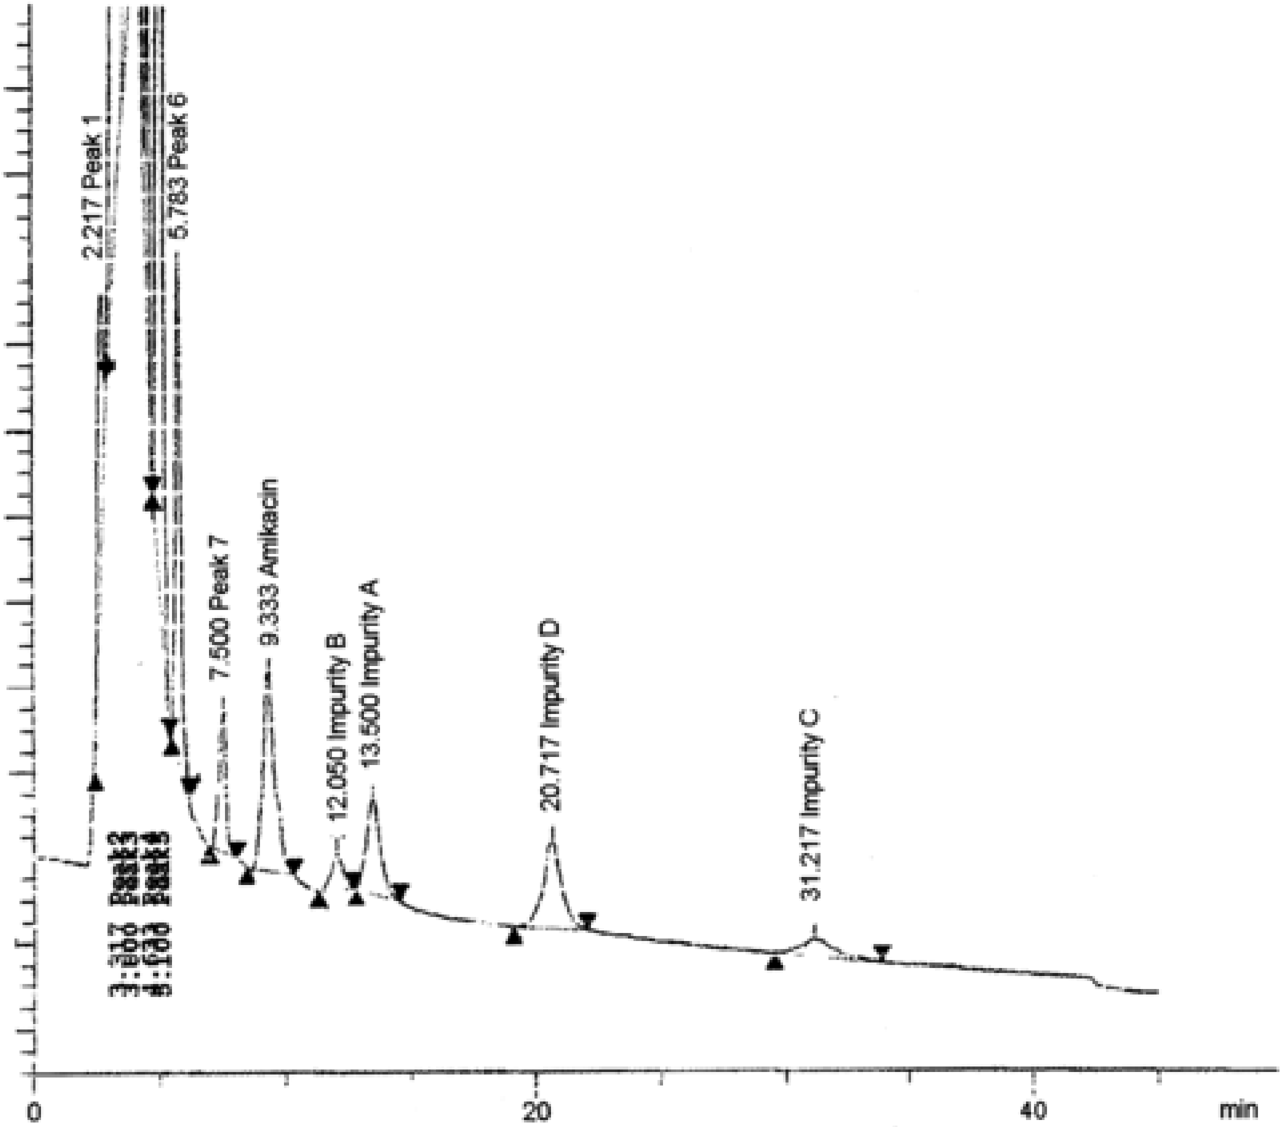


Figure 1290.-1. – *Chromatogram for the test for related substances of amikacin sulphate*

Test solution (a) Dissolve 0.100 g of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent. In a ground-glass-stoppered vial, add 0.2 ml of this solution to 2.0 ml of a 10 g/l solution of *2,4,6-trinitrobenzene sulphonic acid R*. Then add 3.0 ml of *pyridine R* and close the vial tightly. Shake vigorously for 30 s and heat on a water-bath at 75 °C for 2 h. Cool in cold water for 2 min and add 2 ml of *glacial acetic acid R*. Shake vigorously for 30 s.

Test solution (b) Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 50.0 ml with the same solvent. Then prepare as prescribed for test solution (a).

Reference solution (a) Dissolve 5.0 mg of *amikacin impurity A CRS* in *water R* and dilute to 50.0 ml with the same solvent. Then prepare as prescribed for test solution (a).

Reference solution (b) Dissolve 50.0 mg of *amikacin sulphate CRS* in *water R* and dilute to 50.0 ml with the same solvent. Then prepare as prescribed for test solution (a).

Reference solution (c) Dissolve 2 mg of *amikacin sulphate CRS* and 2 mg of *amikacin impurity A CRS* in *water R* and dilute to 20 ml with the same solvent. Then prepare as prescribed for test solution (a).

Blank solution Prepare as described for test solution (a) using 0.2 ml of water R.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);

— *temperature*: 30 °C.

Mobile phase Mix 30 volumes of a 2.7 g/l solution of *potassium dihydrogen phosphate R*, adjusted to pH 6.5 with a 22 g/l solution of *potassium hydroxide R*, and 70 volumes of *methanol R.*

Flow rate 1 ml/min.

Detection Spectrophotometer at 340 nm.

Injection 20 µl of test solution (a) and reference solutions (a) and (c).

Run time 4 times the retention time of amikacin.

System suitability Reference solution (c):

— *resolution*: minimum 3.5 between the peaks due to amikacin and impurity A (see Figure 1290.-1).

Limits:

— *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);

— *any other impurity*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *sum of impurities other than A*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.5 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent); disregard any peak due to the blank and any peak eluting before the principal peak.

Sulphate

23.3 per cent to 25.8 per cent (dried substance).

Dissolve 0.250 g in 100 ml of *water R* and adjust the solution to pH 11 using *concentrated ammonia R*. Add 10.0 ml of *0.1 M barium chloride* and about 0.5 mg of *phthalein purple R*. Titrate with *0.1 M sodium edetate* adding 50 ml of *ethanol (96 per cent) R* when the colour of the solution begins to change and continue the titration until the violet-blue colour disappears.

1 ml of *0.1 M barium chloride* is equivalent to 9.606 mg of sulphate (SO_4).

Loss on drying (*2.2.32*)

Maximum 13.0 per cent, determined on 0.500 g by drying in an oven at 105 °C at a pressure not exceeding 0.7 kPa for 3 h.

Pyrogens (*2.6.8*)

If intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of pyrogens, it complies with the test for pyrogens. Inject per kilogram of the rabbit's mass 5 ml of a solution containing 25 mg of the substance to be examined in *water for injections R*.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Injection Test solution (b) and reference solution (b).

System suitability:

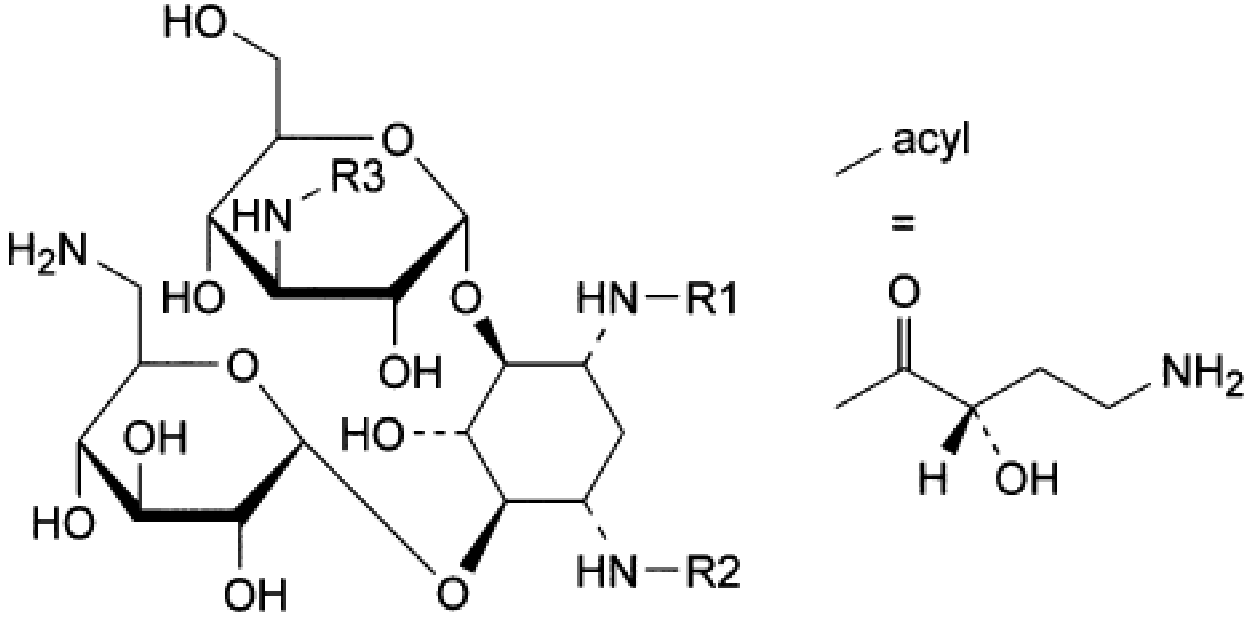
— *repeatability*: maximum relative standard deviation of 2.0 per cent after 6 injections of reference solution (b).

Calculate the percentage content of $C_{22}H_{47}N_5O_{21}S_2$ from the declared content of *amikacin sulphate CRS.*

STORAGE

If the substance is sterile, store in a sterile, airtight, tamper-proof container.

IMPURITIES



A. R1 = R3 = H, R2 = acyl: 4-*O*-(3-amino-3-deoxy-α-D-glucopyranosyl)-6-*O*-(6-amino-6-deoxy-α-D-glucopyranosyl)-1-*N*-[(2*S*)-4-amino-2-hydroxybutanoyl]-2-deoxy-L-streptamine,

Limits:

— *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1 per cent);

— *any other impurity*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *sum of impurities other than A*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.5 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent); disregard any peak due to the blank.

Water (*2.5.12*)

Maximum 8.5 per cent, determined on 0.200 g.

Sulphated ash (*2.4.14*)

Maximum 0.5 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

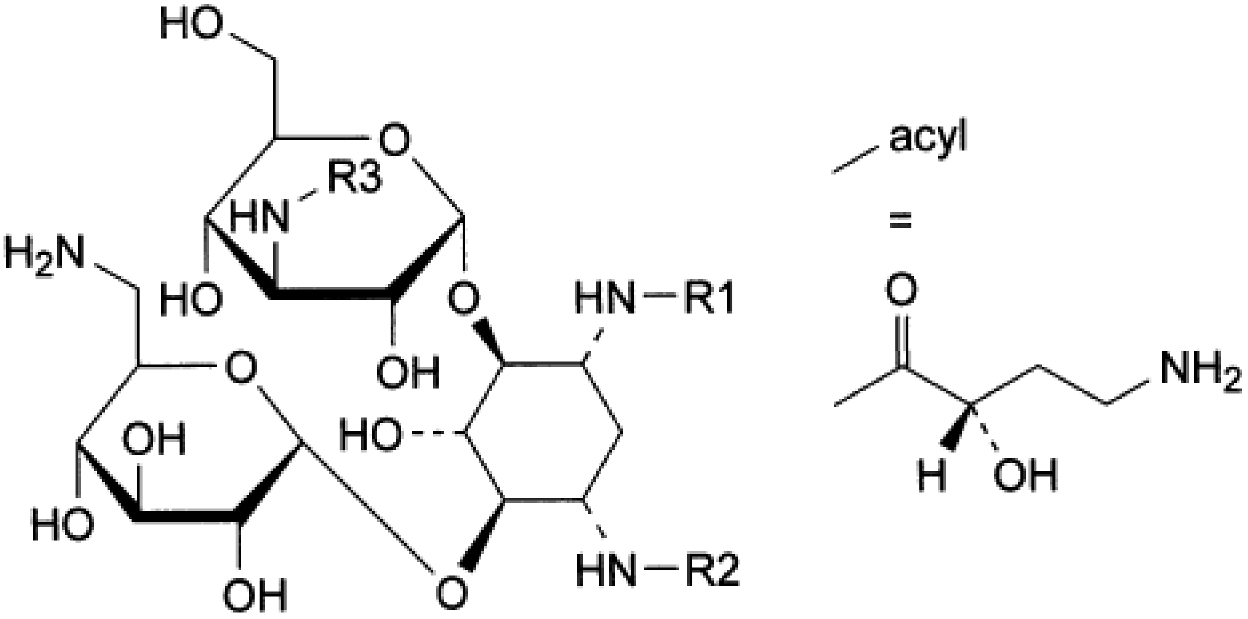
Injection Test solution (b) and reference solution (b).

System suitability:

— *repeatability*: maximum relative standard deviation of 2.0 per cent after 6 injections of reference solution (b).

Calculate the percentage content of $C_{22}H_{43}N_5O_{13}$ from the declared content of *amikacin CRS*.

IMPURITIES



A. R1 = R3 = H, R2 = acyl: 4-*O*-(3-amino-3-deoxy-α-D-glucopyranosyl)-6-*O*-(6-amino-6-deoxy-α-D-glucopyranosyl)-1-*N*-[(2*S*)-4-amino-2-hydroxybutanoyl]-2-deoxy-L-streptamine,

B. R1 = R2 = acyl, R3 = H: 4-*O*-(3-amino-3-deoxy-α-D-glucopyranosyl)-6-*O*-(6-amino-6-deoxy-α-D-glucopyranosyl)-1,3-*N*-bis[(2*S*)-4-amino-2-hydroxybutanoyl]-2-deoxy-L-streptamine,

C. R1 = R2 = H, R3 = acyl: 4-*O*-(6-amino-6-deoxy-α-D-glucopyranosyl)-6-*O*-[3-[[(2S)-4-amino-2-hydroxybutanoyl]amino]-3-deoxy-α-D-glucopyranosyl]-2-deoxy-D-streptamine,

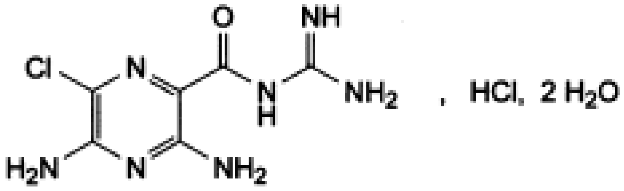
D. R1 = R2 = R3 = H: kanamycin.

Ph Eur

Amiloride Hydrochloride

General Notices

(Ph Eur monograph 0651)



$C_6H_8ClN_7O,HCl,2H_2O$ 302.1 *17440-83-4*

Action and use

Sodium channel blocker; potassium-sparing diuretic.

Preparations

Amiloride Tablets

Co-amilofruse Tablets

Co-amilozide Oral Solution

Co-amilozide Tablets

Ph Eur

DEFINITION

3,5-Diamino-*N*-carbamimidoyl-6-chloropyrazine-2-carboxamide hydrochloride dihydrate.

Content

98.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

Pale yellow or greenish-yellow powder.

Solubility

Slightly soluble in water and in anhydrous ethanol.

IDENTIFICATION

First identification A, D.

Second identification B, C, D.

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *amiloride hydrochloride CRS* .

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 40 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 40 mg of *amiloride hydrochloride CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel plate R*.

Mobile phase *dilute ammonia R1*, *water R*, *dioxan R* (6:6:88 *V/V/V*); freshly prepared mixture.

Application 5 µl.

Development Over a path of 12 cm.

Drying In air.

Detection Examine in ultraviolet light at 365 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, fluorescence and size to the principal spot in the chromatogram obtained with the reference solution.

C. Dissolve about 10 mg in 10 ml of *water R*. Add 10 ml of a 200 g/l solution of *cetrimide R*, 0.25 ml of *dilute sodium hydroxide solution R* and 1 ml of *bromine water R*. A greenish-yellow colour is produced. Add 2 ml of *dilute hydrochloric acid R*. The solution becomes deep yellow and shows blue fluorescence in ultraviolet light at 365 nm.

D. It gives reaction (b) of chlorides *(2.3.1)*.

TESTS

Free acid

Dissolve 1.0 g in a mixture of 50 ml of *methanol R* and 50 ml of *water R* and titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically *(2.2.20)*. Not more than 0.3 ml of *0.1 M sodium hydroxide* is required to reach the end-point.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 20.0 mg of the substance to be examined in a mixture of 1 volume of *acetonitrile R* and 3 volumes of *water R* and dilute to 10.0 ml with the same mixture of solvents.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with a mixture of 1 volume of *acetonitrile R* and 3 volumes of *water R*.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 10.0 ml with a mixture of 1 volume of *acetonitrile R* and 3 volumes of *water R*.

Reference solution (c) Dissolve 5.0 mg of *amiloride impurity A CRS* in a mixture of 1 volume of *acetonitrile R* and 3 volumes of *water R* and dilute to 5.0 ml with the same mixture of solvents. Dilute 1.0 ml of this solution to 100.0 ml with a mixture of 1 volume of *acetonitrile R* and 3 volumes of *water R*.

Column:

— *size: l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 5 volumes of *tetramethylammonium hydroxide solution R*, 250 volumes of *acetonitrile R* and 745 volumes of *water R*; adjust to pH 7.0 with a mixture of 1 volume of *phosphoric acid R* and 9 volumes of *water R*. Adjust the concentration of acetonitrile in the mobile phase so that the retention time of impurity A is 5-6 min (an increase in the concentration of acetonitrile results in a shorter retention time). Adjust the concentration of tetramethylammonium hydroxide and of phosphoric acid keeping the pH at 7.0 so that the retention time of amiloride is 9-12 min (an increase in the concentration results in a shorter retention time for amiloride).

Flow rate 1 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 20 µl.

Run time 5 times the retention time of amiloride.

System suitability Reference solution (b):

— *signal-to-noise ratio*: minimum 5.0 for the peak due to amiloride.

Limits:

— *total*: not more than the area of the peak due to impurity A in the chromatogram obtained with reference solution (c) (0.5 per cent);

— *disregard limit*: 0.1 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (c) (0.05 per cent).

Water *(2.5.12)*

11.0 per cent to 13.0 per cent, determined on 0.200 g.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

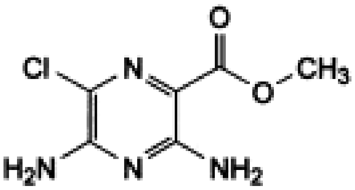
Dissolve 0.200 g in a mixture of 5.0 ml of *0.01 M hydrochloric acid* and 50 ml of *ethanol (96 per cent) R*. Carry out a potentiometric titration *(2.2.20)*, using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 26.61 mg of $C_6H_9Cl_2N_7O$.

STORAGE

Protected from light.

IMPURITIES



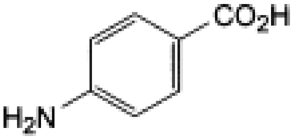
A. methyl 3,5-diamino-6-chloropyrazine-2-carboxylate.

Ph Eur

Aminobenzoic Acid

General Notices

(4-Aminobenzoic Acid, Ph Eur monograph 1687)



$C_7H_7NO_2$ 137.1 *150-13-0*

Action and use

Skin protective.

Ph Eur

DEFINITION

4-Aminobenzoic acid.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or slightly yellow, crystalline powder.

Solubility

Slightly soluble in water, freely soluble in alcohol. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification *B.*

Second identification *A, C.*

A. Melting point *(2.2.14)*: 186 °C to 189 °C.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *4-aminobenzoic acid CRS .*

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 20 mg of the substance to be examined in *methanol R* and dilute to 20 ml with the same solvent.

Reference solution (a) Dissolve 20 mg of *4-aminobenzoic acid CRS* in *methanol R* and dilute to 20 ml with the same solvent.

Reference solution (b) Dissolve 10 mg of *4-nitrobenzoic acid R* in 10 ml of reference solution (a).

Plate Suitable silica gel with a fluorescent indicator having an optimal intensity at 254 nm as the coating substance.

Mobile phase *glacial acetic acid R*, *hexane R*, *methylene chloride R* (5:20:75 *V/V/V*).

Application 1 µl.

Development Over a path of 10 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability The chromatogram obtained with reference solution (b) shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

Appearance of solution

The solution is clear (*2.2.1*) and not more intensely coloured than reference solution B_5 *(2.2.2, Method II)*.

Dissolve 1.0 g in *alcohol R* and dilute to 20 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution Dissolve 25.0 mg of *4-nitrobenzoic acid R* and 25.0 mg of *benzocaine R* in *methanol R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml to 50.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Column:

— *size:* *l* = 0.12 m, Ø = 4.0 mm,

— *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 20 volumes of a mixture of 70 volumes of *acetonitrile R* and 80 volumes of *methanol R*, and 80 volumes of a solution containing 1.5 g/l of *potassium dihydrogen phosphate R* and 2.5 g/l of *sodium octanesulphonate R* adjusted to pH 2.2 with *phosphoric acid R*.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 270 nm.

Injection 20 µl.

Run time 11 times the retention time of 4-aminobenzoic acid.

Relative retention With reference to 4-aminobenzoic acid (retention time = about 3 min): impurity A = about 4; impurity B = about 9.

Limits:

— *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.2 per cent),

— *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.2 per cent),

— *any other impurity*: not more than 0.5 times the area of the peak due to impurity A in the chromatogram obtained with the reference solution (0.1 per cent),

— *total*: not more than 2.5 times the area of the peak due to impurity A in the chromatogram obtained with the reference solution (0.5 per cent),

— *disregard limit*: 0.1 times the area of the peak due to impurity A in the chromatogram obtained with the reference solution (0.02 per cent).

Impurity C and impurity D

Gas chromatography *(2.2.28)*.

Internal standard solution Dissolve 20.0 mg of *lauric acid R* in *methylene chloride R* and dilute to 100.0 ml with the same solvent.

Test solution Dissolve 1.000 g of the substance to be examined in 10.0 ml of an 84 g/l solution of *sodium hydroxide R* and extract with 2 quantities, each of 10 ml, of *methylene chloride R*. Combine and wash with 5 ml of *water R*; filter through *anhydrous sodium sulphate R*. Wash the filter with *methylene chloride R*. Evaporate in a water-bath at 50-60 °C to obtain a volume of about 1-5 ml. Add 1.0 ml of the internal standard solution and dilute to 10.0 ml with *methylene chloride R*.

Reference solution (a) Dissolve 20.0 mg of *aniline R* in *methylene chloride R* and dilute to 100.0 ml with the same solvent.

Reference solution (b) Dissolve 20.0 mg of *p-toluidine R* in *methylene chloride R* and dilute to 100.0 ml with the same solvent.

Reference solution (c) Dilute 0.50 ml of reference solution (a), 0.50 ml of reference solution (b) and 10.0 ml of the internal standard solution to 100.0 ml with *methylene chloride R*.

Column:

— *material*: fused silica,

— *size*: *l* = 30 m, Ø = 0.32 mm,

— *stationary phase*: *poly[methyl(95)phenyl(5)] siloxane R* (film thickness 0.5 µm).

Carrier gas *helium for chromatography R*.

Flow rate 1.0 ml/min.

Split ratio 1:10.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 4	130
	4 - 6.5	130 → 180
	6.5 - 11.5	180
Injection port		280
Detector		300

Detection Flame ionisation.

Injection 2 µl; inject the test solution and reference solution (c).

Retention time Internal standard = about 9.5 min.

Limits:

— *impurity C*: calculate the ratio (*R*) of the area of the peak due to impurity C to the area of the peak due to the internal standard from the chromatogram obtained with reference solution (c); calculate the ratio of the area of the peak due to impurity C to the area of the peak due to the internal standard from the chromatogram obtained with the test solution: this ratio is not greater than *R* (10 ppm),

— *impurity D*: calculate the ratio (*R*) of the area of the peak due to impurity D to the area of the peak due to the internal standard from the chromatogram obtained with reference solution (c); calculate the ratio of the area of the peak due to impurity D to the area of the peak due to the internal standard from the chromatogram obtained with the test solution: this ratio is not greater than *R* (10 ppm).

Iron *(2.4.9)*

Maximum 40 ppm.

Dissolve 0.250 g in 3 ml of *alcohol R* and dilute to 10.0 ml with *water R*.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with limit test C. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R.*

Water *(2.5.12)*

Maximum 0.2 per cent, determined on 1.00 g.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

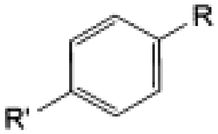
Dissolve 0.100 g with heating in 50 ml of *carbon dioxide-free water R*. Titrate with *0.1 M sodium hydroxide* determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M sodium hydroxide* is equivalent to 13.71 mg of $C_7H_7NO_2$.

STORAGE

Protected from light.

IMPURITIES



A. R = CO_2H, R′ = NO_2: 4-nitrobenzoic acid,

B. R = CO-O-C_2H_5, R′ = NH_2: benzocaine,

C. R = H, R′ = NH_2: aniline,

D. R = CH_3, R′ = NH_2: 4-methylaniline (*p*-toluidine).

Ph Eur

Aminocaproic Acid

General Notices

(Ph Eur monograph 0874)

$C_6H_{13}NO_2$ 131.2 *60-32-2*

Action and use

Antifibrinolytic.

Ph Eur

DEFINITION

Aminocaproic acid contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of 6-aminohexanoic acid, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, freely soluble in water, slightly soluble in alcohol.

It melts at about 205 °C with decomposition.

IDENTIFICATION

First identification A.

Second identification B, C, D.

A. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *aminocaproic acid CRS* . Examine the substances prepared as discs.

B. Examine the chromatograms obtained in the test for ninhydrin-positive substances. The principal spot in the chromatogram obtained with the test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve 0.5 g in 4 ml of a mixture of equal volumes of *dilute hydrochloric acid R* and *water R*. Evaporate to dryness by heating on a water-bath. Dry the residue in a desiccator. Dissolve the residue in about 2 ml of boiling *ethanol R*. Allow to cool and maintain at 4 °C to 8 °C for 3 h. Filter under reduced pressure. The residue washed with about 10 ml of *acetone R* and dried at 60 °C for 30 min, melts *(2.2.14)* at 131 °C to 133 °C.

D. Dissolve about 5 mg in 0.5 ml of *distilled water R*. Add 3 ml of *dimethylformamide R* and 2 ml of *ascorbic acid solution R*. Heat on a water-bath. An orange colour develops.

TESTS

Solution S

Dissolve 10.0 g in *carbon dioxide-free water R* and dilute to 50.0 ml with the same solvent.

Appearance of solution

Solution S is colourless *(2.2.2, Method II)* and remains clear *(2.2.1)* on standing for 24 h.

pH *(2.2.3)*

The pH of solution S is 7.5 to 8.0.

Absorbance *(2.2.25)*.

A. The absorbance of solution S at 287 nm is not more than 0.10 and at 450 nm is not more than 0.03.

B. Place 2.0 g in an even layer in a shallow dish 9 cm in diameter, cover and allow to stand at 98 °C to 102 °C for 72 h. Dissolve in *water R* and dilute to 10.0 ml with the same solvent. The absorbance of the solution at 287 nm is not more than 0.15 and at 450 nm is not more than 0.03.

Ninhydrin-positive substances

Examine by thin-layer chromatography *(2.2.27)*, using a suitable silica gel as the coating substance.

Test solution (a) Dissolve 0.10 g of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 50 ml with *water R*.

Reference solution (a) Dissolve 10 mg of *aminocaproic acid CRS* in *water R* and dilute to 50 ml with the same solvent.

Reference solution (b) Dilute 5 ml of test solution (b) to 20 ml with *water R*.

Reference solution (c) Dissolve 10 mg of *aminocaproic acid CRS* and 10 mg of *leucine CRS* in *water R* and dilute to 25 ml with the same solvent.

Apply separately to the plate 5 µl of each solution. Allow the plate to dry in air. Develop over a path of 15 cm using a mixture of 20 volumes of *glacial acetic acid R*, 20 volumes of *water R* and 60 volumes of *butanol R*. Dry the plate in a current of warm air. Spray with *ninhydrin solution R* and heat at 100 °C to 105 °C for 15 min. Any spot in the chromatogram obtained with the test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated principal spots.

Heavy metals *(2.4.8)*

12 ml of solution S complies with limit test A for heavy metals (10 ppm). Prepare the standard using *lead standard solution (2 ppm Pb) R.*

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in 20 ml of *anhydrous acetic acid R*. Using 0.1 ml of *crystal violet solution R* as indicator, titrate with *0.1 M perchloric acid* until the colour changes from bluish-violet to bluish-green.

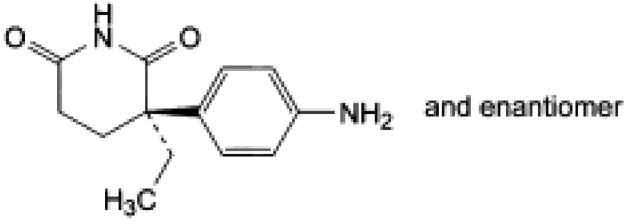
1 ml of *0.1 M perchloric acid* is equivalent to 13.12 mg of $C_6H_{13}NO_2$.

Ph Eur

Aminoglutethimide

General Notices

(Ph Eur monograph 1291)



$C_{13}H_{16}N_2O_2$ 232.3 *125-84-8*

Action and use

Inhibitor of adrenal corticosteroid synthesis; used in chemical adrenalectomy.

Preparation

Aminoglutethimide Tablets

Ph Eur

DEFINITION

(3*RS*)-3-(4-Aminophenyl)-3-ethylpiperidine-2,6-dione.

Content

98.0 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance

White or slightly yellow, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in acetone, soluble in methanol.

IDENTIFICATION

First identification B.

Second identification A, C.

A. Melting point *(2.2.14)*: 150 °C to 154 °C.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *aminoglutethimide CRS* .

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 25 mg of the substance to be examined in *acetone R* and dilute to 5 ml with the same solvent.

Reference solution (a) Dissolve 25 mg of *aminoglutethimide CRS* in *acetone R* and dilute to 5 ml with the same solvent.

Reference solution (b) Dissolve 25 mg of *aminoglutethimide CRS* and 25 mg of *glutethimide CRS* in *acetone R* and dilute to 5 ml with the same solvent.

Plate *TLC silica gel* F_{254} *plate R*.

Mobile phase *glacial acetic acid R*, *methanol R*, *ethyl acetate R* (0.5:15:85 *V/V/V*).

Application 5 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separed spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

Solution S

Dissolve 1.0 g in *methanol R* and dilute to 20.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7 *(2.2.2, Method II)*.

Optical rotation *(2.2.7)*

- 0.10° to + 0.10°, determined on solution S.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 0.10 g of the substance to be examined in a mixture of equal volumes of *methanol R* and *acetate buffer solution pH 5.0 R* and dilute to 50.0 ml with the same mixture of solvents.

Reference solution (a) Dissolve 5.0 mg of *aminoglutethimide impurity A CRS* in a mixture of equal volumes of *methanol R* and *acetate buffer solution pH 5.0 R* and dilute to 25.0 ml with the same mixture of solvents.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 10.0 ml with a mixture of equal volumes of *methanol R* and *acetate buffer solution pH 5.0 R*.

Reference solution (c) Dilute 1.0 ml of the test solution to 100.0 ml with a mixture of equal volumes of *methanol R* and *acetate buffer solution pH 5.0 R*.

Reference solution (d) Dilute 1.0 ml of the test solution to 10.0 ml with reference solution (a).

Column:

— *size:* l = 0.15 m, Ø = 3.9 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (4 µm);

— *temperature*: 40 °C.

Mobile phase Mix 27 volumes of *methanol R* and 73 volumes of *acetate buffer solution pH 5.0 R*.

Flow rate 1.3 ml/min.

Detection Spectrophotometer at 240 nm.

Injection 10 µl of the test solution and reference solutions (b), (c) and (d).

Run time 4 times the retention time of aminoglutethimide.

Retention time aminoglutethimide = about 9 min; impurity A = about 12 min.

System suitability Reference solution (d):

— *resolution*: minimum 2.0 between the peaks due to aminoglutethimide and impurity A.

Limits:

— *impurity A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (2 per cent);

— *sum of impurities other than A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (1 per cent);

— *total*: maximum 2.0 per cent for the sum of the contents of all impurities;

— *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Impurity D

Liquid chromatography *(2.2.29)*. *Carry out the test protected from light. Use shaking, not sonication or heat, to dissolve the reference substance and the substance to be examined.*

Test solution Dissolve 0.100 g of the substance to be examined in *dimethyl sulphoxide R* and dilute to 100.0 ml with the same solvent.

Reference solution Dissolve 3.0 mg of *aminoglutethimide impurity D CRS* in *dimethyl sulphoxide R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of this solution to 100.0 ml with *dimethyl sulphoxide R*.

Column:

— *size:* l = 0.12 m, Ø = 4 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Dissolve 0.285 g of *sodium edetate R* in *water R*, add 7.5 ml of *dilute acetic acid R* and 50 ml of *0.1 M potassium hydroxide* and dilute to 1000 ml with *water R*; adjust to pH 5.0 with *glacial acetic acid R*; mix 350 ml of this solution with 650 ml of *methanol R*.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 328 nm.

Injection 10 µl.

System suitability Test solution:

— *number of theoretical plates*: minimum 3300, calculated for the principal peak;

— *mass distribution ratio*: 2.0 to 5.0 for the principal peak;

— *symmetry factor*: maximum 1.2 for the principal peak.

Limit:
— *impurity D*: not more than the area of the principal peak in the chromatogram obtained with the reference solution (300 ppm).

Sulphates *(2.4.13)*

Maximum 500 ppm.

Dilute 6 ml of solution S to 15 ml with *distilled water R*.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

Dissolve 2.0 g in 15 ml of *acetone R* and dilute to 20 ml with *water R*. 12 ml of the solution complies with test B. Prepare the reference solution using lead standard solution (1 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 15 ml of *acetone R* and 5 ml of *water R*.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.180 g in 50 ml of *anhydrous acetic acid R* and titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 23.23 mg of $C_{13}H_{16}N_2O_2$.

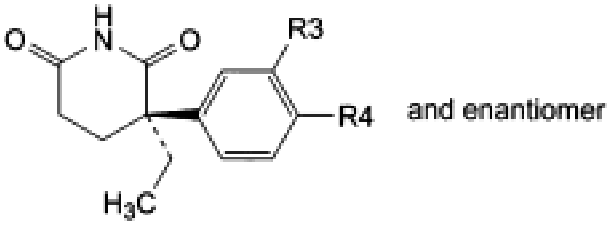
IMPURITIES

Specified impurities *A, D.*

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph

Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*)

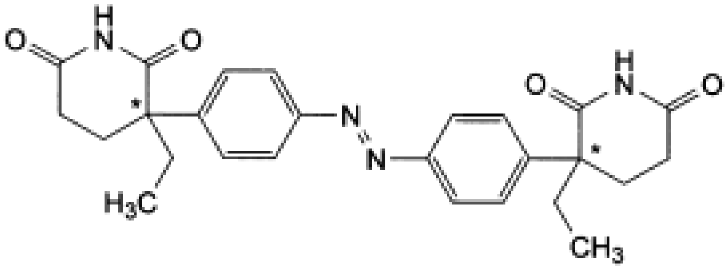
B, C.



A. R3 = NH_2, R4 = H: (3*RS*)-3-(3-aminophenyl)-3-ethylpiperidine-2,6-dione (3-aminoglutethimide),

B. R3 = NO_2, R4 = H: (3*RS*)-3-ethyl-3-(3-nitrophenyl)piperidine-2,6-dione,

C. R3 = H, R4 = NO_2: (3*RS*)-3-ethyl-3-(4-nitrophenyl)piperidine-2,6-dione,



D. 3,3′-[diazenediylbis(4,1-phenylene)]bis(3-ethylpiperidine-2,6-dione) (azoglutethimide).

Ph Eur

Aminophylline Hydrate

General Notices

(Theophylline-ethylenediamine Hydrate, Ph Eur monograph 0301)

5877-66-5

Action and use

Non-selective phosphodiesterase inhibitor; treatment of reversible airways obstruction.

Preparation

Aminophylline Injection

Ph Eur

DEFINITION

Theophylline-ethylenediamine hydrate contains not less than 84.0 per cent and not more than the equivalent of 87.4 per cent of theophylline ($C_7H_8N_4O_2$; M_r 180.2) and not less than 13.5 per cent and not more than the equivalent of 15.0 per cent of ethylenediamine ($C_2H_8N_2$; M_r 60.1), both calculated with reference to the anhydrous substance.

CHARACTERS

A white or slightly yellowish powder, sometimes granular, freely soluble in water (the solution becomes cloudy through absorption of carbon dioxide), practically insoluble in ethanol.

IDENTIFICATION

First identification *B, C, E.*

Second identification *A, C, D, E, F.*

Dissolve 1.0 g in 10 ml of *water R* and add 2 ml of *dilute hydrochloric acid R* dropwise with shaking. Filter. Use the precipitate for identification tests A, B, D and F and the filtrate for identification test C.

A. The precipitate, washed with *water R* and dried at 100 °C to 105 °C, melts *(2.2.14)* at 270 °C to 274 °C.

B. Examine the precipitate, washed with *water R* and dried at 100 °C to 105 °C, by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *theophylline CRS* .

C. To the filtrate add 0.2 ml of *benzoyl chloride R,* make alkaline with *dilute sodium hydroxide solution R* and shake vigorously. Filter the precipitate, wash with 10 ml of *water R*, dissolve in 5 ml of hot *alcohol R* and add 5 ml of *water R*. A precipitate is formed, which when washed and dried at 100 °C to 105 °C, melts *(2.2.14)* at 248 °C to 252 °C.

D. Heat about 10 mg of the precipitate with 1.0 ml of a 360 g/l solution of *potassium* *hydroxide R* in a water-bath at 90 °C for 3 min, then add 1.0 ml of *diazotised sulphanilic acid solution R*. A red colour slowly develops. Carry out a blank test.

E. It contains 3.0 per cent to 8.0 per cent of water (see Tests).

F. The precipitate gives the reaction of xanthines *(2.3.1)*.

TESTS

Appearance of solution

Dissolve 0.5 g with gentle warming in 10 ml of *carbon dioxide-free water R*. The solution is not more opalescent than reference suspension II *(2.2.1)* and not more intensely coloured than reference solution GY_6 *(2.2.2, Method II)*.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using as the coating substance a suitable silica gel with a fluorescent indicator having an optimal intensity at 254 nm.

Test solution Dissolve 0.2 g of the substance to be examined in 2 ml of *water R* with heating and dilute to 10 ml with *methanol R*.

Reference solution Dilute 0.5 ml of the test solution to 100 ml with *methanol R*.

Apply separately to the plate 10 µl of each solution. Develop over a path of 15 cm using a mixture of 10 volumes of *concentrated ammonia R*, 30 volumes of *acetone R*, 30 volumes of *chloroform R* and 40 volumes of *butanol R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

Heavy metals *(2.4.8)*

1.0 g complies with limit test C for heavy metals (20 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Water *(2.5.12)*

3.0 per cent to 8.0 per cent, determined on 0.50 g dissolved in 20 ml of *pyridine R*, by the semi-micro determination of water.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Ethylenediamine

Dissolve 0.250 g in 30 ml of *water R*. Add 0.1 ml of *bromocresol green solution R*. Titrate with *0.1 M hydrochloric acid* until a green colour is obtained.

1 ml of *0.1 M hydrochloric acid* is equivalent to 3.005 mg of $C_2H_8N_2$.

Theophylline

Heat 0.200 g to constant mass in an oven at 135 °C. Dissolve the residue with heating in 100 ml of *water R*, allow to cool, add 20 ml of *0.1 M silver nitrate* and shake. Add 1 ml of *bromothymol blue solution R1*. Titrate with *0.1 M sodium hydroxide*.

1 ml of *0.1 M sodium hydroxide* is equivalent to 18.02 mg of $C_7H_8N_4O_2$.

STORAGE

Store in a well-filled airtight container , protected from light.

Ph Eur

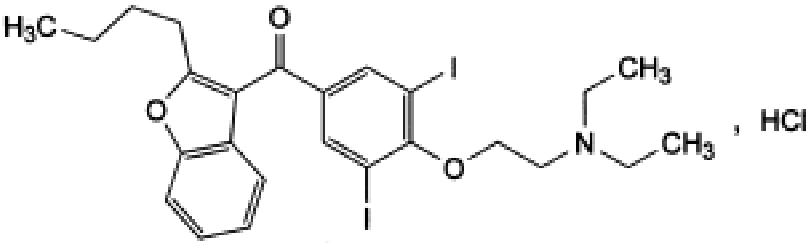
Amiodarone Hydrochloride

General Notices

(Ph Eur monograph 0803)



$C_{25}H_{29}I_2NO_3$,HCl 682 *199774-82-4*

Action and use

Potassium channel blocker; class III antiarrhythmic.

Preparations

Amiodarone Intravenous Infusion

Amiodarone Tablets

Ph Eur

DEFINITION

(2-Butylbenzofuran-3-yl)[4-[2-(diethylamino)ethoxy]-3,5-diiodophenyl]methanone hydrochloride.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, fine, crystalline powder.

Solubility

Very slightly soluble in water, freely soluble in methylene chloride, soluble in methanol, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *amiodarone hydrochloride CRS* .

B. It gives reaction (b) of chlorides *(2.3.1)*.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution GY_5 or BY_5 (*2.2.2, Method II*).

Dissolve 1.0 g in *methanol R* and dilute to 20 ml with the same solvent.

pH *(2.2.3)*

3.2 to 3.8.

Dissolve 1.0 g in *carbon dioxide-free water R*, heating at 80 °C, cool and dilute to 20 ml with the same solvent.

Impurity H

Thin-layer chromatography *(2.2.27)*. *Prepare the solutions immediately before use and keep protected from bright light.*

Test solution Dissolve 0.500 g of the substance to be examined in *methylene chloride R* and dilute to 5.0 ml with the same solvent.

Reference solution (a) Dissolve 10.0 mg of *(2-chloroethyl)diethylamine hydrochloride R* (impurity H) in *methylene chloride R* and dilute to 50.0 ml with the same solvent. Dilute 2.0 ml of this solution to 20.0 ml with *methylene chloride R*.

Reference solution (b) Mix 2.0 ml of the test solution and 2.0 ml of reference solution (a).

Plate *TLC silica gel* F_{254} *plate R*.

Mobile phase *anhydrous formic acid R*, *methanol R*, *methylene chloride R* (5:10:85 *V/V/V*).

Application 50 µl of the test solution and reference solution (a); 100 µl of reference solution (b).

Development Over 2/3 of the plate.

Drying In a current of cold air.

Detection Spray with *potassium iodobismuthate solution R1* and then with *dilute hydrogen peroxide solution R*; examine immediately in daylight.

System suitability Reference solution (b):

- the spot due to impurity H is clearly visible.

Limit:

- *impurity H*: any spot with the same R_F as the spot due to impurity H in the chromatogram obtained with reference solution (b), is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.02 per cent).

Related substances

Liquid chromatography *(2.2.29)*.

Buffer solution pH 4.9 To 800 ml of *water R* add 3.0 ml of *glacial acetic acid R*, adjust to pH 4.9 with *dilute ammonia R1* and dilute to 1000 ml with *water R*.

Test solution Dissolve 0.125 g of the substance to be examined in a mixture of equal volumes of *acetonitrile R* and *water R* and dilute to 25.0 ml with the same mixture of solvents.

Reference solution Dissolve 5 mg of *amiodarone impurity D CRS* , 5 mg of *amiodarone impurity E CRS* and 5.0 mg of *amiodarone hydrochloride CRS* in *methanol R* and dilute to 25.0 ml with the same solvent. Dilute 1.0 ml of this solution to 20.0 ml with a mixture of equal volumes of *acetonitrile R* and *water R*.

Column:
— *size: l* = 0.15 m, Ø = 4.6 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);

— *temperature*: 30 °C.

Mobile phase *buffer solution pH 4.9*, *methanol R*, *acetonitrile R* (30:30:40 *V/V/V*).

Flow rate 1 ml/min.

Detection Spectrophotometer at 240 nm.

Injection 10 µl.

Run time Twice the retention time of amiodarone.

Relative retention With reference to amiodarone (retention time = about 24 min): impurity A = about 0.26; impurity D = about 0.29; impurity E = about 0.37; impurity B = about 0.49; impurity C = about 0.55; impurity G = about 0.62; impurity F = about 0.69.

System suitability Reference solution:

— *resolution*: minimum 3.5 between the peaks due to impurities D and E.

Limits:
— *impurities A, B, C, D, E, F, G*: for each impurity, not more than the area of the peak due to amiodarone in the chromatogram obtained with the reference solution (0.2 per cent);

— *unspecified impurities*: for each impurity, not more than 0.5 times the area of the peak due to amiodarone in the chromatogram obtained with the reference solution (0.10 per cent);

— *total*: not more than 2.5 times the area of the peak due to amiodarone in the chromatogram obtained with the reference solution (0.5 per cent);

— *disregard limit*: 0.25 times the area of the peak due to amiodarone in the chromatogram obtained with the reference solution (0.05 per cent).

Iodides

Maximum 150 ppm.

Prepare the test and reference solutions simultaneously.

Solution A Add 1.50 g of the substance to be examined to 40 ml of *water R* at 80 °C and shake until completely dissolved. Cool and dilute to 50.0 ml with *water R*.

Test solution To 15.0 ml of solution A add 1.0 ml of *0.1 M hydrochloric acid* and 1.0 ml of *0.05 M potassium* i*odate*. Dilute to 20.0 ml with *water R*. Allow to stand protected from light for 4 h.

Reference solution To 15.0 ml of solution A add 1.0 ml of *0.1 M hydrochloric acid*, 1.0 ml of an 88.2 mg/l solution of *potassium iodide R* and 1.0 ml of *0.05 M potassium iodate*. Dilute to 20.0 ml with *water R*. Allow to stand protected from light for 4 h.

Measure the absorbances *(2.2.25)* of the solutions at 420 nm, using a mixture of 15.0 ml of solution A and 1.0 ml of *0.1 M hydrochloric acid* diluted to 20.0 ml with *water R* as the compensation liquid. The absorbance of the test solution is not greater than half the absorbance of the reference solution.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying at 50 °C at a pressure not exceeding 0.3 kPa for 4 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.600 g in a mixture of 5.0 ml of *0.01 M hydrochloric acid* and 75 ml of *ethanol (96 per cent) R*. Carry out a potentiometric titration *(2.2.20)*, using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

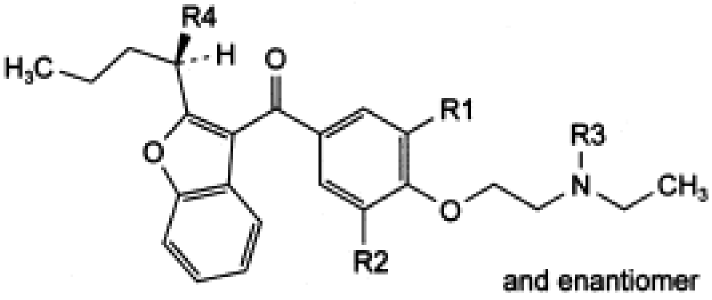
1 ml of *0.1 M sodium hydroxide* is equivalent to 68.18 mg of $C_{25}H_{30}ClI_2NO_3$.

STORAGE

Protected from light, at a temperature not exceeding 30 °C.

IMPURITIES

Specified impurities *A, B, C, D, E, F, G, H.*



A. R1 = R2 = R4 = H, R3 = C_2H_5: (2-butylbenzofuran-3-yl)[4-[2-(diethylamino)ethoxy]phenyl] methanone,

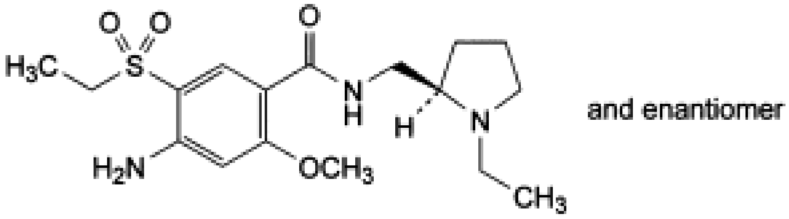
Amisulpride

General Notices

(Ph Eur monograph 1490)



$C_{17}H_{27}N_3O_4S$ 369.5 *71675-85-9*

Action and use

Dopamine receptor antagonist; neuroleptic.

Ph Eur

DEFINITION

4-Amino-*N*-[[(2*RS*)-1-ethylpyrrolidin-2-yl]methyl]-5-(ethylsulphonyl)-2-methoxybenzamide.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in methylene chloride, sparingly soluble in anhydrous ethanol.

mp

About 126 °C.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)*.

Comparison amisulpride CRS .

TESTS

Appearance of solution

The solution is not more opalescent than reference suspension II *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

Dissolve 1.0 g in 3 ml of a mixture of 1 volume of *acetic acid R* and 4 volumes of *water R* and dilute to 20 ml with *water R*.

Optical rotation *(2.2.7)*

- 0.10° to + 0.10°.

Dissolve 5.0 g in *dimethylformamide R* and dilute to 50.0 ml with the same solvent.

Impurity A

Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 0.20 g in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 5 mg of *sulpiride impurity A CRS* (amisulpride impurity A) in *methanol R* and dilute to 25 ml with the same solvent. Dilute 2 ml of the solution to 20 ml with *methanol R*.

Reference solution (b) Dilute 1 ml of the test solution to 10 ml with reference solution (a).

Plate *TLC silica gel G plate R*.

Mobile phase The upper layer obtained after shaking a mixture of a 50 per cent *V/V* solution of *concentrated ammonia R*, *anhydrous ethanol R* and *di-isopropyl ether R* (10:25:65 *V/V/V*).

Application 10 µl.

Development Over a path of 12 cm.

Drying In air.

Detection Spray with *ninhydrin solution R* and heat at 100-105 °C for 15 min.

System suitability The chromatogram obtained with reference solution (b) shows 2 clearly separated spots.

Limit:

— *impurity A*: any spot corresponding to impurity A is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.1 per cent).

Related substances

Examine by liquid chromatography (*2.2.29*).

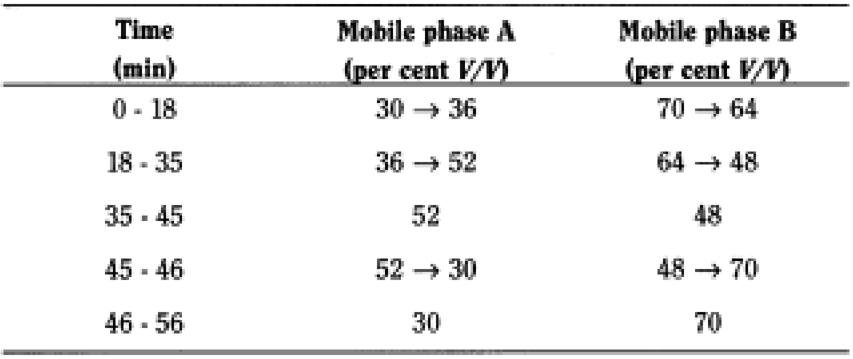
Test solution Dissolve 0.10 g in 30 ml of *methanol R* and dilute to 100.0 ml with mobile phase B.

Reference solution (a) Dilute 5.0 ml of the test solution to 100.0 ml with a mixture of 30 volumes of mobile phase A and 70 volumes of mobile phase B. Dilute 1.0 ml of the solution to 25.0 ml with a mixture of 30 volumes of mobile phase A and 70 volumes of mobile phase B.

Reference solution (b) Dissolve 5 mg of *amisulpride impurity B CRS* in 5 ml of the test solution and dilute to 50 ml with a mixture of 30 volumes of mobile phase A and 70 volumes of mobile phase B. Dilute 1 ml of the solution to 10 ml with a mixture of 30 volumes of mobile phase A and 70 volumes of mobile phase B.

Column:
- *size: l* = 0.25 m, Ø = 4.6 mm,
- *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm) with a carbon loading of 16 per cent, a specific surface area of 330 m2/g and a pore size of 7.5 nm.

Mobile phase:
- *mobile phase A*: *methanol R*,
- *mobile phase B*: 0.7 g/l solution of *sodium octanesulphonate R* in a 0.25 per cent *V/V* solution of *dilute sulphuric acid R*,



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)

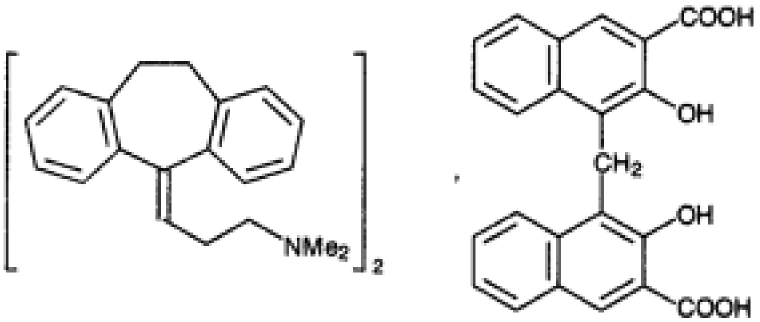
Ph Eur

Amitriptyline Embonate

General Notices



$(C_{20}H_{23}N)_2,C_{23}H_{16}O_6$ 943.2   *17086-03-2*

Action and use

Monoamine reuptake inhibitor; tricyclic antidepressant.

DEFINITION

Amitriptyline Embonate is 3-(10,11-dihydro-5*H*-dibenzo[*a,d*]cyclohept-5-ylidene) propyldimethylamine 4,4′-methylenebis(3-hydroxy-2-naphthoate). It contains not less than 98.5% and not more than 101.0% of $(C_{20}H_{23}N)_2,C_{23}H_{16}O_6$, calculated with reference to the anhydrous substance.

CHARACTERISTICS

A pale yellow to brownish yellow powder.

Practically insoluble in *water*; slightly soluble in *ethanol (96%).*

IDENTIFICATION

A. Dissolve 40 mg in 100 ml of *methanol*. To 1 ml of the solution add 1 ml of a 2.5% w/v solution of *sodium hydrogen carbonate*, 1 ml of a 2.0% w/v solution of *sodium periodate* and 1 ml of a 0.3% w/v solution of *potassium permanganate*, shake and allow to stand for 15 minutes. Acidify with 1M *sulphuric acid*, extract with 10 ml of *2,2,4-trimethylpentane* and filter. The *light absorption* of the filtrate, Appendix II B, in the range 230 to 350 nm exhibits a maximum only at 265 nm.

B. Dissolve 0.2 g in 10 ml of *dichloromethane*, add 5 ml of 1.25M *sodium hydroxide* and shake. The aqueous layer exhibits a green fluorescence when examined under *ultraviolet light (365 nm)*.

TESTS

Chloride

Not more than 0.2% when determined by the following method. Dissolve 1 g in a mixture of 50 ml of *acetone* and 50 ml of *water*, add 2 ml of *nitric acid* and 75 ml of *acetate buffer pH 5.0* and titrate with 0.01M *silver nitrate VS* determining the end point potentiometrically. Each ml of 0.01M *silver nitrate VS* is equivalent to 0.3545 mg of Cl.

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, protected from light, using *silica gel G* as the coating substance and a mixture of 3 volumes of *diethylamine*, 15 volumes of *ethyl acetate* and 85 volumes of *cyclohexane* as the mobile phase but allowing the solvent front to ascend 14 cm above the line of application in an unlined tank. Apply separately to the plate 10 µl of each of three solutions in *chloroform* containing (1) 3.3% w/v of the substance being examined, (2) 0.0010% w/v of *dibenzosuberone EPCRS* and (3) 0.0040% w/v of *cyclobenzaprine hydrochloride EPCRS.* After removal of the plate, allow it to dry in air, spray with a freshly prepared mixture of 4 volumes of *formaldehyde* and 96 volumes of *sulphuric acid* , heat at 100° to 105° for 10 minutes and examine under *ultraviolet light (365 nm)*. Any spot corresponding to dibenzosuberone in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (2) (0.05%, with reference to amitriptyline). Examine the plate under *ultraviolet light (254 nm)*. Any other *secondary spot* in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (3) (0.2%, with reference to amitriptyline).

Sulphated ash

Not more than 0.2%, Appendix IX A.

Water

Not more than 5.0% w/w, Appendix IX C. Use 0.5 g.

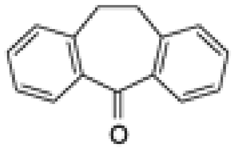
ASSAY

Dissolve 0.6 g in 50 ml of *acetic anhydride* and carry out Method I for *non-aqueous titration*, Appendix VIII A, using *1-naphtholbenzein solution* as indicator. Each ml of *0.1M perchloric acid VS* is equivalent to 47.16 mg of $(C_{20}H_{23}N)_2,C_{23}H_{16}O_6$.

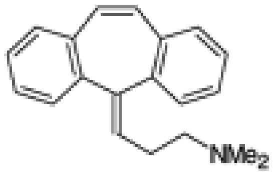
STORAGE

Amitriptyline Embonate should be protected from light.

IMPURITIES



A. dibenzosuberone

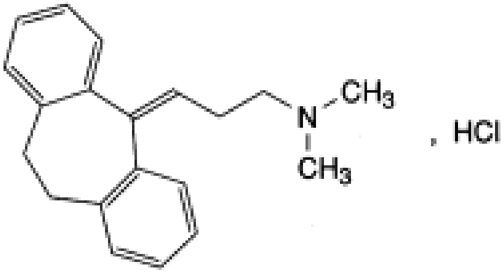


B. cyclobenzaprine.

Amitriptyline Hydrochloride

General Notices

(Ph Eur monograph 0464)



$C_{20}H_{23}N,HCl$ 313.9 *549-18-8*

Action and use

Monoamine reuptake inhibitor; tricyclic antidepressant.

Preparation

Amitriptyline Tablets

Ph Eur

DEFINITION

3-(10,11-Dihydro-5*H*-dibenzo[*a*,*d*][7]annulen-5-ylidene)-*N*,*N*-dimethylpropan-1-amine hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder or colourless crystals.

Solubility

Freely soluble in water, in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *amitriptyline hydrochloride CRS* .

B. 50 mg gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution B_7 *(2.2.2, Method II)*.

Dissolve 1.25 g in *water R* and dilute to 25 ml with the same solvent.

Acidity or alkalinity

Dissolve 0.20 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent. Add 0.1 ml of *methyl red solution R* and 0.2 ml of *0.01 M sodium hydroxide*. The solution is yellow. Add 0.4 ml of *0.01 M hydrochloric acid* . The solution is red.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (a) Dissolve 5.0 mg of *dibenzosuberone CRS* (impurity A) and 5.0 mg of *cyclobenzaprine hydrochloride CRS* (impurity B) in 5.0 ml of the test solution and dilute to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 50.0 ml with the mobile phase.

Column:

- *size: l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped polar-embedded octadecylsilyl amorphous organosilica polymer R* (5 µm);
- *temperature*: 40 °C.

Mobile phase Mix 35 volumes of *acetonitrile R* and 65 volumes of a 5.23 g/l solution of *dipotassium hydrogen phosphate R* previously adjusted to pH 7.0 with *phosphoric acid R*.

Flow rate 1.2 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 10 µl.

Run time 3 times the retention time of amitriptyline.

Relative retention With reference to amitriptyline (retention time = about 14 min): impurity B = about 0.9; impurity A = about 2.2.

System suitability Reference solution (a):

- *resolution*: minimum 2.0 between the peaks due to impurity B and amitriptyline.

Limits:

- *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *impurity A*: not more than 0.5 times the area of the corresponding peak in the

chromatogram obtained with reference solution (b) (0.05 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the peak due to amitriptyline in the chromatogram obtained with reference solution (b) (0.10 per cent);

— *total*: not more than 3 times the area of the peak due to amitriptyline in the chromatogram obtained with reference solution (b) (0.3 per cent);

— *disregard limit*: 0.5 times the area of the peak due to amitriptyline in the chromatogram obtained with reference solution (b) (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test F. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 30 ml of *ethanol (96 per cent) R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M sodium hydroxide* is equivalent to 31.39 mg of $C_{20}H_{24}ClN$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities   *A, B.*

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use)*

DEFINITION

3-Ethyl 5-methyl (4*RS*)-2-[(2-aminoethoxy)methyl]-4-(2-chlorophenyl)-6-methyl-1,4-dihydropyridine-3,5-dicarboxylate benzenesulphonate.

Content

97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Slightly soluble in water, freely soluble in methanol, sparingly soluble in ethanol, slightly soluble in 2-propanol.

IDENTIFICATION

First identification *A.*

Second identification *B, C.*

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *amlodipine besilate CRS* .

Preparation Mulls.

B. Examine the chromatograms obtained in test A for related substances in ultraviolet light at 366 nm.

Results The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (b).

C. Dissolve 5.0 mg in a 1 per cent *V/V* solution of *0.1 M hydrochloric acid* in *methanol R* and dilute to 100.0 ml with the same acid solution. Examined between 300 nm and 400 nm *(2.2.25)*, the solution shows an absorption maximum at 360 nm. The specific absorbance at the maximum is 113 to 121.

TESTS

Optical rotation *(2.2.7)*

- 0.10° to + 0.10°.

Dissolve 0.250 g in *methanol R* and dilute to 25.0 ml with the same solvent.

Related substances

A. Thin-layer chromatography *(2.2.27)*.

Test solution (a) Dissolve 0.140 g of the substance to be examined in *methanol R* and dilute to 2.0 ml with the same solvent.

Test solution (b) Dilute 1.0 ml of test solution (a) to 10.0 ml with *methanol R*.

Reference solution (a) Dissolve 70.0 mg of *amlodipine besilate CRS* in 1.0 ml of *methanol R*.

Reference solution (b) Dilute 1 ml of reference solution (a) to 10 ml with *methanol R*.

Reference solution (c) Dilute 3.0 ml of test solution (b) to 100.0 ml with *methanol R*.

Reference solution (d) Dilute 1.0 ml of test solution (b) to 100.0 ml with *methanol R*.

Plate *TLC silica gel* F_{254} *plate R*.

Mobile phase The upper layer of a mixture of *glacial acetic acid R*, *water R* and *methyl isobutyl ketone R* (25:25:50 *V/V/V*).

Application 10 µl.

Development Over a path of 15 cm.

Drying For 15 min at 80 °C.

Detection Examine in ultraviolet light at 254 nm and 366 nm.

System suitability The chromatogram obtained with reference solution (a) shows 2 clearly separated minor spots with R_F values of about 0.18 and 0.22.

Limits In the chromatogram obtained with test solution (a):

— *any impurity*: any spot, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (c) (0.3 per cent) and at most 2 spots are more intense than the spot in the chromatogram obtained with reference solution (d) (0.1 per cent).

B. Liquid chromatography *(2.2.29)*.

Test solution (a) Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Test solution (b) Dilute 5.0 ml of test solution (a) to 100.0 ml with the mobile phase.

Reference solution (a) Dissolve 50.0 mg of *amlodipine besilate CRS* in the mobile phase and dilute to 50.0 ml with the mobile phase. Dilute 5.0 ml of the solution to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 3.0 ml of test solution (a) to 100.0 ml with the mobile phase and dilute 5.0 ml of the solution to 50.0 ml with the mobile phase.

Reference solution (c) Dissolve 5 mg of the substance to be examined in 5 ml of *strong hydrogen peroxide solution R*. Heat at 70 °C for 45 min.

Column:
— *size:* l = 0.15 m, Ø = 3.9 mm,

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 15 volumes of *acetonitrile R*, 35 volumes of *methanol R* and 50 volumes of a solution prepared as follows: dissolve 7.0 ml of *triethylamine R* in 1 litre of *water R* and adjust to pH 3.0 ± 0.1 with *phosphoric acid R*.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 237 nm.

Injection 10 µl; inject test solution (a) and reference solutions (b) and (c).

Run time 3 times the retention time of amlodipine.

Relative retention With reference to amlodipine (retention time = about 7 min): impurity D = about 0.5.

System suitability Reference solution (c):

— *resolution*: minimum 4.5 between the peaks corresponding to amlodipine and impurity D.

Limits:
— *correction factor*: for the calculation of content, multiply the peak area of impurity D by 2,

— *impurity D*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent),

— *total of other impurities*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent); disregard any peak due to benzene sulphonate (relative retention = about 0.2),

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.03 per cent).

Water *(2.5.12)*

Maximum 0.5 per cent, determined on 3.000 g.

Sulphated ash *(2.4.14)*

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

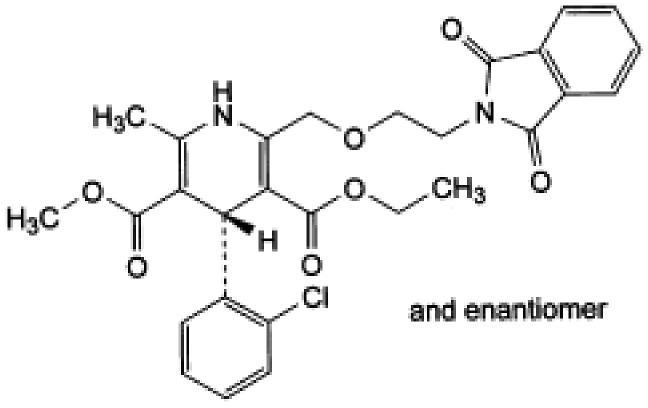
Injection Test solution (b), reference solution (a).

Calculate the percentage content of amlodipine besilate from the areas of the peaks and the declared content of $C_{26}H_{31}ClN_{2}0_{8}S$ in *amlodipine besilate CRS* .

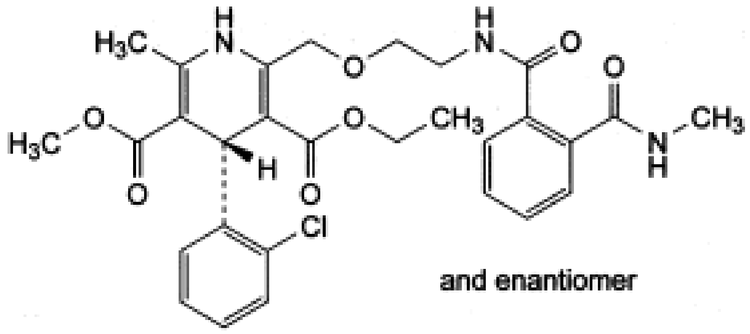
STORAGE

In an airtight container , protected from light.

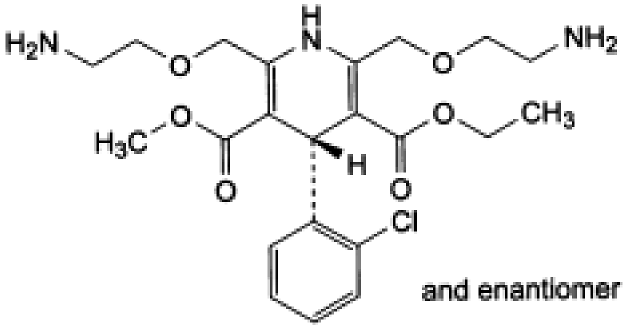
IMPURITIES



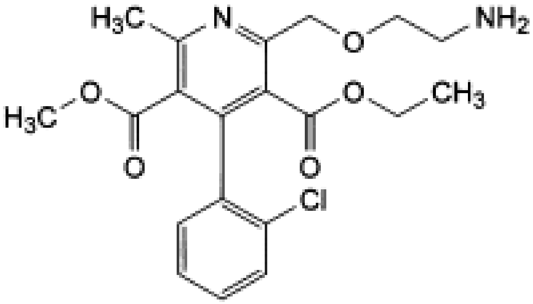
A. 3-ethyl 5-methyl (4*RS*)-4-(2-chlorophenyl)-2-[[2-(1,3-dioxo-1,3-dihydro-2*H*-isoindol-2-yl) ethoxy]methyl]-6-methyl-1,4-dihydropyridine-3,5-dicarboxylate,



B. 3-ethyl 5-methyl (4*RS*)-4-(2-chlorophenyl)-6-methyl-2-[[2-[[2-(methylcarbamoyl)benzoyl] amino]ethoxy]methyl]-1,4-dihydropyridine-3,5-dicarboxylate,



C. ethyl methyl (4*RS*)-2,6-bis[(2-aminoethoxy)methyl]-4-(2-chlorophenyl)-1,4-dihydropyridine-3,5-dicarboxylate,



D. 3-ethyl 5-methyl 2-[(2-aminoethoxy)methyl]-4-(2-chlorophenyl)-6-methylpyridine-3,5-dicarboxylate.

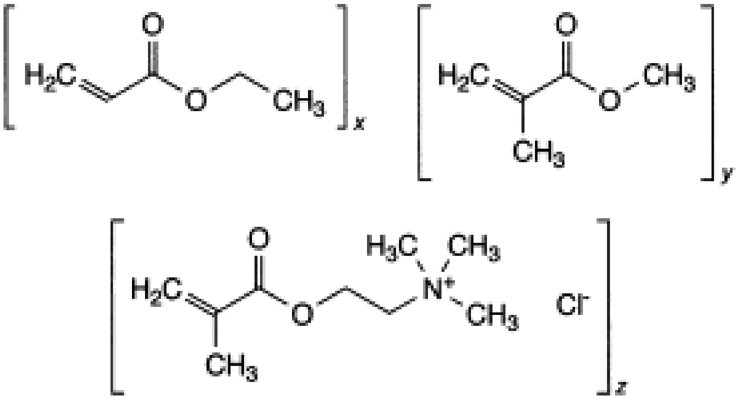
Ammonio Methacrylate Copolymer (Type A)

General Notices

(Ph Eur monograph 2081)



Action and use

Excipient.

Ph Eur

DEFINITION

Poly(ethyl propenoate-co-methyl 2-methylpropenoate-co-2-(trimethylammonio)ethyl 2-methylpropenoate) chloride having a mean relative molecular mass of about 150 000.

The ratio of ethyl propenoate groups to methyl 2-methylpropenoate groups to 2-(trimethylammonio)ethyl 2-methylpropenoate groups is about 1:2:0.2.

Content of ammonio methacrylate groups 8.9 per cent to 12.3 per cent (dried substance).

CHARACTERS

Appearance

Colourless to white or almost white granules or powder.

Solubility

Practically insoluble in water, freely soluble in anhydrous ethanol and in methylene chloride giving clear to cloudy solutions. Due to the polymeric nature of the substance, a stirring time of up to 5 h may be necessary.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison Ph. Eur. reference spectrum of ammonio methacrylate copolymer (type A).

B. Viscosity (see Tests).

C. It complies with the limits of the assay.

TESTS

Solution S

Dissolve a quantity of the substance to be examined corresponding to 12.5 g of the dried substance in a mixture of 35.0 g of *acetone R* and 52.5 g of *2-propanol R*.

Viscosity *(2.2.10)*

Maximum 15 mPa·s, determined on solution S.

Apparatus Rotating viscometer.

Dimensions:
- *spindle*: diameter = 25.15 mm; height = 90.74 mm; shaft diameter = 4.0 mm;
- *cylinder*: diameter = 27.62 mm; height = 0.135 m.

Stirring speed 30 r/min.

Volume of solution 16 ml of solution S.

Temperature 20 °C.

Appearance of a film

Spread 2 ml of solution S evenly on a glass plate. Upon drying a clear film is formed.

Monomers

Liquid chromatography *(2.2.29)*.

Solution A Dissolve 3.5 g of *sodium perchlorate R* in *water for chromatography R* and dilute to 100 ml with the same solvent.

Test solution Dissolve 5.00 g of the substance to be examined in *methanol R* and dilute to 50.0 ml with the same solvent. To 10.0 ml of this solution add 5.0 ml of solution A, dropwise, while continuously stirring. Remove the precipitated polymer by centrifugation. Use the clear supernatant solution.

Reference solution Dissolve 50.0 mg of *ethyl acrylate R* and 10.0 mg of *methyl methacrylate R* in *methanol R* and dilute to 50.0 ml with the same solvent. Dilute 1.0 ml of the solution to 100.0 ml with *methanol R*. Add 10 ml of this solution to 5 ml of solution A.

Column:
- *size: l* = 0.12 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (7 µm).

Mobile phase Dilute phosphoric acid R with *water for chromatography R* to obtain a solution at pH 2.0; mix 800 ml of this solution and 200 ml of *methanol R*, filter and degas.

Flow rate 2.0 ml/min.

Detection Spectrophotometer at 202 nm.

Injection 50 µl.

System suitability Reference solution:

— *resolution*: minimum 1.5 between the peaks due to impurity A and impurity B.

Limits:

— *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (100 ppm);

— *impurity B:* not more than 2.5 times the area of the corresponding peak in the chromatogram obtained with the reference solution (50 ppm).

Methanol *(2.4.24, System A)*

Maximum 1.5 per cent.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2.0 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 3.0 per cent, determined on 1.000 g by drying *in vacuo* at 80 °C for 5 h.

ASSAY

Dissolve 1.000 g in a mixture of 3 ml of *anhydrous formic acid R* and 30 ml of *anhydrous acetic acid R* and heat to dissolve. Add 20 ml *of acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 20.77 mg of $C_9H_{18}O_2NCl$ (ammonio methacrylate groups).

Aromatic Ammonia Spirit

Ph Eur

DEFINITION

Content

98.0 per cent to 101.0 per cent.

CHARACTERS

Appearance

Fine, white or almost white, crystalline powder or white or almost white crystals, slightly hygroscopic.

Solubility

Freely soluble in water, practically insoluble in ethanol (96 per cent).

It volatilises rapidly at 60 °C. The volatilisation takes place slowly at ambient temperatures if the substance is slightly moist. It is in a state of equilibrium with ammonium carbamate.

IDENTIFICATION

A. It gives the reaction of carbonates and bicarbonates *(2.3.1)*.

B. Dissolve 50 mg in 2 ml of *water R*. The solution gives the reaction of ammonium salts *(2.3.1)*.

TESTS

Solution S

Dissolve 14.0 g in 100 ml of *distilled water R.* Boil to remove the ammonia, allow to cool and dilute to 100.0 ml with *distilled water R*.

Chlorides *(2.4.4)*

Maximum 70 ppm.

Dilute 5 ml of solution S to 15 ml with *water R*.

Sulphates *(2.4.13)*

Maximum 70 ppm, determined on solution S.

Iron *(2.4.9)*

Maximum 40 ppm.

Dilute 1.8 ml of solution S to 10 ml with *water R*.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

Dissolve cautiously 2.5 g in 25 ml of *1 M hydrochloric acid* . 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

ASSAY

Dissolve cautiously 1.0 g in 20.0 ml of *0.5 M sulphuric acid* and dilute to 50 ml with *water R*. Boil, cool and titrate the excess of acid with *1 M sodium hydroxide*, using 0.1 ml of *methyl red solution R* as indicator.

1 ml of *0.5 M sulphuric acid* is equivalent to 79.1 mg of NH_4HCO_3.

STORAGE

In an airtight container .

DEFINITION

Content

98.5 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals, hygroscopic.

Solubility

Freely soluble in water, sparingly soluble in alcohol.

It becomes yellow when exposed to light or air.

IDENTIFICATION

A. It gives reaction (a) of bromides *(2.3.1)*.

B. 10 ml of solution S (see Tests) gives the reaction of ammonium salts *(2.3.1)*.

TESTS

Solution S

Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Acidity or alkalinity

To 10 ml of solution S add 0.05 ml of *methyl red solution R*. Not more than 0.5 ml of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Bromates

To 10 ml of solution S add 1 ml of *starch solution R*, 0.1 ml of a 100 g/l solution of *potassium iodide R* and 0.25 ml of *0.5 M sulphuric acid* and allow to stand protected from light for 5 min. No blue or violet colour develops.

Chlorides

Maximum 0.6 per cent.

In a conical flask, dissolve 1.000 g in 20 ml of *dilute nitric acid R*. Add 5 ml of *strong hydrogen peroxide solution R* and heat on a water-bath until the solution is completely decolorised. Wash down the sides of the flask with a little *water R* and heat on a water-bath for 15 min. Allow to cool, dilute to 50 ml with *water R* and add 5.0 ml of *0.1 M silver nitrate* and 1 ml of *dibutyl phthalate R*. Shake and titrate with *0.1 M ammonium thiocyanate* using 5 ml of *ferric ammonium sulphate solution R2* as indicator. Not more than 1.7 ml of *0.1 M silver nitrate* is used. Note the volume of *0.1 M silver nitrate* used (see Assay). Carry out a blank test.

Iodides

To 5 ml of solution S add 0.15 ml of *ferric chloride solution R1* and 2 ml of *methylene chloride R*. Shake and allow to separate. The lower layer is colourless *(2.2.2, Method I)*.

Sulphates *(2.4.13)*

Maximum 100 ppm.

15 ml of solution S complies with the limit test for sulphates.

Iron *(2.4.9)*

Maximum 20 ppm.

5 ml of solution S diluted to 10 ml with *water R* complies with the limit test for iron.

Magnesium and alkaline-earth metals *(2.4.7)*

Maximum 200 ppm, calculated as Ca.

10.0 g complies with the limit test for magnesium and alkaline-earth metals. The volume of *0.01 M sodium edetate* used does not exceed 5.0 ml.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

12 ml of solution S complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 1.500 g in *water R* and dilute to 100.0 ml with the same solvent. To 10.0 ml of the solution add 50 ml of *water R*, 5 ml of *dilute nitric acid R*, 25.0 ml of *0.1 M silver nitrate* and 2 ml of *dibutyl phthalate R*. Shake. Titrate with *0.1 M ammonium thiocyanate* using 2 ml of *ferric* *ammonium sulphate solution R2* as indicator and shaking vigorously towards the end-point.

1 ml of *0.1 M silver nitrate* is equivalent to 9.794 mg of NH_4Br.

Calculate the percentage content of NH_4Br from the expression:

$$a - 2.763\,b$$

a = percentage content of NH_4Br and NH_4Cl obtained in the assay and calculated as NH_4Br,

b = percentage content of Cl obtained in the test for chlorides.

STORAGE

In an airtight container, protected from light.

Ph Eur

Ammonium Chloride

General Notices

(Ph Eur monograph 0007)

NH_4Cl 53.49 *12125-02-9*

Action and use

Used for the acidification of urine and to correct metabolic alkalosis.

Preparation

Ammonium Chloride Mixture

Ph Eur

DEFINITION

Content

99.0 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals.

Solubility

Freely soluble in water.

IDENTIFICATION

A. It gives the reactions of chlorides *(2.3.1)*.

B. 10 ml of solution S (see Tests) gives the reaction of ammonium salts *(2.3.1)*.

TESTS

Solution S

Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Acidity or alkalinity

To 10 ml of solution S add 0.05 ml of *methyl red solution R*. Not more than 0.5 ml *of 0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Bromides and iodides

To 10 ml of solution S add 0.1 ml of *dilute hydrochloric acid R* and 0.05 ml of *chloramine solution R*. After 1 min, add 2 ml of *chloroform R* and shake vigorously. The chloroform layer remains colourless *(2.2.2, Method I)*.

Sulphates *(2.4.13)*

Maximum 150 ppm.

Dilute 10 ml of solution S to 15 ml with *distilled water R*.

Calcium *(2.4.3)*

Maximum 200 ppm.

Dilute 5 ml of solution S to 15 ml with *distilled water R*.

Iron *(2.4.9)*

Maximum 20 ppm.

Dilute 5 ml of solution S to 10 ml with *water R*.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 1.0 per cent, determined on 1.00 g by drying in an oven at 105 °C for 2 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 2.0 g.

ASSAY

Dissolve 1.000 g in 20 ml of *water R* and add a mixture of 5 ml of *formaldehyde solution R*, previously neutralised to *phenolphthalein solution R*, and 20 ml of *water R*. After 1-2 min, titrate slowly with *1 M sodium hydroxide*, using a further 0.2 ml of the same indicator.

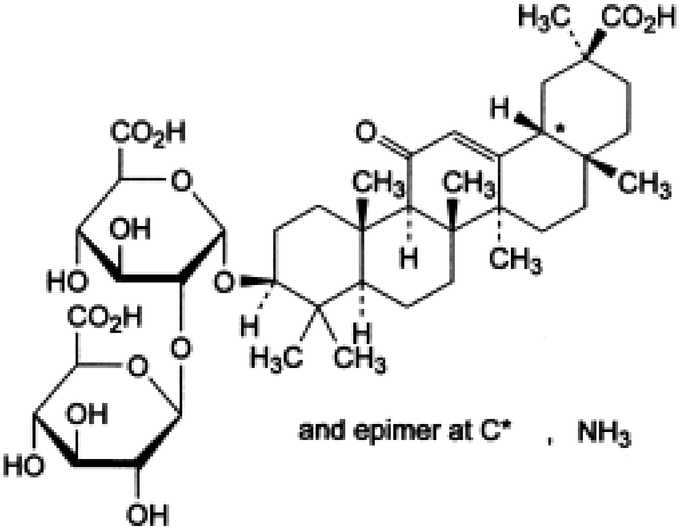
1 ml of *1 M sodium hydroxide* is equivalent to 53.49 mg of NH_4Cl.

Ph Eur

Ammonium Glycyrrhizinate

General Notices

(Ammonium Glycyrrhizate, Ph Eur monograph 1772)



$C_{42}H_{65}NO_{16}$ *840* *53956-04-0*

Ph Eur

DEFINITION

Mixture of ammonium 18α- and 18β-glycyrrhizate (ammonium salt of (20β)-3β-[[2-*O*-(β-D-glucopyranosyluronic acid)-α-D-glucopyranosyluronic acid]oxy]-11-oxoolean-12-en-29-oic acid), the 18β-isomer being the main component.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or yellowish-white, hygroscopic powder.

Solubility

Slightly soluble in water, very slightly soluble in anhydrous ethanol, practically insoluble in acetone. It dissolves in dilute solutions of acids and of alkali hydroxides.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *ammonium glycyrrhizate CRS*.

B. Dissolve 0.1 g in 20 ml of *water R*, add 2 ml of *dilute sodium hydroxide solution R* and heat cautiously. On heating, the solution gives off vapours that may be identified by the alkaline reaction of wet litmus paper *(2.3.1)*.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution BY_7 *(2.2.2, Method I)*.

Dissolve 1.0 g in *ethanol (20 per cent V/V) R* and dilute to 100.0 ml with the same solvent.

Specific optical rotation *(2.2.7)*

+ 49.0 to + 54.0 (anhydrous substance).

Dissolve 0.5 g in *ethanol (50 per cent V/V) R* and dilute to 50.0 ml with the same solvent.

Related substances Liquid chromatography *(2.2.29)*.

Test solution Dissolve 0.100 g of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 20.0 ml with the mobile phase.

Reference solution (b) Dissolve 50 mg of *ammonium glycyrrhizate CRS* in the mobile phase and dilute to 50.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 20.0 ml with the mobile phase.

Column:
- *size: l* = 0.25 m, Ø = 4.0 mm,
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5-10 µm).

Mobile phase *glacial acetic acid R*, *acetonitrile R*, *water R* (6:380:614 *V/V/V*).

Flow rate 1.2 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 10 µl.

Run time 3 times the retention time of 18β-glycyrrhizic acid.

Relative retention With reference to 18β-glycyrrhizic acid (retention time = about 8 min): impurity A = about 0.8; 18α-glycyrrhizic acid = about 1.2.

System suitability Reference solution (b):

- *resolution*: minimum 2.0 between the peaks due to 18β-glycyrrhizic acid and 18α-glycyrrhizic acid.

Limits:
- *18α-glycyrrhizic acid*: not more than twice the sum of the areas of the peaks in the chromatogram obtained with reference solution (a) (10.0 per cent),

— *impurity A*: not more than the sum of the areas of the peaks in the chromatogram obtained with reference solution (a) (5.0 per cent),

— *any other impurity*: for each impurity, not more than 0.4 times the sum of the areas of the peaks in the chromatogram obtained with reference solution (a) (2.0 per cent),

— *sum of other impurities*: not more than 1.4 times the sum of the areas of the peaks in the chromatogram obtained with reference solution (a) (7.0 per cent),

— *disregard limit*: 0.04 times the sum of the areas of the peaks in the chromatogram obtained with reference solution (a) (0.2 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with limit test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Water *(2.5.12)*

Maximum 6.0 per cent, determined on 0.250 g.

Sulphated ash *(2.4.14)*

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

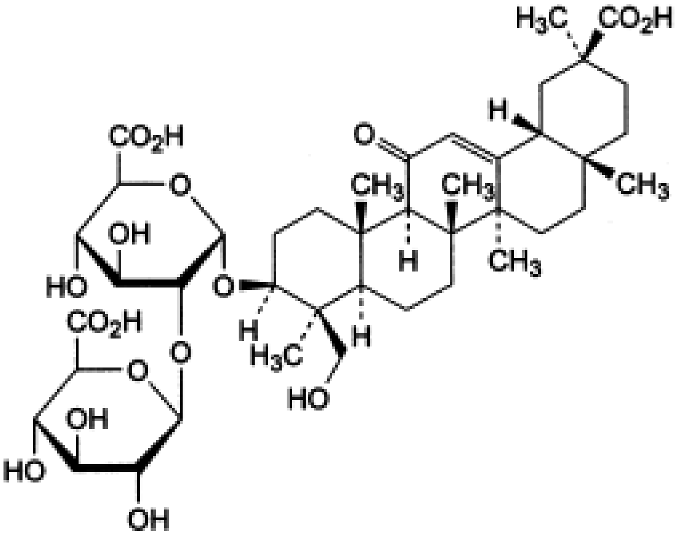
Dissolve 0.600 g in 60 ml of *anhydrous acetic acid R* heating at 80 °C if necessary. Cool. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 84.0 mg of $C_{42}H_{65}NO_{16}$.

STORAGE

In an airtight container.

IMPURITIES



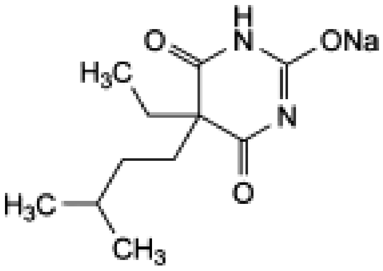
A. (4β,20β)-3β-[[2-O-(β-D-glucopyranosyluronic acid)-α-D-glucopyranosyluronic acid]oxy]-23-hydroxy-11-oxoolean-12-en-29-oic acid (24-hydroxyglycyrrhizinic acid).

Ph Eur

Amobarbital Sodium

General Notices

(Ph Eur monograph 0166)



$C_{11}H_{17}N_2NaO_3$ 248.3 *64-43-7*

Action and use

Barbiturate.

Ph Eur

DEFINITION

Amobarbital sodium contains not less than 98.5 per cent and not more than the equivalent of 102.0 per cent of sodium derivative of 5-ethyl-5-(3-methylbutyl)pyrimidin-2,4,6(1*H*,3*H*,5*H*)-trione, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, granular powder, hygroscopic, very soluble in carbon dioxide-free water (a small fraction may be insoluble), freely soluble in alcohol.

IDENTIFICATION

First identification A, B, E.

Second identification A, C, D, E.

A. Acidify 10 ml of solution S (see Tests) with *dilute hydrochloric acid R* and shake with 20 ml of *ether R*. Separate the ether layer, wash with 10 ml of *water R*, dry over *anhydrous sodium sulphate R* and filter. Evaporate the filtrate to dryness and dry the residue at 100 °C to 105 °C (test residue). Repeat the operations using 0.1 g of *amobarbital sodium CRS* (reference residue). Determine the melting point *(2.2.14)* of the test residue. Mix equal parts of the test residue and the reference residue and determine the melting point of the mixture. The difference between the melting points (which are about 157 °C) is not greater than 2 °C.

B. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing the spectrum obtained with the reference residue prepared from *amobarbital sodium CRS* with that obtained with the test residue (see identification test A).

C. Examine by thin-layer chromatography *(2.2.27)*, using *silica gel GF_{254} R* as the coating substance.

Test solution Dissolve 0.1 g of the substance to be examined in *alcohol R* and dilute to 100 ml with the same solvent.

Reference solution Dissolve 0.1 g of *amobarbital sodium CRS* in *alcohol R* and dilute to 100 ml with the same solvent.

Apply separately to the plate 10 µl of each solution. Develop over a path of 18 cm using the lower layer of a mixture of 5 volumes of *concentrated ammonia R*, 15 volumes of *alcohol R* and 80 volumes of *chloroform R*. Examine immediately in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. It gives the reaction of non-nitrogen substituted barbiturates *(2.3.1)*.

E. It gives reaction (a) of sodium *(2.3.1)*.

TESTS

Solution S

Dissolve 5.0 g in *alcohol (50 per cent V/V) R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7 *(2.2.2, Method II)*.

pH *(2.2.3)*

Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent. Disregard any slight residue. The pH of the solution is not more than 11.0.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel GF_{254} R* as the coating substance.

Test solution Dissolve 1.0 g of the substance to be examined in *alcohol R* and dilute to 100 ml with the same solvent.

Reference solution Dilute 0.5 ml of the test solution to 100 ml with *alcohol R*.

Apply separately to the plate 20 µl of each solution. Develop over a path of 15 cm using the lower layer of a mixture of 5 volumes of *concentrated ammonia R*, 15 volumes of *alcohol R* and 80 volumes of *chloroform R*. Examine the plate immediately in ultraviolet light at 254 nm. Spray with *diphenylcarbazone mercuric reagent R*. Allow the plate to dry in air and spray with freshly prepared *alcoholic potassium hydroxide solution R* diluted 1 in 5 with *aldehyde-free alcohol R*. Heat at 100 °C to 105 °C for 5 min and examine immediately. When examined in ultraviolet light and after spraying, any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent). Disregard any spot at the starting-point.

Loss on drying *(2.2.32)*

Not more than 3.0 per cent, determined on 0.50 g by drying in an oven at 130 °C.

ASSAY

Dissolve 0.200 g in 5 ml of *ethanol R*. Add 0.5 ml of *thymolphthalein solution R* and 10 ml of *silver nitrate solution in pyridine R*. Titrate with *0.1 M ethanolic sodium hydroxide* until a pure blue colour is obtained. Carry out a blank titration.

1 ml of *0.1 M ethanolic sodium hydroxide* is equivalent to 24.83 mg of $C_{11}H_{17}N_2NaO_3$.

STORAGE

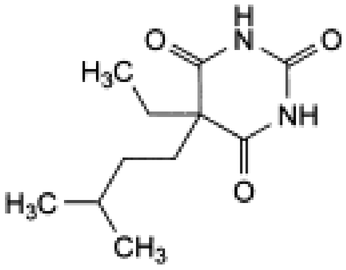
Store in an airtight container .

Ph Eur

Amobarbital

General Notices

(Ph Eur monograph 0594)



$C_{11}H_{18}N_2O_3$ 226.3 *57-43-2*

Action and use

Barbiturate.

Ph Eur

DEFINITION

Amobarbital contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 5-ethyl-5-(3-methylbutyl)pyrimidin-2,4,6(1*H*,3*H*,5*H*)-trione, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, very slightly soluble in water, freely soluble in alcohol, soluble in methylene chloride. It forms water-soluble compounds with alkali hydroxides and carbonates and with ammonia.

IDENTIFICATION

First identification A, B.

Second identification A, C, D.

A. Determine the melting point *(2.2.14)* of the substance to be examined. Mix equal parts of the substance to be examined and *amobarbital CRS* and determine the melting point of the mixture. The difference between the melting points (which are about 157 °C) is not greater than 2 °C.

B. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *amobarbital CRS* .

C. Examine by thin-layer chromatography *(2.2.27)*, using *silica gel* GF_{254} *R* as the coating substance.

Test solution Dissolve 0.1 g of the substance to be examined in *alcohol R* and dilute to 100 ml with the same solvent.

Reference solution Dissolve 0.1 g of *amobarbital CRS* in *alcohol R* and dilute to 100 ml with the same solvent.

Apply separately to the plate 10 µl of each solution. Develop over a path of 18 cm using the lower layer from a mixture of 5 volumes of *concentrated ammonia R*, 15 volumes of *alcohol R* and 80 volumes of *chloroform R*. Examine immediately in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. It gives the reaction of non-nitrogen substituted barbiturates *(2.3.1)*.

TESTS

Appearance of solution

Dissolve 1.0 g in a mixture of 4 ml of *dilute sodium hydroxide solution R* and 6 ml of *water R*. The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

Acidity or alkalinity

To 1.0 g add 50 ml of *water R* and boil for 2 min. Allow to cool and filter. To 10 ml of the filtrate add 0.15 ml of *methyl red solution R* and 0.1 ml of *0.01 M sodium hydroxide*. The solution is yellow. Add 0.2 ml of *0.01 M hydrochloric acid*. The solution is red.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel* GF_{254} *R* as the coating substance.

Test solution Dissolve 1.0 g of the substance to be examined in *alcohol R* and dilute to 100 ml with the same solvent.

Reference solution Dilute 0.5 ml of the test solution to 100 ml with *alcohol R*.

Apply separately to the plate 20 µl of each solution. Develop over a path of 15 cm using the lower layer from a mixture of 5 volumes of *concentrated ammonia R*, 15 volumes of *alcohol R* and 80 volumes of *chloroform R*. Examine the plate immediately in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution. Spray with *diphenylcarbazone mercuric reagent R*. Amoxicillin Sodium

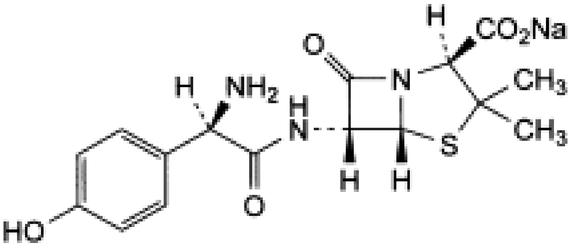
General Notices

(Ph Eur monograph 0577)



$C_{16}H_{18}N_3NaO_5S$ *387.4* 34642-77-8

Action and use

Penicillin antibacterial.

Preparations

Amoxicillin Injection

Co-amoxiclav Injection

Ph Eur

DEFINITION

Sodium (2*S*,5*R*,6*R*)-6-[[(2*R*)-2-amino-2-(4-hydroxyphenyl)acetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate.

Semi-synthetic product derived from a fermentation product.

Content

89.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, very hygroscopic, powder.

Solubility

Very soluble in water, sparingly soluble in anhydrous ethanol, very slightly soluble in acetone.

IDENTIFICATION

First identification *A, D.*

Second identification *B, C, D.*

A. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Dissolve 0.250 g in 5 ml of *water R*, add 0.5 ml of *dilute acetic acid R*, swirl and allow to stand for 10 min in iced water. Filter the crystals and wash with 2-3 ml of a mixture of 1 volume of *water R* and 9 volumes of *acetone R*, then dry in an oven at 60 °C for 30 min.

Comparison *amoxicillin trihydrate CRS.*

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 25 mg of the substance to be examined in 10 ml of *sodium hydrogen carbonate solution R*.

Reference solution (a) Dissolve 25 mg of *amoxicillin trihydrate CRS* in 10 ml of *sodium hydrogen carbonate solution R.*

Reference solution (b) Dissolve 25 mg of *amoxicillin trihydrate CRS* and 25 mg of *ampicillin trihydrate CRS* in 10 ml of *sodium hydrogen carbonate solution R*.

Plate *TLC silanised silica gel plate R.*

Mobile phase Mix 10 volumes of *acetone R* and 90 volumes of a 154 g/l solution of *ammonium acetate R* previously adjusted to pH 5.0 with *glacial acetic acid R*.

Application 1 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Expose to iodine vapour until the spots appear and examine in daylight.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Place about 2 mg in a test-tube about 150 mm long and about 15 mm in diameter. Moisten with 0.05 ml of *water R* and add 2 ml of *sulphuric acid-formaldehyde reagent R*. Mix the contents of the tube by swirling; the solution is practically colourless. Place the test-tube in a water-bath for 1 min; a dark yellow colour develops.

D. It gives reaction (a) of sodium *(2.3.1)*.

TESTS

Appearance of solution

The solution is not more opalescent than reference suspension II *(2.2.1)*, it may show an initial, but transient, pink colour, and after 5 min, its absorbance *(2.2.25)* at 430 nm is not greater than 0.20.

Dissolve 1.0 g in *water R* and dilute to 10.0 ml with the same solvent. Examine immediately after dissolution.

pH *(2.2.3)*

8.0 to 10.0.

Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Specific optical rotation *(2.2.7)*

+ 240 to + 290 (anhydrous substance).

Dissolve 62.5 mg in a 4 g/l solution of *potassium hydrogen phthalate R* and dilute to 25.0 ml with the same solution.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution (a) Dissolve 30.0 mg of the substance to be examined in mobile phase A and dilute to 50.0 ml with mobile phase A.

Test solution (b) Dissolve 30.0 mg of the substance to be examined in mobile phase A and dilute to 20.0 ml with mobile phase A. *Prepare immediately before use.*

Reference solution (a) Dissolve 30.0 mg of *amoxicillin trihydrate CRS* in mobile phase A and dilute to 50.0 ml with mobile phase A.

Reference solution (b) Dissolve 4.0 mg of *cefadroxil CRS* in mobile phase A and dilute to 50 ml with mobile phase A. To 5.0 ml of this solution add 5.0 ml of reference solution (a) and dilute to 100 ml with mobile phase A.

Reference solution (c) Dilute 2.0 ml of reference solution (a) to 20.0 ml with mobile phase A. Dilute 5.0 ml of this solution to 20.0 ml with mobile phase A.

Reference solution (d) To 0.20 g of *amoxicillin trihydrate R* add 1.0 ml of *water R*. Shake and add dropwise *dilute sodium hydroxide solution R* to obtain a solution. The pH of the solution is about 8.5. Store the solution at room temperature for 4 h. Dilute 0.5 ml of this solution to 50.0 ml with mobile phase A.

Column:

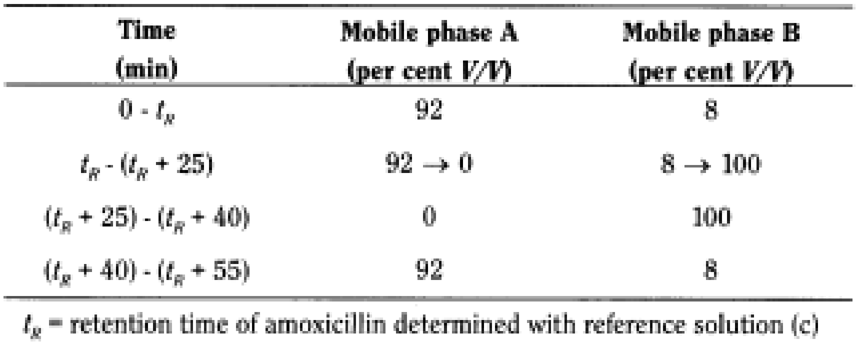
— *size: l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

— *mobile phase A*: mix 1 volume of *acetonitrile R* and 99 volumes of a 25 per cent *V/V* solution of *0.2 M potassium dihydrogen phosphate R* adjusted to pH 5.0 with *dilute sodium hydroxide solution R*;

— *mobile phase B*: mix 20 volumes of *acetonitrile R* and 80 volumes of a 25 per cent *V/V* solution of *0.2 M potassium dihydrogen phosphate R* adjusted to pH 5.0 with *dilute sodium hydroxide solution R*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - t_R	92	8
t_R - (t_R + 25)	92 → 0	8 → 100
(t_R + 25) - (t_R + 40)	0	100
(t_R + 40) - (t_R + 55)	92	8

t_R = retention time of amoxicillin determined with reference solution (c)

If the mobile phase has been adjusted to achieve the required resolution, the adjusted composition will apply at time zero in the gradient and in the assay.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 50 µl of reference solutions (b) and (c) with isocratic elution at the initial mobile phase composition and 50 µl of test solution (b) and reference solution (d) according to the elution gradient described under Mobile phase; inject mobile phase A as a blank according to the elution gradient described under Mobile phase.

Identification of impurities Use the chromatogram obtained with reference solution (d) to identify the 3 principal peaks eluted after the main peak corresponding to impurity C, amoxicillin dimer (impurity J; n = 1) and amoxicillin trimer (impurity J; n = 2).

Relative retention With reference to amoxicillin: impurity C = about 3.4; impurity J (n = 1) = about 4.1; impurity J (n = 2) = about 4.5.

System suitability Reference solution (b):

— *resolution*: minimum 2.0 between the peaks due to amoxicillin and cefadroxil; if necessary, adjust the ratio A:B of the mobile phase.

Limits:

— *impurity J (n = 1)*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (c) (3 per cent);

— *any other impurity: for each impurity*, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (2 per cent);

— *total*: not more than 9 times the area of the principal peak in the chromatogram obtained with reference solution (c) (9 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent).

N*,*N*-Dimethylaniline *(2.4.26, Method A or B)

Maximum 20 ppm.

2-Ethylhexanoic acid *(2.4.28)*

Maximum 0.8 per cent m/m.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Water *(2.5.12)*

Maximum 3.0 per cent, determined on 0.400 g.

Bacterial endotoxins *(2.6.14)*

Less than 0.25 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Mobile phase Initial composition of the mixture of mobile phases A and B, adjusted where applicable.

Injection Test solution (a) and reference solution (a).

System suitability Reference solution (a):

— *repeatability*: maximum relative standard deviation of 1.0 per cent after 6 injections.

Calculate the percentage content of amoxicillin sodium by multiplying the percentage content of amoxicillin by 1.060.

STORAGE

In an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

DEFINITION

(2*S*,5*R*,6*R*)-6-[[(2*R*)-2-Amino-2-(4-hydroxyphenyl)acetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid trihydrate.

Semi-synthetic product derived from a fermentation product.

Content

95.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Slightly soluble in water, very slightly soluble in ethanol (96 per cent), practically insoluble in fatty oils. It dissolves in dilute acids and dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification *A.*

Second identification *B, C.*

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *amoxicillin trihydrate CRS.*

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 25 mg of the substance to be examined in 10 ml of *sodium hydrogen carbonate solution R.*

Reference solution (a) Dissolve 25 mg of *amoxicillin trihydrate CRS* in 10 ml of *sodium hydrogen carbonate solution R.*

Reference solution (b) Dissolve 25 mg of *amoxicillin trihydrate CRS* and 25 mg of *ampicillin trihydrate CRS* in 10 ml of *sodium hydrogen carbonate solution R*.

Plate *TLC silanised silica gel plate R.*

Mobile phase Mix 10 volumes of *acetone R* and 90 volumes of a 154 g/l solution of *ammonium acetate R* previously adjusted to pH 5.0 with *glacial acetic acid R*.

Application 1 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Expose to iodine vapour until the spots appear and examine in daylight.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Place about 2 mg in a test-tube about 150 mm long and about 15 mm in diameter. Moisten with 0.05 ml of *water R* and add 2 ml of *sulphuric acid-formaldehyde reagent R*. Mix the contents of the tube by swirling; the solution is practically colourless. Place the test-tube in a water-bath for 1 min; a dark yellow colour develops.

TESTS

Solution S

With the aid of ultrasound or gentle heating, dissolve 0.100 g in *carbon dioxide-free water R* and dilute to 50.0 ml with the same solvent.

Appearance of solution

The solutions are not more opalescent than reference suspension II *(2.2.1)*.

Dissolve 1.0 g in 10 ml of *0.5 M hydrochloric acid*. Dissolve separately 1.0 g in 10 ml of *dilute ammonia R2*. Examine immediately after dissolution.

pH ***(2.2.3)***

3.5 to 5.5 for solution S.

Specific optical rotation ***(2.2.7)***

+ 290 to + 315 (anhydrous substance), determined on solution S.

Related substances

Liquid chromatography *(2.2.29)*.

Buffer solution pH 5.0 To 250 ml of *0.2 M potassium dihydrogen phosphate R* add *dilute sodium hydroxide solution R* to pH 5.0 and dilute to 1000.0 ml with *water R*.

Test solution (a) Dissolve 30.0 mg of the substance to be examined in mobile phase A and dilute to 50.0 ml with mobile phase A.

Test solution (b) Dissolve 30.0 mg of the substance to be examined in mobile phase A and dilute to 20.0 ml with mobile phase A. *Prepare immediately before use.*

Reference solution (a) Dissolve 30.0 mg of *amoxicillin trihydrate CRS* in mobile phase A and dilute to 50.0 ml with mobile phase A.

Reference solution (b) Dissolve 4.0 mg of *cefadroxil CRS* in mobile phase A and dilute to 50 ml with mobile phase A. To 5.0 ml of this solution add 5.0 ml of reference solution (a) and dilute to 100 ml with mobile phase A.

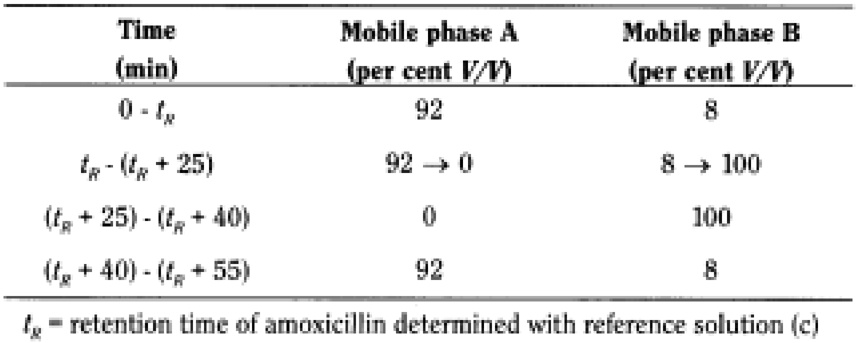
Reference solution (c) Dilute 2.0 ml of reference solution (a) to 20.0 ml with mobile phase A. Dilute 5.0 ml of this solution to 20.0 ml with mobile phase A.

Column:
— *size: l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:
— *mobile phase A*: *acetonitrile R*, buffer solution pH 5.0 (1:99 *V/V*);

— *mobile phase B*: *acetonitrile R*, buffer solution pH 5.0 (20:80 *V/V*);



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - t_R	92	8
t_R - (t_R + 25)	92 → 0	8 → 100
(t_R + 25) - (t_R + 40)	0	100
(t_R + 40) - (t_R + 55)	92	8

t_R = retention time of amoxicillin determined with reference solution (c)

If the mobile phase composition has been adjusted to achieve the required resolution, the adjusted composition will apply at time zero in the gradient and in the assay.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 50 µl of reference solutions (b) and (c) with isocratic elution at the initial mobile phase composition and 50 µl of test solution (b) according to the elution gradient described under Mobile phase; inject mobile phase A as a blank according to the elution gradient described under Mobile phase.

System suitability Reference solution (b):

— *resolution*: minimum 2.0 between the peaks due to amoxicillin and cefadroxil; if necessary, adjust the ratio A:B of the mobile phase.

Limit:

— *any impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (1 per cent).

N*,*N*-Dimethylaniline** ***(2.4.26, Method A or B)

Maximum 20 ppm.

Water ***(2.5.12)***

11.5 per cent to 14.5 per cent, determined on 0.100 g.

Sulphated ash ***(2.4.14)***

Maximum 1.0 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Mobile phase Initial composition of the mixture of mobile phases A and B, adjusted where applicable.

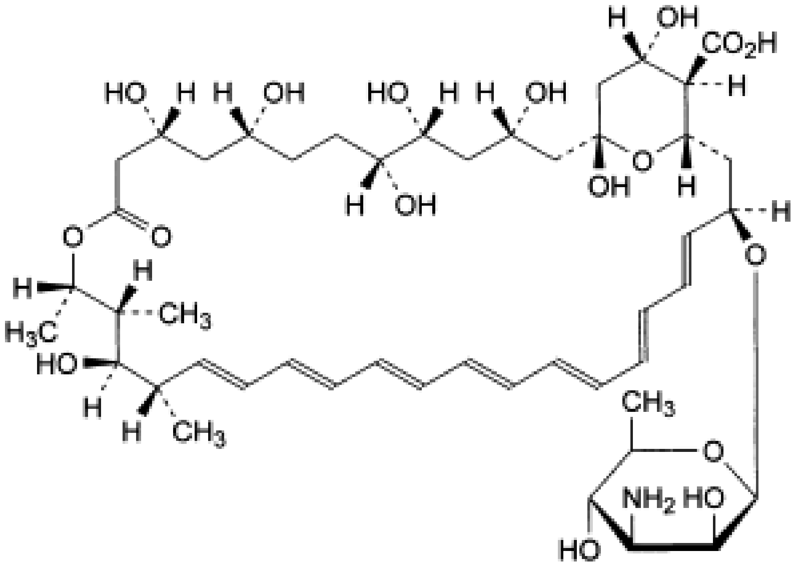
Ph Eur

Amphotericin

General Notices

(Amphotericin B, Ph Eur monograph 1292)



$C_{47}H_{73}NO_{17}$ 924 *1397-89-3*

Action and use

Antifungal.

Preparation

Amphotericin Lozenges

Amphotericin Oral Suspension

Ph Eur

DEFINITION

Amphotericin B is a mixture of antifungal polyenes produced by the growth of certain strains of *Streptomyces nodosus* or by any other means. It consists mainly of amphotericin B which is (1*R*,3*S*,5*R*,6*R*,9*R*,11*R*,15*S*,16*R*,17*R*,18*S*,19*E*,21*E*,23*E*, 25*E*,27*E*,29*E*,31*E*,33*R*,35*S*,36*R*, 37*S*)-33-[(3-amino-3,6-dideoxy-β-D-mannopyranosyl)oxy]-1,3,5,6,9,11,17,37-octahydroxy-15, 16,18-trimethyl-13-oxo-14,39-dioxabicyclo[33.3.1]nonatriaconta-19,21,23,25,27,29,31-heptaene-36-carboxylic acid. The potency is not less than 750 IU/mg, calculated with reference to the dried substance.

CHARACTERS

A yellow or orange powder, practically insoluble in water, soluble in dimethyl sulphoxide and in propylene glycol, slightly soluble in dimethylformamide, very slightly soluble in methanol, practically insoluble in alcohol.

It is sensitive to light in dilute solutions and is inactivated at low pH values.

IDENTIFICATION

A. Dissolve 25 mg in 5 ml of *dimethyl sulphoxide R* and dilute to 50 ml with *methanol R*. Dilute 2 ml of the solution to 200 ml with *methanol R*. Examined between 300 nm and 450 nm *(2.2.25)*, the solution shows 3 absorption maxima at 362 nm, 381 nm and 405 nm. The ratio of the absorbance measured at 362 nm to that measured at 381 nm is 0.57 to 0.61. The ratio of the absorbance measured at 381 nm to that measured at 405 nm is 0.87 to 0.93.

B. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *amphotericin B CRS* . If the spectra obtained show differences dry the substance to be examined at 60 °C at a pressure not exceeding 0.7 kPa for 1 h and prepare a new spectrum.

C. To 1 ml of a 0.5 g/l solution in *dimethyl sulphoxide R*, add 5 ml of *phosphoric acid R* to form a lower layer, avoiding mixing the 2 liquids. A blue ring is immediately produced at the junction of the liquids. Mix, an intense blue colour is produced. Add 15 ml of *water R* and mix; the solution becomes pale yellow.

TESTS

Content of tetraenes

Not more than 10.0 per cent and not more than 5.0 per cent if intended for use in the manufacture of parenteral dosage forms, determined by the following method.

Test solution Dissolve 50.0 mg in 5 ml of *dimethyl sulphoxide R* and dilute to 50.0 ml with *methanol R*. Dilute 4.0 ml of the solution to 50.0 ml with *methanol R*.

Reference solution (a) Dissolve 50.0 mg of *amphotericin B CRS* in 5 ml of *dimethyl sulphoxide R* and dilute to 50.0 ml with *methanol R*. Dilute 4.0 ml of the solution to 50.0 ml with *methanol R*.

Reference solution (b) Dissolve 25.0 mg of *nystatin CRS* in 25 ml of *dimethyl sulphoxide R* and dilute to 250.0 ml with *methanol R*. Dilute 4.0 ml of the solution to 50.0 ml with *methanol R*.

Measure the absorbances *(2.2.25)* of the test solution and of reference solutions (a) and (b) at the maxima at 282 nm and 304 nm respectively, using a 0.8 per cent *V/V* solution of *dimethyl sulphoxide R* in *methanol R* as the compensation liquid. Calculate the specific absorbance of the substance being examined, of *nystatin CRS* and of *amphotericin B CRS* at both wavelengths, each with reference to the dried substance, and calculate the percentage content of tetraenes using the following expression:

$$F + \frac{100\,(B_1S_2 - B_2S_1)}{(N_2B_1 - N_1B_2)}$$

S_1 and S_2 = specific absorbances of the substance to be examined at 282 nm and 304 nm respectively,

N_1 and N_2 = specific absorbance of *nystatin CRS* at 282 nm and 304 nm respectively,

B_1 and B_2 = specific absorbance of *amphotericin B CRS* at 282 nm and 304 nm respectively,

F = declared content of tetraenes in *amphotericin B CRS*.

Loss on drying ***(2.2.32)***

Not more than 5.0 per cent, determined on 1.000 g by drying in an oven at 60 °C at a pressure not exceeding 0.7 kPa.

Sulphated ash ***(2.4.14)***

Not more than 3.0 per cent and not more than 0.5 per cent if intended for use in the manufacture of parenteral dosage forms, determined on 1.0 g.

Bacterial endotoxins ***(2.6.14)***

Less than 1.0 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Protect all solutions from light throughout the assay. Dissolve 25.0 mg in *dimethyl sulphoxide R* and dilute, with shaking, to 25.0 ml with the same solvent. Under constant stirring of this stock solution, dilute with *dimethyl sulphoxide R* to obtain solutions of appropriate concentrations (the following concentrations have been found suitable: 44.4, 66.7 and 100 IU/ml). Final solutions are prepared by diluting 1 to 20 with 0.2 M phosphate buffer solution pH 10.5 so that they all contain 5 per cent *V/V* of dimethyl sulphoxide. Prepare the reference and the test solutions simultaneously. Carry out the microbiological assay of antibiotics *(2.7.2)*.

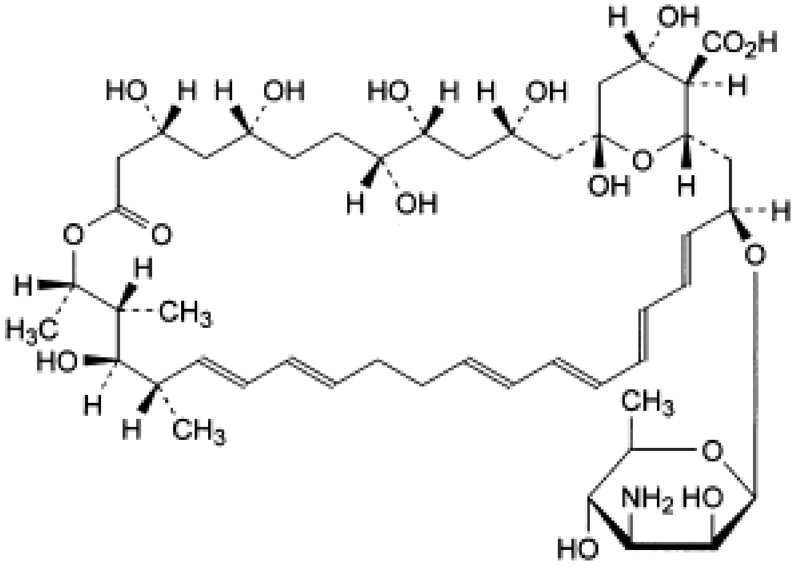
STORAGE

Store protected from light, at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral dosage forms.

IMPURITIES



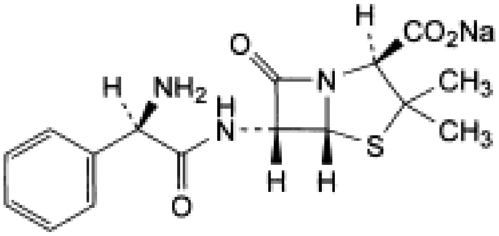
A. amphotericin A (tetraene).

Ph Eur

Ampicillin Sodium

General Notices

(Ph Eur monograph 0578)



$C_{16}H_{18}N_3NaO_4S$ 371.4   *69-52-3*

Action and use

Penicillin antibacterial.

Preparation

Ampicillin Injection

Ph Eur

DEFINITION

Sodium (2*S*,5*R*,6*R*)-6-[[(2*R*)-2-amino-2-phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate.

Semi-synthetic product derived from a fermentation product.

Content

91.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder, hygroscopic.

Solubility

Freely soluble in water, sparingly soluble in acetone, practically insoluble in fatty oils and in liquid paraffin.

IDENTIFICATION

First identification   *A, D.*

Second identification   *B, C, D.*

A. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation   Dissolve 0.250 g in 5 ml of *water R*, add 0.5 ml of *dilute acetic acid R*, swirl and allow to stand for 10 min in iced water. Filter the crystals through a small sintered-glass filter (40) *(2.1.2)*, applying suction, wash with 2-3 ml of a mixture of 1 volume of *water R* and 9 volumes of *acetone R*, then dry in an oven at 60 °C for 30 min.

Comparison   *ampicillin trihydrate CRS.*

B. Thin-layer chromatography *(2.2.27)*.

Test solution   Dissolve 25 mg of the substance to be examined in 10 ml of *sodium hydrogen carbonate solution R.*

Reference solution (a)   Dissolve 25 mg of *ampicillin trihydrate CRS* in 10 ml of *sodium hydrogen carbonate solution R*.

Reference solution (b)   Dissolve 25 mg of *amoxicillin trihydrate CRS* and 25 mg of *ampicillin trihydrate CRS* in 10 ml of *sodium hydrogen carbonate solution R.*

Plate   *TLC silanised silica gel plate R*.

Mobile phase   Mix 10 volumes of *acetone R* and 90 volumes of a 154 g/l solution of *ammonium acetate R* previously adjusted to pH 5.0 with *glacial acetic acid R*.

Application   1 µl.

Development   Over a path of 15 cm.

Drying   In air.

Detection   Expose to iodine vapour until the spots appear and examine in daylight.

System suitability   Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results   The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Place about 2 mg in a test-tube about 150 mm long and about 15 mm in diameter. Moisten with 0.05 ml of *water R* and add 2 ml of *sulphuric acid-formaldehyde reagent R*. Mix the contents of the tube by swirling; the solution is practically colourless. Place the test-tube in a water-bath for 1 min; a dark yellow colour develops.

D. It gives reaction (a) of sodium *(2.3.1)*.

TESTS

Appearance of solution

Solutions A and B are not more opalescent than reference suspension II *(2.2.1)* and the absorbance *(2.2.25)* of solution B at 430 nm is not greater than 0.15.

Place 1.0 g in a conical flask and add slowly and with continuous swirling 10 ml of *1 M hydrochloric acid* (solution A). Separately dissolve 1.0 g in *water R* and dilute to 10.0 ml with the same solvent (solution B). Examine immediately after dissolution.

pH *(2.2.3)*

8.0 to 10.0.

Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent. Measure 10 min after dissolution.

Specific optical rotation *(2.2.7)*

+ 258 to + 287 (anhydrous substance).

Dissolve 62.5 mg in a 4 g/l solution of *potassium hydrogen phthalate R* and dilute to 25.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution (a) Dissolve 31.0 mg of the substance to be examined in mobile phase A and dilute to 50.0 ml with mobile phase A.

Test solution (b) Dissolve 31.0 mg of the substance to be examined in mobile phase A and dilute to 10.0 ml with mobile phase A. *Prepare immediately before use*.

Reference solution (a) Dissolve 27.0 mg of *anhydrous ampicillin CRS* in mobile phase A and dilute to 50.0 ml with mobile phase A.

Reference solution (b) Dissolve 2.0 mg of *cefradine CRS* in mobile phase A and dilute to 50 ml with mobile phase A. To 5.0 ml of this solution add 5.0 ml of reference solution (a).

Reference solution (c) Dilute 1.0 ml of reference solution (a) to 20.0 ml with mobile phase A.

Reference solution (d) To 0.20 g of the substance to be examined add 1.0 ml of *water R*. Heat the solution at 60 °C for 1 h. Dilute 0.5 ml of this solution to 50.0 ml with mobile phase A.

Column:

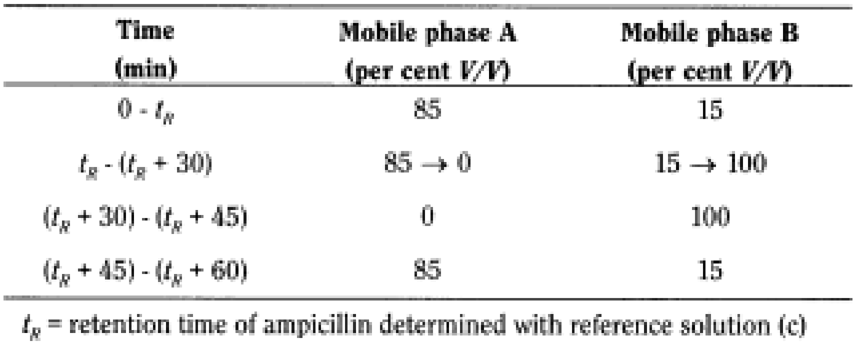
— *size: l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

— *mobile phase* A: mix 0.5 ml of *dilute acetic acid R*, 50 ml of *0.2 M potassium dihydrogen phosphate* R and 50 ml of *acetonitrile R*, then dilute to 1000 ml with *water R*;

— *mobile phase B*: mix 0.5 ml of *dilute acetic acid R,* 50 ml of *0.2 M potassium dihydrogen phosphate R* and 400 ml of *acetonitrile R*, then dilute to 1000 ml with *water R;*



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - t_R	85	15
t_R - (t_R + 30)	85 → 0	15 → 100
(t_R + 30) - (t_R + 45)	0	100
(t_R + 45) - (t_R + 60)	85	15

t_R = retention time of ampicillin determined with reference solution (c)

If the mobile phase composition has been adjusted to achieve the required resolution, the adjusted composition will apply at time zero in the gradient and in the assay.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 50 µl of reference solutions (b) and (c) with isocratic elution at the initial mobile phase composition and 50 µl of test solution (b) and reference solution (d) according to the elution gradient described under Mobile phase; inject mobile phase A as a blank according to the elution gradient described under Mobile phase.

Identification of peaks Use the chromatogram obtained with reference solution (d) to identify the peaks due to ampicillin and ampicillin dimer.

Relative retention With reference to ampicillin: ampicillin dimer = about 2.8.

System suitability Reference solution (b):

— *resolution*: minimum 3.0 between the peaks due to ampicillin and cefradin; if necessary adjust the ratio A:B of the mobile phase.

Limits:

— *ampicillin dimmer*: not more than 4.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (4.5 per cent);

— *any other impurity*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (2 per cent).

N*,*N*-Dimethylaniline *(2.4.26, Method B)

Maximum 20 ppm.

2-Ethylhexanoic acid *(2.4.28)*

Maximum 0.8 per cent m/m.

Methylene chloride

Gas chromatography *(2.2.28)*.

Internal standard solution Dissolve 1.0 ml of *ethylene chloride R* in *water R* and dilute to 500.0 ml with the same solvent.

Test solution (a) Dissolve 1.0 g of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Test solution (b) Dissolve 1.0 g of the substance to be examined in *water R*, add 1.0 ml of the internal standard solution and dilute to 10.0 ml with *water R*.

Reference solution Dissolve 1.0 ml of *methylene chloride R* in *water R* and dilute to 500.0 ml with the same solvent. To 1.0 ml of this solution add 1.0 ml of the internal standard solution and dilute to 10.0 ml with *water R*.

Column:

— *material*: glass;

— *size: l* = 1.5 m, Ø = 4 mm;

— *stationary phase*: *diatomaceous earth for gas chromatography R* impregnated with 10 per cent *m/m* of *macrogol 1000 R*.

Carrier gas *nitrogen for chromatography R*.

Flow rate 40 ml/min.

Temperature:
- — *column*: 60 °C;
- — *injection port*: 100 °C;
- — *detector*: 150 °C.

Detection Flame ionisation.

Calculate the content of methylene chloride taking its density at 20 °C to be 1.325 g/ml.

Limit:
- — *methylene chloride*: maximum 0.2 per cent m/m.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Water *(2.5.12)*

Maximum 2.0 per cent, determined on 0.300 g.

Bacterial endotoxins *(2.6.14)*

Less than 0.15 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Mobile phase Initial composition of the mixture of mobile phases A and B, adjusted where applicable.

Injection Test solution (a) and reference solution (a).

System suitability Reference solution (a):

- — *repeatability*: maximum relative standard deviation of 1.0 per cent after 6 injections.

Calculate the percentage content of ampicillin sodium by multiplying the percentage content of ampicillin by 1.063.

STORAGE

In an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

IMPURITIES

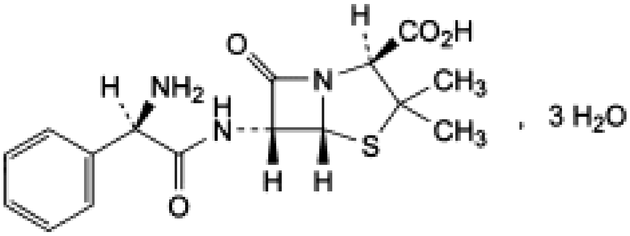
General Notices

(Ph Eur monograph 0168)



$C_{16}H_{19}N_3O_4S,3H_2O$ 403.5 *7177-48-2*

Action and use

Penicillin antibacterial.

Preparations

Ampicillin Capsules

Ampicillin Oral Suspension

Co-fluampicil Capsules

Co-fluampicil Oral Suspension

Ph Eur

DEFINITION

(2*S*,5*R*,6*R*)-6-[[(2*R*)-2-Amino-2-phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid trihydrate.

Semi-synthetic product derived from a fermentation product.

Content

96.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Slightly soluble in water, practically insoluble in ethanol (96 per cent) and in fatty oils. It dissolves in dilute solutions of acids and of alkali hydroxides.

IDENTIFICATION

First identification *A, D.*

Second identification *B, C, D.*

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *ampicillin trihydrate CRS* .

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 25 mg of the substance to be examined in 10 ml of *sodium hydrogen carbonate solution R.*

Reference solution (a) Dissolve 25 mg of *ampicillin trihydrate CRS* in 10 ml of *sodium hydrogen carbonate solution R.*

Reference solution (b) Dissolve 25 mg of *amoxicillin trihydrate CRS* and 25 mg of *ampicillin trihydrate CRS* in 10 ml of *sodium hydrogen carbonate solution R*.

Plate *TLC silanised silica gel plate R*.

Mobile phase Mix 10 volumes of *acetone R* and 90 volumes of a 154 g/l solution of *ammonium acetate R* previously adjusted to pH 5.0 with *glacial acetic acid R*.

Application 1 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Expose to iodine vapour until the spots appear and examine in daylight.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Place about 2 mg in a test-tube about 150 mm long and about 15 mm in diameter. Moisten with 0.05 ml of *water R* and add 2 ml of *sulphuric acid-formaldehyde reagent R*. Mix the contents of the tube by swirling; the solution is practically colourless. Place the test-tube in a water-bath for 1 min; a dark yellow colour develops.

D. Water (see Tests).

TESTS

Appearance of solution

The solutions are not more opalescent than reference suspension II *(2.2.1)*.

Dissolve 1.0 g in 10 ml of *1 M hydrochloric acid* . Separately dissolve 1.0 g in 10 ml of *dilute ammonia R2*. Examine immediately after dissolution.

pH *(2.2.3)*

3.5 to 5.5.

Dissolve 0.1 g in *carbon dioxide-free water R* and dilute to 40 ml with the same solvent.

Specific optical rotation ***(2.2.7)***

+ 280 to + 305 (anhydrous substance).

Dissolve 62.5 mg in *water R* and dilute to 25.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution (a) Dissolve 31.0 mg of the substance to be examined in mobile phase A and dilute to 50.0 ml with mobile phase A.

Test solution (b) Dissolve 31.0 mg of the substance to be examined in mobile phase A and dilute to 10.0 ml with mobile phase A*. Prepare immediately before use*.

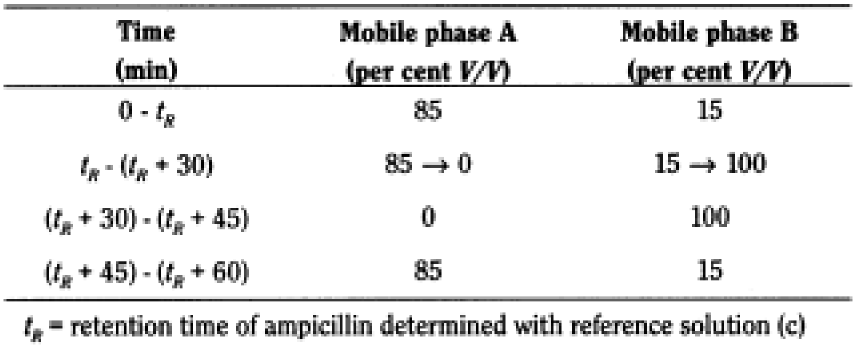
Reference solution (a) Dissolve 27.0 mg of *anhydrous ampicillin CRS* in mobile phase A and dilute to 50.0 ml with mobile phase A.

Reference solution (b) Dissolve 2 mg of *cefradine CRS* in mobile phase A and dilute to 50 ml with mobile phase A. To 5 ml of this solution, add 5 ml of reference solution (a).

Reference solution (c) Dilute 1.0 ml of reference solution (a) to 20.0 ml with mobile phase A.

Column:
- *size: l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:
- *mobile phase* A: mix 0.5 ml of *dilute acetic acid R*, 50 ml of *0.2 M potassium dihydrogen phosphate R* and 50 ml of *acetonitrile R*, then dilute to 1000 ml with *water R*;
- *mobile phase B*: mix 0.5 ml of *dilute acetic acid R,* 50 ml of *0.2 M potassium dihydrogen phosphate R* and 400 ml of *acetonitrile R*, then dilute to 1000 ml with *water R*;



Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - t_R	85	15
t_R - (t_R + 30)	85 → 0	15 → 100
(t_R + 30) - (t_R + 45)	0	100
(t_R + 45) - (t_R + 60)	85	15

t_R = retention time of ampicillin determined with reference solution (c)

If the mobile phase composition has been adjusted to achieve the required resolution, the adjusted composition will apply at time zero in the gradient and in the assay.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 50 µl of reference solutions (b) and (c) with isocratic elution at the initial mobile phase composition and 50 µl of test solution (b) according to the elution gradient described

under Mobile phase; inject mobile phase A as a blank according to the elution gradient described under Mobile phase.

System suitability Reference solution (b):

— *resolution*: minimum 3.0 between the peaks due to ampicillin and cefradin; if necessary, adjust the ratio A:B of the mobile phase.

Limit:

— *any impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent).

N*,*N*-Dimethylaniline** ***(2.4.26, Method B)

Maximum 20 ppm.

Water ***(2.5.12)***

12.0 per cent to 15.0 per cent, determined on 0.100 g.

Sulphated ash ***(2.4.14)***

Maximum 0.5 per cent, determined on 1.0 g.

ASSAY

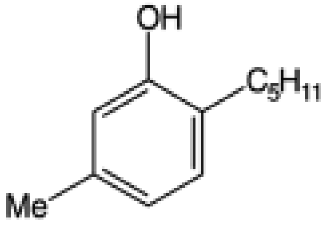
Amylmetacresol

General Notices



$C_{12}H_{18}O$ 178.3 *1300-94-3*

Action and use

Antiseptic.

DEFINITION

Amylmetacresol is 5-methyl-2-pentylphenol. It contains not less than 96.0% and not more than 104.0% of $C_{12}H_{18}O$.

CHARACTERISTICS

A clear or almost clear liquid or a solid crystalline mass, colourless or slightly yellow when freshly prepared, which darkens on storage.

Practically insoluble in *water*; soluble in *ethanol (96%)*, in *ether* and in fixed and volatile oils.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of amylmetacresol *(RS 014)*.

B. The *light absorption*, Appendix II B, in the range 230 to 350 nm of a 0.004% w/v solution in *absolute ethanol* containing 2% v/v of *0.1M hydrochloric acid* exhibits a maximum at 278 nm and a less well-defined maximum at 286 nm. The *absorbance* at the maximum at 278 nm is about 0.53.

C. To 5 ml of a 0.5% v/v solution in *methanol* add 5 ml of *bromine water*. A yellow precipitate is produced.

D. *Freezing point*, about 22°, Appendix V B.

TESTS

Weight per ml

0.947 to 0.953 g, Appendix V G.

Related substances

Carry out the method for *gas chromatography*, Appendix III B, using the following solutions. Solution (1) contains 1% w/v of the substance being examined in *chloroform*. Solution (2) is the substance being examined.

The chromatographic procedure may be carried out using a glass column (1.8 m × 3 mm) packed with *acid-washed, silanised diatomaceous support* (80 to 100 mesh) coated with 10% w/w of silicone grease (Apiezon L is suitable) and maintained at 180°.

In the chromatogram obtained with solution (2) the area of any *secondary peak* is not greater than 2% and the sum of the areas of any *secondary peaks* is not greater than 3% by *normalisation*.

Sulphated ash

Not more than 0.1%, Appendix IX A.

ASSAY

Dissolve 0.2 g in *absolute ethanol* containing 2% v/v of *0.1M hydrochloric acid* and dilute to 100 ml with the same solvent. Dilute 2 ml of the solution to 100 ml with the same solvent and measure the *absorbance* of the resulting solution at the maximum at 278 nm, Appendix II B. Calculate the content of $C_{12}H_{18}O$ taking 132 as the value of A(1%, 1 cm) at the maximum at 278 nm.

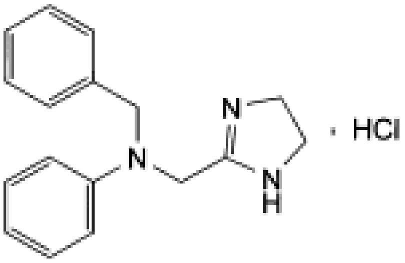
STORAGE

Amylmetacresol should be protected from light.

Antazoline Hydrochloride

General Notices

(Ph Eur monograph 0972)



$C_{17}H_{19}N_3$,HCl 301.8 *2508-72-7*

Action and use

Histamine H_1 receptor antagonist; antihistamine.

Ph Eur

DEFINITION

Antazoline hydrochloride contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of *N*-benzyl-*N*-[(4,5-dihydro-1*H*-imidazol-2-yl)methyl]aniline hydrochloride, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, sparingly soluble in water, soluble in alcohol, slightly soluble in methylene chloride.

It melts at about 240 °C, with decomposition.

IDENTIFICATION

First identification A, D.

Second identification B, C, D.

A. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *antazoline hydrochloride CRS* . Examine the substances as discs prepared using *potassium chloride R*.

B. Examine the chromatograms obtained in the test for related substances in daylight after spraying. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (b).

C. To 5 ml of solution S (see Tests) add, drop by drop, *dilute sodium hydroxide solution R* until an alkaline reaction is produced. Filter. The precipitate, washed with two quantities, each of 10 ml, of *water R* and dried in a desicator under reduced pressure, melts *(2.2.14)* at 119 °C to 123 °C.

D. It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 2.0 g in *carbon dioxide-free water R* prepared from *distilled water R*, heating at 60 °C if necessary. Allow to cool and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7 *(2.2.2, Method II)*.

Acidity or alkalinity

To 10 ml of solution S add 0.2 ml of *methyl red solution R*. Not more than 0.1 ml of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel* GF_{254} *R* as the coating substance. Heat the plate at 110 °C for 15 min before using.

Test solution (a) Dissolve 0.10 g of the substance to be examined in *methanol R* and dilute to 5 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 5 ml with *methanol R*.

Reference solution (a) Dilute 0.5 ml of test solution (a) to 100 ml with *methanol R*.

Reference solution (b) Dissolve 20 mg of *antazoline hydrochloride CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution (c) Dissolve 20 mg of *xylometazoline hydrochloride CRS* in 1 ml of test solution (a) and dilute to 5 ml with *methanol R*.

Apply to the plate 5 µl of each solution. Develop over a path of 15 cm using a mixture of 5 volumes of *diethylamine R*, 10 volumes of *methanol R* and 85 volumes of *ethyl acetate R*. Dry the plate in a current of warm air for 15 min. Examine in ultraviolet light at 254 nm. The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated principal spots. Spray with a mixture of equal volumes of a 200 g/l solution of *ferric chloride R* and a 5 g/l solution of *potassium ferricyanide R*. Examine immediately in daylight. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.5 per cent).

Heavy metals *(2.4.8)*

1.0 g complies with limit test C for heavy metals (20 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

Sulphated ash *(2.4.14)*

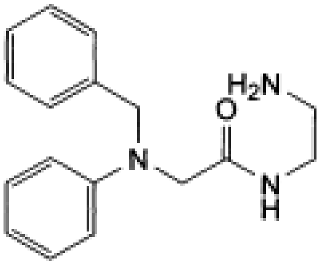
Not more than 0.1 per cent, determined on the residue obtained in the test for loss on drying.

ASSAY

Dissolve 0.250 g in 100 ml of *alcohol R*. Add 0.1 ml of *phenolphthalein solution R1*. Titrate with *0.1 M alcoholic potassium hydroxide*.

1 ml of *0.1 M alcoholic potassium hydroxide* is equivalent to 30.18 mg of $C_{17}H_{20}ClN_3$.

IMPURITIES



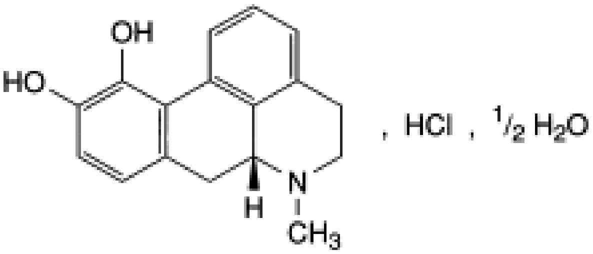
A. *N*-(2-aminoethyl)-2-(benzylphenylamino)acetamide.

Ph Eur

Apomorphine Hydrochloride

General Notices

(Ph Eur monograph 0136)



$C_{17}H_{17}NO_2,HCl,½H_2O$ 312.8 *41372-20-7*

Action and use

Dopamine receptor agonist; treatment of Parkinson's disease.

Preparation

Apomorphine Hydrochloride for Homoeopathic Preparations

Ph Eur

DEFINITION

(6a*R*)-6-Methyl-5,6,6a,7-tetrahydro-4*H*-dibenzo[*de*,*g*]quinoline-10,11-diol hydrochloride hemihydrate.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or slightly yellowish-brown or green-tinged greyish, crystalline powder or crystals; on exposure to air and light, the green tinge becomes more pronounced.

Solubility

Sparingly soluble in water and in alcohol, practically insoluble in toluene.

IDENTIFICATION

First identification *B, D.*

Second identification *A, C, D.*

A. Dissolve 10.0 mg in *0.1 M hydrochloric acid* and dilute to 100.0 ml with the same acid. Dilute 10.0 ml of the solution to 100.0 ml with *0.1 M hydrochloric acid*. Examined between 230 nm and 350 nm *(2.2.25)*, the solution shows an absorption maximum at 273 nm and a shoulder at 300 nm to 310 nm. The specific absorbance at the maximum is 530 to 570.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *Ph. Eur. reference spectrum of apomorphine hydrochloride* .

C. To 5 ml of solution S (see Tests) add a few millilitres of *sodium hydrogen carbonate solution R* until a permanent, white precipitate is formed. The precipitate slowly becomes greenish. Add 0.25 ml of *0.05 M iodine* and shake. The precipitate becomes greyish-green. Collect the precipitate. The precipitate dissolves in *ether R* giving a purple solution, in *methylene chloride R* giving a violet-blue solution and in *alcohol R* giving a blue solution.

D. To 2 ml of solution S add 0.1 ml of *nitric acid R*. Mix and filter. The filtrate gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 0.25 g without heating in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution BY_5 or GY_5*(2.2.2, Method II)*.

pH *(2.2.3)*

4.0 to 5.0 for solution S.

Specific optical rotation *(2.2.7)*

- 48 to - 52 (dried substance).

Dissolve 0.25 g in *0.02 M hydrochloric acid* and dilute to 25.0 ml with the same acid.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 0.25 g of the substance to be examined in a 1 per cent *V/V* solution of *glacial acetic acid R* and dilute to 100.0 ml with the same solution.

Reference solution (a) Dilute 1.0 ml of the test solution to 10.0 ml with a 1 per cent *V/V* solution of *glacial acetic acid R*. Dilute 1.0 ml to 100.0 ml with a 1 per cent *V/V* solution of *glacial acetic acid R*.

Reference solution (b) Dissolve 25 mg of *boldine R* in a 1 per cent *V/V* solution of *glacial acetic acid R* and dilute to 10.0 ml with the same solvent. To 1 ml of this solution, add 1 ml of the test solution and dilute to 10.0 ml with a 1 per cent *V/V* solution of *glacial acetic acid R*.

Column:

— *size:* *l* = 0.15 m, Ø = 4.6 mm,

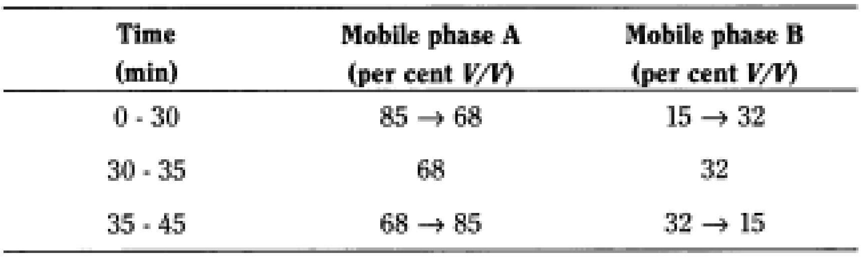
— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm),

— *temperature*: 35 °C.

Mobile phase:

— *mobile phase A*: 1.1 g/l solution of *sodium octanesulphonate R*, adjusted to pH 2.2 using a 50 per cent *m/m* solution of *phosphoric acid R*,

— *mobile phase B*: *acetonitrile R*,



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 30	85 → 68	15 → 32
30 - 35	68	32
35 - 45	68 → 85	32 → 15

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 280 nm.

Injection 10 µl.

System suitability Reference solution (b):

— *resolution*: minimum 2.5 between the peaks due to boldine and apomorphine.

Limits:

— *any impurity*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent),

— *total*: not more than 8 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.8 per cent),

— *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent).

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

1.0 g complies with limit test C. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying ***(2.2.32)***

2.5 per cent to 4.2 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

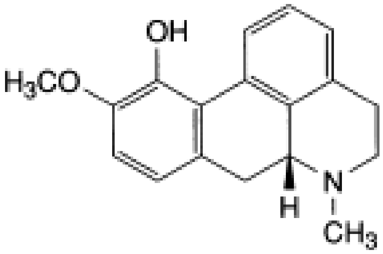
Dissolve 0.250 g in a mixture of 5.0 ml of *0.01 M hydrochloric acid* and 50 ml of *alcohol R*. Carry out a potentiometric titration *(2.2.20)*, using *0.1 M sodium hydroxide*. Read the volume added between the first 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 30.38 mg of $C_{17}H_{18}ClNO_2$.

STORAGE

In an airtight container , protected from light.

IMPURITIES



A. (6a*R*)-10-methoxy-6-methyl-5,6,6a,7-tetrahydro-4*H*-dibenzo[*de*,*g*]quinolin-11-ol (apocodeine),

B. morphine.

Ph Eur

Aprotinin Concentrated Solution

General Notices

(Ph Eur monograph 0579)

Action and use

Antifibrinolytic.

Preparation

Aprotinin Injection

Ph Eur

DEFINITION

Aprotinin concentrated solution is a solution of aprotinin, a polypeptide consisting of a chain of 58 amino acids, which inhibits stoichiometrically the activity of several proteolytic enzymes such as chymotrypsin, kallikrein, plasmin and trypsin. It contains not less than 15.0 Ph. Eur. U. of aprotinin activity per millilitre.

PRODUCTION

The animals from which aprotinin is derived must fulfil the requirements for the health of animals suitable for human consumption to the satisfaction of the competent authority.

The manufacturing process is validated to demonstrate suitable inactivation or removal of any contamination by viruses or other infectious agents.

The method of manufacture is validated to demonstrate that the product, if tested, would comply with the following tests.

Abnormal toxicity *(2.6.9)*

Inject into each mouse a quantity of the preparation to be examined containing 2 Ph. Eur. U. diluted with a sufficient quantity of *water for injections R* to give a volume of 0.5 ml.

Histamine *(2.6.10)*

Maximum 0.2 µg of histamine base per 3 Ph. Eur. U.

CHARACTERS

Appearance

Clear, colourless liquid.

IDENTIFICATION

A. Thin-layer chromatography *(2.2.27)*.

Test solution Solution S (see Tests).

Reference solution *Aprotinin solution BRP.*

Plate *TLC silica gel G plate R.*

Mobile phase *water R, glacial acetic acid R* (80:100 *V/V*) containing 100 g/l of *sodium acetate R*).

Application 10 µl.

Development Over a path of 12 cm.

Drying In air.

Detection Spray with a solution of 0.1 g of *ninhydrin R* in a mixture of 6 ml of a 10 g/l solution of *cupric chloride R*, 21 ml of *glacial acetic acid R* and 70 ml of *anhydrous ethanol R*. Dry the plate at 60 °C.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

B. Determine the ability of the preparation to be examined to inhibit trypsin activity using the method described below.

Test solution Dilute 1 ml of solution S to 50 ml with *buffer solution pH 7.2 R*.

Trypsin solution Dissolve 10 mg of *trypsin BRP* in *0.002 M hydrochloric acid* and dilute to 100 ml with the same acid.

Casein solution Dissolve 0.2 g of *casein R* in *buffer solution pH 7.2 R* and dilute to 100 ml with the same buffer solution.

Precipitating solution Mix 1 volume of *glacial acetic acid R*, 49 volumes of *water R* and 50 volumes of *anhydrous ethanol R*.

Mix 1 ml of the test solution with 1 ml of the trypsin solution. Allow to stand for 10 min and add 1 ml of the casein solution. Incubate at 35 °C for 30 min. Cool in iced water and add 0.5 ml of the precipitating solution. Shake and allow to stand at room temperature for 15 min. The solution is cloudy. Carry out a blank test under the same conditions using *buffer solution pH 7.2 R* instead of the test solution. The solution is not cloudy.

TESTS

Solution S

Prepare a solution containing 15 Ph. Eur. U./ml, if necessary by dilution on the basis of the activity stated on the label.

Appearance of solution

Solution S is clear *(2.2.1)*.

Absorbance *(2.2.25)*

Maximum 0.80 by measuring at the absorption maximum at 277 nm.

Prepare from the concentrated solution a dilution containing 3.0 Ph. Eur. U./ml.

Protein impurities of higher molecular mass

Size-exclusion chromatography *(2.2.30)*.

Freeze-dry the preparation to be examined using a pressure of 2.7 Pa and a temperature of -30 °C; the operation, including freeze-drying and a period of drying at 15-25 °C, takes 6-12 h.

Use *cross-linked dextran for chromatography R2*. Use a 180 g/l solution of *anhydrous acetic acid R* to swell the gel and as the eluent. Prepare a column of gel 0.8 m to 1.0 m long and 25 mm in diameter, taking care to avoid the introduction of air bubbles. Place at the top of the column a quantity of the preparation to be examined containing 300 Ph. Eur. U. dissolved in 1 ml of a 180 g/l solution of *anhydrous acetic acid R* and allow to elute. Collect the eluate in fractions of 2 ml. Measure the absorbance *(2.2.25)* of each fraction at the absorption maximum at 277 nm and plot the values on a graph. The chromatogram obtained does not present an absorption maximum before the elution of the aprotinin.

Specific activity of the dry residue

Minimum 3.0 Ph. Eur. U. of aprotinin activity per milligram of dry residue.

Evaporate 25.0 ml to dryness in a water-bath, dry the residue at 110 °C for 15 h and weigh. From the mass of the residue and the activity determined as described below, calculate the number of European Pharmacopoeia Units per milligram of dry residue.

Bacterial endotoxins *(2.6.14)*

Less than 0.14 IU per European Pharmacopoeia Unit of aprotinin, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

The activity of aprotinin is determined by measuring its inhibitory action on a solution of trypsin of known activity. The inhibiting activity of the aprotinin is calculated from the difference between the initial activity and the residual activity of the trypsin.

The inhibiting activity of aprotinin is expressed in European Pharmacopoeia Units. 1 Ph. Eur. U. inhibits 50 per cent of the enzymatic activity of 2 microkatals of trypsin.

Use a reaction vessel with a capacity of about 30 ml and provided with:

— a device that will maintain a temperature of 25 ± 0.1 °C;

— a stirring device, such as a magnetic stirrer;

— a lid with 5 holes for accommodating the electrodes, the tip of a burette, a tube for the admission of nitrogen and the introduction of the reagents.

An automatic or manual titration apparatus may be used. In the latter case the burette is graduated in 0.05 ml and the pH-meter is provided with a wide reading scale and glass and calomel electrodes.

Test solution With *0.0015 M borate buffer solution pH 8.0 R* prepare an appropriate dilution (*D*) of the concentrated solution expected on the basis of the stated potency to contain 1.67 Ph. Eur. U./ml.

Trypsin solution Prepare a solution of *trypsin BRF* containing about 0.8 microkatals per millilitre (about 1 mg/ml), using *0.001 M hydrochloric acid* as the solvent. Use a freshly prepared solution and keep in iced water.

Trypsin and aprotinin solution To 4.0 ml of the trypsin solution add 1.0 ml of the test solution. Dilute immediately to 40.0 ml with *0.0015 M borate buffer solution pH 8.0 R*. Allow to stand at room temperature for 10 min and then keep in iced water. Use within 6 h of preparation.

Dilute trypsin solution Dilute 0.5 ml of the trypsin solution to 10.0 ml with *0.0015 M borate buffer solution pH 8.0 R*. Allow to stand at room temperature for 10 min and then keep in iced water.

Maintain an atmosphere of nitrogen in the reaction flask and stir continuously; introduce 9.0 ml of *0.0015 M borate buffer solution pH 8.0 R* and 1.0 ml of a freshly prepared 6.9 g/l solution of *benzoylarginine ethyl ester hydrochloride R*. Adjust to pH 8.0 with *0.1 M sodium hydroxide*. When the temperature has reached equilibrium at 25 ± 0.1 °C, add 1.0 ml of the trypsin and aprotinin solution and start a timer. Maintain at pH 8.0 by the addition of *0.1 M sodium hydroxide* and note the volume added every 30 s. Continue the reaction for 6 min. Determine the number of millilitres of *0.1 M sodium hydroxide* used per second (n_1 ml). Carry out, under the same conditions, a titration using 1.0 ml of the dilute trypsin solution. Determine the number of millilitres of *0.1 M sodium hydroxide* used per second (n_2 ml).

Calculate the aprotinin activity in European Pharmacopoeia Units per millilitre using the following expression:

$$4000(2n_2 - n_1) \times D$$

D = dilution factor of the aprotinin concentrated solution to be examined in order to obtain a solution containing 1.67 Ph. Eur. U./ml.

The estimated activity is not less than 90 per cent and not more than 110 per cent of the activity stated on the label.

STORAGE

In an airtight, tamper-proof container, protected from light.

LABELLING

The label states the number of European Pharmacopoeia Units of aprotinin activity per millilitre.

Ph Eur

Aprotinin

General Notices

(Ph Eur monograph 0580)

Action and use

Antifibrinolytic.

Preparation

Aprotinin Injection

Ph Eur

DEFINITION

Aprotinin is a polypeptide consisting of a chain of 58 amino acids. It inhibits stoichiometrically the activity of several proteolytic enzymes such as chymotrypsin, kallikrein, plasmin and trypsin. It contains not less than 3.0 Ph. Eur. U. of aprotinin activity per milligram, calculated with reference to the dried substance.

PRODUCTION

The animals from which aprotinin is derived must fulfil the requirements for the health of animals suitable for human consumption to the satisfaction of the competent authority.

The manufacturing process is validated to demonstrate suitable inactivation or removal of any contamination by viruses or other infectious agents.

The method of manufacture is validated to demonstrate that the product, if tested, would comply with the following tests.

Abnormal toxicity *(2.6.9)*

Inject into each mouse a quantity of the substance to be examined containing 2 Ph. Eur. U. dissolved in a sufficient quantity of *water for injections R* to give a volume of 0.5 ml.

Histamine *(2.6.10)*

Maximum 0.2 µg of histamine base per 3 Ph. Eur. U.

CHARACTERS

Appearance

Almost white powder, hygroscopic.

Solubility

Soluble in water and in isotonic solutions, practically insoluble in organic solvents.

IDENTIFICATION

A. Thin-layer chromatography *(2.2.27)*.

Test solution Solution S (see Tests).

Reference solution *Aprotinin solution BRP*.

Plate *TLC silica gel G plate R*.

Mobile phase *water R*, *glacial acetic acid R* (80:100 *V/V*) containing 100 g/l of *sodium acetate R*.

Application 10 µl.

Development Over a path of 12 cm.

Drying In air.

Detection Spray with a solution of 0.1 g of *ninhydrin R* in a mixture of 6 ml of a 10 g/l solution of *cupric chloride R*, 21 ml of *glacial acetic acid R* and 70 ml of *ethanol R*. Dry the plate at 60 °C.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

B. Determine the ability of the substance to be examined to inhibit trypsin activity using the method described below.

Test solution Dilute 1 ml of solution S to 50 ml with *buffer solution pH 7.2 R*.

Trypsin solution Dissolve 10 mg of *trypsin BRP* in *0.002 M hydrochloric acid* and dilute to 100 ml with the same acid.

Casein solution Dissolve 0.2 g of *casein R* in *buffer solution pH 7.2 R* and dilute to 100 ml with the same buffer solution.

Precipitating solution Mix 1 volume of *glacial acetic acid R*, 49 volumes of *water R* and 50 volumes of *ethanol R*.

Mix 1 ml of the test solution with 1 ml of the trypsin solution. Allow to stand for 10 min and add 1 ml of the casein solution. Incubate at 35 °C for 30 min. Cool in iced water and add 0.5 ml of the precipitating solution. Shake and allow to stand at room temperature for 15 min. The solution is cloudy. Carry out a blank test under the same conditions using *buffer solution pH 7.2 R* instead of the test solution. The solution is not cloudy.

TESTS

Solution S

Prepare a solution of the substance to be examined containing 15 Ph. Eur. U./ml, calculated from the activity stated on the label.

Appearance of solution

Solution S is clear *(2.2.1)*.

Absorbance *(2.2.25)*

Maximum 0.80 by measuring at the absorption maximum at 277 nm.

Prepare a solution of the substance to be examined containing 3.0 Ph. Eur. U./ml.

Protein impurities of higher molecular mass

Size-exclusion chromatography *(2.2.30)*.

Use *cross-linked dextran for chromatography R2*. Use a 180 g/l solution of *anhydrous acetic acid R* to swell the gel and as the eluent. Prepare a column of gel 0.8 m to 1.0 m long and 25 mm in diameter, taking care to avoid the introduction of air bubbles. Place at the top of the column a quantity of the substance to be examined containing 300 Ph. Eur. U. dissolved in 1 ml of a 180 g/l solution of *anhydrous acetic acid R* and allow to elute. Collect the eluate in fractions of 2 ml. Measure the absorbance *(2.2.25)* of each fraction at the absorption maximum at 277 nm and plot the values on a graph. The chromatogram obtained does not present an absorption maximum before the elution of the aprotinin.

Loss on drying *(2.2.32)*

Maximum 6.0 per cent, determined on 0.100 g by drying *in vacuo*.

Bacterial endotoxins *(2.6.14)*

Less than 0.14 IU per European Pharmacopoeia Unit of aprotinin, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

The activity of aprotinin is determined by measuring its inhibitory action on a solution of trypsin of known activity. The inhibiting activity of the aprotinin is calculated from the difference between the initial activity and the residual activity of the trypsin.

The inhibiting activity of aprotinin is expressed in European Pharmacopoeia Units. 1 Ph. Eur. U. inhibits 50 per cent of the enzymatic activity of 2 microkatals of trypsin.

Use a reaction vessel with a capacity of about 30 ml and provided with:

— a device that will maintain a temperature of 25 ± 0.1 °C;

— a stirring device, such as a magnetic stirrer;

— a lid with 5 holes for accommodating the electrodes, the tip of a burette, a tube for the admission of nitrogen and the introduction of the reagents.

An automatic or manual titration apparatus may be used. In the latter case the burette is graduated in 0.05 ml and the pH-meter is provided with a wide reading scale and glass and calomel electrodes.

Test solution Prepare a solution of the substance to be examined in *0.0015 M borate buffer solution pH 8.0 R* expected to contain 1.67 Ph. Eur. U./ml (about 0.6 mg (m mg) per millilitre).

Trypsin solution Prepare a solution of *trypsin BRP* containing about 0.8 microkatals per millilitre (about 1 mg/ml), using *0.001 M hydrochloric acid* as the solvent. Use a freshly prepared solution and keep in iced water.

Trypsin and aprotinin solution To 4.0 ml of the *trypsin solution* add 1.0 ml of the test solution. Dilute immediately to 40.0 ml with *0.0015 M borate buffer solution pH 8.0 R*. Allow to stand at room temperature for 10 min and then keep in iced water. Use within 6 h of preparation.

Dilute trypsin solution Dilute 0.5 ml of the trypsin solution to 10.0 ml with *0.0015 M borate buffer solution pH 8.0 R*. Allow to stand at room temperature for 10 min and then keep in iced water.

Maintain an atmosphere of nitrogen in the reaction flask and stir continuously; introduce 9.0 ml of *0.0015 M borate buffer solution pH 8.0 R* and 1.0 ml of a freshly prepared 6.9 g/l solution of *benzoylarginine ethyl ester hydrochloride R*. Adjust to pH 8.0 with *0.1 M sodium hydroxide*. When the temperature has reached equilibrium at 25 ± 0.1 °C, add 1.0 ml of the trypsin and aprotinin solution and start a timer. Maintain at pH 8.0 by the addition of *0.1 M sodium hydroxide* and note the volume added every 30 s. Continue the reaction for 6 min. Determine the number of millilitres of *0.1 M sodium hydroxide* used per second (n_1 ml). Carry out, under the same conditions, a titration using 1.0 ml of the dilute trypsin solution. Determine the number of millilitres of *0.1 M sodium hydroxide* used per second (n_2 ml).

Calculate the aprotinin activity in European Pharmacopoeia Units per milligram from the expression:

$$\frac{4000\,(2n_2 - n_1)}{m}$$

The estimated activity is not less than 90 per cent and not more than 110 per cent of the activity stated on the label.

STORAGE

In an airtight, tamper-proof container, protected from light.

LABELLING

The label states the number of European Pharmacopoeia Units of aprotinin activity per milligram.

Arachis Oil

General Notices

Peanut Oil

(Refined Arachis Oil, Ph Eur monograph 0263)

Preparation

Arachis Oil Enema

Ph Eur

DEFINITION

The refined fatty oil obtained from the shelled seeds of *Arachis hypogaea* L. A suitable antioxidant may be added.

CHARACTERS

Appearance

Clear, yellowish, viscous liquid.

Solubility

Very slightly soluble in ethanol (96 per cent), miscible with light petroleum.

Relative density

About 0.915.

It solidifies at about 2 °C.

IDENTIFICATION

It complies with the identification test for fatty oils by thin-layer chromatography *(2.3.2)*. The chromatogram obtained is similar to the typical chromatogram for arachis oil.

TESTS

Acid value *(2.5.1)*

Maximum 0.5, determined on 10.0 g.

Peroxide value *(2.5.5)*

Maximum 5.0.

Unsaponifiable matter *(2.5.7)*

Maximum 1.0 per cent, determined on 5.0 g.

Alkaline impurities *(2.4.19)*

It complies with the test for alkaline impurities in fatty oils.

Composition of fatty acids

Gas chromatography *(2.4.22, Method A)*. Use the mixture of calibrating substances in Table 2.4.22.-3.

Composition of the fatty acid fraction of the oil:

— *saturated fatty acids of chain length less than* C_{16}: maximum 0.4 per cent,

— *palmitic acid*: 7.0 per cent to 16.0 per cent,

— *stearic acid*: 1.3 per cent to 6.5 per cent,

— *oleic acid* (equivalent chain length on polyethyleneglycol adipate 18.3): 35.0 per cent to 72.0 per cent,

— *linoleic acid* (equivalent chain length on polyethyleneglycol adipate 18.9): 13.0 per cent to 43.0 per cent,

— *linolenic acid* (equivalent chain length on polyethyleneglycol adipate 19.7): maximum 0.6 per cent,

— *arachidic acid*: 0.5 per cent to 3.0 per cent,

— *eicosenoic acid* (equivalent chain length on polyethyleneglycol adipate 20.3): 0.5 per cent to 2.1 per cent,

— *behenic acid*: 1.0 per cent to 5.0 per cent,

— *erucic acid* (equivalent chain length on polyethyleneglycol adipate 22.3): maximum 0.5 per cent,

— *lignoceric acid*: 0.5 per cent to 3.0 per cent.

Water *(2.5.12)*

Maximum 0.3 per cent, determined on 3.00 g, if intended for use in the manufacture of parenteral dosage forms.

STORAGE

In a well-filled container, protected from light.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral dosage forms.

Ph Eur

Arginine Aspartate

General Notices

$C_6H_{14}N_4O_2,C_4H_7NO_4$ 307.3   *7675-83-4*

Action and use

Amino acid; nutrient.

Ph Eur

DEFINITION

(2*S*)-2-Amino-5-guanidinopentanoic acid (2*S*)-2-aminobutanedioate.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white granules or powder.

Solubility

Very soluble in water, practically insoluble in alcohol and in methylene chloride.

IDENTIFICATION

A. It complies with the test for specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison   arginine aspartate CRS .

C. Examine the chromatograms obtained in the test for ninhydrin-positive substances.

Results   The 2 principal spots in the chromatogram obtained with test solution (b) are similar in position, colour and size to the 2 principal spots in the chromatogram obtained with reference solution (a).

TESTS

Solution S

Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7 *(2.2.2, Method II)*.

pH *(2.2.3)*

6.0 to 7.0 for solution S.

Specific optical rotation *(2.2.7)*

+ 25 to + 27 (dried substance).

Dissolve 2.50 g in *dilute hydrochloric acid R* and dilute to 25.0 ml with the same acid.

Ninhydrin-positive substances

Thin-layer chromatography *(2.2.27)*.

Test solution (a) Dissolve 0.20 g of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with *water R*.

Reference solution (a) Dissolve 25 mg of *arginine R* and 25 mg of *aspartic acid R* in *water R* and dilute to 25 ml with the same solvent.

Reference solution (b) Dilute 2 ml of reference solution (a) to 50 ml with *water R*.

Plate *TLC silica gel G plate R*.

Mobile phase *ammonia R*, *propanol R* (36:64 *V/V*).

Application 5 µl.

Development Over 2/3 of the plate.

Drying At 100-105 °C for 10 min.

Detection Spray with *ninhydrin solution R* and heat at 100-105 °C for 10 min.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated principal spots.

Limit Test solution (a):

— *any impurity*: any spots, apart from the 2 principal spots, are not more intense than each of the 2 principal spots in the chromatogram obtained with reference solution (b) (0.2 per cent).

Chlorides *(2.4.4)*

Maximum 200 ppm.

Dilute 2.5 ml of solution S to 15 ml with *water R*.

Sulphates ***(2.4.13)***

Maximum 300 ppm.

To 0.5 g add 2.5 ml of *dilute hydrochloric acid R* and dilute to 15 ml with *distilled water R*. Examine after 30 min.

Ammonium ***(2.4.1)***

Maximum 100 ppm, determined on 100 mg.

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

12 ml of solution S complies with limit test A. Prepare the standard using *lead standard solution (2 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 60 °C for 24 h.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 80.0 mg in 2 ml of *anhydrous formic acid R*. Add 50 ml of anhydrous acetic acid R. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

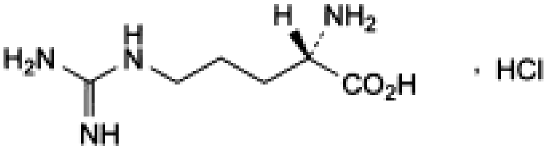
1 ml of *0.1 M perchloric acid* is equivalent to 10.24 mg of $C_{10}H_{21}N_5O_6$.

Ph Eur

Arginine Hydrochloride

General Notices

(Ph Eur monograph 0805)



$C_6H_{14}N_4O_2$,HCl 210.7 *1119-34-2*

Action and use

Amino acid; nutrient.

Preparation

Arginine Hydrochloride Intravenous Infusion

Ph Eur

DEFINITION

Arginine hydrochloride contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of the hydrochloride of (*S*)-2-amino-5-guanidinopentanoic acid, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, freely soluble in water, very slightly soluble in alcohol.

IDENTIFICATION

First identification A, B, E.

Second identification A, C, D, E.

A. It complies with the test for specific optical rotation (see Tests).

B. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *arginine hydrochloride CRS* . Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for ninhydrin-positive substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 25 mg in 2 ml of *water R*. Add 1 ml of α-*naphthol solution R* and 2 ml of a mixture of equal volumes of *strong sodium hypochlorite solution R* and *water R*. A red colour develops.

E. It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 2.5 g in *distilled water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution BY_6 *(2.2.2, Method II)*.

Specific optical rotation *(2.2.7)*

Dissolve 2.00 g in *hydrochloric acid R1* and dilute to 25.0 ml with the same acid. The specific optical rotation is + 21.0 to + 23.5, calculated with reference to the dried substance.

Ninhydrin-positive substances

Examine by thin-layer chromatography *(2.2.27)*, using a *TLC silica gel plate R.*

Test solution (a) Dissolve 0.10 g of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 50 ml with *water R.*

Reference solution (a) Dissolve 10 mg of *arginine hydrochloride CRS* in *water R* and dilute to 50 ml with the same solvent.

Reference solution (b) Dilute 5 ml of test solution (b) to 20 ml with *water R*.

Reference solution (c) Dissolve 10 mg of *arginine hydrochloride CRS* and 10 mg of *lysine hydrochloride CRS* in *water R* and dilute to 25 ml with the same solvent.

Apply to the plate 5 µl of each solution. Allow the plate to dry in air. Develop over a path of 15 cm using a mixture of 30 volumes of *concentrated ammonia R* and 70 volumes of *2-propanol R*. Dry the plate at 100 °C to 105 °C until the ammonia disappears completely. Spray with *ninhydrin solution R* and heat at 100 °C to 105 °C for 15 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated spots.

Sulphates *(2.4.13)*

Dilute 10 ml of solution S to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates (300 ppm).

Ammonium *(2.4.1)*

50 mg complies with limit test B for ammonium (200 ppm). Prepare the standard using 0.1 ml of *ammonium standard solution (100 ppm* NH_4*) R*.

Iron *(2.4.9)*

In a separating funnel, dissolve 1.0 g in 10 ml of *dilute hydrochloric acid R*. Shake with three quantities, each of 10 ml, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 ml of *water R* and shake for 3 min. The aqueous layer complies with the limit test for iron (10 ppm).

Heavy metals *(2.4.8)*

Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with limit test A for heavy metals (10 ppm). Prepare the standard using *lead standard solution (1 ppm Pb) R.*

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.180 g in 3 ml of *anhydrous formic acid R*. Add 30 ml of *anhydrous acetic acid R*. Using 0.1 ml of *naphtholbenzein solution R* as indicator, titrate with *0.1 M perchloric acid* until the colour changes from brownish-yellow to green.

1 ml of *0.1 M perchloric acid* is equivalent to 21.07 mg of $C_6H_{15}ClN_4O_2$.

STORAGE

Store protected from light.

Ph Eur

DEFINITION

Methyl 4-methyl-3-[[(2*RS*)-2-(propylamino)propanoyl]amino]thiophene-2-carboxylate hydrochloride.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water and in alcohol.

IDENTIFICATION

First identification B, D.

Second identification A, C, D.

A. Dissolve 50.0 mg in a 1 g/l solution of *hydrochloric acid R* and dilute to 100.0 ml with the same acid. Dilute 5.0 ml of the solution to 100.0 ml with a 1 g/l solution of *hydrochloric acid R*. Examined between 200 nm and 350 nm *(2.2.25)*, the solution shows an absorption maximum at 272 nm. The specific absorbance at the maximum is 290 to 320.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Place dropwise 20 µl of the test solution on 300 mg discs.

Test solution Dissolve 0.1 g in 5 ml of *water R*, add 3 ml of a saturated solution of *sodium hydrogen carbonate R* and shake twice with 2 ml of *methylene chloride R*. Combine the methylene chloride layers, dilute to 5.0 ml with *methylene chloride R* and dry over *anhydrous sodium sulphate R.*

Comparison articaine hydrochloride CRS .

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 20 mg of the substance to be examined in 5 ml of *alcohol R*.

Reference solution Dissolve 20 mg of *articaine hydrochloride CRS* in 5 ml of *alcohol R*.

Plate TLC silica gel F_{254} *plate R.*

Mobile phase triethylamine R, *ethyl acetate R*, *heptane R* (10:35:65 *V/V/V*).

Application 5 µl.

Development Over a path of 15 cm.

Drying In air.

Detection .Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 0.50 g in *water R* and dilute to 10 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution BY_6 *(2.2.2, Method I)*.

pH *(2.2.3)*

4.2 to 5.2.

Dissolve 0.20 g in *carbon dioxide-free water R* and dilute to 20.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 10.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve 10.0 mg of *articaine impurity A CRS* and 5.0 mg of *articaine impurity E CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (c) Add 1.0 ml of reference solution (b) to 50.0 mg of *articaine hydrochloride CRS* and dilute to 50 ml with the mobile phase.

Reference solution (d) Dilute 1.0 ml of reference solution (b) to 50.0 ml with the mobile phase.

Column:

— *size:* *l* = 0.25 m, Ø = 4.6 mm,

— *stationary phase*: spherical *end-capped octadecylsilyl silica gel for chromatography R* (5 µm) with a specific surface area of 335 m2/g and a carbon loading of 19 per cent,

— *temperature*: 45 °C.

Mobile phase Mix 25 volumes of *acetonitrile R* and 75 volumes of a solution prepared as follows: dissolve 2.02 g of *sodium heptanesulphonate R* and 4.08 g of *potassium dihydrogen phosphate R* in *water R* and dilute to 1000 ml with the same solvent. Adjust to pH 2.0 with *phosphoric acid R*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 276 nm.

Injection 10 µl; inject the test solution and reference solutions (a), (c) and (d).

Run time 5 times the retention time of articaine.

Relative retentions With reference to articaine (retention time = about 9.3 min): impurity B = about 0.6; impurity D = about 0.7; impurity A = about 0.8; impurity E = about 0.86; impurity F = about 0.9; impurity G = about 1.7; impurity H = about 2.1; impurity I = about 2.6; impurity C = about 3.6; impurity J = about 4.0.

System suitability Reference solution (c):

— *resolution*: minimum 1.2 between the peaks due to impurity A and impurity E.

Limits:

— *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.2 per cent),

— *any other impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),

— *total of other impurities*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),

— *disregard limit*: half the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 5 ppm.

Dissolve 4.0 g in 20.0 ml of *water R*. 12 ml of the solution complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 5 h.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in a mixture of 5.0 ml of *0.01 M hydrochloric acid* and 50 ml of *alcohol R*. Carry out a potentiometric titration *(2.2.20)* using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 32.08 mg of $C_{13}H_{21}ClN_2O_3S$.

STORAGE

Protected from light.

Action and use

Vitamin C.

Preparations

Ascorbic Acid Injection

Ascorbic Acid Tablets

Paediatric Vitamins A, C and D Oral Drops

Vitamins B and C Injection

When Vitamin C is prescribed or demanded, Ascorbic Acid shall be dispensed or supplied.

Ph Eur

DEFINITION

Ascorbic acid contains not less than 99.0 per cent and not more than the equivalent of 100.5 per cent of (5*R*)-5-[(1*S*)-1,2-dihydroxyethyl]-3,4-dihydroxyfuran-2(5*H*)-one.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, becoming discoloured on exposure to air and moisture, freely soluble in water, soluble in ethanol (96 per cent).

It melts at about 190 °C, with decomposition.

IDENTIFICATION

First identification *B, C.*

Second identification *A, C, D.*

A. Dissolve 0.10 g in *water R* and dilute immediately to 100.0 ml with the same solvent. To 10 ml of *0.1 M hydrochloric acid* add 1.0 ml of the solution and dilute to 100.0 ml with *water R*. Measure the absorbance *(2.2.25)* at the maximum at 243 nm immediately after dissolution. The specific absorbance at the maximum is 545 to 585.

B. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *ascorbic acid CRS*. Examine the substance prepared as discs containing 1 mg.

C. The pH *(2.2.3)* of solution S (see Tests) is 2.1 to 2.6.

D. To 1 ml of solution S add 0.2 ml of *dilute nitric acid R* and 0.2 ml of *silver nitrate solution R2*. A grey precipitate is formed.

TESTS

Solution S

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution BY_7 *(2.2.2, Method II)*.

Specific optical rotation *(2.2.7)*

Dissolve 2.50 g in *water R* and dilute to 25.0 ml with the same solvent. The specific optical rotation is + 20.5 to + 21.5.

Oxalic acid

Dissolve 0.25 g in 5 ml of *water R.* Neutralise to *red litmus paper R* using *dilute sodium hydroxide solution R* and add 1 ml of *dilute acetic acid R* and 0.5 ml of *calcium chloride solution R* (test solution). Prepare a reference solution as follows: dissolve 70 mg of *oxalic acid R* in *water R* and dilute to 500 ml with the same solvent; to 5 ml of this solution add 1 ml of *dilute acetic acid R* and 0.5 ml of *calcium chloride solution R* (reference solution). Allow the solutions to stand for 1 h. Any opalescence in the test solution is not more intense than that in the reference solution (0.2 per cent).

Related substances

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

Copper

Not more than 5.0 ppm of Cu, determined by atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Dissolve 2.0 g of the substance to be examined in *0.1 M nitric acid* and dilute to 25.0 ml with the same acid.

Reference solutions Prepare reference solutions containing 0.2 ppm, 0.4 ppm and 0.6 ppm of Cu by diluting *copper standard solution (10 ppm Cu) R* with *0.1 M nitric acid*.

Measure the absorbance at 324.8 nm using a copper hollow-cathode lamp as a source of radiation and an air-acetylene flame. Adjust the zero of the apparatus using *0.1 M nitric acid*.

Iron

Not more than 2.0 ppm of Fe, determined by atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Dissolve 5.0 g of the substance to be examined in *0.1 M nitric acid* and dilute to 25.0 ml with the same acid.

Reference solutions Prepare reference solutions containing 0.2 ppm, 0.4 ppm and 0.6 ppm of Fe by diluting *iron standard solution (20 ppm Fe) R* with *0.1 M nitric acid*.

Measure the absorbance at 248.3 nm using an iron hollow-cathode lamp as a source of radiation and an air-acetylene flame. Adjust the zero of the apparatus using *0.1 M nitric acid*.

Heavy metals *(2.4.8)*

Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with test A (10 ppm). Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in a mixture of 10 ml of *dilute sulphuric acid R* and 80 ml of *carbon dioxide-free water R*. Add 1 ml of *starch solution R*. Titrate with *0.05 M iodine* until a persistent violet-blue colour is obtained.

1 ml of *0.05 M iodine* is equivalent to 8.81 mg of $C_6H_8O_6$.

STORAGE

Store in a non-metallic container, protected from light.

Maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 1.0 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C for 5 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.160 g in 50 ml of *methanol R*. Add 30 ml of *water R* and 1 ml of *starch solution R*. Titrate with *0.05 M iodine* until a persistent violet-blue colour is obtained.

1 ml of *0.05 M iodine* is equivalent to 20.73 mg of $C_{22}H_{38}O_7$.

STORAGE

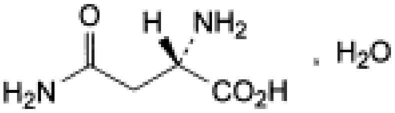
In an airtight container , protected from light.

Ph Eur

Asparagine Monohydrate

General Notices

(Ph Eur monograph 2086)



$C_4H_8N_2O_3,H_2O$ 150.1 *5794-13-8*

Action and use

Amino acid.

Ph Eur

DEFINITION

(2*S*)-2,4-Diamino-4-oxobutanoic acid monohydrate.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white crystalline powder or colourless crystals.

Solubility

Slightly soluble in water, practically insoluble in alcohol and in methylene chloride.

IDENTIFICATION

First identification *A, B.*

Second identification *A, C.*

A. It complies with the test for specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *asparagine monohydrate CRS .*

C. Examine the chromatograms obtained in the test for ninhydrin-positive substances.

Results The principal spot in the chromatogram obtained with test solution (b) is similar in

position, colour and size to the principal spot in the chromatogram obtained with reference solution (c).

TESTS

Solution S

Dissolve with heating 2.0 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

4.0 to 6.0 for solution S.

Specific optical rotation *(2.2.7)*

+ 33.7 to + 36.0 (dried substance).

Dissolve 2.50 g in a 309.0 g/l solution of *hydrochloric acid R* and dilute to 25.0 ml with the same acid.

Ninhydrin-positive substances

Thin-layer chromatography *(2.2.27)*.

Test solution (a) Dissolve 0.25 g of the substance to be examined in *water R*, heating to not more than 40 °C, and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with *water R*.

Reference solution (a) Dilute 1.0 ml of test solution (a) to 200 ml with *water R*.

Reference solution (b) Dissolve 25 mg of *glutamic acid R* in *water R*, add 1 ml of test solution (a) and dilute to 10 ml with *water R*.

Reference solution (c) Dissolve 25 mg of *asparagine monohydrate CRS* in *water R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel G plate R.*

Mobile phase *glacial acetic acid R*, *water R*, *butanol R* (25:25:50 *V/V/V*).

Application 5 µl.

Development Over half of the plate.

Drying At 110 °C for 15 min.

Detection Spray with *ninhydrin solution R* and heat at 110 °C for 10 min.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated principal spots.

Limit Test solution (a):

— *any impurity*: any spot, apart from the principal spot, is not more intense than the principal spot in the chromatogram obtained with reference solution (a) (0.5 per cent).

Chlorides ***(2.4.4)***

Maximum 200 ppm.

Dilute 12.5 ml of solution S to 15 ml with *water R*.

Sulphates ***(2.4.13)***

Maximum 200 ppm.

To 0.75 g add 2.5 ml of *dilute hydrochloric acid R* and dilute to 15 ml with *distilled water R*. Examine after 30 min.

Ammonium ***(2.4.1, Method B)***

Maximum 0.1 per cent, determined on 10 mg.

Iron ***(2.4.9)***

Maximum 10 ppm.

Dissolve 1.0 g in *dilute hydrochloric acid R* and dilute to 10 ml with the same acid. Shake 3 times with 10 ml of *methyl isobutyl ketone R1* for 3 min. Wash the combined organic phases with 10 ml of *water R* for 3 min. The aqueous phase complies with the limit test for iron.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

Dissolve 2.0 g in a mixture of 3 ml of *dilute hydrochloric acid R* and 15 ml of *water R* with gentle warming if necessary. Dilute to 20 ml with *water R*. 12 ml of the solution complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Loss on drying ***(2.2.32)***

10.5 per cent to 12.5 per cent, determined on 1.000 g by drying in an oven at 60 °C for 24 h.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.110 g in 5 ml of *anhydrous formic acid R*. Add 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 13.21 mg of $C_4H_8N_2O_3$.

IMPURITIES

Specified impurities *A, B.*

A. aspartic acid,

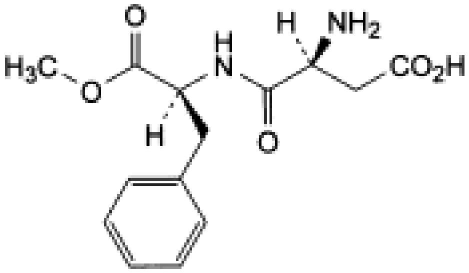
B. glutamic acid.

Ph Eur

Aspartame

General Notices

(Ph Eur monograph 0973)



$C_{14}H_{18}N_2O_5$ 294.3 *53906-69-7*

Action and use

Sweetening agent.

Ph Eur

DEFINITION

(3*S*)-3-Amino-4-[[(1*S*)-1-benzyl-2-methoxy-2-oxoethyl]amino]-4-oxobutanoic acid.

Content

98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, slightly hygroscopic, crystalline powder.

Solubility

Sparingly soluble or slightly soluble in water and in ethanol (96 per cent), practically insoluble in hexane and in methylene chloride.

IDENTIFICATION

First identification *B.*

Second identification *A, C, D.*

A. Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution Dissolve 0.1 g in *ethanol (96 per cent) R* and dilute to 100 ml with the same solvent.

Spectral range 230-300 nm.

Absorption maxima At 247 nm, 252 nm, 258 nm and 264 nm.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *aspartame CRS* .

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 15 mg of the substance to be examined in 2.5 ml of *water R* and dilute to 10 ml with *acetic acid R*.

Reference solution Dissolve 15 mg of *aspartame CRS* in 2.5 ml of *water R* and dilute to 10 ml with *acetic acid R*.

Plate *TLC silica gel G plate R.*

Mobile phase *water R*, *anhydrous formic acid R*, *methanol R*, *methylene chloride R* (2:4:30:64 *V/V/V/V*).

Application 20 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Spray with *ninhydrin solution R* and heat at 100-105 °C for 15 min.

Results The spot in the chromatogram obtained with the test solution is similar in position, colour and size to the spot in the chromatogram obtained with the reference solution.

D. Dissolve about 20 mg in 5 ml of *methanol R* and add 1 ml of *alkaline hydroxylamine solution R1*. Heat on a water-bath for 15 min. Allow to cool and adjust to about pH 2 with *dilute hydrochloric acid R*. Add 0.1 ml of *ferric chloride solution R1*. A brownish-red colour is produced.

TESTS

Solution S

Dissolve 0.8 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution GY_6 *(2.2.2, Method II)*.

Conductivity *(2.2.38)*

Maximum 30 $\mu S \cdot cm^{-1}$.

Dissolve 0.80 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100.0 ml with the same solvent. Measure the conductivity of the solution (C_1) and that of the water used for preparing the solution (C_2). The readings must be stable within 1 per cent over a period of 30 s.

Calculate the conductivity of the solution of the substance to be examined using the following expression:

$$C_1 - 0.992\ C_2$$

Specific optical rotation ***(2.2.7)***

+ 14.5 to + 16.5 (dried substance).

Dissolve 2.00 g in a 690 g/l solution of *anhydrous formic acid R* and dilute to 50.0 ml with the same solution. Measure within 30 min of preparation.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 0.60 g of the substance to be examined in a mixture of 1.5 volumes of *glacial acetic acid R* and 98.5 volumes of *water R* and dilute to 100.0 ml with the same mixture of solvents.

Reference solution (a) Dissolve 4.5 mg of *aspartame impurity A CRS* in a mixture of 1.5 volumes of *glacial acetic acid R* and 98.5 volumes of *water R* and dilute to 50.0 ml with the same mixture of solvents.

Reference solution (b) Dissolve 30.0 mg of *phenylalanine R* (impurity C) in a mixture of 15 volumes of *glacial acetic acid R* and 85 volumes of *water R* and dilute to 100.0 ml with the same mixture of solvents. Dilute 1.0 ml of this solution to 10.0 ml with *water R*.

Reference solution (c) Dilute 5.0 ml of the test solution to 10.0 ml with *water R*. Dilute 3.0 ml of this solution to 100.0 ml with *water R*.

Reference solution (d) Dissolve 30.0 mg of *L-aspartyl-L-phenylalanine R* (impurity B) in a mixture of 15 volumes of *glacial acetic acid R* and 85 volumes of *water R* and dilute to 100.0 ml with the same mixture of solvents. Dilute 1.0 ml of the solution to 10.0 ml with *water R*. Mix 1.0 ml of this solution with 1.0 ml of reference solution (b).

Column:
- *size:* *l* = 0.25 m, Ø = 4.0 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5-10 µm).

Mobile phase Mix 10 volumes of *acetonitrile R* and 90 volumes of a 6.8 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 3.7 with *phosphoric acid R*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 20 µl.

Run time Twice the retention time of aspartame.

System suitability Reference solution (d):

- *resolution*: minimum 3.5 between the peaks due to impurities B and C.

Limits:
- *impurity A*: not more than the area of the principal peak in the chromatogram obtained

with reference solution (a) (1.5 per cent);

— *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *sum of impurities other than A and C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (1.5 per cent);

— *disregard limit*: disregard any peak due to the solvent.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

1.0 g complies with test C. Prepare the reference solution using 1 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 4.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 1.5 ml of *anhydrous formic acid R* and 60 ml of *anhydrous acetic acid R*. Titrate immediately with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 29.43 mg of $C_{14}H_{18}N_2O_5$.

STORAGE

In an airtight container .

IMPURITIES

Specified impurities *A, C.*

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*)

B.

A. 2-(5-benzyl-3,6-dioxopiperazin-2-yl)acetic acid (diketopiperazine),

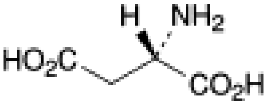
Ph Eur

Aspartic Acid

General Notices

(Ph Eur monograph 0797)



$C_4H_7NO_4$ 133.1 *6899-03-2*

Action and use

Amino acid.

Ph Eur

DEFINITION

Aspartic acid contains not less than 98.5 per cent and not more than the equivalent of 101.5 per cent of (2*S*)-2-aminobutanedioic acid, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, slightly soluble in water, practically insoluble in alcohol. It dissolves in dilute mineral acids and in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification A, C.

Second identification A, B, D.

A. It complies with the test for specific optical rotation (see Tests).

B. A suspension of 1 g in 10 ml of *water R* is strongly acid *(2.2.4)*.

C. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *aspartic acid CRS* . Examine the substances prepared as discs.

D. Examine the chromatograms obtained in the test for ninhydrin-positive substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

Appearance of solution

Dissolve 0.5 g in *1 M hydrochloric acid* and dilute to 10 ml with the same acid. The solution is clear *(2.2.1)* and not more intensely coloured than reference solution BY_6 *(2.2.2, Method II)*.

Specific optical rotation ***(2.2.7)***

Dissolve 2.000 g in *hydrochloric acid R1* and dilute to 25.0 ml with the same acid. The specific optical rotation is + 24.0 to + 26.0, calculated with reference to the dried substance.

Ninhydrin-positive substances

Examine by thin-layer chromatography *(2.2.27)*, using a *TLC silica gel plate R*.

Test solution (a) Dissolve 0.10 g of the substance to be examined in 2 ml of *ammonia R* and dilute to 10 ml with *water R*.

Test solution (b) Dilute 1 ml of test solution (a) to 50 ml with *water R*.

Reference solution (a) Dissolve 10 mg of *aspartic acid CRS* in 2 ml of *dilute ammonia R1* and dilute to 50 ml with *water R*.

Reference solution (b) Dilute 5 ml of test solution (b) to 20 ml with *water R*.

Reference solution (c) Dissolve 10 mg of *aspartic acid CRS* and 10 mg of *glutamic acid CRS* in 2 ml of *dilute ammonia R1* and dilute to 25 ml with *water R*.

Apply separately to the plate 5 µl of each solution. Allow the plate to dry in air. Develop over a path of 15 cm using a mixture of 20 volumes of *glacial acetic acid R*, 20 volumes of *water R* and 60 volumes of *butanol R*. Allow the plate to dry in air, spray with *ninhydrin solution R*. Heat at 100-105 °C for 15 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows 2 clearly separated principal spots.

Chlorides ***(2.4.4)***

Dissolve 0.25 g in 3 ml of *dilute nitric acid R* and dilute to 15 ml with *water R*. The solution, to which 1 ml of *water R* is added instead of *dilute nitric acid R*, complies with the limit test for chlorides (200 ppm).

Sulphates ***(2.4.13)***

Dissolve 0.5 g in 4 ml of *hydrochloric acid R* and dilute to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates (300 ppm). Carry out the evaluation of the test after 30 min.

Ammonium.*(2.4.1)*

50 mg complies with limit test B (200 ppm). Prepare the standard using 0.1 ml of *ammonium standard solution (100 ppm* NH_4*) R.*

Iron ***(2.4.9)***

In a separating funnel, dissolve 1.0 g in 10 ml of *dilute hydrochloric acid R*. Shake with 3 quantities, each of 10 ml, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 ml of *water R* and shake for 3 min. The aqueous layer complies with the limit test for iron (10 ppm).

Heavy metals ***(2.4.8)***

2.0 g complies with limit test D (10 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in 50 ml of *carbon dioxide-free water R*, with slight heating if necessary. Cool and add *0.1 ml of bromothymol blue solution R1*. Titrate with *0.1 M sodium hydroxide* until the colour changes from yellow to blue.

1 ml of *0.1 M sodium hydroxide* is equivalent to 13.31 mg of $C_4H_7NO_4$.

STORAGE

Protected from light.

Ph Eur

DEFINITION

2-(Acetyloxy)benzoic acid.

Content

99.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals.

Solubility

Slightly soluble in water, freely soluble in ethanol (96 per cent).

mp: About 143 °C (instantaneous method).

IDENTIFICATION

First identification *A, B.*

Second identification *B, C, D.*

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *acetylsalicylic acid CRS.*

B. To 0.2 g add 4 ml of *dilute sodium hydroxide solution R* and boil for 3 min. Cool and add 5 ml of *dilute sulphuric acid R*. A crystalline precipitate is formed. Filter, wash the precipitate and dry at 100-105 °C. The melting point *(2.2.14)* is 156 °C to 161 °C.

C. In a test tube mix 0.1 g with 0.5 g of *calcium hydroxide R*. Heat the mixture and expose to the fumes produced a piece of filter paper impregnated with 0.05 ml of *nitrobenzaldehyde solution R*. A greenish-blue or greenish-yellow colour develops on the paper. Moisten the paper with *dilute hydrochloric acid R*. The colour becomes blue.

D. Dissolve with heating about 20 mg of the precipitate obtained in identification test B in 10 ml of *water R* and cool. The solution gives reaction (a) of salicylates *(2.3.1)*.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Dissolve 1.0 g in 9 ml of *ethanol (96 per cent) R*.

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the solutions immediately before use*.

Test solution Dissolve 0.10 g of the substance to be examined in *acetonitrile for chromatography R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve 50.0 mg of *salicylic acid R* in the mobile phase and dilute to 50.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (b) Dissolve 10.0 mg of *salicylic acid R* in the mobile phase and dilute to 10.0 ml with the mobile phase. To 1.0 ml of this solution add 0.2 ml of the test solution and dilute to 100.0 ml with the mobile phase.

Column:
— *size:* l = 0.25 m, Ø = 4.6 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *phosphoric acid R, acetonitrile for chromatography R, water R* (2:400:600 *V/V/V*).

Flow rate 1 ml/min.

Detection Spectrophotometer at 237 nm.

Injection 10 µl.

Run time 7 times the retention time of acetylsalicylic acid.

System suitability Reference solution (b):

— *resolution*: minimum 6.0 between the 2 principal peaks.

Limits:

— *any impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.25 per cent);

— *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.025 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

Dissolve 1.0 g in 12 ml of *acetone R* and dilute to 20 ml with *water R*. 12 ml of this solution complies with test B. Prepare the reference solution using lead standard solution (1 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 6 volumes of *water R* and 9 volumes of *acetone R*.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo*.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

In a flask with a ground-glass stopper, dissolve 1.000 g in 10 ml of *ethanol (96 per cent) R*. Add 50.0 ml of *0.5 M sodium hydroxide*. Close the flask and allow to stand for 1 h. Using 0.2 ml of *phenolphthalein solution R* as indicator, titrate with *0.5 M hydrochloric acid*. Carry out a blank titration.

1 ml of *0.5 M sodium hydroxide* is equivalent to 45.04 mg of $C_9H_8O_4$.

STORAGE

In an airtight container.

Action and use

Histamine H_1 receptor antagonist.

Ph Eur

DEFINITION

1-(4-Fluorobenzyl)-*N*-[1-[2-(4-methoxyphenyl)ethyl]piperidin-4-yl]-1*H*-benzimidazol-2-amine.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, freely soluble in methylene chloride and in methanol, soluble in ethanol (96 per cent).

IDENTIFICATION

First identification A, B.

Second identification A, C, D.

A. Melting point *(2.2.14)*: 175 °C to 178 °C.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *astemizole CRS.*

C. Thin layer chromatography *(2.2.27)*.

Test solution Dissolve 30 mg of the substance to be examined in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution (a) Dissolve 30 mg of *astemizole CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution (b) Dissolve 30 mg of *astemizole CRS* and 30 mg of *ketoconazole CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Plate *TLC octadecylsilyl silica gel plate R*.

Mobile phase *ammonium acetate solution R*, *dioxan R*, *methanol R* (20:40:40 *V/V/V*).

Application 5 µl.

Development Over a path of 15 cm.

Drying In a current of warm air for 15 min.

Detection Expose the plate to iodine vapour until the spots appear and examine in daylight.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 ml of *water R*, 0.05 ml of *phenolphthalein solution R1* and about 1 ml of *dilute hydrochloric acid R* to render the solution colourless. Filter. To a freshly prepared mixture of 0.1 ml of *alizarin S solution R* and 0.1 ml of *zirconyl nitrate solution R*, add 1 ml of the filtrate. Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank solution prepared in the same manner. The test solution is yellow and the blank solution is red.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and is not more intensely coloured than reference solution Y_7 *(2.2.2, Method II)*.

Dissolve 0.2 g in *methanol R* and dilute to 20 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the solutions immediately before use*.

Test solution Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve 2.5 mg of *astemizole CRS* and 25 mg of *ketoconazole CRS* in *methanol R* and dilute to 100.0 ml with the same solvent.

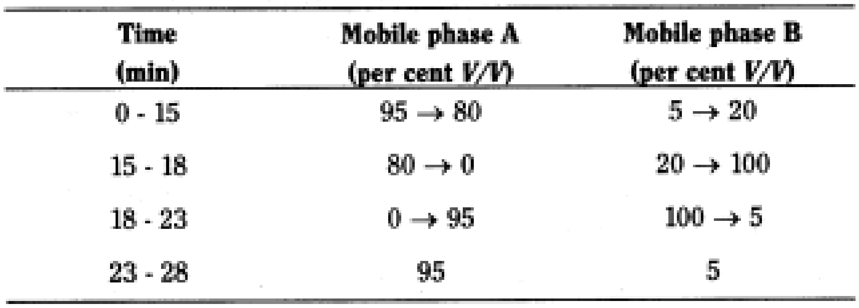
Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with *methanol R*. Dilute 5.0 ml of this solution to 20.0 ml with *methanol R*.

Column:
— *size:* l = 0.1 m, Ø = 4.6 mm;

— *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase:
— *mobile phase A*: a 17 g/l solution of *tetrabutylammonium hydrogen sulphate R*;

— *mobile phase B*: *acetonitrile R*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 15	95 → 80	5 → 20
15 - 18	80 → 0	20 → 100
18 - 23	0 → 95	100 → 5
23 - 28	95	5

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 278 nm.

Equilibration With *acetonitrile R* for at least 30 min then with the mobile phase at the initial composition for at least 5 min.

Injection 10 µl; inject *methanol R* as a blank.

Retention time ketoconazole = about 8 min; astemizole = about 9 min.

System suitability Reference solution (a):

— *resolution*: minimum 1.5 between the peaks due to ketoconazole and astemizole; if necessary, adjust the final concentration of acetonitrile or the percentage of tetrabutylammonium hydrogen sulphate in the mobile phase or adjust the time programme for the linear gradient elution.

Limits:
— *impurities A, B, C, D, E, F, G, H*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak obtained with the blank.

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 50 ml of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R*. Titrate with *0.1 M perchloric acid*, using 0.2 ml of *naphtholbenzein solution R* as indicator.

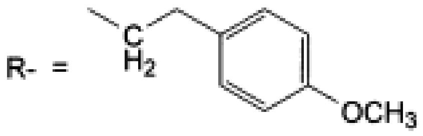
1 ml of *0.1 M perchloric acid* is equivalent to 22.93 mg of $C_{28}H_{31}FN_4O$.

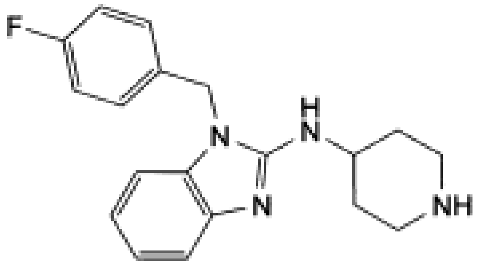
STORAGE

Protected from light.

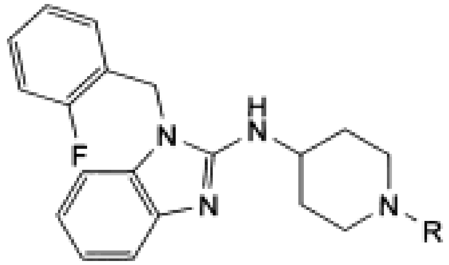
IMPURITIES

Specified impurities A, B, C, D, E, F, G, H.

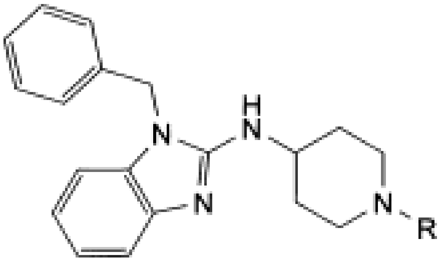




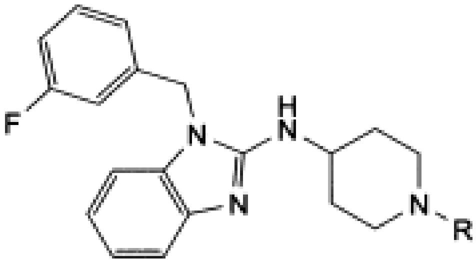
A. 1-(4-fluorobenzyl)-*N*-(piperidin-4-yl)-1*H*-benzimidazol-2-amine,



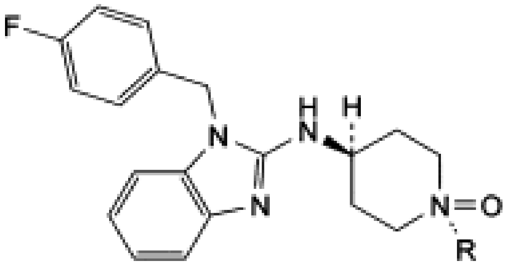
B. 1-(2-fluorobenzyl)-*N*-[1-[2-(4-methoxyphenyl)ethyl]piperidin-4-yl]-1*H*-benzimidazol-2-amine,



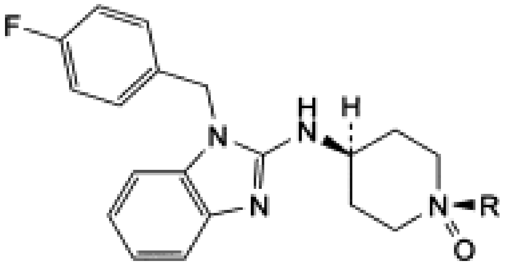
C. 1-benzyl-*N*-[1-[2-(4-methoxyphenyl)ethyl]piperidin-4-yl]-1*H*-benzimidazol-2-amine,



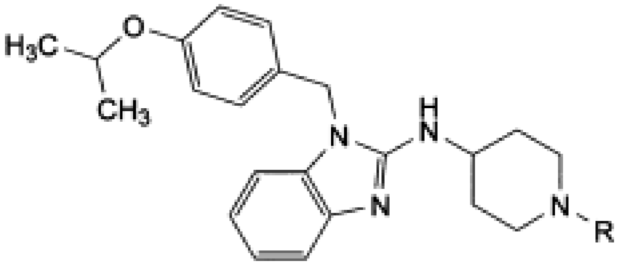
D. 1-(3-fluorobenzyl)-*N*-[1-[2-(4-methoxyphenyl)ethyl]piperidin-4-yl]-1*H*-benzimidazol-2-amine,



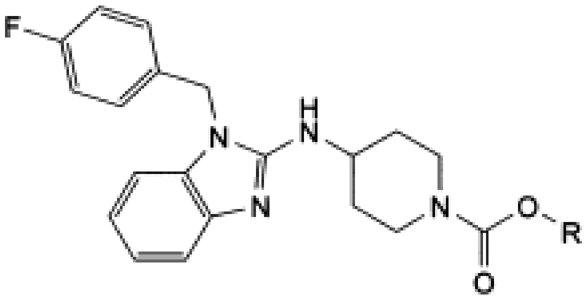
E. 1-(4-fluorobenzyl)-*N*-[*cis*-1-[2-(4-methoxyphenyl)ethyl]piperidin-4-yl 1-oxide]-1*H*-benzimidazol-2-amine,



F. 1-(4-fluorobenzyl)-*N*-[*trans*-1-[2-(4-methoxyphenyl)ethyl]piperidin-4-yl 1-oxide]-1*H*-benzimidazol-2-amine,



G. *N*-[1-[2-(4-methoxyphenyl)ethyl]piperidin-4-yl]-1-[4-(1-methylethoxy)benzyl]-1*H*-benzimidazol-2-amine,



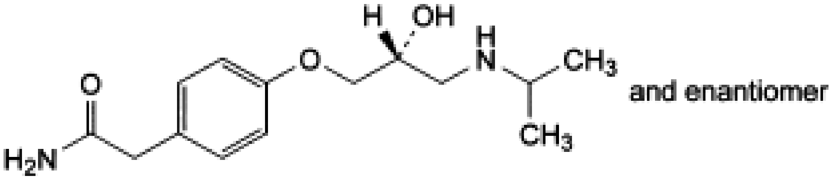
H. 2-(4-methoxyphenyl)ethyl 4-[[1-(4-fluorobenzyl)-1*H*-benzimidazol-2-yl]amino]piperidin-1-carboxylate.

Ph Eur

Atenolol

General Notices

(Ph Eur monograph 0703)



$C_{14}H_{22}N_2O_3$ 266.3 *29122-68-7*

Action and use

Beta-adrenoceptor antagonist.

Preparations

Atenolol Injection

Atenolol Oral Solution

Atenolol Tablets

Co-tenidone Tablets

Ph Eur

DEFINITION

Atenolol contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 2-[4-[(2 *RS*)-2-hydroxy-3-[(1-methylethyl)amino]propoxy]phenyl]acetamide, calculated with reference to the dried substance.

CHARACTERS

A white or almost white powder, sparingly soluble in water, soluble in ethanol, slightly soluble in methylene chloride.

IDENTIFICATION

First identification C.

Second identification A, B, D.

A. Melting point *(2.2.14)*: 152 °C to 155 °C.

B. Dissolve 0.100 g in *methanol R* and dilute to 100 ml with the same solvent. Dilute 10.0 ml of this solution to 100 ml with *methanol R*. Examined between 230 nm and 350 nm *(2.2.25)*, the solution shows two absorption maxima, at 275 nm and 282 nm. The ratio of the absorbance measured at the maximum at 275 nm to that measured at the maximum at 282 nm is 1.15 to 1.20.

C. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *atenolol CRS* .

D. Examine by thin-layer chromatography *(2.2.27)*, using *silica gel* GF_{254} *R* as the coating substance.

Test solution Dissolve 10 mg of the substance to be examined in 1 ml of *methanol R*.

Reference solution Dissolve 10 mg of *atenolol CRS* in 1 ml of *methanol R*.

Apply separately to the plate 10 µl of each solution. Develop over a path of 15 cm using a mixture of 1 volume of *concentrated ammonia R1* and 99 volumes of *methanol R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Solution S

Dissolve 0.10 g in *water R* and dilute to 10 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than degree 6 of the range of reference solutions of the most appropriate colour *(2.2.2, Method II)*.

Optical rotation *(2.2.7)*

Determined on solution S, the angle of optical rotation is + 0.10° to - 0.10°.

Related substances

Examine by liquid chromatography *(2.2.29)*.

Test solution (a) Dissolve 50.0 mg of the substance to be examined in 20 ml of the mobile phase and dilute to 25.0 ml with the mobile phase.

Test solution (b) Dissolve 50.0 mg of the substance to be examined in 0.1 ml of *dimethyl sulphoxide R*, if necessary applying gentle heat by placing the containing vessel in a water-bath for a few seconds, and dilute to 25.0 ml with the mobile phase.

Reference solution (a) Dilute 0.5 ml of test solution (a) to 100.0 ml with the mobile phase.

Reference solution (b) Dissolve 50.0 mg of *atenolol for column validation CRS* in 0.1 ml of *dimethyl sulphoxide R*, if necessary applying gentle heat by placing the containing vessel in a water-bath for a few seconds, and dilute to 25.0 ml with the mobile phase.

The chromatographic procedure may be carried out using:

— a stainless steel column 0.15 m long and 4.6 mm in internal diameter packed with *octadecylsilyl silica gel for chromatography R* (5 µm),

— as mobile phase at a flow rate of 1.0 ml/min a mixture prepared as follows: dissolve 1.0 g of *sodium octanesulphonate R* and 0.4 g of *tetrabutylammonium hydrogen sulphate R* in 1 litre of a mixture of 20 volumes of *tetrahydrofuran R*, 180 volumes of *methanol R* and 800 volumes of a 3.4 g/l solution of *potassium dihydrogen phosphate R*; adjust to pH 3.0 with *phosphoric acid R*,

— as detector a spectrophotometer set at 226 nm.

Equilibrate the column with the mobile phase at a flow rate of 1.0 ml/min for about 30 min.

Adjust the sensitivity of the system so that the height of the principal peak in the chromatogram obtained with 10 µl of reference solution (a) is at least 50 per cent of the full scale of the recorder.

Inject 10 µl of reference solution (b). The resulting chromatogram is similar to that of the specimen chromatogram provided with *atenolol for column validation CRS* in that the peak due to bis-ether precedes and is separated from that due to tertiary amine which normally appears as a doublet. If necessary, adjust the concentration of sodium octanesulphonate in the mobile phase. Increasing the concentration of sodium octanesulphonate increases the retention time of the tertiary amine.

Inject separately 10 µl of test solution (a) and reference solution (a). Continue the chromatography for four times the retention time of the principal peak. In the chromatogram obtained with test solution (a): the area of any peak apart from the principal peak is not greater than half the area of the principal peak in the chromatogram obtained with reference solution (a) (0.25 per cent); the sum of the areas of all the peaks, apart from the principal peak, is not greater than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent). Disregard any peak with an area less than 0.1 times of that of the principal peak in the chromatogram obtained with reference solution (a).

If the substance to be examined is found to contain more than 0.15 per cent of bis-ether, its compliance is confirmed by repeating the chromatography using 10 µl of test solution (b).

Chlorides *(2.4.4)*

Dissolve 50 mg in a mixture of 1 ml of *dilute nitric acid R* and 15 ml of *water R*. The solution, without further addition of *dilute nitric acid R*, complies with the limit test for chlorides (0.1 per cent).

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 80 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 26.63 mg of $C_{14}H_{22}N_2O_3$.

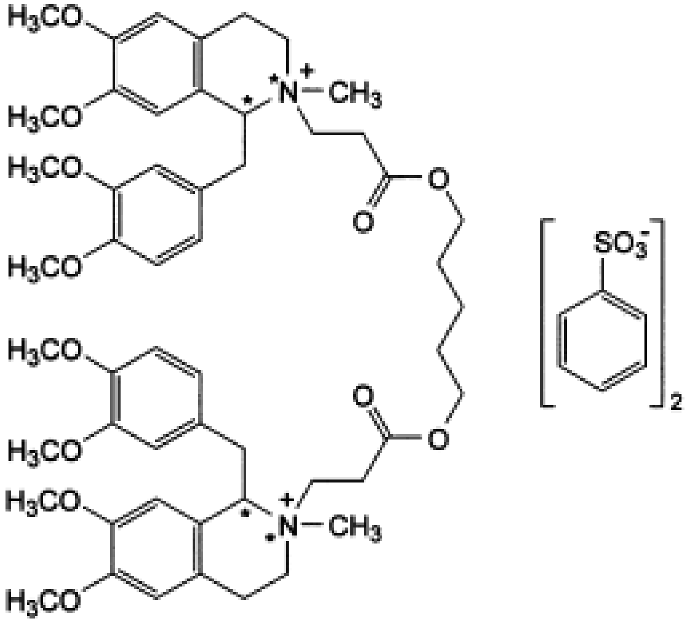
Atracurium Besilate

General Notices

(Ph Eur monograph 1970)



$C_{65}H_{82}N_2O_{18}S_2$ 1243 *64228-81-5*

Action and use

Non-depolarizing neuromuscular blocker.

Ph Eur

DEFINITION

Mixture of the *cis-cis*, *cis-trans* and *trans-trans* isomers of 2,2′-[pentane-1,5-diylbis[oxy(3-oxopropane-1,3-diyl)]]bis[1-(3,4-dimethoxybenzyl)-6,7-dimethoxy-2-methyl-1,2,3,4-tetrahydroisoquinolinium] dibenzenesulphonate.

Content

96.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White to yellowish-white powder, slightly hygroscopic.

Solubility

Soluble in water, very soluble in acetonitrile, in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison atracurium besilate CRS.

B. Examine the chromatograms obtained in the assay.

Results The 3 principal isomeric peaks in the chromatogram obtained with test solution (a) are similar in retention time to those in the chromatogram obtained with reference solution (a).

TESTS

Solution S

Dissolve 1.00 g in *water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7 *(2.2.2, Method II)*.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution (a) Dissolve 50.0 mg of the substance to be examined in mobile phase A and dilute to 50.0 ml with mobile phase A.

Test solution (b) Dissolve 0.100 g of the substance to be examined in mobile phase A and dilute to 10.0 ml with mobile phase A.

Reference solution (a) Dissolve 50.0 mg of *atracurium besilate CRS* in mobile phase A and dilute to 50.0 ml with mobile phase A.

Reference solution (b) Dilute 1.0 ml of test solution (a) to 100.0 ml with mobile phase A.

Reference solution (c) Dissolve 20.0 mg of *methyl benzenesulphonate R* in *acetonitrile R* and dilute to 100.0 ml with the same solvent. Dilute 50 µl of the solution to 100.0 ml with mobile phase A.

Reference solution (d) Dissolve 2.0 mg of *atracurium for peak identification CRS* (containing impurities A1, A2, B, C1, C2, D1, D2, E, G and K) in 2.0 ml of mobile phase A.

Reference solution (e) Dissolve 2.0 mg of *atracurium for impurity F identification CRS* in 2.0 ml of mobile phase A.

Column:

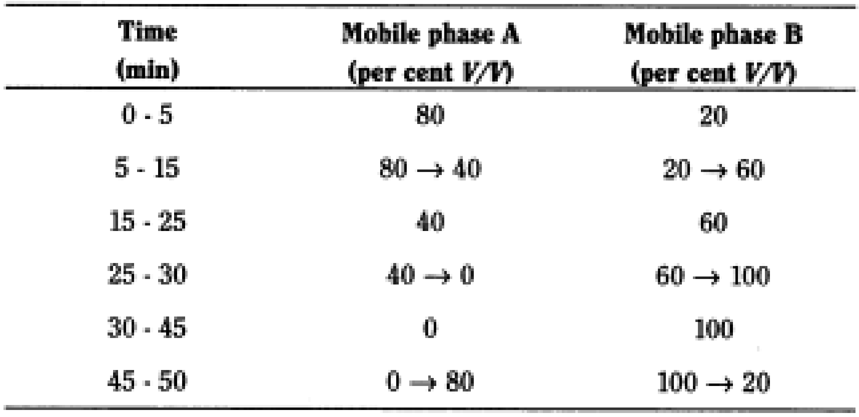
— *size:* l = 0.25 m, Ø = 4.6 mm,

— *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

— *mobile phase A*: mix 5 volumes of *methanol R*, 20 volumes of *acetonitrile R* and 75 volumes of a 10.2 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 3.1 with *phosphoric acid R*,

— *mobile phase B*: mix 20 volumes of *acetonitrile R*, 30 volumes of *methanol R* and 50 volumes of a 10.2 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 3.1 with *phosphoric acid R*,



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 5	80	20
5 - 15	80 → 40	20 → 60
15 - 25	40	60
25 - 30	40 → 0	60 → 100
30 - 45	0	100
45 - 50	0 → 80	100 → 20

Flow rate 1 ml/min.

Detection Spectrophotometer at 280 nm.

Injection 20 µl of test solution (a) and reference solutions (a), (b), (d) and (e).

Relative retention With reference to the atracurium *cis-cis* isomer (retention time = about 30 min): impurity E = about 0.2; impurity F = about 0.25; impurity G = about 0.3; impurity D1 = about 0.45; impurity D2 = about 0.5; atracurium *trans-trans* isomer = about 0.8; atracurium *cis-trans* isomer = about 0.9; impurity A1 = about 1.04; impurity I1 = about 1.07; impurity H1 = about 1.07 (shoulder on the front of peak A2); impurity A2 (major isomer) = about 1.08; impurity K1 = about 1.09 (shoulder on the tail of peak A2); impurity I2 (major isomer) = about 1.12; impurity H2 (major isomer) = about 1.12; impurity K2 (major isomer) = about 1.12; impurity B = about 1.15; impurity C1 = about 1.2; impurity C2 (major isomer) = about 1.3.

Identification of impurities:

— use the chromatogram obtained with reference solution (d) and the chromatogram supplied *with atracurium for peak identification CRS* to identify the peaks due to impurities A1, A2, B, C1, C2, D1, D2, E, G and K;

— use the chromatogram obtained with reference solution (e) and the chromatogram supplied with *atracurium for impurity F identification CRS* to identify the peak due to impurity F.

System suitability Reference solution (a):

— *resolution*: minimum 1.5 between the peaks due to the atracurium *trans-trans* isomer and the atracurium *cis-trans* isomer, and minimum 1.5 between the peaks due to the atracurium *cis-trans* isomer and the atracurium *cis-cis* isomer.

Limits:

— *correction factor*: for the calculation of content, multiply the peak area of impurity G by 0.5,

— *impurity E*: not more than 1.5 times the sum of the areas of the peaks due to the atracurium *cis-cis*, *trans-trans* and *cis-trans* isomers in the chromatogram obtained with reference solution (b) (1.5 per cent),

— *impurities A, D*: for each impurity, for the sum of the areas of the 2 isomer peaks, not more than 1.5 times the sum of the areas of the peaks due to the atracurium *cis-cis*, *trans-trans* and *cis-trans* isomers in the chromatogram obtained with reference solution (b) (1.5 per cent),

— *impurity C*: for the sum of the areas of the 2 isomer peaks, not more than the sum of the areas of the peaks due to the atracurium *cis-cis*, *trans-trans* and *cis-trans* isomers in the chromatogram obtained with reference solution (b) (1.0 per cent),

— *impurities F, G*: for each impurity, not more than the sum of the areas of the peaks due to the atracurium *cis-cis*, *trans-trans* and *cis-trans* isomers in the chromatogram obtained with reference solution (b) (1.0 per cent),

— *impurities H, I, K*: for the sum of the areas of the isomer peaks of these impurities, not more than the sum of the areas of the peaks due to the atracurium *cis-cis*, *trans-trans* and *cis-trans* isomers in the chromatogram obtained with reference solution (b) (1.0 per cent),

— *any other impurity*: for each impurity, not more than 0.1 times the sum of the areas of the peaks due to the atracurium *cis-cis*, *trans-trans* and *cis-trans* isomers in the chromatogram obtained with reference solution (b) (0.1 per cent),

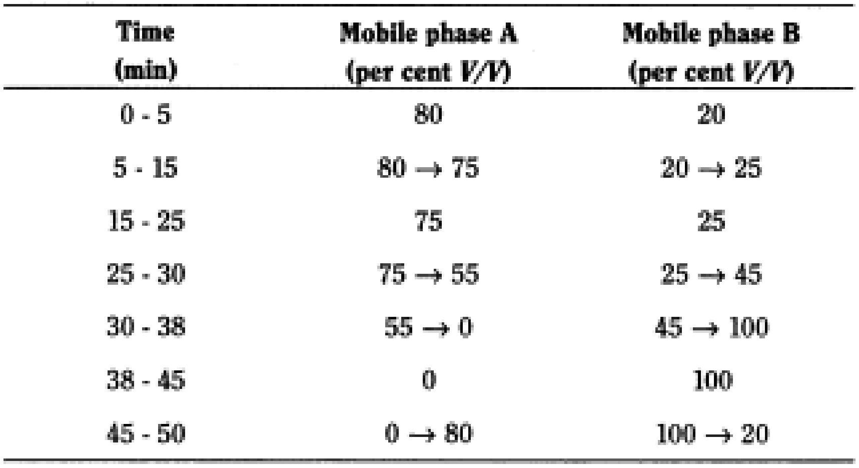
— *total*: not more than 3.5 times the sum of the areas of the peaks due to the atracurium *cis-cis*, *trans-trans* and *cis-trans* isomers in the chromatogram obtained with reference solution (b) (3.5 per cent),

— *disregard limit*: 0.05 times the sum of the areas of the peaks due to the atracurium *cis-cis*, *trans-trans* and *cis-trans* isomers in the chromatogram obtained with reference solution (b) (0.05 per cent).

Impurity J

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Mobile phase:



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 5	80	20
5 - 15	80 → 75	20 → 25
15 - 25	75	25
25 - 30	75 → 55	25 → 45
30 - 38	55 → 0	45 → 100
38 - 45	0	100
45 - 50	0 → 80	100 → 20

Detection Spectrophotometer at 217 nm.

Injection 100 µl of test solution (b) and reference solution (c).

Retention time Impurity J = about 25 min; atracurium *trans-trans* isomer = about 38 min.

Limit:

— *impurity J*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (10 ppm).

Isomer composition

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications. Use the normalisation procedure.

Injection Test solution (a).

Limits:

— *atracurium cis-cis isomer*: 55.0 per cent to 60.0 per cent,

— *atracurium cis-trans isomer*: 34.5 per cent to 38.5 per cent,

— *atracurium trans-trans isomer*: 5.0 per cent to 6.5 per cent.

Water ***(2.5.12)***

Maximum 5.0 per cent, determined on 1.000 g.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

Injection Test solution (a) and reference solution (a).

Calculate the percentage content of $C_{65}H_{82}N_2O_{18}S_2$ from the sum of the areas of the peaks due to the 3 isomers in test solution (a) and reference solution (a).

STORAGE

In an airtight container, protected from light, at a temperature of 2 °C to 8 °C.

IMPURITIES

Specified impurities A, C, D, E, F, G, H, I, J, K.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*)

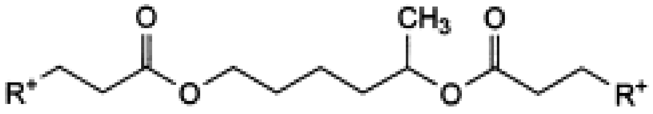
J. methyl benzenesulphonate,



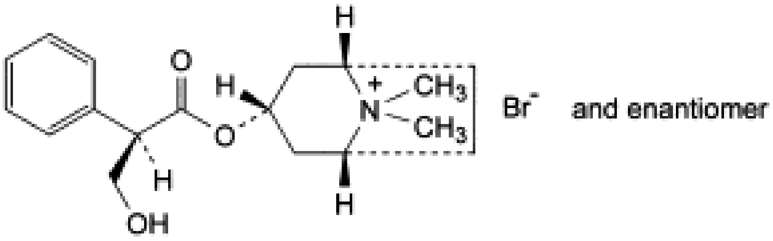
K. 2,2′-[(hexane-1,5)-diylbis[oxy(3-oxopropane-1,3-diyl)]]bis[1-(3,4-dimethoxybenzyl)-6,7-dimethoxy-2-methyl-1,2,3,4-tetrahydroisoquinolinium]).

Ph Eur

Atropine Methobromide

General Notices

(Methylatropine Bromide, Ph Eur monograph 0511)



$C_{18}H_{26}BrNO_3$ 384.3 *2870-71-5*

Action and use

Anticholinergic.

Ph Eur

DEFINITION

Methylatropine bromide contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of (1*R*,3*r*,5*S*)-3-[[(2*RS*)-3-hydroxy-2-phenylpropanoyl]oxy]-8,8-dimethyl-8-azoniabicyclo[3.2.1]octane bromide, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, freely soluble in water, sparingly soluble in alcohol.

It melts at about 219 °C, with decomposition.

IDENTIFICATION

First identification *B, E.*

Second identification *A, C, D, E.*

A. It complies with the test for optical rotation (see Tests).

B. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *methylatropine bromide CRS*.

C. To 5 ml of solution S (see Tests) add 2 ml of *dilute sodium hydroxide solution R*. No precipitate is formed.

D. To about 1 mg add 0.2 ml of *fuming nitric acid R* and evaporate to dryness on a water-bath. Dissolve the residue in 2 ml of *acetone R* and add 0.1 ml of a 30 g/l solution of *potassium hydroxide R* in *methanol R*. A violet colour develops.

E. It gives reaction (a) of bromides *(2.3.1)*.

TESTS

Solution S

Dissolve 1.25 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution B_9 *(2.2.2, Method II)*.

Acidity or alkalinity

To 10 ml of solution S add 0.1 ml of *phenolphthalein solution R*; the solution is colourless. Add 0.5 ml of *0.01 M sodium hydroxide*; the solution is red.

Optical rotation *(2.2.7)*

Dissolve 2.50 g in *water R* and dilute to 25.0 ml with the same solvent. The angle of optical rotation, measured in a 2 dm tube, is - 0.25° to + 0.05°.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using a *TLC silica gel G plate R*.

Test solution Dissolve 0.2 g of the substance to be examined in a mixture of 1 volume of *water R* and 9 volumes of *methanol R* and dilute to 5 ml with the same mixture of solvents.

Reference solution Dilute 0.5 ml of the test solution to 100 ml with a mixture of 1 volume of *water R* and 9 volumes of *methanol R*.

Apply to the plate 5 µl of each solution. Develop over a path of 15 cm using a mixture of 10 volumes of *methanol R*, 15 volumes of *anhydrous formic acid R*, 15 volumes of *water R* and 60 volumes of *ethyl acetate R*. Dry the plate at 100 °C to 105 °C until the solvent has evaporated, allow to cool and spray with *dilute potassium iodobismuthate solution R* until the spots appear. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

Apomethylatropine

Dissolve 0.10 g in *0.01 M hydrochloric acid* and dilute to 100.0 ml with the same acid. Measure the absorbances *(2.2.25)* at the maxima at 252 nm and 257 nm. The ratio of the absorbance at 257 nm to that at 252 nm is at least 1.19.

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 0.500 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on the residue obtained in the test for loss on drying.

ASSAY

Dissolve 0.300 g in 50 ml of *anhydrous acetic acid R*, warming slightly if necessary. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 38.43 mg of $C_{18}H_{26}BrNO_3$.

STORAGE

Store protected from light.

DEFINITION

Methylatropine nitrate contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of (1*R*,3*r*,5*S*)-3-[[(2*RS*)-3-hydroxy-2-phenylpropanoyl]oxy]-8,8-dimethyl-8-azoniabicyclo[3.2.1]octane nitrate, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, freely soluble in water, soluble in alcohol.

It melts at about 167 °C.

IDENTIFICATION

First identification *B, E.*

Second identification *A, C, D, E.*

A. It complies with the test for optical rotation (see Tests).

B. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *methylatropine nitrate CRS*.

C. To a mixture of 2.5 ml of solution S (see Tests) and 2.5 ml of *water R* add 2 ml of *dilute sodium hydroxide solution R*. No precipitate is formed.

D. To about 1 mg add 0.2 ml of *fuming nitric acid R* and evaporate to dryness on a water-bath. Dissolve the residue in 2 ml of *acetone R* and add 0.25 ml of a 30 g/l solution of *potassium hydroxide R* in *methanol R*. A violet colour develops.

E. To 0.05 ml of *diphenylamine solution R* add 0.05 ml of a 1 in 10 dilution of solution S. An intense blue colour is produced.

TESTS

Solution S

Dissolve 1.25 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution B_9 *(2.2.2, Method II)*.

Acidity or alkalinity

To 10 ml of solution S add 0.1 ml of *phenolphthalein solution R*; the solution is colourless. Add 0.5 ml of *0.01 M sodium hydroxide*; the solution is red.

Optical rotation *(2.2.7)*

Dissolve 2.50 g in *water R* and dilute to 25.0 ml with the same solvent. The angle of optical rotation, measured in a 2 dm tube, is - 0.25° to + 0.05°.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel G R* as the coating substance.

Test solution Dissolve 0.2 g of the substance to be examined in a mixture of 1 volume of *water R* and 9 volumes of *methanol R* and dilute to 5 ml with the same mixture of solvents.

Reference solution Dilute 0.5 ml of the test solution to 100 ml with a mixture of 1 volume of *water R* and 9 volumes of *methanol R*.

Apply to the plate 5 µl of each solution. Develop over a path of 15 cm using a mixture of 10 volumes of *methanol R*, 15 volumes of *anhydrous formic acid R*, 15 volumes of *water R* and 60 volumes of *ethyl acetate R*. Dry the plate at 100 °C to 105 °C until the solvent has evaporated, allow to cool and spray with *dilute potassium iodobismuthate solution R* until the spots appear. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

Apomethylatropine

Dissolve 0.10 g in *0.01 M hydrochloric acid* and dilute to 100.0 ml with the same acid. Measure the absorbances *(2.2.25)* at the maxima at 252 nm and 257 nm. The ratio of the absorbance at 257 nm to that at 252 nm is not less than 1.17.

Halides

15 ml of solution S complies with the limit test for chlorides *(2.4.4)*. Prepare the standard using 1.5 ml of *chloride standard solution (5 ppm Cl) R* (10 ppm).

Silver

Dissolve 1.0 g in 10 ml of *water R* and add 0.1 ml of *sodium sulphide solution R*. Allow to stand for 2 min. The solution is not more intensely coloured than reference solution B_8 *(2.2.2, Method II)* (10 ppm).

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 0.500 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on the residue obtained in the test for loss on drying.

ASSAY

Dissolve 0.300 g in 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid* determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 36.64 mg of $C_{18}H_{26}N_2O_6$.

STORAGE

Store protected from light.

DEFINITION

Bis[(1*R*,3*r*,5*S*)-8-methyl-8-azabicyclo[3.2.1]oct-3-yl (2*RS*)-3-hydroxy-2-phenylpropanoate] sulphate monohydrate.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals.

Solubility

Very soluble in water, freely soluble in ethanol (96 per cent).

IDENTIFICATION

First identification *A, B, E.*

Second identification *C, D, E, F.*

A. Optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison *atropine sulphate CRS.*

C. Dissolve about 50 mg in 5 ml of *water R* and add 5 ml of *picric acid solution R*. The precipitate, washed with *water R* and dried at 100-105 °C for 2 h, melts (*2.2.14*) at 174 °C to 179 °C.

D. To about 1 mg add 0.2 ml of *fuming nitric acid R* and evaporate to dryness in a water-bath. Dissolve the residue in 2 ml of *acetone R* and add 0.1 ml of a 30 g/l solution of *potassium hydroxide R* in *methanol R*. A violet colour develops.

E. It gives the reactions of sulphates (*2.3.1*).

F. It gives the reaction of alkaloids (*2.3.1*).

TESTS

pH (*2.2.3*)

4.5 to 6.2.

Dissolve 0.6 g in *carbon dioxide-free water R* and dilute to 30 ml with the same solvent.

Optical rotation (*2.2.7*)

- 0.50° to + 0.05° (measured in a 2 dm tube).

Dissolve 2.50 g in *water R* and dilute to 25.0 ml with the same solvent.

Related substances

Injection 10 µl.

Identification of impurities Use the chromatogram supplied with *atropine for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B, D, E, F, G and H. Use the chromatogram obtained with reference solution (d) to identify the peak due to impurity C.

Relative retention With reference to atropine (retention time = about 11 min): impurity C = about 0.2; impurity E = about 0.67; impurity D = about 0.73; impurity F = about 0.8; impurity B = about 0.89; impurity H = about 0.93; impurity G = about 1.1; impurity A = about 1.7.

System suitability Reference solution (b):

- *resolution*: minimum 2.5 between the peaks due to impurity B and atropine.

Limits:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.6; impurity C = 0.6;
- *impurities E, H*: for each impurity, not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- *impurities A, B, C, D, F, G*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained

with reference solution (a) (0.05 per cent).

Water (*2.5.12*)

2.0 per cent to 4.0 per cent, determined on 0.500 g.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.500 g in 30 ml of *anhydrous acetic acid R*, warming if necessary. Cool the solution. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 67.68 mg of $C_{34}H_{48}N_2O_{10}S$.

STORAGE

Protected from light.

IMPURITIES

Attapulgite

General Notices

Action and use

Excipient.

DEFINITION

Attapulgite is a purified native hydrated magnesium aluminium silicate essentially consisting of the clay mineral palygorskite.

CHARACTERISTICS

A light, cream or buff, very fine powder, free or almost free from gritty particles.

IDENTIFICATION

A. Ignite 0.5 g with 2 g of *anhydrous sodium carbonate* for 20 minutes, cool and extract with 25 ml of boiling *water*. Cool, filter, wash the residue with *water* and add the washings to the filtrate. Reserve the residue for test B. Cautiously acidify the combined filtrate and washings with *hydrochloric acid*, evaporate to dryness, moisten the residue with 0.2 ml of *hydrochloric acid*, add 10 ml of *water* and stir. A white, gelatinous precipitate is produced.

B. Wash the residue reserved in test A with *water* and dissolve in 10 ml of *2M hydrochloric acid*. To 2 ml of the solution add a 10% w/v solution of *ammonium thiocyanate*. An intense red colour is produced.

C. To 2 ml of the solution obtained in test B add 1 ml of *strong sodium hydroxide solution* and filter. To the filtrate add 3 ml of *ammonium chloride solution*. A gelatinous white precipitate is produced.

D. To 2 ml of the solution obtained in test B add *ammonium chloride* and an excess of *13.5M ammonia* and filter. To the filtrate add 0.15 ml of *magneson reagent* and an excess of *5M sodium hydroxide*. A blue precipitate is produced.

TESTS

Acidity or alkalinity

pH of a 5% w/v suspension in *carbon dioxide-free water*, after shaking for 5 minutes, 7.0 to 9.5, Appendix V L.

Adsorptive capacity

Moisture adsorption, 5 to 14% when determined by the following method. Dry in air and powder a sufficient quantity of the substance being examined and pass through a sieve with a nominal mesh aperture of 150 µm. Spread 0.5 g as a thin layer on a previously weighed piece of aluminium foil (60 mm × 50 mm) of nominal gauge 17.5 µm and transfer to a desiccator containing a dish of sodium chloride crystals partially immersed in saturated brine at 25°. After 4 hours, remove from the desiccator and weigh immediately. Dry in an oven at 110° for 4 hours, allow to cool in a desiccator and weigh. The *moisture adsorption* is the gain in weight of the substance being examined expressed as a percentage of its oven-dried weight.

Arsenic

To 0.13 g add 5 ml of *water*, 2 ml of *sulphuric acid* and 10 ml of *sulphur dioxide solution* and evaporate on a water bath until the sulphur dioxide solution is removed and the volume reduced to about 2 ml. Transfer the solution to the generator flask with the aid of 5 ml of *water*. The resulting solution complies with the *limit test for arsenic*, Appendix VII (8 ppm).

Heavy metals

A. Not more than 20 ppm when determined by the following method. Shake 6.0 g with 40 ml of *0.5M hydrochloric acid* at 37° for 30 minutes, cool and filter. Wash the residue with *water* and dilute the combined filtrate and washings to 50 ml with *water*. To 20 ml add 2 g each of *ammonium chloride* and *ammonium thiocyanate* and dissolve. Shake the solution with 80 ml of a mixture of equal volumes of *ether* and *isoamyl alcohol* and separate, retaining the aqueous layer. Extract with a further 80 ml of the mixture. To the aqueous layer add 2 g of *citric acid*, neutralise with *13.5M ammonia* and dilute to 25 ml with *water*. 12 ml of the resulting solution complies with *limit test A for heavy metals*, Appendix VII. Use *lead standard solution (2 ppm Pb)* to prepare the standard.

B. Not more than 10 ppm when determined by the following method. Shake 6.0 g with 40 ml of *0.5M sodium hydroxide* at 37° for 30 minutes, cool and filter. Wash the residue with *water* and dilute the combined filtrate and washings to 50 ml with *water*. Neutralise 20 ml of the solution with *hydrochloric acid* and dilute to 25 ml with *water*. 12 ml of the resulting solution complies with *limit test A for heavy metals*, Appendix VII. Use *lead standard solution (1 ppm Pb)* to prepare the standard.

Acid-soluble matter

Boil 2 g with 100 ml of *0.2M hydrochloric acid* under a reflux condenser for 5 minutes, cool and filter. Evaporate 50 ml of the filtrate to dryness. The residue, after ignition at about 600° for 30 minutes, weighs not more than 0.25 g.

Water-soluble matter

Boil 10 g with 100 ml of *water* under a reflux condenser for 5 minutes, cool and filter. Evaporate 50 ml of the filtrate to dryness. The residue, after ignition at 600° for 30 minutes, weighs not more than 50 mg.

Loss on drying

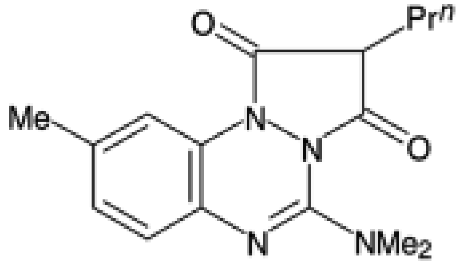
When dried to constant weight at 105°, loses not more than 17.0% of its weight. Use 1 g.

Loss on ignition

When ignited at 600°, loses 15.0 to 27.0% of its weight. Use 1 g.

Azapropazone

General Notices



$C_{16}H_{20}N_4O_2,2H_2O$ 336.4 *13539-59-8 (anhydrous)*

Action and use

Cyclo-oxygenase inhibitor; analgesic; anti-inflammatory.

Preparations

Azapropazone Capsules

Azapropazone Tablets

DEFINITION

Azapropazone is 5-dimethylamino-9-methyl-2-propylpyrazolo[1,2-*a*][1,2,4]benzotriazine-1,3 (2*H*)-dione dihydrate. It contains not less than 99.0% and not more than 101.0% of $C_{16}H_{20}N_4O_2$, calculated with reference to the anhydrous substance.

CHARACTERISTICS

A white to pale yellow, crystalline powder.

Very slightly soluble in *water*; soluble in *ethanol (96%)*; it dissolves in solutions of alkali hydroxides.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of azapropazone *(RS 016)*.

B. The *light absorption*, Appendix II B, in the range 230 to 350 nm of a 0.0008% w/v solution in 0.1M *sodium hydroxide* exhibits two maxima, at 255 nm and 325 nm. The *absorbances* at 255 nm and 325 nm are about 0.86 and 0.18 respectively.

TESTS

Acetic acid

Not more than 0.2%, determined by the following method. Dissolve 10 g in 25 ml of *methanol*, add 75 ml of *water* and carry out a *potentiometric titration*, Appendix VIII B, using *0.1M sodium hydroxide VS* as titrant to a pH of 5.9. Each ml of *0.1M sodium hydroxide VS* is equivalent to 6.005 mg of acetic acid, $C_2H_4O_2$.

Related substances

Carry out the following operations in subdued light using low-actinic glassware without delay. Carry out the method for *liquid chromatography*, Appendix III D, using the following solutions in a mixture of 1 volume of *phosphate buffer pH 4.0* and 3 volumes of *methanol*. Solution (1) contains 0.10% w/v of the substance being examined. Solution (2) contains 0.00010% w/v of *azapropazone impurity A BPCRS.* Solution (3) contains 0.00025% w/v of *azapropazone impurity B BPCRS*. Solution (4) contains 0.00025% w/v of *azapropazone impurity C BPCRS.* Solution (5) contains 0.0001% w/v of the substance being examined. Solution (6) contains 0.00005% w/v of the substance being examined. Solution (7) contains 0.1% w/v of *azapropazone impurity standard BPCRS.*

The chromatographic procedure may be carried out using (a) a stainless steel column (30 cm × 3.9 mm) packed with *octadecylsilyl silica gel for chromatography* (10 µm) (µBondapak C18 is suitable), (b) a mixture of 1 volume of *glacial acetic acid*, 36 volumes of *methanol* and 63 volumes of a 0.068% w/v solution of *sodium butanesulphonate* in *water* as the mobile phase with a flow rate of 2.5 ml per minute and (c) a detection wavelength of 254 nm.

Inject solution (7) and continue the chromatography for 5 times the retention time of the principal peak. The test is not valid unless the chromatogram obtained with solution (7) closely resembles the reference chromatogram supplied with the azapropazone impurity standard. If necessary adjust the proportion of methanol in the mobile phase to give the required retention times.

In the chromatogram obtained with solution (1) the areas of any peaks corresponding to azapropazone impurities A, B or C are not greater than the areas of the corresponding peaks in the chromatograms obtained with solutions (2), (3) and (4) respectively (0.1%, 0.25% and 0.25%). The area of any other *secondary peak* is not greater than the area of the peak in the chromatogram obtained with solution (5) (0.1%). Calculate the content of impurities A, B and C using the respective reference solutions and the content of any unnamed impurities using solution (5). The total nominal content of impurities is not greater than 0.5%. Disregard any peak with an area less than the area of the peak in the chromatogram obtained with solution (6) (0.05%).

Heavy metals

Dissolve 3.125 g in 20 ml of *water*, boil for 10 minutes, dilute to 50 ml and filter (solution A). 12 ml of solution A complies with *limit test A for heavy metals*, Appendix VII. Use 10 ml of *lead standard solution (1 ppm Pb)* to prepare the standard (16 ppm).

Chloride

A mixture of 10 ml of solution A and 5 ml of *water* complies with the limit *test for chlorides*, Appendix VII (80 ppm).

Sulphate

A mixture of 10 ml of solution A and 5 ml of *water* complies with the *limit test for sulphates*, Appendix VII (240 ppm).

Water

10.0 to 11.5% w/w, Appendix IX C. Use 0.25 g.

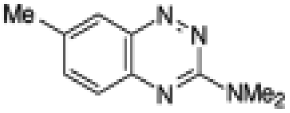
Sulphated ash

Not more than 0.1%, Appendix IX A.

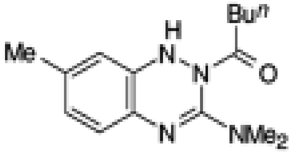
ASSAY

Carry out Method I for *non-aqueous titration*, Appendix VIII A, using 0.25 g and determining the end point potentiometrically. Each ml of *0.1M perchloric acid VS* is equivalent to 30.04 mg of $C_{16}H_{20}N_4O_2$.

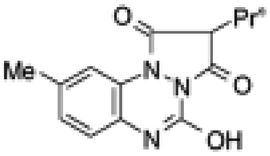
IMPURITIES



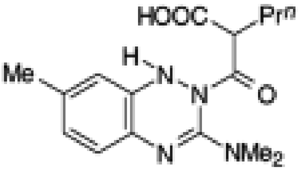
1. 3-dimethylamino-7-methyl-1,2,4-benzotriazine *(impurity A)*,



2. 3-dimethylamino-1,2-dihydro-7-methyl-2-valeryl-1,2,4-benzotriazine,



3. 5-hydroxy-9-methyl-2-propylpyrazolo[1,2-*a*][1,2,4]benzotriazine-1,3(2*H*)-dione *(impurity B)*,

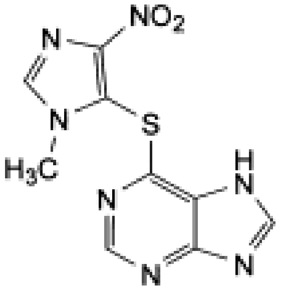


4. α-(3-dimethylamino-7-methyl-1,2-dihydro-1,2,4-benzotriazin-2-ylcarbonyl)valeric acid *(impurity C)*.

Azathioprine

General Notices

(Ph Eur monograph 0369)



$C_9H_7N_7O_2S$ 277.3 *446-86-6*

Action and use

Immunosuppressant.

Preparation

Azathioprine Tablets

Ph Eur

DEFINITION

6-[(1-Methyl-4-nitro-1*H*-imidazol-5-yl)sulfanyl]-7*H*-purine.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

Pale yellow powder.

Solubility

Practically insoluble in water and in ethanol (96 per cent). It is soluble in dilute solutions of alkali hydroxides and sparingly soluble in dilute mineral acids.

IDENTIFICATION

A. Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution Dissolve 0.150 g in 30 ml of *dimethyl sulphoxide R* and dilute to 500.0 ml with *0.1 M hydrochloric acid*. Dilute 25.0 ml of the solution to 1000.0 ml with *0.1 M hydrochloric acid*.

Spectral range 230-350 nm.

Absorption maximum At 280 nm.

Specific absorbance at the absorption maximum 600 to 660.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *azathioprine CRS*.

C. To about 20 mg add 100 ml of *water R*, heat and filter. To 5 ml of the filtrate add 1 ml of *hydrochloric acid R* and about 10 mg of *zinc powder R*. Allow to stand for 5 min. The solution becomes yellow. Filter, cool in iced water, add 0.1 ml of *sodium nitrite solution R* and 0.1 g of *sulphamic acid R* and shake until the bubbles disappear. Add 1 ml of *β-naphthol solution R*. A pale pink precipitate is formed.

TESTS

Acidity or alkalinity

To 0.5 g add 25 ml of *carbon dioxide-free water R*, shake for 15 min and filter. To 20 ml of the filtrate add 0.1 ml of *methyl red solution R.* Not more than 0.2 ml of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Chloromethylnitroimidazole and mercaptopurine

Thin-layer chromatography *(2.2.27)*. *Prepare the solutions immediately before use*.

Test solution Dissolve 0.2 g of the substance to be examined in *dilute ammonia R1* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 10 mg of *chloromethylnitroimidazole CRS* in *dilute ammonia R1* and dilute to 50 ml with the same solvent.

Reference solution (b) Dissolve 10 mg of *mercaptopurine R* in *dilute ammonia R1* and dilute to 50 ml with the same solvent.

Plate *cellulose for chromatography F_{254} R* as the coating substance.

Mobile phase *butanol R* saturated with *dilute ammonia R1*.

Application 5 µl.

Development Over a path of 15 cm.

Drying At 50 °C.

Detection Examine in ultraviolet light at 254 nm.

Limits:

— *chloromethylnitroimidazole*: any spot due to chloromethylnitroimidazole is not more intense than the spot in the chromatogram obtained with reference solution (a) (1.0 per cent);

— *mercaptopurine*: any spot due to mercaptopurine is not more intense than the spot in the chromatogram obtained with reference solution (b) (1.0 per cent).

Loss on drying *(2.2.32)*

Maximum 1.0 per cent, determined on 0.50 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 25 ml of *dimethylformamide R*. Titrate with *0.1 M tetrabutylammonium hydroxide*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M tetrabutylammonium hydroxide* is equivalent to 27.73 mg of $C_9H_7N_7O_2S$.

STORAGE

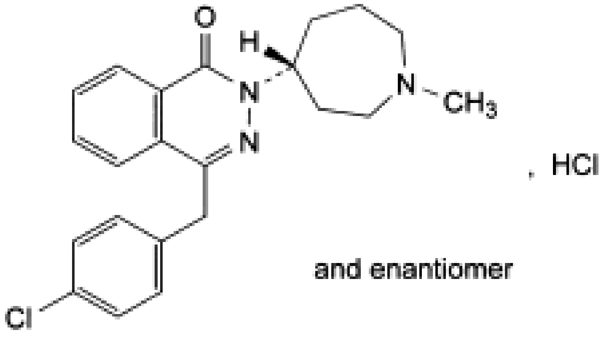
Protected from light.

Ph Eur

Azelastine Hydrochloride

General Notices

(Ph Eur monograph 1633)



$C_{22}H_{24}ClN_3O,HCl$ 418.4 *79307-93-0*

Action and use

Histamine H_1 receptor antagonist; antihistamine.

Ph Eur

DEFINITION

4-(4-Chlorobenzyl)-2-[(4*RS*)-1-methylhexahydro-1*H*-azepin-4-yl]phthalazin-1(2*H*)-one hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Sparingly soluble in water, soluble in ethanol and in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison azelastine hydrochloride CRS .

B. Solution S (see Tests) gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Acidity or alkalinity

To 10 ml of solution S add 0.2 ml of *bromothymol blue solution R1*. Not more than 0.1 ml of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the solution.

Related substances

Liquid chromatography *(2.2.29)*.

Solvent mixture *acetonitrile for chromatography R*, *water R* (45:55 *V/V*).

Test solution Dissolve 0.125 g of the substance to be examined in the solvent mixture and dilute to 50.0 ml with the solvent mixture.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 10.0 ml with the solvent mixture.

Reference solution (b) Dissolve 1 mg of *azelastine impurity B CRS* , 1 mg of *azelastine impurity D CRS* and 1 mg of *azelastine impurity E CRS* in the test solution and dilute to 20 ml with the test solution.

Column:

— *size:* *l* = 0.25 m, Ø = 4.6 mm,

— *stationary phase*: *nitrile silica gel for chromatography R* (10 µm),

— *temperature*: 30 °C.

Mobile phase Dissolve 2.16 g of *sodium octanesulphonate R* and 0.68 g of *potassium dihydrogen phosphate R* in 740 ml of *water for chromatography R*, adjust to pH 3.0-3.1 with *dilute phosphoric acid R*, add 260 ml of *acetonitrile for chromatography R* and mix.

Flow rate 2.0 ml/min.

Detection Spectrophotometer at 210 nm.

Injection 10 µl.

Run time Twice the retention time of azelastine.

Relative retention With reference to azelastine (retention time = about 8-9 min): impurity A = about 0.2; impurity B = about 0.3; impurity C = about 0.4; impurity D = about 0.6; impurity E = about 1.4.

System suitability Reference solution (b):

— *resolution*: minimum 4.0 between the peaks due to impurity B and impurity D,

— the peaks due to impurity D and impurity E are baseline separated from the principal

---

peak.

Limits:

- *correction factors*: for the calculation of contents, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 3.6; impurity D = 0.7; impurity E = 2.1;
- *impurities A, B, C, D, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

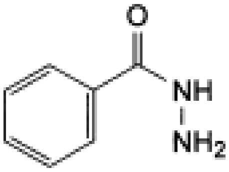
In order to avoid overheating in the reaction medium, mix thoroughly throughout and stop the titration immediately after the end-point has been reached.

Dissolve 0.300 g in 5 ml of *anhydrous formic acid R*. Add 30 ml of *acetic anhydride R*. Titrate quickly with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

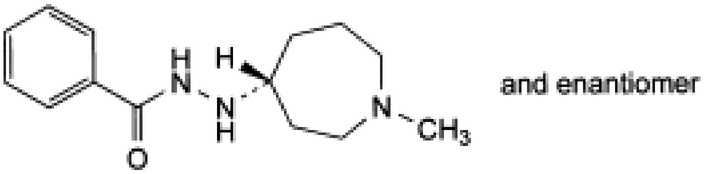
1.0 ml of *0.1 M perchloric acid* is equivalent to 41.84 mg of $C_{22}H_{25}Cl_2N_3O$.

IMPURITIES

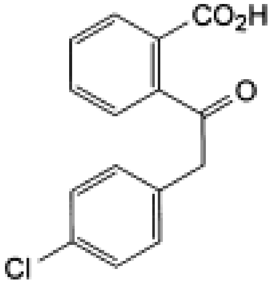
Specified impurities *A, B, C, D, E.*



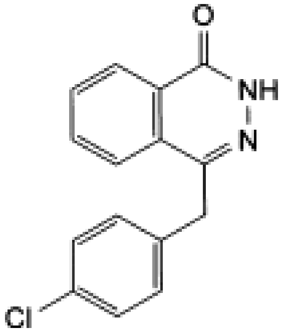
A. benzoyldiazane (benzohydrazide),



B. 1-benzoyl-2-[(4*RS*)-1-methylhexahydro-1*H*-azepin-4-yl]diazane,



C. 2-[(4-chlorophenyl)acetyl]benzoic acid,



D. 4-(4-chlorobenzyl)phthalazin-1(2*H*)-one,

DEFINITION

(2*R*,3*S*,4*R*,5*R*,8*R*,10*R*,11*R*,12*S*,13*S*,14*R*)-13-[(2,6-Dideoxy-3-*C*-methyl-3-*O*-methyl-α-L-*ribo*-hexopyranosyl)oxy]-2-ethyl-3,4,10-trihydroxy-3,5,6,8,10,12,14-heptamethyl-11-[[3,4,6-trideoxy-3-(dimethylamino)-β-D-*xylo*-hexopyranosyl]oxy]-1-oxa-6-azacyclopentadecan-15-one. The degree of hydration is 1 or 2.

Semi-synthetic product derived from a fermentation product.

Content

96.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, freely soluble in anhydrous ethanol and in methylene chloride.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *azithromycin CRS* .

If the spectra obtained in the solid state show differences, prepare further spectra using 90 g/l solutions in *methylene chloride R*.

TESTS

Solution S

Dissolve 0.500 g in *anhydrous ethanol R* and dilute to 50.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

9.0 to 11.0.

Dissolve 0.100 g in 25.0 ml of *methanol R* and dilute to 50.0 ml with *carbon dioxide-free water R*.

Specific optical rotation *(2.2.7)*

- 45 to - 49 (anhydrous substance), determined on solution S.

Related substances

Liquid chromatography *(2.2.29)*.

Solvent mixture Prepare a 1.73 g/l solution of *ammonium dihydrogen phosphate R* adjusted to pH 10.0 with *ammonia R*. Transfer 350 ml of this solution to a suitable container. Add 300 ml of *acetonitrile R1* and 350 ml of *methanol R1*. Mix well.

Test solution Dissolve 0.200 g of the substance to be examined in the solvent mixture and dilute to 25.0 ml with the solvent mixture.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the solvent mixture.

Reference solution (b) Dissolve the contents of a vial of *azithromycin for system suitability CRS* (containing impurities F, H and J) in 1.0 ml of the solvent mixture and sonicate for 5 min.

Reference solution (c) Dissolve 8.0 mg of *azithromycin for peak identification CRS* (containing impurities A, B, C, E, F, G, I, J, L, M, N, O, P) in 1.0 ml of the solvent mixture.

Reference solution (d) Dissolve the contents of a vial of *azithromycin impurity B CRS* in 1.0 ml of the solvent mixture.

Column:
 — *size:* *l* = 0.25 m, Ø = 4.6 mm;

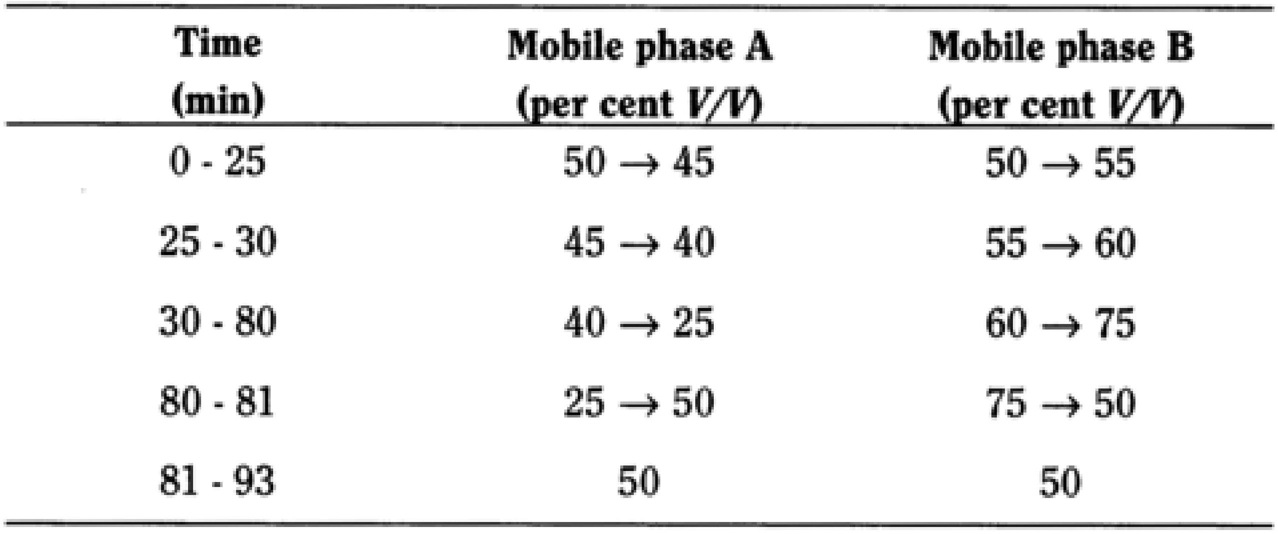
— *stationary phase*: *end-capped octadecylsilyl amorphous organosilica polymer for mass spectrometry R* (5 µm);

— *temperature*: 60 °C.

Mobile phase:

— *mobile phase A*: 1.80 g/l solution of *anhydrous disodium hydrogen phosphate R* adjusted to pH 8.9 with *dilute phosphoric acid R* or with *dilute sodium hydroxide solution R*;

— *mobile phase B*: *methanol R1*, *acetonitrile R1* (250:750 *V/V*);



Time (min)	**Mobile phase A (per cent *V/V*)**	**Mobile phase B (per cent *V/V*)**
0 - 25	50 → 45	50 → 55
25 - 30	45 → 40	55 → 60
30 - 80	40 → 25	60 → 75
80 - 81	25 → 50	75 → 50
81 - 93	50	50

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 210 nm.

Injection 50 µl.

Relative retention With reference to azithromycin (retention time = 45-50 min): impurity L = about 0.29; impurity M = about 0.37; impurity E = about 0.43; impurity F = about 0.51; impurity D = about 0.54; impurity J = about 0.54; impurity I = about 0.61; impurity C = about 0.73; impurity N = about 0.76; impurity H = about 0.79; impurity A = about 0.83; impurity P = about 0.92; impurity O = about 1.23; impurity G = about 1.26; impurity B = about 1.31.

Identification of impurities Use the chromatogram supplied with *azithromycin for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, C, E, F, G, I, J, L, M, N, O and P, the chromatogram obtained with reference solution (d) to identify the peak due to impurity B and the chromatogram obtained with reference solution (b) to identify the peak due to impurity H.

System suitability Reference solution (b):

— *peak-to-valley ratio*: minimum 1.4, where H_p = height above the baseline of the peak due to impurity J and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity F.

Limits:

— *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity F = 0.3; impurity H = 0.1; impurity L = 2.3; impurity M = 0.6; impurity N = 0.7;

— *impurity B*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (2.0 per cent);

— *impurities A, C, E, F, G, H, I, L, M, N, O, P*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *sum of impurities D and J*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *any other impurity*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (3.0 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent); disregard the peaks eluting before impurity L and after impurity B.

Heavy metals *(2.4.8)*

Maximum 25 ppm.

Dissolve 2.0 g in a mixture of 15 volumes of *water R* and 85 volumes of *anhydrous ethanol R* and dilute to 20 ml with the same mixture of solvents. 12 ml of the solution complies with test B. Prepare the reference solution using lead standard solution (2.5 ppm Pb) obtained by *diluting lead standard solution (100 ppm Pb) R* with a mixture of 15 volumes of *water R* and 85 volumes of *anhydrous ethanol R*.

Water *(2.5.12)*

1.8 per cent to 6.5 per cent, determined on 0.200 g.

Sulphated ash *(2.4.14)*

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)*.

Solution A Mix 60 volumes of *acetonitrile R1* and 40 volumes of a 6.7 g/l solution of *dipotassium hydrogen phosphate R* adjusted to pH 8.0 with *phosphoric acid R*.

Test solution Dissolve 53.0 mg of the substance to be examined in 2 ml of *acetonitrile R1* and dilute to 100.0 ml with solution A.

Reference solution (a) Dissolve 53.0 mg of *azithromycin CRS* in 2 ml of *acetonitrile R1* and dilute to 100.0 ml with solution A.

Reference solution (b) Dissolve 5 mg of the substance to be examined and 5 mg of *azithromycin impurity A CRS* in 0.5 ml of *acetonitrile R1* and dilute to 10 ml with solution A.

Column:

— *size*: l = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *octadecylsilyl vinyl polymer for chromatography R* (5 µm);

— *temperature*: 40 °C.

Mobile phase Mix 60 volumes of *acetonitrile R1* and 40 volumes of a 6.7 g/l solution of *dipotassium hydrogen phosphate R* adjusted to pH 11.0 with a 560 g/l solution of *potassium hydroxide R*.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 210 nm.

Injection 10 µl.

Run time 1.5 times the retention time of azithromycin.

Retention time Azithromycin = about 10 min.

System suitability Reference solution (b):

— *resolution*: minimum 3.0 between the peaks due to impurity A and azithromycin.

Calculate the percentage content of $C_{38}H_{72}N_2O_{12}$ from the declared content of *azithromycin CRS* .

STORAGE

In an airtight container .

IMPURITIES

Specified impurities A, B, C, D, E, F, G, H, I, J, L, M, N, O, P.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*)

Ph Eur

Dried Aluminium Hydroxide

General Notices

(Hydrated Aluminium Oxide, Ph Eur monograph 0311)

Action and use

Antacid.

Preparations

Aluminium Hydroxide Tablets

Co-magaldrox Oral Suspension

Co-magaldrox Tablets

Compound Magnesium Trisilicate Tablets

Ph Eur

DEFINITION

Content

47.0 per cent to 60.0 per cent of Al_2O_3 (M_r 102.0).

CHARACTERS

Appearance

White or almost white, amorphous powder.

Solubility

Practically insoluble in water. It dissolves in dilute mineral acids and in solutions of alkali hydroxides.

IDENTIFICATION

Solution S (see Tests) gives the reaction of aluminium *(2.3.1)*.

TESTS

Solution S

Dissolve 2.5 g in 15 ml of *hydrochloric acid R*, heating on a water-bath. Dilute to 100 ml with *distilled water R*.

Appearance of solution

Solution S is not more opalescent than reference suspension II *(2.2.1)* and not more intensely coloured than reference solution GY_6 *(2.2.2, Method II)*.

Alkaline impurities

Shake 1.0 g with 20 ml of *carbon dioxide-free water R* for 1 min and filter. To 10 ml of the filtrate add 0.1 ml of *phenolphthalein solution R*. Any pink colour disappears on the addition of 0.3 ml of *0.1 M hydrochloric acid* .

Neutralising capacity

Carry out the test at 37 °C. Disperse 0.5 g in 100 ml of *water R*, heat, add 100.0 ml of *0.1 M hydrochloric acid* , previously heated, and stir continuously; the pH *(2.2.3)* of the solution after 10 min, 15 min and 20 min is not less than 1.8, 2.3 and 3.0 respectively and is at no time greater than 4.5. Add 10.0 ml of *0.5 M hydrochloric acid* , previously heated, stir continuously for 1 h and titrate with *0.1 M sodium hydroxide* to pH 3.5; not more than 35.0 ml of *0.1 M sodium hydroxide* is required.

Chlorides *(2.4.4)*

Maximum 1 per cent.

Dissolve 0.1 g with heating in 10 ml of *dilute nitric acid R* and dilute to 100 ml with *water R*. Dilute 5 ml of the solution to 15 ml with *water R*.

Sulphates *(2.4.13)*

Maximum 1 per cent.

Dilute 4 ml of solution S to 100 ml with *distilled water R*.

Arsenic *(2.4.2, Method A)*

Maximum 4 ppm, determined on 10 ml of solution S.

Heavy metals *(2.4.8)*

Maximum 60 ppm.

Neutralise 20 ml of solution S with *concentrated ammonia R*, using *metanil yellow solution R* as an external indicator. Filter, if necessary, and dilute to 30 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using 10 ml of *lead standard solution (1 ppm Pb) R*.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^3 micro-organisms per gram, determined by plate count. It complies with the tests for enterobacteria and certain other gram-negative bacteria and with the test for *Escherichia coli (2.6.13)*.

ASSAY

Dissolve 0.800 g in 10 ml of *hydrochloric acid R1*, heating on a water-bath. Cool and dilute to 50.0 ml with *water R*. To 10.0 ml of the solution, add *dilute ammonia R1* until a precipitate begins to appear. Add the smallest quantity of *dilute hydrochloric acid R* needed to dissolve the precipitate and dilute to 20 ml with *water R*. Carry out the complexometric titration of aluminium *(2.5.11)*.

1 ml of *0.1 M sodium edetate* is equivalent to 5.098 mg of Al_2O_3.

STORAGE

In an airtight container, at a temperature not exceeding 30 °C.

Ph Eur

Dried Aluminium Phosphate

General Notices

Antacid.

Ph Eur

DEFINITION

Content

94.0 per cent to 102.0 per cent of $AlPO_4$ (M_r 122.0) (ignited substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Very slightly soluble in water, practically insoluble in alcohol. It dissolves in dilute solutions of mineral acids and alkali hydroxides.

IDENTIFICATION

A. Solution S (see Tests) gives reaction (b) of phosphates *(2.3.1)*.

B. Solution S gives the reaction of aluminium *(2.3.1)*.

TESTS

Solution S

Dissolve 2.00 g in *dilute hydrochloric acid R* and dilute to 100 ml with the same acid.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

5.5 to 7.2

Shake 4.0 g with *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Chlorides *(2.4.4)*

Maximum 1.3 per cent.

Dissolve 50.0 mg in 10 ml of *dilute nitric acid R* and dilute to 200 ml with *water R*. 15 ml of the solution complies with the limit test for chlorides.

Soluble phosphates

Maximum 1.0 per cent, calculated as PO_4^{3-}.

Test solution Stir 5.0 g with 150 ml of *water R* for 2 h. Filter and wash the filter with 50 ml of *water R*. Combine the filtrate and the washings and dilute to 250.0 ml with *water R*. Dilute 10.0 ml of this solution to 100.0 ml with *water R*.

Reference solution (a) Dissolve 2.86 g of *potassium dihydrogen phosphate R* in *water R* and dilute to 100 ml with the same solvent.

Reference solution (b) Dilute 1 ml of reference solution (a) to 5 ml with *water R*.

Reference solution (c) Dilute 3 ml of reference solution (a) to 5 ml with *water R*.

Treat each solution as follows. To 5.0 ml add 4 ml of *dilute sulphuric acid R*, 1 ml of *ammonium molybdate solution R*, 5 ml of *water R* and 2 ml of a solution containing 0.10 g of *4-methylaminophenol sulphate R*, 0.5 g of *anhydrous sodium sulphite R* and 20.0 g of *sodium metabisulphite R* in 100 ml of *water R*. Shake and allow to stand for 15 min. Dilute to 25.0 ml with *water R* and allow to stand for a further 15 min. Measure the absorbance *(2.2.25)* at 730 nm. Calculate the content of soluble phosphates from a calibration curve prepared using reference solutions (a), (b) and (c) after treatment.

Sulphates *(2.4.13)*

Maximum 0.6 per cent.

Dilute 8 ml of solution S to 100 ml with *distilled water R*. 15 ml of the solution complies with the limit test for sulphates.

Arsenic *(2.4.2)*

Maximum 1 ppm.

1.0 g complies with limit test A.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

Dissolve 1.0 g in *dilute hydrochloric acid R* and dilute to 20 ml with the same acid. 12 ml of the solution complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Loss on ignition

10.0 per cent to 20.0 per cent, determined on 1.000 g at 800 ± 50 °C.

Neutralising capacity

Add 0.50 g to 30 ml of *0.1 M hydrochloric acid* previously heated to 37 °C and maintain at this temperature for 15 min while stirring. The pH *(2.2.3)* of the mixture after 15 min at 37 °C is 2.0

to 2.5.

ASSAY

Dissolve 0.400 g in 10 ml of *dilute hydrochloric acid R* and dilute to 100.0 ml with *water R*. To 10.0 ml of the solution, add 10.0 ml of *0.1 M sodium edetate* and 30 ml of a mixture of equal volumes of *ammonium acetate solution R* and *dilute acetic acid R*. Boil for 3 min, then cool. Add 25 ml of *alcohol R* and 1 ml of a freshly prepared 0.25 g/l solution of *dithizone R* in *alcohol R*. Titrate the excess of sodium edetate with *0.1 M zinc sulphate* until the colour changes to pink.

1 ml of *0.1 M sodium edetate* is equivalent to 12.20 mg of $AlPO_4$.

STORAGE

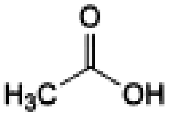
In an airtight container.

Ph Eur

Glacial Acetic Acid

General Notices

(Ph Eur monograph 0590)



$C_2H_4O_2$ 60.1 *64-19-7*

Ph Eur

DEFINITION

Content

99.0 per cent *m/m* to 100.5 per cent *m/m*.

CHARACTERS

Appearance

Crystalline mass or clear, colourless, volatile liquid.

Solubility

Miscible with water, with ethanol (96 per cent) and with methylene chloride.

IDENTIFICATION

A. A 100 g/l solution is strongly acid *(2.2.4)*.

B. To 0.03 ml add 3 ml of *water R* and neutralise with *dilute sodium hydroxide solution R*. The solution gives reaction (b) of acetates *(2.3.1)*.

TESTS

Solution S

Dilute 20 ml to 100 ml with *distilled water R*.

Appearance

The substance to be examined is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Freezing point *(2.2.18)*

Minimum 14.8 °C.

Reducing substances

To 5.0 ml add 10.0 ml of *water R* and mix. To 5.0 ml of this solution add 6 ml of *sulphuric acid R*, cool and add 2.0 ml of *0.0167 M potassium dichromate*. Allow to stand for 1 min and add 25 ml of *water R* and 1 ml of a freshly prepared 100 g/l solution of *potassium iodide R*. Titrate with *0.1 M sodium thiosulphate*, using 1.0 ml of *starch solution R* as indicator. Not less than 1.0 ml of *0.1 M sodium thiosulphate solution* is required.

Chlorides *(2.4.4)*

Maximum 25 mg/l.

Dilute 10 ml of solution S to 15 ml with *water R*.

Sulphates *(2.4.13)*

Maximum 50 mg/l, determined on solution S.

Iron *(2.4.9)*

Maximum 5 ppm.

Dilute 5.0 ml of solution A obtained in the test for heavy metals to 10.0 ml with *water R*.

Heavy metals *(2.4.8)*

Maximum 5 ppm.

Dissolve the residue obtained in the test for residue on evaporation by heating with 2 quantities, each of 15 ml, of *water R* and dilute to 50.0 ml (solution A). 12 ml of solution A complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

Residue on evaporation

Maximum 0.01 per cent.

Evaporate 20 g to dryness on a water-bath and dry at 100-105 °C. The residue weighs a maximum of 2.0 mg.

ASSAY

Weigh accurately a conical flask with a ground-glass stopper containing 25 ml of *water R*. Add 1.0 ml of the substance to be examined and weigh again accurately. Add 0.5 ml of *phenolphthalein solution R* and titrate with *1 M sodium hydroxide*.

1 ml of *1 M sodium hydroxide* is equivalent to 60.1 mg of $C_2H_4O_2$.

STORAGE

In an airtight container.

Ph Eur

Hydrated Aluminium Hydroxide for Adsorption

General Notices

(Ph Eur monograph 1664)

$[AlO(OH)],nH_2O$

Ph Eur

DEFINITION

Content

90.0 per cent to 110.0 per cent of the content of aluminium stated on the label.

NOTE: shake the gel vigorously for at least 30 s immediately before examining.

CHARACTERS

Appearance

White or almost white, translucent, viscous, colloidal gel. A supernatant may be formed upon standing.

Solubility

A clear or almost clear solution is obtained with alkali hydroxide solutions and mineral acids.

IDENTIFICATION

Solution S (see Tests) gives the reaction of aluminium.

To 10 ml of solution S add about 0.5 ml of *dilute hydrochloric acid R* and about 0.5 ml of *thioacetamide reagent R*. No precipitate is formed. Add dropwise 5 ml of *dilute sodium hydroxide solution R*. Allow to stand for 1 h. A gelatinous white precipitate is formed which dissolves upon addition of 5 ml of *dilute sodium hydroxide solution R*. Gradually add 5 ml of *ammonium chloride solution R* and allow to stand for 30 min. The gelatinous white precipitate is re-formed.

TESTS

Solution S

Add 1 g to 4 ml of *hydrochloric acid R*. Heat at 60 °C for 1 h, cool, dilute to 50 ml with *distilled water R* and filter if necessary.

pH (*2.2.3*)

5.5 to 8.5.

Adsorption power

Dilute the substance to be examined with *distilled water R* to obtain an aluminium concentration of 5 mg/ml. Prepare *bovine albumin R* solutions with the following concentrations of bovine albumin: 0.5 mg/ml, 1 mg/ml, 2 mg/ml, 3 mg/ml, 5 mg/ml and 10 mg/ml. If necessary, adjust the gel and the *bovine albumin R* solutions to pH 6.0 with *dilute hydrochloric acid R* or *dilute sodium hydroxide solution R*.

For adsorption, mix 1 part of the diluted gel with 4 parts of each of the solutions of *bovine albumin R* and allow to stand at room temperature for 1 h. During this time shake the mixture vigorously at least 5 times. Centrifuge or filter through a non-protein-retaining filter. Immediately determine the protein content (*2.5.33, Method 2*) of either the supernatant or the filtrate.

It complies with the test if no bovine albumin is detectable in the supernatant or filtrate of the 2 mg/ml *bovine albumin R* solution (maximum level of adsorption) and in the supernatant or filtrate of *bovine albumin R* solutions of lower concentrations. Solutions containing 3 mg/ml, 5 mg/ml and 10 mg/ml *bovine albumin R* may show bovine albumin in the supernatant or filtrate, proportional to the amount of bovine albumin in the solutions.

Sedimentation

If necessary, adjust the substance to be examined to pH 6.0 using *dilute hydrochloric acid R* or *dilute sodium hydroxide solution R.* Dilute with *distilled water R* to obtain an aluminium concentration of approximately 5 mg/ml. If the aluminium content of the substance to be examined is lower than 5 mg/ml, adjust to pH 6.0 and dilute with a 9 g/l solution of *sodium chloride R* to obtain an aluminium concentration of about 1 mg/ml. After shaking for at least 30 s, place 25 ml of the preparation in a 25 ml graduated cylinder and allow to stand for 24 h.

It complies with the test if the volume of the clear supernatant is less than 5 ml for the gel with an aluminium content of about 5 mg/ml.

It complies with the test if the volume of the clear supernatant is less than 20 ml for the gel with an aluminium content of about 1 mg/ml.

Chlorides (*2.4.4*)

Maximum 0.33 per cent.

Dissolve 0.5 g in 10 ml of *dilute nitric acid R* and dilute to 500 ml with *water R*.

Nitrates

Maximum 100 ppm.

Place 5 g in a test-tube immersed in ice-water, add 0.4 ml of a 100 g/l solution of *potassium chloride R*, 0.1 ml of *diphenylamine solution R* and, dropwise with shaking, 5 ml of *sulphuric acid R*. Transfer the tube to a water-bath at 50 °C. After 15 min, any blue colour in the solution is not more intense than that in a standard prepared at the same time and in the same manner using 5 ml of *nitrate standard solution (100 ppm* NO_3*) R.*

Sulphates (*2.4.13*)

Maximum 0.5 per cent.

Dilute 2 ml of solution S to 20 ml with *water R*.

Ammonium (*2.4.1, Method B*)

Maximum 50 ppm, determined on 1.0 g.

Prepare the standard using 0.5 ml of *ammonium standard solution (100 ppm NH_4) R*.

Arsenic (*2.4.2, Method A*)

Maximum 1 ppm, determined on 1 g.

Iron (*2.4.9*)

Maximum 15 ppm, determined on 0.67 g.

Heavy metals (*2.4.8*)

Maximum 20 ppm.

Dissolve 2.0 g in 10 ml of *dilute nitric acid R* and dilute to 20 ml with *water R.* The solution complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

Bacterial endotoxins (*2.6.14*)

Less than 5 IU of endotoxin per milligram of aluminium, if intended for use in the manufacture of an adsorbed product without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Dissolve 2.50 g in 10 ml of *hydrochloric acid R*, heating for 30 min at 100 °C on a water-bath. Cool and dilute to 20 ml with *water R*. To 10 ml of the solution, add *concentrated ammonia R* until a precipitate is obtained. Add the smallest quantity of *hydrochloric acid R* needed to dissolve the precipitate and dilute to 20 ml with *water R*. Carry out the complexometric titration of aluminium (*2.5.11*). Carry out a blank titration.

STORAGE

At a temperature not exceeding 30 °C. Do not allow to freeze. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

LABELLING

The label states the declared content of aluminium.

Ph Eur

Hydrogenated Arachis Oil

General Notices

Hydrogenated Peanut Oil
(Ph Eur monograph 1171)

Ph Eur

DEFINITION

Oil obtained by refining, bleaching, hydrogenating and deodorising oil obtained from the shelled seeds of *Arachis hypogaea* L. Each type of hydrogenated arachis oil is characterised by its nominal drop point.

CHARACTERS

Appearance

White or faintly yellowish, soft mass which melts to a clear, pale yellow liquid when heated.

Solubility

Practically insoluble in water, freely soluble in methylene chloride and in light petroleum (bp: 65-70 °C), very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

First identification A, B.

Second identification A, C.

A. Drop point (see Tests).

B. Identification of fatty oils by thin-layer chromatography *(2.3.2)*.

Results The chromatogram obtained is similar to the typical chromatogram for arachis oil.

C. Composition of fatty acids (see Tests).

TESTS

Drop point *(2.2.17)*

32 °C to 43 °C, and within 3 °C of the nominal value.

Acid value *(2.5.1)*

Maximum 0.5.

Dissolve 10.0 g in 50 ml of the prescribed solvent by heating on a water-bath.

Peroxide value ***(2.5.5, Method A)***

Maximum 5.0.

Dissolve 5.0 g in 30 ml of the prescribed solvent by heating on a water-bath.

Unsaponifiable matter ***(2.5.7)***

Maximum 1.0 per cent.

Alkaline impurities in fatty oils ***(2.4.19)***

It complies with the test.

Composition of fatty acids ***(2.4.22, Method A)***

Use the mixture of calibrating substances in Table 2.4.22.-3.

Column:
- *material:* fused silica;
- *size*: *l* = 25 m, Ø = 0.25 mm;
- *stationary phase*: *poly(cyanopropyl)siloxane R* (film thickness 0.2 µm).

Carrier gas *helium for chromatography R.*

Flow rate 0.7 ml/min.

Split ratio 1:100.

Temperature:
- *column*: 180 °C for 20 min;
- *injection port and detector*: 250 °C.

Detection Flame ionisation.

Composition of the fatty-acid fraction of the oil:
- *saturated fatty acids of chain length less than C_{14}*: maximum 0.5 per cent;
- *myristic acid*: maximum 0.5 per cent;
- *palmitic acid*: 7.0 per cent to 16.0 per cent;
- *stearic acid*: 3.0 per cent to 19.0 per cent;
- *oleic acid and isomers*: 54.0 per cent to 78.0 per cent;
- *linoleic acid and isomers*: maximum 10.0 per cent;
- *arachidic acid*: 1.0 per cent to 3.0 per cent;
- *eicosenoic acids*: maximum 2.1 per cent;
- *behenic acid*: 1.0 per cent to 5.0 per cent;
- *erucic acid and isomers*: maximum 0.5 per cent;
- *lignoceric acid*: 0.5 per cent to 3.0 per cent.

Nickel

Maximum 1.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method II)*.

Test solution Into a platinum or silica crucible previously tared after ignition introduce 5.0 g. Cautiously heat and introduce into the substance a wick formed from twisted ashless filter paper. Ignite the wick. When the substance has ignited stop heating. After combustion, ignite in a muffle furnace at about 600 ± 50 °C. Continue ignition until white ash is obtained. After cooling, take up the residue with 2 quantities, each of 2 ml, of *dilute hydrochloric acid R* and transfer into a 25 ml graduated flask. Add 0.3 ml of *nitric acid R* and dilute to 25.0 ml with *water R*.

Reference solutions Prepare 3 reference solutions by adding 1.0 ml, 2.0 ml and 4.0 ml of *nickel standard solution (0.2 ppm Ni) R* to 2.0 ml of the test solution and diluting to 10.0 ml with *water R*.

Source Nickel hollow-cathode lamp.

Wavelength 232 nm.

Atomisation device Graphite furnace.

Carrier gas *argon R.*

Water ***(2.5.12)***

Maximum 0.3 per cent, determined on 1.000 g.

STORAGE

Protected from light.

LABELLING

The label states the nominal drop point.

Ph Eur

Medical Air

General Notices

(Medicinal Air, Ph Eur monograph 1238)

When Medical Air is intended for use in a room in which magnetic resonance imaging (MRI) is being performed, the cylinder and fittings should be made from suitable non-ferromagnetic materials and labelled accordingly.

Ph Eur

DEFINITION

Compressed ambient air.

Content

20.4 per cent *V/V* to 21.4 per cent *V/V* of oxygen (O_2).

CHARACTERS

A colourless, odourless gas.

Solubility

At a temperature of 20 °C and a pressure of 101 kPa, 1 volume dissolves in about 50 volumes of water.

PRODUCTION

Carbon dioxide

Maximum 500 ppm *V/V*, determined using an infrared analyser *(2.5.24)*.

Gas to be examined Use the substance to be examined. It must be filtered to avoid stray light phenomena.

Reference gas (a) Use a mixture of 79 per cent *V/V* of *nitrogen R1* and 21 per cent *V/V* of *oxygen R* containing less than 1 ppm *V/V* of *carbon dioxide R1*.

Reference gas (b) Use a mixture of 79 per cent *V/V* of *nitrogen R1* and 21 per cent *V/V* of *oxygen R* containing 500 ppm *V/V* of *carbon dioxide R1*.

Calibrate the apparatus and set the sensitivity using reference gases (a) and (b). Measure the content of carbon dioxide in the gas to be examined.

Carbon monoxide

Maximum 5 ppm *V/V*, determined using an infrared analyser *(2.5.25)*.

Gas to be examined Use the substance to be examined. It must be filtered to avoid stray light phenomena.

Reference gas (a) Use a mixture of 79 per cent *V/V* of *nitrogen R1* and 21 per cent *V/V* of *oxygen R* containing less than 1 ppm *V/V* of *carbon monoxide R*.

Reference gas (b) Use a mixture of 79 per cent *V/V* of *nitrogen R1* and 21 per cent *V/V* of *oxygen R* containing 5 ppm *V/V* of *carbon monoxide R*.

Calibrate the apparatus and set the sensitivity using reference gases (a) and (b). Measure the content of carbon monoxide in the gas to be examined.

Sulphur dioxide

Maximum 1 ppm *V/V*, determined using an ultraviolet fluorescence analyser (Figure 1238.-1).

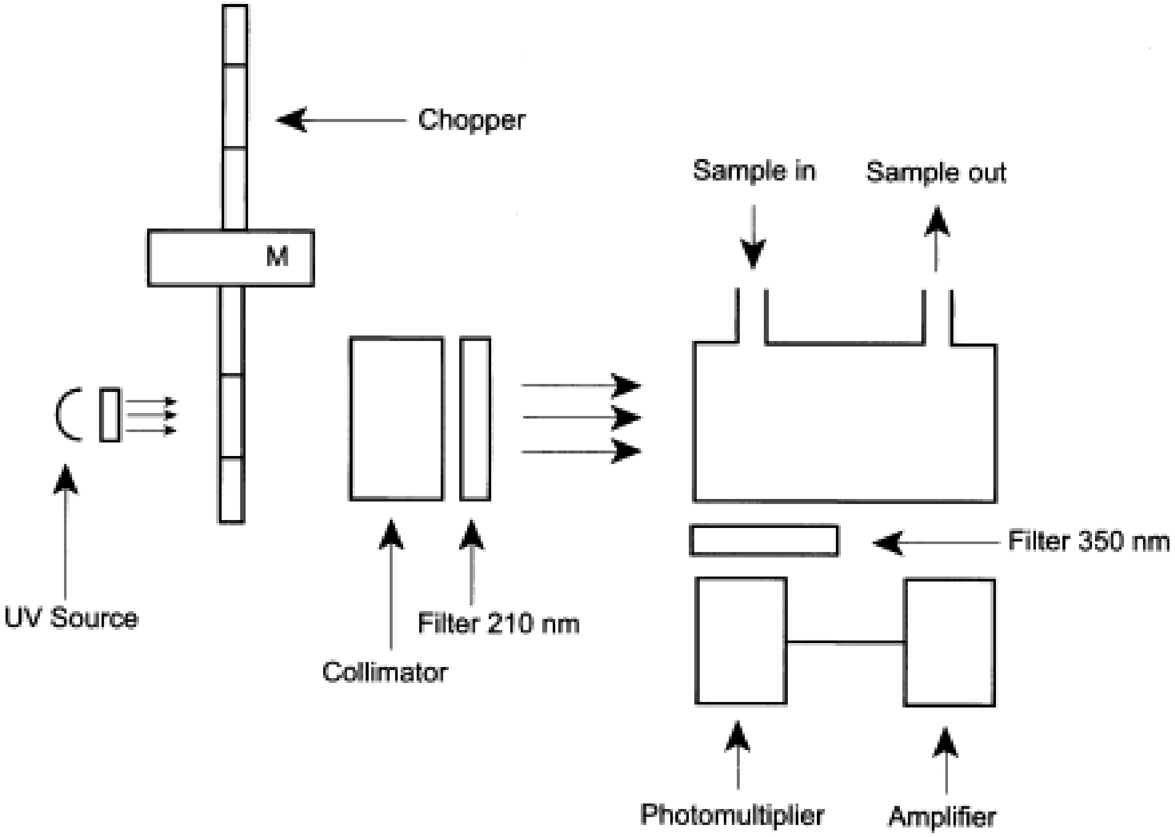


Figure 1238.-1. – *UV fluorescence analyser*

The apparatus consists of the following:

- — a system generating ultraviolet radiation with a wavelength of 210 nm, made up of an ultraviolet lamp, a collimator, and a selective filter; the beam is blocked periodically by a chopper rotating at high speeds;
- — a reaction chamber, through which flows the gas to be examined;
- — a system that detects radiation emitted at a wavelength of 350 nm, made up of a selective filter, a photomultiplier tube and an amplifier.

Gas to be examined Use the substance to be examined. It must be filtered.

Reference gas (a) Use a mixture of 79 per cent *V/V* of *nitrogen R1* and 21 per cent *V/V* of *oxygen R*.

Reference gas (b) Use a mixture of 79 per cent *V/V* of *nitrogen R1* and 21 per cent *V/V* of *oxygen R* containing 0.5 ppm *V/V* to 2 ppm *V/V* of *sulphur dioxide R1*.

Calibrate the apparatus and set the sensitivity using reference gases (a) and (b). Measure the content of sulphur dioxide in the gas to be examined.

Oil

Maximum 0.1 mg/m^3 calculated for atmospheric pressure and at 0 °C, determined using a measuring system such as described in Figure 1238.-2.

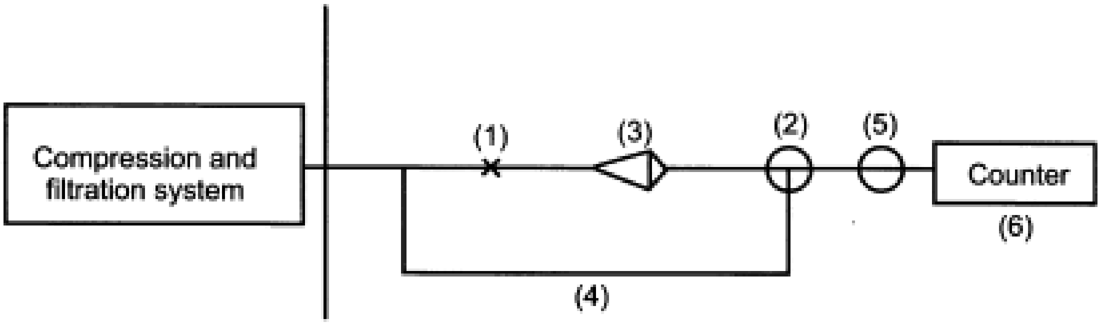

Figure 1238.-2. – *Measuring system for oil*

The apparatus consists of the following:

- an on-off valve (1),
- a three-way valve (2),
- an oil cone (3),
- a bypass line (4),
- a pressure-regulator (5),
- a flow-metering device (6).

All of the apparatus is cleaned beforehand, using trichlorotrifluoroethane R free from oil and grease.

Place a micro fibre-glass filter in the oil cone (3); this filter has the following characteristics: 100 per cent borosilicate glass without binder; resistant to heat treatment at 500 °C (to eliminate organic traces); 99.999 per cent retention efficiency for NaCl particles with a diameter of 0.6 µm. Close the on-off valve (1); the substance to be examined enters the bypass line (4) and purges the three-way valve (2), the pressure-regulator (5) and the flow-metering device (6). Close the inlet valve of the compression and filtration system: open the on-off valve (1) and set the three-way valve (2) to the position allowing passage between the oil cone and the pressure-regulator. Open the inlet valve and set the pressure-regulator (5) so that the flow indicated by the flow-metering device (6) is 20 litres/min. Pass 100.0 litres of the substance to be examined through the system.

Test solution Remove the micro fibre-glass filter and place in an airtight container. Carefully cut up the micro fibre-glass filter and place the pieces in 25.0 ml of *trichlorotrifluoroethane R*.

Reference solutions Prepare the reference solutions with quantities of oil (used for the lubrication of the compression system) ranging from 0.05 µg/ml to 0.5 µg/ml in *trichlorotrifluoroethane R*.

Measure the absorbance of the test solution and the reference solutions, using an appropriate infrared spectrophotometer, at 2960.3 cm^{-1}, 2927.7 cm^{-1} and 2855.0 cm^{-1}. The sum of the 3 absorbances gives the absorbance of the oil. Use potassium bromide cells with a pathlength of several centimetres.

Plot the calibration curve from the absorbances obtained with the reference solutions and determine the quantity of oil from this curve.

Nitrogen monoxide and nitrogen dioxide

Maximum 2 ppm *V/V* in total, determined using a chemiluminescence analyser *(2.5.26)*.

Gas to be examined Use the substance to be examined.

Reference gas (a) Use a mixture of 79 per cent *V/V* of *nitrogen R1* and 21 per cent *V/V* of *oxygen R* containing less than 0.05 ppm *V/V* of nitrogen monoxide and nitrogen dioxide.

Reference gas (b) Use a mixture of 2 ppm *V/V* of *nitrogen monoxide R* in *nitrogen R1*.

Calibrate the apparatus and set the sensitivity using reference gases (a) and (b). Measure the content of nitrogen monoxide and nitrogen dioxide in the gas to be examined.

Water

Maximum 67 ppm *V/V*, determined using an electrolytic hygrometer *(2.5.28)*, except where the competent authority decides that the following limit applies to medicinal air generated on-site and distributed in pipe-line systems operating at a pressure not greater than 10 bars and a temperature not less than 5 °C: maximum 870 ppm *V/V*, determined using an electrolytic hygrometer *(2.5.28)*.

Assay

Determine the concentration of oxygen in air using a paramagnetic analyser *(2.5.27)*.

IDENTIFICATION

First identification *C.*

Second identification *A, B.*

A. In a conical flask containing the substance to be examined, place a glowing wood splinter. The splinter remains glowing.

B. Use a gas burette (Figure 1238.-3) of 25 ml capacity in the form of a chamber in the middle of which is a tube graduated in 0.2 per cent between 19.0 per cent and 23.0 per cent, and isolated at each end by a tap with a conical barrel. The lower tap is joined to a tube with an olive-shaped nozzle and is used to introduce the gas into the apparatus. A cylindrical funnel above the upper tap is used to introduce the absorbent solution. Wash the burette with *water R* and dry. Open the 2 taps. Connect the nozzle to the source of the substance to be examined and set the flow rate to 1 litre/min. Flush the burette by passing the substance to be examined through it for 1 min. Close the lower tap of the burette and immediately afterwards the upper tap. Rapidly disconnect the burette from the source of the substance to be examined. Rapidly give a half turn to the upper tap to eliminate any excess pressure in the burette. Keeping the burette vertical, fill the funnel with a freshly prepared mixture of 21 ml of a 560 g/l solution of *potassium hydroxide R* and 130 ml of a 200 g/l solution of *sodium dithionite R*. Open the upper tap slowly. The solution absorbs the oxygen and enters the burette. Allow to stand for 10 min without shaking. Read the level of the liquid meniscus on the graduated part of the burette. This figure represents the percentage *V/V* of oxygen. The value read is 20.4 to 21.4.

C. It complies with the limits of the assay.

TESTS

Carbon dioxide

Maximum 500 ppm *V/V*, determined using a carbon dioxide detector tube *(2.1.6)*.

Sulphur dioxide

Maximum 1 ppm *V/V*, determined using a sulphur dioxide detector tube *(2.1.6)*.

Oil

Maximum 0.1 mg/m^3, determined using an oil detector tube *(2.1.6)*.

Nitrogen monoxide and nitrogen dioxide

Maximum 2 ppm *V/V*, determined using a nitrogen monoxide and nitrogen dioxide detector tube *(2.1.6)*.

Carbon monoxide

Maximum 5 ppm *V/V*, determined using a carbon monoxide detector tube *(2.1.6)*.

Water vapour

Maximum 67 ppm *V/V*, determined using a water vapour detector tube *(2.1.6)*, except where the competent authority decides that the following limit applies to medicinal air generated on-site and distributed in pipe-line systems operating at a pressure not greater than 10 bars and a temperature not less than 5 °C: maximum 870 ppm *V/V*, determined using a water vapour detector tube *(2.1.6)*.

Ph Eur

Refined Almond Oil

General Notices

(Ph Eur monograph 1064)

Ph Eur

DEFINITION

Fatty oil obtained from the ripe seeds of *Prunus dulcis* (Miller) D.A. Webb var. *dulcis* or *Prunus dulcis* (Miller) D.A. Webb var. *amara* (D.C.) Buchheim or a mixture of both varieties by cold expression. It is then refined. A suitable antioxidant may be added.

CHARACTERS

Appearance

Pale yellow, clear liquid.

Solubility

Slightly soluble in ethanol (96 per cent), miscible with light petroleum.

Relative density

About 0.916.

It solidifies at about - 18 °C.

IDENTIFICATION

A. Carry out the identification of fatty oils by thin-layer chromatography *(2.3.2)*. The chromatogram obtained is similar to the type chromatogram for almond oil.

B. Composition of fatty acids (see Tests).

TESTS

Specific absorbance *(2.2.25)*

0.2 to 6.0, determined at the absorption maximum between 264 nm and 276 nm.

Dissolve 0.100 g in *cyclohexane R* and dilute to 10.0 ml with the same solvent.

Acid value *(2.5.1)*

Maximum 0.5, determined on 5.0 g.

Peroxide value *(2.5.5)*

Maximum 5.0.

Unsaponifiable matter ***(2.5.7)***

Maximum 0.9 per cent, determined on 5.0 g.

Composition of fatty acids

Gas chromatography *(2.4.22, Method A)*. Use the mixture of calibrating substances in Table 2.4.22.-3.

Composition of the fatty-acid fraction of the oil:

- *saturated fatty acids of chain length less than C_{16}*: maximum 0.1 per cent,
- *palmitic acid* : 4.0 per cent to 9.0 per cent,
- *palmitoleic acid* (equivalent chain length on polyethyleneglycol adipate 16.3): maximum 0.8 per cent,
- *margaric acid*: maximum 0.2 per cent,
- *stearic acid* : maximum 3.0 per cent,
- *oleic acid* (equivalent chain length on polyethyleneglycol adipate 18.3): 62.0 per cent to 86.0 per cent,
- *linoleic acid* (equivalent chain length on polyethyleneglycol adipate 18.9): 20.0 per cent to 30.0 per cent,
- *linolenic acid* (equivalent chain length on polyethyleneglycol adipate 19.7): maximum 0.4 per cent,
- *arachidic acid*: maximum 0.2 per cent,
- *eicosenoic acid* (equivalent chain length on polyethyleneglycol adipate 20.3): maximum 0.3 per cent,
- *behenic acid*: maximum 0.2 per cent,
- *erucic acid* (equivalent chain length on polyethyleneglycol adipate 22.3): maximum 0.1 per cent.

Sterols ***(2.4.23)*****.**

Composition of the sterol fraction of the oil:

- *cholesterol* : maximum 0.7 per cent,
- *campesterol*: maximum 5.0 per cent,
- *stigmasterol* : maximum 4.0 per cent,
- β-*sitosterol* : 73.0 per cent to 87.0 per cent,
- Δ*5-avenasterol*: minimum 5.0 per cent,
- Δ*7-stigmastenol*: maximum 3.0 per cent,
- Δ*7-avenasterol*: maximum 3.0 per cent,
- *brassicasterol*: maximum 0.3 per cent.

Water ***(2.5.32)***

Maximum 0.1 per cent, determined on 5.000 g, if intended for use in the manufacture of parenteral dosage forms.

STORAGE

In a well-filled container, protected from light.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral dosage forms.

Ph Eur

Spray-dried Acacia

General Notices

(Ph Eur monograph 0308)

Ph Eur

DEFINITION

Spray-dried acacia is obtained from a solution of acacia.

CHARACTERS

It dissolves completely and rapidly, after about 20 min, in twice its mass of water. The liquid obtained is colourless or yellowish, dense, viscous, adhesive, translucent and weakly acid to blue litmus paper. Spray-dried acacia is practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Examined under a microscope, in *ethanol (96 per cent) R*, the powder is seen to consist predominantly of spheroidal particles about 4-40 µm in diameter, with a central cavity containing 1 or several air-bubbles; a few minute flat fragments are present. Only traces of starch granules are visible. No vegetable tissue is seen.

B. Examine the chromatograms obtained in the test for glucose and fructose.

Results The chromatogram obtained with the test solution shows 3 zones due to galactose, arabinose and rhamnose. No other important zones are visible, particularly in the upper part of the chromatogram.

C. Dissolve 1 g of the drug to be examined in 2 ml of *water R* by stirring frequently for 20 min. Add 2 ml of *ethanol (96 per cent) R*. After shaking a white gelatinous mucilage is formed which becomes fluid on adding 10 ml of *water R*.

TESTS

Solution S

Dissolve 3.0 g of the drug to be examined in 25 ml of *water R* by stirring for 10 min. Allow to stand for 20 min and dilute to 30 ml with *water R*.

Glucose and fructose

Thin-layer chromatography *(2.2.27)*.

Test solution To 0.100 g in a thick-walled centrifuge tube add 2 ml of a 100 g/l solution of *trifluoroacetic acid R*, shake vigorously to dissolve the forming gel, stopper the tube and heat the mixture at 120 °C for 1 h. Centrifuge the hydrolysate, transfer the clear supernatant carefully into a 50 ml flask, add 10 ml of *water R* and evaporate to dryness under reduced pressure. To the resulting clear film add 0.1 ml of *water R* and 0.9 ml of *methanol R*. Centrifuge to separate the amorphous precipitate. Dilute the supernatant, if necessary, to 1 ml with *methanol R*.

Reference solution Dissolve 10 mg of *arabinose R*, 10 mg of *galactose R*, 10 mg of *glucose R*, 10 mg of *rhamnose R* and 10 mg of *xylose R* in 1 ml of *water R* and dilute to 10 ml with *methanol R*.

Plate *TLC silica gel plate R.*

Mobile phase 16 g/l solution of *sodium dihydrogen phosphate R, butanol R, acetone R* (10:40:50 *V/V/V*).

Application 10 µl as bands.

Development A Over a path of 10 cm.

Drying A In a current of warm air for a few minutes.

Development B Over a path of 15 cm using the same mobile phase.

Detection Spray with *anisaldehyde solution R* and heat at 110 °C for 10 min.

Results The chromatogram obtained with the reference solution shows 5 clearly separated coloured zones due to galactose (greyish-green or green), glucose (grey), arabinose (yellowish-green), xylose (greenish-grey or yellowish-grey) and rhamnose (yellowish-green), in order of increasing R_F value. The chromatogram obtained with the test solution shows no grey zone and no greyish-green zone between the zones corresponding to galactose and arabinose in the chromatogram obtained with the reference solution.

Starch, dextrin and agar

To 10 ml of solution S previously boiled and cooled add 0.1 ml of *0.05 M iodine*. No blue or reddish-brown colour develops.

Sterculia gum

A. Place 0.2 g in a 10 ml ground-glass-stoppered cylinder graduated in 0.1 ml. Add 10 ml of *ethanol (60 per cent V/V) R* and shake. Any gel formed occupies not more than 1.5 ml.

B. To 1.0 g add 100 ml of *water R* and shake. Add 0.1 ml of *methyl red solution R*. Not more than 5.0 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Tannins

To 10 ml of solution S add 0.1 ml of *ferric chloride solution R1*. A gelatinous precipitate is formed, but neither the precipitate nor the liquid shows a dark blue colour.

Tragacanth

Examine the chromatograms obtained in the test for Glucose and fructose.

Results The chromatogram obtained with the test solution shows no greenish-grey or yellowish-grey zone corresponding to the zone of xylose in the chromatogram obtained with the reference solution.

Loss on drying *(2.2.32)*

Maximum 10.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Total ash *(2.4.16)*

Maximum 4.0 per cent.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^4 micro-organisms per gram, determined by plate count. It complies with the test for *Escherichia coli (2.6.13)*.

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristic may be relevant for spray-dried acacia used as a viscosity-increasing agent and/or suspending agent in aqueous preparations.

Apparent viscosity

Determine the dynamic viscosity using a capillary viscometer *(2.2.9)* or a rotating viscometer *(2.2.10)* on a 100 g/l solution of spray-dried acacia (dried substance).

Ph Eur

Strong Ammonia Solution

General Notices

(Concentrated Ammonia Solution, Ph Eur monograph 0877)

Preparation

Dilute Ammonia Solution

Ph Eur

DEFINITION

Content

25.0 per cent m/m to 30.0 per cent *m/m*.

CHARACTERS

Appearance

Clear, colourless liquid, very caustic.

Solubility

Miscible with water and with ethanol (96 per cent).

IDENTIFICATION

A. Relative density *(2.2.5)*: 0.892 to 0.910.

B. It is strongly alkaline *(2.2.4)*.

C. To 0.5 ml add 5 ml of *water R*. Bubble air through the solution and lead the gaseous mixture obtained over the surface of a solution containing 1 ml of *0.1 M hydrochloric acid* and 0.05 ml of *methyl red solution R*. The colour changes from red to yellow. Add 1 ml of *sodium cobaltinitrite solution R*. A yellow precipitate is formed.

TESTS

Solution S

Evaporate 220 ml almost to dryness on a water-bath. Cool, add 1 ml of *dilute acetic acid R* and dilute to 20 ml with *distilled water R*.

Appearance of solution

The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

To 2 ml add 8 ml of *water R*.

Oxidisable substances

Cautiously add, whilst cooling, 8.8 ml to 100 ml of *dilute sulphuric acid R*. Add 0.75 ml of *0.002 M potassium permanganate*. Allow to stand for 5 min. The solution remains faintly pink.

Pyridine and related substances

Maximum 2 ppm, calculated as pyridine.

Measure the absorbance *(2.2.25)* at 252 nm using *water R* as the compensation liquid. The absorbance is not greater than 0.06.

Carbonates

Maximum 60 ppm.

To 10 ml in a test-tube with a ground-glass neck add 10 ml of *calcium hydroxide solution R*. Stopper immediately and mix. Any opalescence in the solution is not more intense than that in a standard prepared at the same time and in the same manner using 10 ml of a 0.1 g/l solution of *anhydrous sodium carbonate R*.

Chlorides *(2.4.4)*

Maximum 1 ppm.

Dilute 5 ml of solution S to 15 ml with *water R*.

Sulphates *(2.4.13)*

Maximum 5 ppm.

Dilute 3 ml of solution S to 15 ml with *distilled water R*.

Iron *(2.4.9)*

Maximum 0.25 ppm.

Dilute 4 ml of solution S to 10 ml with *water R*.

Heavy metals *(2.4.8)*

Maximum 1 ppm.

Dilute 4 ml of solution S to 20 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R.*

Residue on evaporation

Maximum 20 mg/l.

Evaporate 50 ml to dryness on a water-bath and dry at 100-105 °C for 1 h. The residue weighs a maximum of 1 mg.

ASSAY

Weigh accurately a flask with a ground-glass neck containing 50.0 ml of *1 M hydrochloric acid*. Add 2 ml of the substance to be examined and re-weigh. Add 0.1 ml of *methyl red solution R* as indicator. Titrate with *1 M sodium hydroxide* until the colour changes from red to yellow.

1 ml of *1 M hydrochloric acid* is equivalent to 17.03 mg of NH_3.

STORAGE

Protected from air, at a temperature not exceeding 20 °C.

Ph Eur

Substances for Pharmaceutical Use

General Notices

(Ph Eur monograph 2034)

Ph Eur

The statements in this monograph are intended to be read in conjunction with individual monographs on substances in the Pharmacopoeia. Application of the monograph to other substances may be decided by the competent authority.

DEFINITION

Substances for pharmaceutical use are any organic or inorganic substances that are used as active substances or excipients for the production of medicinal products for human or veterinary use. They may be obtained from natural sources or produced by extraction from raw materials, fermentation or synthesis.

This monograph does not apply to herbal drugs, herbal drug preparations or extracts, which are the subject of separate general monographs [*Herbal drugs (1433), Herbal drug preparations (1434), Extracts (0765)*].

Where medicinal products are manufactured using substances for pharmaceutical use of human or animal origin, the requirements of chapter *5.1.7. Viral safety* apply.

Substances for pharmaceutical use may be used as such or as starting materials for subsequent formulation to prepare medicinal products. Depending on the formulation, certain substances may be used either as active substances or as excipients. Solid substances may be compacted, coated, granulated, powdered to a certain fineness or processed in other ways. Processing with addition of excipients is permitted only where this is specifically stated in the Definition of the individual monograph.

Substance for pharmaceutical use of special grade Unless otherwise indicated or restricted in the individual monographs, a substance for pharmaceutical use is intended for human and veterinary use, and is of appropriate quality for the manufacture of all dosage forms in which it can be used.

Polymorphism Individual monographs do not usually specify crystalline or amorphous forms, unless bioavailability is affected. All forms of a substance for pharmaceutical use comply with the requirements of the monograph, unless otherwise indicated.

PRODUCTION

Substances for pharmaceutical use are manufactured by procedures that are designed to ensure a consistent quality and comply with the requirements of the individual monograph or approved specification.

The provisions of general chapter *5.10* apply to the control of impurities in substances for pharmaceutical use.

Whether or not it is specifically stated in the individual monograph that the substance for pharmaceutical use:

— is a recombinant protein or another substance obtained as a direct gene product based on genetic modification, where applicable, the substance also complies with the requirements of the general monograph on *Products of recombinant DNA technology (0784)*;

— is obtained from animals susceptible to transmissible spongiform encephalopathies other than by experimental challenge, where applicable, the substance also complies with the requirements of the general monograph on *Products with risk of transmitting agents of animal spongiform encephalopathies (1483)*;

— is a substance derived from a fermentation process, whether or not the micro-organisms involved are modified by traditional procedures or recombinant DNA (rDNA) technology, where applicable, the substance complies with the requirements of the general monograph on *Products of fermentation (1468)*.

If solvents are used during production, they are of suitable quality. In addition, their toxicity and their residual level are taken into consideration *(5.4)*. If water is used during production, it is of suitable quality.

If substances are produced or processed to yield a certain form or grade, that specific form or grade of the substance complies with the requirements of the monograph. Certain functionality-related tests may be described to control properties that may influence the suitability of the substance and subsequently the properties of dosage forms prepared from it.

Powdered substances may be processed to obtain a certain degree of fineness *(2.9.12)*.

Compacted substances are processed to increase the particle size or to obtain particles of a specific form and/or to obtain a substance with a higher bulk density.

Coated active substances consist of particles of the active substance coated with one or more suitable excipients.

Granulated active substances are particles of a specified size and/or form produced from the active substance by granulation directly or with one or more suitable excipients.

If substances are processed with excipients, these excipients comply with the requirements of the relevant monograph or, where no such monograph exists, the approved specification.

CHARACTERS

The statements under the heading Characters (e.g. statements about the solubility or a decomposition point) are not to be interpreted in a strict sense and are not requirements. They are given for information.

Where a substance may show polymorphism, this may be stated under Characters in order to draw this to the attention of the user who may have to take this characteristic into consideration during formulation of a preparation.

IDENTIFICATION

Where under Identification an individual monograph contains subdivisions entitled *First identification* and *Second identification*, the test or tests that constitute the *First identification* may be used in all circumstances. The test or tests that constitute the *Second identification* may be used for identification, provided it can be demonstrated that the substance is fully traceable to a batch certified to comply with all the other requirements of the monograph.

TESTS

Polymorphism *(5.9)*

If the nature of a crystalline or amorphous form imposes restrictions on its use in preparations, the nature of the specific crystalline or amorphous form is identified, its morphology is adequately controlled and its identity is stated on the label.

Related substances

Unless otherwise prescribed or justified and authorised, organic impurities in active substances are to be reported, identified wherever possible, and qualified as indicated in Table 2034.-1.

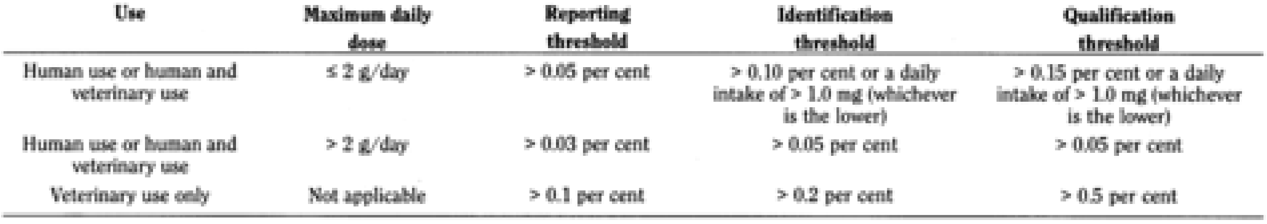

Table 2034.-1. – *Reporting, identification and qualification of organic impurities in active substances*

Use	Maximum daily dose	Reporting threshold	Identification threshold	Qualification threshold
Human use or human and veterinary use	≤ 2 g/day	> 0.05 per cent	> 0.10 per cent or a daily intake of > 1.0 mg (whichever is the lower)	> 0.15 per cent or a daily intake of > 1.0 mg (whichever is the lower)
Human use or human and veterinary use	> 2 g/day	> 0.03 per cent	> 0.05 per cent	> 0.05 per cent
Veterinary use only	Not applicable	> 0.1 per cent	> 0.2 per cent	> 0.5 per cent

Specific thresholds may be applied for impurities known to be unusually potent or to produce toxic or unexpected pharmacological effects.

If the individual monograph does not provide suitable control for a new impurity, a suitable test for control must be developed and included in the specification for the substance.

The requirements above do not apply to biological and biotechnological products, peptides, oligonucleotides, radiopharmaceuticals, products of fermentation and semi-synthetic products derived therefrom, to crude products of animal or plant origin or herbal products.

Residual solvents

Are limited according to the principles defined in chapter *5.4*, using general method *2.4.24* or another suitable method. Where a quantitative determination of a residual solvent is carried out and a test for loss on drying is not carried out, the content of residual solvent is taken into account for calculation of the assay content of the substance, the specific optical rotation and the specific absorbance.

Microbiological quality

Individual monographs give acceptance criteria for microbiological quality wherever such control is necessary. Table 5.1.4.-2. – *Acceptance criteria for microbiological quality of non-sterile substances for pharmaceutical use in chapter* 5.1.4*. Microbiological quality of pharmaceutical preparations* gives recommendations on microbiological quality that are of general relevance for substances subject to microbial contamination. Depending on the nature of the substance and its intended use, different acceptance criteria may be justified.

Sterility *(2.6.1)*

If intended for use in the manufacture of sterile dosage forms without a further appropriate sterilisation procedure, or if offered as sterile grade, the substance for pharmaceutical use complies with the test for sterility.

Bacterial endotoxins *(2.6.14)*

If offered as bacterial endotoxin-free grade, the substance for pharmaceutical use complies with the test for bacterial endotoxins. The limit and test method (if not gelation method A) are stated in the individual monograph. The limit is calculated in accordance with *Test for bacterial endotoxins: guidelines (2.6.14)*, unless a lower limit is justified from results from production batches or is required by the competent authority. Where a test for bacterial endotoxins is prescribed, a test for pyrogens is not required.

Pyrogens *(2.6.8)*

If the test for pyrogens is justified rather than the test for bacterial endotoxins and if a pyrogen-free grade is offered, the substance for pharmaceutical use complies with the test for pyrogens. The limit and test method are stated in the individual monograph or approved by the competent authority. Based on appropriate test validation for bacterial endotoxins and pyrogens, the test for bacterial endotoxins may replace the test for pyrogens.

Additional properties

Control of additional properties (e.g. physical characteristics, functionality-related characteristics) may be necessary for individual manufacturing processes or formulations. Grades (such as sterile, endotoxin-free, pyrogen-free) may be produced with a view to manufacture of preparations for parenteral administration or other dosage forms and appropriate requirements may be specified in an individual monograph.

ASSAY

Unless justified and authorised, contents of substances for pharmaceutical use are determined. Suitable methods are used.

LABELLING

In general, labelling is subject to supranational and national regulation and to international agreements. The statements under the heading Labelling therefore are not comprehensive and, moreover, for the purposes of the Pharmacopoeia only those statements that are necessary to demonstrate compliance or non-compliance with the monograph are mandatory. Any other labelling statements are included as recommendations. When the term 'label' is used in the Pharmacopoeia, the labelling statements may appear on the container, the package, a leaflet accompanying the package or a certificate of analysis accompanying the article, as decided by the competent authority.

Where appropriate, the label states that the substance is:

— intended for a specific use;

— of a distinct crystalline form;

— of a specific degree of fineness;

— compacted;

— coated;

— granulated;

— sterile;

— free from bacterial endotoxins;

— free from pyrogens;

— containing gliding agents.

Where applicable, the label states:

— the degree of hydration,

— the name and concentration of any added substance (for example, an antimicrobial preservative or an antioxidant).

Where an active substance is processed with addition of an excipient or excipients, the label states the excipient(s) used and the content of active substance and excipient(s).

Ph Eur

Synthetic Air

General Notices

(Synthetic Medicinal Air, Ph Eur monograph 1684)

When Synthetic Air is intended for use in a room in which magnetic resonance imaging (MRI) is being performed, the cylinder and fittings should be made from suitable non-ferromagnetic materials and labelled accordingly.

Ph Eur

DEFINITION

Mixture of *Nitrogen (1247)* and *Oxygen (0417)*.

Content

95.0 per cent to 105.0 per cent of the nominal value which is between 21.0 per cent *V/V* to 22.5 per cent *V/V* of oxygen (O_2).

CHARACTERS

Colourless and odourless gas.

Solubility

At a temperature of 20 °C and a pressure of 101 kPa, 1 volume dissolves in about 50 volumes of water.

PRODUCTION

Water *(2.5.28)*

Maximum 67 ppm *V/V*.

Assay *(2.5.27)*

Carry out the determination of oxygen in gases.

IDENTIFICATION

First identification *C.*

Second identification *A, B.*

A. In a conical flask containing the substance to be examined, place a glowing splinter of wood. The splinter remains glowing.

B. Use a gas burette (Figure 1684.-1) of 25 ml capacity in the form of a chamber, in the middle of which is a tube graduated in 0.2 per cent between 19.0 per cent and 23.0 per cent, and isolated at each end by a tap with a conical barrel. The lower tap is joined to a tube with an olive-shaped nozzle and is used to introduce the gas into the apparatus. A cylindrical funnel above the upper tap is used to introduce the absorbent solution. Wash the burette with *water R* and dry. Open both taps. Connect the nozzle to the source of the substance to be examined and set the flow rate to 1 litre/min. Flush the burette by passing the substance to be examined through it for 1 min. Close the lower tap of the burette and immediately afterwards the upper tap. Rapidly disconnect the burette from the source of the substance to be examined. Rapidly give a half turn of the upper tap to eliminate any excess pressure in the burette. Keeping the burette vertical, fill the funnel with a freshly prepared mixture of 21 ml of a 560 g/l solution of *potassium hydroxide R* and 130 ml of a 200 g/l solution of *sodium dithionite R*. Open the upper tap slowly. The solution absorbs the oxygen and enters the burette. Allow to stand for 10 min without shaking. Read the level of the liquid meniscus on the graduated part of the burette. This figure represents the percentage *V/V* of oxygen. The value read is 95.0 per cent to 105.0 per cent of the nominal value.

C. It complies with the limits of the assay.

TESTS

Water vapour

Maximum 67 ppm *V/V*, determined using a water vapour detector tube *(2.1.6)*.

STORAGE

As a compressed gas in suitable containers complying with the legal regulations or as a compressed gas supplied by a pipe network, after mixing of the components.

LABELLING

The label states the nominal content of O_2 in per cent *V/V*.

IMPURITIES

Ph Eur

Virgin Almond Oil

General Notices

Almond Oil
(Ph Eur monograph 0261)

Preparation

Almond Oil Ear Drops

Ph Eur

DEFINITION

Fatty oil obtained by cold expression from the ripe seeds of *Prunus dulcis* (Miller) D.A. Webb var. *dulcis* or *Prunus dulcis* (Miller) D.A. Webb var. *amara* (D.C.) Buchheim or a mixture of both varieties.

CHARACTERS

Appearance

Yellow, clear liquid.

Solubility

Slightly soluble in ethanol (96 per cent), miscible with light petroleum.

Relative density

About 0.916.

It solidifies at about - 18 °C.

IDENTIFICATION

First identification A, C.

Second identification A, B.

A. It complies with the test for absorbance (see Tests).

B. Carry out the identification of fatty oils by thin-layer chromatography *(2.3.2)*. The chromatogram obtained is comparable with the typical chromatogram for almond oil.

C. It complies with the test for composition of fatty acids (see Tests).

TESTS

Absorbance *(2.2.25)*

Maximum 0.2 by measuring at the absorption maximum between 264 nm and 276 nm. The ratio of the absorbance measured at 232 nm to that measured at 270 nm is greater than 7.

Dissolve 0.100 g in *cyclohexane R* and dilute to 10.0 ml with the same solvent.

Acid value *(2.5.1)*

Maximum 2.0, determined on 5.0 g.

Peroxide value *(2.5.5)*

Maximum 15.0.

Unsaponifiable matter *(2.5.7)*

Maximum 0.9 per cent, determined on 5.0 g.

Composition of fatty acids

Gas chromatography *(2.4.22, Method A)*. Use the mixture of calibrating substances in Table 2.4.22.-3.

Composition of the fatty-acid fraction of the oil:

— *saturated fatty acids of chain length less than* C_{16}: maximum 0.1 per cent,

— *palmitic acid* : 4.0 per cent to 9.0 per cent,

— *palmitoleic acid* (equivalent chain length on polyethyleneglycol adipate 16.3): maximum 0.8 per cent,

— *margaric acid*: maximum 0.2 per cent,

— *stearic acid* : maximum 3.0 per cent,

— *oleic acid* (equivalent chain length on polyethyleneglycol adipate 18.3): 62.0 per cent to 86.0 per cent,

— *linoleic acid* (equivalent chain length on polyethyleneglycol adipate 18.9): 20.0 per cent to 30.0 per cent,

— *linolenic acid* (equivalent chain length on polyethyleneglycol adipate 19.7): maximum 0.4 per cent,

— *arachidic acid*: maximum 0.2 per cent,

— *eicosenoic acid* (equivalent chain length on polyethyleneglycol adipate 20.3): maximum 0.3 per cent,

— *behenic acid*: maximum 0.2 per cent,

— *erucic acid* (equivalent chain length on polyethyleneglycol adipate 22.3): maximum 0.1 per cent.

Sterols *(2.4.23)*.

Composition of sterol fraction of the oil:

— *cholesterol* : maximum 0.7 per cent,

— *campesterol*: maximum 4.0 per cent,

— *stigmasterol* : maximum 3.0 per cent,

— β-*sitosterol* : 73.0 per cent to 87.0 per cent,

— Δ*5-avenasterol*: minimum 10.0 per cent,

— Δ*7-stigmastenol*: maximum 3.0 per cent,

— Δ*7-avenasterol*: maximum 3.0 per cent,

— *brassicasterol*: maximum 0.3 per cent.

STORAGE

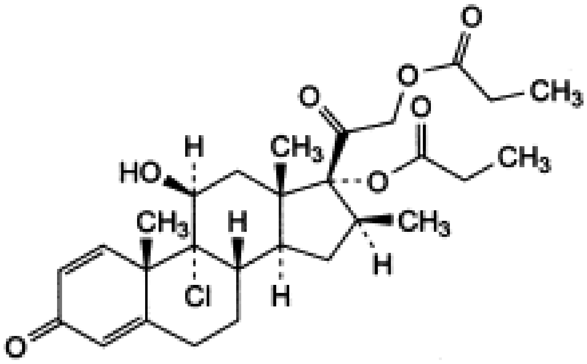
In a well-filled container, protected from light.

Ph Eur

Anhydrous Beclometasone Dipropionate

General Notices

(Ph Eur monograph 0654)



$C_{28}H_{37}ClO_7$ 521.1 *5534-09-8*

Action and use

Glucocorticoid.

Preparations

Beclometasone Cream

Beclometasone Nasal Spray

Beclometasone Ointment

Beclometasone Powder for Inhalation

Beclometasone Pressurised Inhalation

Ph Eur

DEFINITION

9-Chloro-11β-hydroxy-16β-methyl-3,20-dioxopregna-1,4-diene-17,21-diyl dipropanoate.

Content

96.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in acetone, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *anhydrous beclometasone dipropionate CRS*.

B. Treat 25 mg by the oxygen-flask method *(2.5.10)*. Use a mixture of 1 ml of *1 M sodium hydroxide* and 20 ml of *water R* to absorb the combustion products. The solution gives reaction (a) of chlorides *(2.3.1)*.

C. Loss on drying (see Tests).

TESTS

Specific optical rotation *(2.2.7)*:

+ 108 to + 115 (dried substance).

Dissolve 0.100 g in *ethanol (96 per cent) R* and dilute to 10.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29).*

Test solution (a) Dissolve 50.0 mg of the substance to be examined in *acetonitrile R* and dilute to 50.0 ml with the same solvent.

Test solution (b) Dilute 1.0 ml of test solution (a) to 50.0 ml with *acetonitrile R.*

Reference solution (a) Dilute 5.0 ml of test solution (b) to 100.0 ml with *acetonitrile R*.

Reference solution (b) Dissolve 5 mg of *beclometasone dipropionate for system suitability CRS* (containing impurity D) in *acetonitrile R* and dilute to 5 ml with the same solvent.

Reference solution (c) Dissolve 5 mg of *beclometasone dipropionate for peak identification CRS* (containing impurities A, B, C, L and M) in *acetonitrile R* and dilute to 5 ml with the same solvent.

Reference solution (d) Dissolve 50.0 mg of *anhydrous beclometasone dipropionate CRS* in *acetonitrile R* and dilute to 50.0 ml with the same solvent. Dilute 1.0 ml to 50.0 ml with *acetonitrile R*.

Column:
— *size*: *l* = 0.25 m, Ø = 4.0 mm;

— *stationary phase: end-capped octadecylsilyl silica gel for chromatography R* (5 µm);

— *temperature*: 30 °C.

Mobile phase *acetonitrile R, water R* (45:55 *V/V*).

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 238 nm.

Injection 20 µl of test solution (a) and reference solutions (a), (b) and (c).

Run time 2.5 times the retention time of beclometasone dipropionate.

Identification of impurities Use the chromatogram supplied with *beclometasone dipropionate for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B, C, L and M; use the chromatogram supplied with *beclometasone dipropionate for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peak due to impurity D; if necessary, use the responses of impurities D and M detected at 284 nm to distinguish the 2 impurities: the response of impurity D decreases and that of impurity M increases.

Relative retention With reference to beclometasone dipropionate (retention time = about 29 min): impurity A = about 0.3; impurity B = about 0.6; impurity D = about 1.1; impurity M = about 1.1; impurity L = about 1.3; impurity C = about 1.6.

System suitability Reference solution (b):

— *peak-to-valley ratio*: minimum 2.0, where H_p = height above the baseline of the peak due to impurity D and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to beclometasone dipropionate.

Limits:

— *correction factor*: for the calculation of content, multiply the peak area of impurity D by 1.3;

— *impurities B, L*: for each impurity, not more than 8 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.8 per cent);

— *impurity M*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *impurities A, D*: for each impurity, not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *impurity C:* not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— t*otal*: not more than 15 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.5 per cent);

— *disregard limit:* 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Mobile phase *water R, acetonitrile R* (40:60 *V/V*).

Flow rate 1.0 ml/min.

Injection Test solution (b) and reference solution (d).

Calculate the percentage content of $C_{28}H_{37}ClO_7$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities: A, B, C, D, L, M.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034).* It is therefore not necessary to identify these impurities for demonstration of compliance. Ph Eur

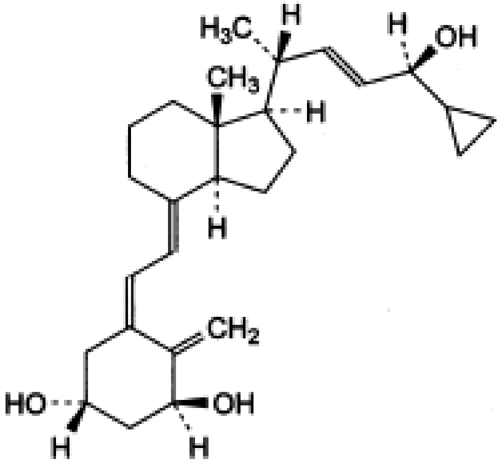
Anhydrous Calcipotriol

General Notices

(Ph Eur monograph 2011)



$C_{27}H_{40}O_3$ 412.6 *112828-00-9*

Action and use

Vitamin D analogue.

Ph Eur

DEFINITION

(*5Z,7E,22E,24S*)-24-Cyclopropyl-9,10-secochola-5,7,10(19),22-tetraene-1α,3β,24-triol.

Content

95.5 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in ethanol (96 per cent), slightly soluble in methylene chloride.

It is sensitive to heat and light.

A reversible isomerisation to pre-calcipotriol takes place in solution, depending on temperature and time. The activity is due to both compounds.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *Ph. Eur. reference spectrum of anhydrous calcipotriol.*

B. Loss on drying (see Tests).

Carry out the tests for related substances and the assay as rapidly as possible and protected from actinic light and air.

TESTS

Related substances

A. Thin-layer chromatography *(2.2.27)* .

Solution A To 1 ml of *triethylamine R* add 9 ml of *chloroform R* .

Test solution Dissolve 1 mg of the substance to be examined in 100 µl of solution A.

Reference solution (a) To 10 µl of the test solution add 990 µl of solution A.

Reference solution (b) To 250 µl of reference solution (a) add 750 µl of solution A.

Reference solution (c) To 100 µl of reference solution (a) add 900 µl of solution A.

Reference solution (d) Place 2 mg of the substance to be examined in a vial and dissolve in 200 µl of solution A. Close the vial and keep it in a water bath at 60 °C for 2 h.

Plate *TLC silica gel F_{254} plate R .*

Mobile phase *2-methylpropanol R, methylene chloride R* (20:80 V/V).

Application 10 µl of the test solution and reference solutions (b), (c) and (d).

Development Over 2/3 of the plate.

Drying In air, then at 140 °C for 10 min.

Detection Spray the hot plate with an *alcoholic solution of sulphuric acid R* , dry at 140 °C for not more than 1 min and examine in ultraviolet light at 366 nm.

Relative retention With reference to calcipotriol (R_F = about 0.4): impurity G = about 0.4; impurity H = about 0.4; pre-calcipotriol = about 0.9; impurity A = about 1.2.

System suitability Reference solution (d):

— the chromatogram shows a secondary spot due to pre-calcipotriol.

Limits:

— *impurity A*: any spot due to impurity A is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.25 per cent),

— *impurities G, H*: any spot due to impurity G or H is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.25 per cent for the sum),

— *any other impurity*: any other spot is not more intense than the spot in the chromatogram obtained with reference solution (c) (0.1 per cent).

B. Liquid chromatography *(2.2.29)* .

Solution A. Dissolve 1.32 g of *ammonium phosphate R* in *water R* and dilute to 10.0 ml with the same solvent.

Solvent mixture solution A, *water R, methanol R* (3:297:700 *V/V/V*).

Test solution (a) Dissolve 2.00 mg of the substance to be examined in the solvent mixture and dilute to 5.0 ml with the solvent mixture.

Test solution (b) Dissolve 2.00 mg of the substance to be examined in the solvent mixture and dilute to 20.0 ml with the same solvent mixture.

Reference solution (a) Dilute 1.0 ml of test solution (a) to 100.0 ml with the solvent mixture.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 10.0 ml with the solvent mixture.

Reference solution (c) Dissolve 1.0 mg of *calcipotriol monohydrate CRS* (containing impurities B, C and D) in the solvent mixture and dilute to 2.5 ml with the solvent mixture.

Reference solution (d) Dissolve 2.00 mg of *calcipotriol monohydrate CRS* in the solvent mixture and dilute to 20.0 ml with the solvent mixture.

Column:

— *size*: *l* = 0.10 m, Ø = 4.0 mm,

— *stationary phase: octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase *water R, methanol R* (30:70 *V/V*).

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 264 nm.

Injection 20 µl of test solution (a) and reference solutions (a), (b) and (c).

Run time Twice the retention time of calcipotriol.

Relative retention With reference to calcipotriol (retention time = about 13.5 min): impurity B = about 0.86; impurity C = about 0.92; impurity D = about 1.3.

System suitability Reference solution (c):

— *peak-to-valley ratio* : minimum 1.5, where H_p = height above the baseline of the peak due to impurity C and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to calcipotriol,

— the chromatogram obtained is similar to the chromatogram supplied with *calcipotriol monohydrate CRS*.

Limits:

— *impurity B*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),

— *impurities C, D*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent),

— *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),

— *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (2.5 per cent),

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying

Maximum 1.0 per cent, determined on 5 mg by thermogravimetry *(2.2.34)* . Heat to 105 °C at a rate of 10 °C/min and maintain at 105 °C for 60 min.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

Injection Test solution (b) and reference solution (d).

Calculate the percentage content of $C_{27}H_{40}O_3$ from the areas of the peaks and the declared content of *calcipotriol monohydrate CRS*.

STORAGE

In an airtight container , protected from light at - 20 °C or below.

IMPURITIES

Specified impurities A, B, C, D, G, H.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. Ph Eur

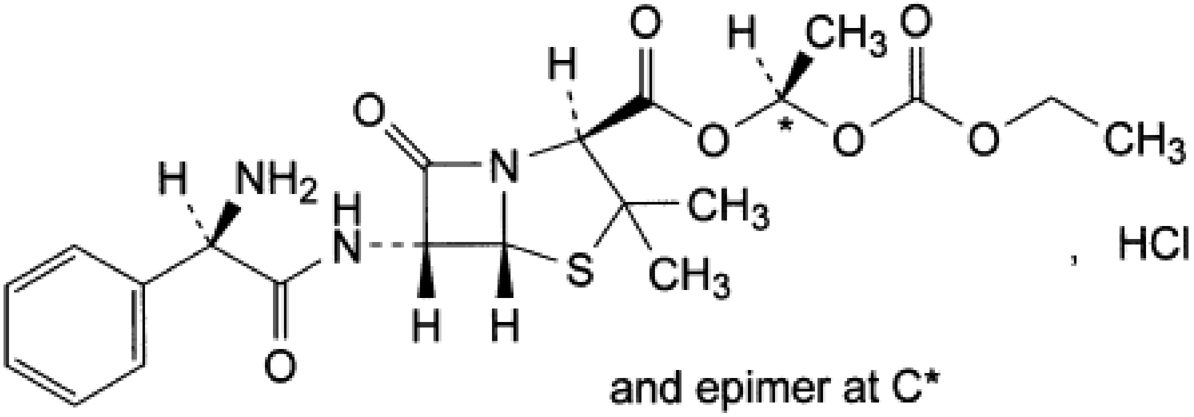
Bacampicillin Hydrochloride

General Notices

(Ph Eur monograph 0808)



and epimer at C*

$C_{21}H_{27}N_3O_7S$, HCl 502.0 *37661-08-8*

Action and use

Penicillin antibacterial.

Ph Eur

DEFINITION

(1*RS*)-1-[(Ethoxycarbonyl)oxy]ethyl (2*S*,5*R*,6*R*)-6-[[(2*R*)-2-amino-2-phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate hydrochloride.

Semi-synthetic product derived from a fermentation product.

Content

95.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder or granules, hygroscopic.

Solubility

Soluble in water, freely soluble in ethanol (96 per cent), soluble in methylene chloride.

IDENTIFICATION

First identification A, D.

Second identification B, C, D.

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison *bacampicillin hydrochloride CRS.*

B. Thin-layer chromatography (*2.2.27*).

Test solution Dissolve 10 mg of the substance to be examined in 2 ml of *methanol R.*

Reference solution (a) Dissolve 10 mg of *bacampicillin hydrochloride CRS* in 2 ml of *methanol R.*

Reference solution (b) Dissolve 10 mg of *bacampicillin hydrochloride CRS,* 10 mg of *talampicillin hydrochloride CRS* and 10 mg of *pivampicillin CRS* in 2 ml of *methanol R.*

Plate *TLC silanised silica gel plate R.*

Mobile phase Mix 10 volumes of a 272 g/l solution of *sodium acetate R* adjusted to pH 5.0 with *glacial acetic acid R*, 40 volumes of *water R* and 50 volumes of *ethanol (96 per cent) R.*

Application 1 µl.

Development Over a path of 15 cm.

Drying In a current of warm air.

Detection Spray with *ninhydrin solution R1* and heat at 60 °C for 10 min.

System suitability Reference solution (b):

— the chromatogram shows 3 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Place about 2 mg in a test-tube about 150 mm long and 15 mm in diameter. Moisten with 0.05 ml of *water R* and add 2 ml of *sulphuric acid-formaldehyde reagent R*. Mix the contents of the tube by swirling; the solution is practically colourless. Place the test-tube on a water-bath for 1 min; a dark yellow colour develops.

D. Dissolve about 25 mg in 2 ml of *water R*. Add 2 ml of *dilute sodium hydroxide solution R* and shake. Wait a few minutes and add 3 ml of *dilute nitric acid R* and 0.5 ml of *silver nitrate solution R1*. A white precipitate is formed. Add 0.5 ml of *concentrated ammonia R*. The precipitate dissolves.

TESTS

Appearance of solution

Dissolve 0.200 g in 20 ml of *water R*; the solution is not more opalescent than reference suspension II (*2.2.1*). Dissolve 0.500 g in 10 ml of *water R*; the absorbance (*2.2.25*) of the solution at 430 nm is not greater than 0.10.

pH (*2.2.3*)

3.0 to 4.5.

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Specific optical rotation (*2.2.7*)

+ 175 to + 195 (anhydrous substance).

Dissolve 0.250 g in *water R* and dilute to 25.0 ml with the same solvent.

Related substances

Liquid chromatography (*2.2.29*). *Prepare the test solution and reference solutions (a), (b) and (d) immediately before use.*

Phosphate buffer A Dissolve 1.4 g of *sodium dihydrogen phosphate monohydrate R* in *water R* and dilute to about 800 ml with the same solvent. Adjust to pH 3.0 with *dilute phosphoric acid R* and dilute to 1000.0 ml with *water R*.

Phosphate buffer B Dissolve 2.75 g of *sodium dihydrogen phosphate monohydrate R* and 2.3 g of *disodium hydrogen phosphate dihydrate R* in *water R* and dilute to about 1800 ml with the same solvent. Adjust to pH 6.8, if necessary, using *dilute phosphoric acid R* or *dilute sodium hydroxide solution R* and dilute to 2000.0 ml with *water R*.

Test solution Dissolve 30.0 mg of the substance to be examined in phosphate buffer A and dilute to 100.0 ml with phosphate buffer A.

Reference solution (a) Dissolve 30.0 mg of *bacampicillin hydrochloride CRS* in phosphate buffer A and dilute to 100.0 ml with phosphate buffer A.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 100.0 ml with phosphate buffer A.

Reference solution (c) Dissolve 30 mg of the substance to be examined in phosphate buffer B and dilute to 100 ml with phosphate buffer B. Heat at 80 °C for about 30 min.

Reference solution (d) Dissolve 20 mg of *ampicillin trihydrate CRS* (impurity I) in phosphate buffer A and dilute to 250 ml with phosphate buffer A. Dilute 5 ml of this solution to 100 ml with phosphate buffer A.

Column:

- *size*: *l* = 0.05 m, Ø = 3.9 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 30 volumes of *acetonitrile R1* and 70 volumes of a 0.06 per cent *m/m* solution of *tetrahexylammonium hydrogen sulphate R* in phosphate buffer B.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 20 µl of the test solution and reference solutions (b), (c) and (d).

Run time 3.5 times the retention time of bacampicillin.

System suitability:

- the peak due to impurity I is separated from the peaks due to the solvent in the chromatogram obtained with reference solution (d);
- *relative retention* with reference to bacampicillin: degradation product eluting just after bacampicillin = 1.12 to 1.38 in the chromatogram obtained with reference solution (c); if

necessary, adjust the concentration of tetrahexylammonium hydrogen sulphate in the mobile phase.

Limits:

— *any impurity*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent);

— *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (3 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

Butyl acetate and ethyl acetate (*2.4.24, System A*)

Maximum 2.0 per cent of butyl acetate, maximum 4.0 per cent of ethyl acetate and maximum 5.0 per cent for the sum of the contents.

Sample solution Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Use the method of standard additions.

Static head-space conditions that may be used:

— *equilibration temperature*: 60 °C;

— *equilibration time*: 20 min.

N,N-Dimethylaniline (*2.4.26, Method A*)

Maximum 20 ppm.

Water (*2.5.12*)

Maximum 0.8 per cent, determined on 0.300 g.

Sulphated ash (*2.4.14*)

Maximum 1.5 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Injection Test solution and reference solution (a).

System suitability Reference solution (a):

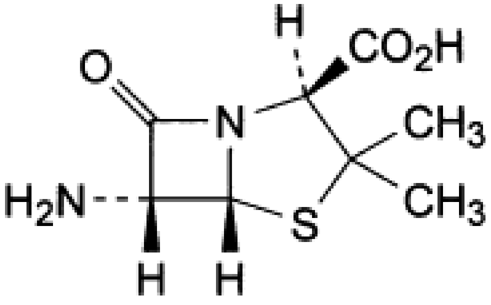
— *repeatability*: maximum relative standard deviation of 1.0 per cent after 6 injections.

Calculate the percentage content of $C_{21}H_{28}ClN_3O_7S$ from the declared content of *bacampicillin hydrochloride CRS.*

STORAGE

In an airtight container .

IMPURITIES



A. (2*S*,5*R*,6*R*)-6-amino-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (6-aminopenicillanic acid),

I. ampicillin.

Ph Eur

Bacitracin Zinc

General Notices

(Ph Eur monograph 0466)

1405-49-6

Action and use

Polypeptide antibacterial.

Preparation

Polymyxin and Bacitracin Eye Ointment

Ph Eur

DEFINITION

Zinc complex of bacitracin, which consists of a mixture of antimicrobial polypeptides produced by certain strains of *Bacillus licheniformis* or *Bacillus subtilis*, the main components being bacitracins A, B1, B2 and B3.

Content

Minimum 60 IU/mg (dried substance).

CHARACTERS

Appearance

White or light yellowish-grey powder, hygroscopic.

Solubility

Slightly soluble in water and in alcohol.

IDENTIFICATION

First identification *B*, *C*.

Second identification *A*, *C*.

A. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 10 mg of the substance to be examined in 0.5 ml of *dilute hydrochloride acid R* and dilute to 1.0 ml with *water R.*

Reference solution Dissolve 10 mg of *bacitracin zinc CRS* in 0.5 ml of *dilute hydrochloric acid R* and dilute to 1.0 ml with *water R.*

Plate *TLC silica gel plate R.*

Mobile phase *glacial acetic acid R, water R, butanol R*

(1:2:4 *V/V/V*).

Application 10 µl.

Development Over half of the plate.

Drying At 100-105 °C.

Detection Spray with *ninhydrin solution R1* and heat at 110 °C for 5 min.

Results The spots in the chromatogram obtained with the test solution are similar in position, size and colour to the spots in the chromatogram obtained with the reference solution.

B. It complies with the test for composition (see Tests).

C. Ignite about 0.15 g, allow to cool and dissolve the residue in 1 ml of *dilute hydrochloric acid R.* Add 4 ml of *water R*. The solution gives the reaction of zinc *(2.3.1)*.

TESTS

pH *(2.2.3)*

6.0 to 7.5.

Shake 1.0 g for about 1 min with 10 ml of *carbon dioxide-free water R* and filter.

Composition

Liquid chromatography *(2.2.29)*: use the normalisation procedure*. Prepare the solutions immediately before use.*

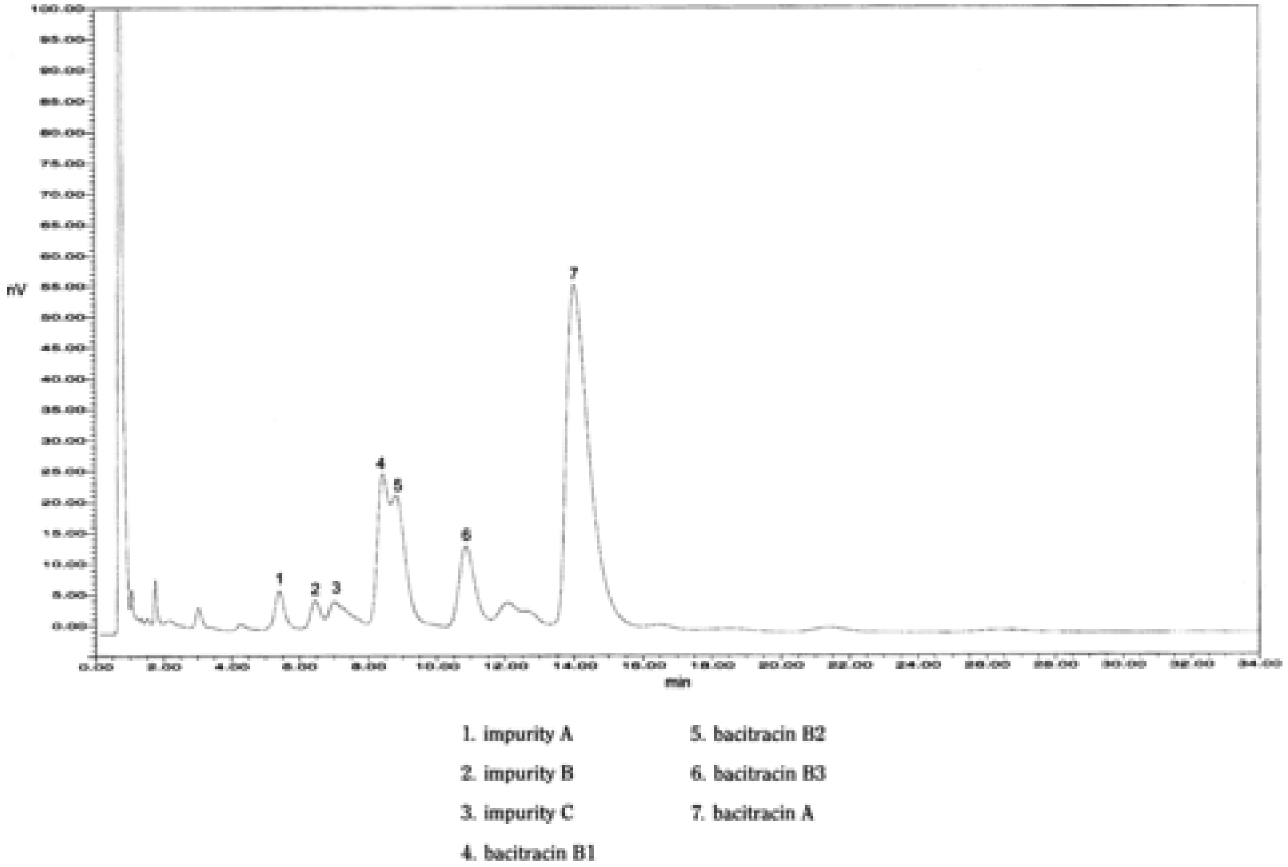

Figure 0466.-1. – *Chromatogram of the test for composition in bacitracin zinc obtained with the test solution at 254 nm*

Test solution Dissolve 0.100 g of the substance to be examined in 50.0 ml of a 40 g/l solution of *sodium edetate R* adjusted to pH 7.0 with *dilute sodium hydroxide R*.

Reference solution (a) Dissolve 20.0 mg of *bacitracin zinc CRS* in 10.0 ml of a 40 g/l solution of *sodium edetate R* adjusted to pH 7.0 with *dilute sodium hydroxide R*.

Reference solution (b) Dilute 5.0 ml of the test solution to 100.0 ml with *water R.*

Reference solution (c) Dilute 1.0 ml of reference solution (b) to 10.0 ml with *water R*.

Reference solution (d) Dissolve 50.0 mg of the substance to be examined in 25.0 ml of a 40 g/l solution of *sodium edetate R* adjusted to pH 7.0 with *dilute sodium hydroxide R*. Heat in a boiling water-bath for 30 min. Cool to room temperature.

Blank solution A 40 g/l solution of *sodium edetate R* adjusted to pH 7.0 with dilute *sodium hydroxide R.*

Column:

— size: *l* = 0.25 m, Ø = 4.6 mm,

— *stationary phase: end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Add 520 volumes of *methanol R1*, 40 volumes of *acetonitrile R* and 300 volumes of *water R* to 100 volumes of a 34.8 g/l solution of *dipotassium hydrogen phosphate R*, adjusted to pH 6.0 with a 27.2 g/l solution of *potassium dihydrogen phosphate R*.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 100 µl; inject the blank, the test solution and reference solutions (a) and (c).

Run time 3 times the retention time of bacitracin A.

Relative retention With reference to bacitracin A (retention time = 15 min to 25 min): bacitracin B1 = about 0.6; bacitracin B3 = about 0.8; impurity E = about 2.5.

If necessary, adjust the composition of the mobile phase by changing the amount of organic modifier whilst keeping the ratio constant between methanol and acetonitrile.

System suitability Reference solution (a):

— *peak-to-valley ratio*: minimum of 1.2, where H_p = height above the baseline of the peak due to bacitracin B1 and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to bacitracin B2.

Limits:

— *bacitracin A:* minimum 40.0 per cent,

— *sum of bacitracins A, B1, B2 and B3*: minimum 70.0 per cent.

— *disregard limit*: the area of the peak due to bacitracin A in the chromatogram obtained with reference solution (c) (0.5 per cent); disregard any peak observed in the blank run.

Related peptides

Liquid chromatography *(2.2.29)* as described in the test for composition.

See Figure 0466.-1.

Limit:

— *sum of the areas of all peaks eluting before the peak due to bacitracin B1*: maximum 20.0 per cent.

Impurity E

Liquid chromatography *(2.2.29)* as described in the test for composition.

See Figure 0466.-2.

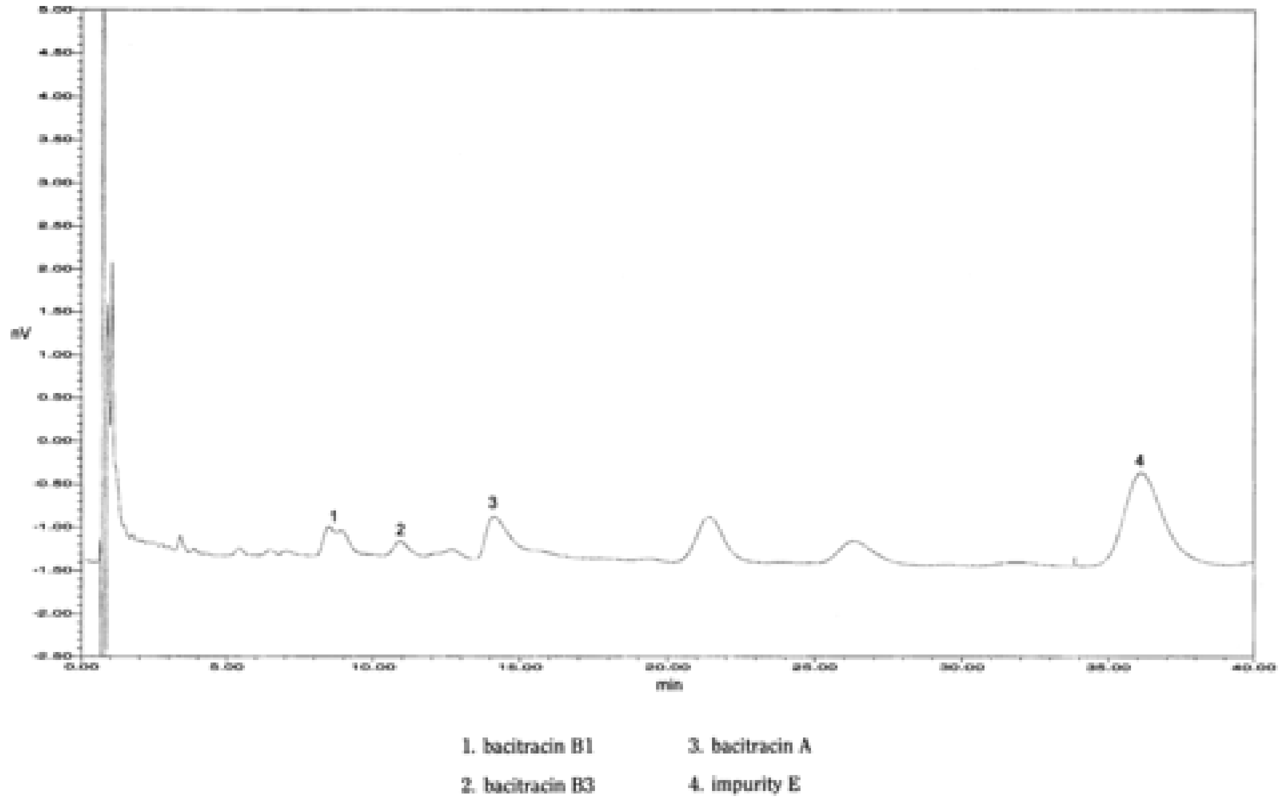

Figure 0466.-2. – *Chromatogram of the test for impurity E in bacitracin zinc obtained with reference solution (d) at 300 nm*

Detection Spectrophotometer at 254 nm; spectrophotometer at 300 nm for reference solution (d).

Injection Test solution and reference solutions (b) and (d).

Limit:

— *impurity E*: not more than 1.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (6.0 per cent).

Zinc

4.0 per cent to 6.0 per cent (dried substance).

Dissolve 0.200 g in a mixture of 2.5 ml of *dilute acetic acid R* and 2.5 ml of water. Add 50 ml of *water R,* 50 mg of *xylenol orange triturate R* and sufficient *hexamethylenetetramine R* to produce a red colour. Add 2 g of *hexamethylenetetramine R* in excess. Titrate with *0.01 M sodium edetate* until a yellow colour is obtained.

1 ml of *0.01 M sodium edetate* is equivalent to 0.654 mg of Zn.

Loss on drying ***(2.2.32)***

Maximum 5.0 per cent, determined on 1.000 g by drying at 60 °C over *diphosphorus pentoxide R* at a pressure not exceeding 0.1 kPa for 3 h.

Sterility ***(2.6.1)***

If intended for administration by spraying into internal body cavities without a further appropriate sterilisation procedure, it complies with the test for sterility.

Pyrogens *(2.6.8)*

If intended for administration by spraying into internal body cavities without a further appropriate procedure for the removal of pyrogens, it complies with the test for pyrogens. Inject per kilogram of the rabbit's mass 1 ml of the supernatant liquid obtained by centrifuging a suspension containing 11 mg per millilitre in a 9 g/l solution of *sodium chloride R*.

ASSAY

Suspend 50.0 mg in 5 ml of *water R*, add 0.5 ml of *dilute hydrochloric acid R* and dilute to 100.0 ml with *water R*. Allow the solution to stand for 30 min. Carry out the microbiological assay of antibiotics *(2.7.2)*.

STORAGE

In an airtight container . If the substance is sterile, store in a sterile, airtight, tamper-proof container .

1405-87-4

Action and use

Polypeptide antibacterial.

Ph Eur

DEFINITION

Mixture of antimicrobial polypeptides produced by certain strains of *Bacillus licheniformis* or *Bacillus subtilis*, the main components being bacitracins A, B1, B2 and B3.

Content

Minimum 60 IU/mg (dried substance).

CHARACTERS

Appearance

White or almost white powder, hygroscopic.

Solubility

Freely soluble in water and in alcohol.

IDENTIFICATION

First identification *B, C.*

Second identification *A, C.*

A. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 10 mg of the substance to be examined in a 3.4 g/l solution of *hydrochloric acid R* and dilute to 1.0 ml with the same solution.

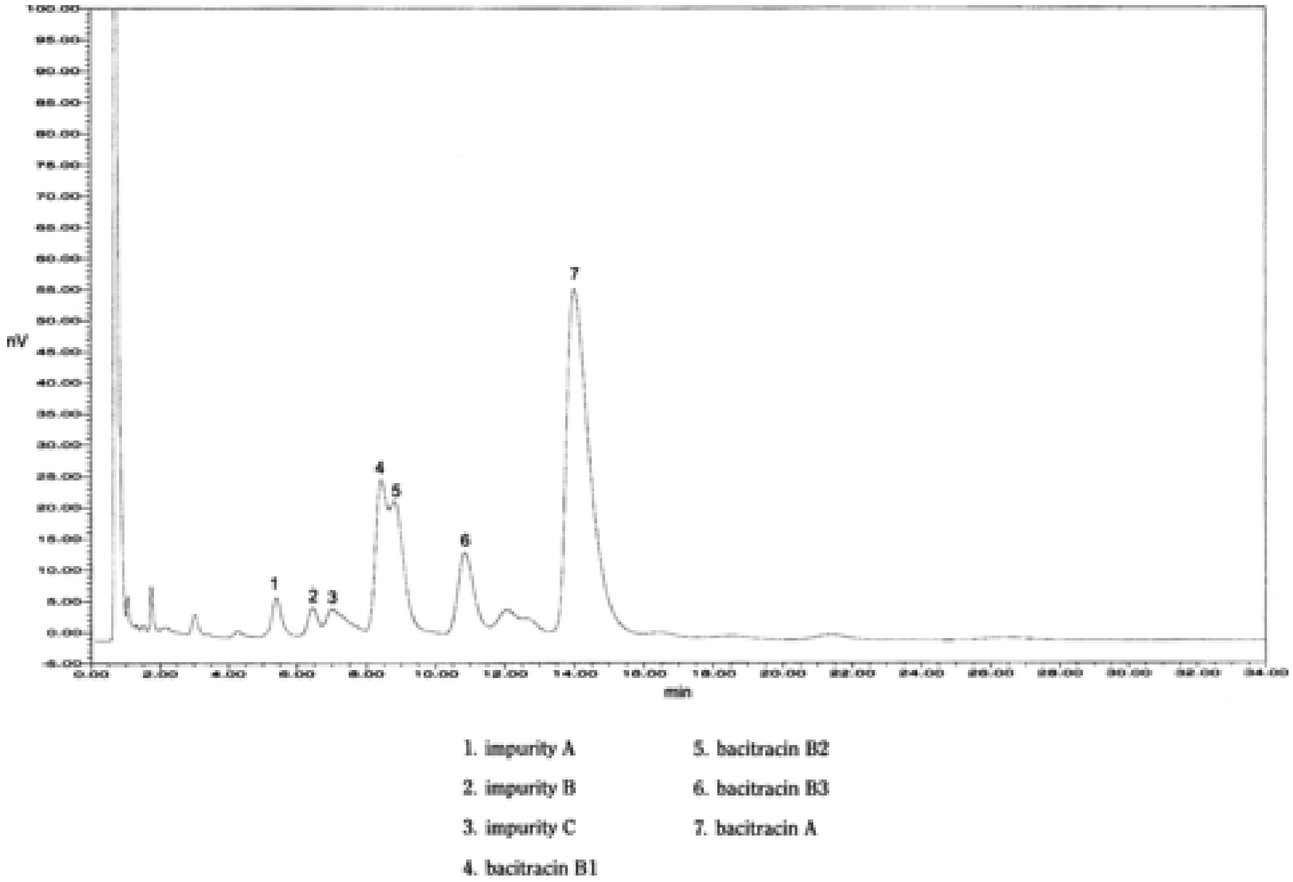

Figure 0465.-1. – *Chromatogram of the test for composition in bacitracin obtained with the test solution at 254 nm*

Reference solution Dissolve 10 mg of *bacitracin zinc CRS* in a 3.4 g/l solution of *hydrochloric acid R* and dilute to 1.0 ml with the same solution.

Plate *TLC silica gel plate R.*

Mobile phase *glacial acetic acid R, water R, butanol R*

(1:2:4 *V/V/V*).

Application 10 µl.

Development Over half of the plate.

Drying At 100-105 °C.

Detection Spray with *ninhydrin solution R1* and heat at 110 °C for 5 min.

Results The spots in the chromatogram obtained with the test solution are similar in position, size and colour to the spots in the chromatogram obtained with the reference solution.

B. It complies with the test for composition (see Tests).

C. Ignite 0.2 g. An insignificant residue remains which is not yellow at high temperature. Allow to cool. Dissolve the residue in 0.1 ml *of dilute hydrochloric acid R*. Add 5 ml of *water R* and 0.2 ml of *strong sodium hydroxide solution R*. No white precipitate is formed.

TESTS

Solution S

Dissolve 0.25 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)*.

pH *(2.2.3)*

6.0 to 7.0 for solution S.

Composition

Liquid chromatography *(2.2.29)*: use the normalisation procedure. *Prepare the solutions immediately before use.*

Test solution Dissolve 0.100 g of the substance to be examined in 50.0 ml of the mobile phase.

Reference solution (a) Suspend 20.0 mg of *bacitracin zinc CRS* in *water R*, add 0.2 ml of *dilute hydrochloric acid R* and dilute to 10.0 ml with *water R*.

Reference solution (b) Dilute 5.0 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (c) Dilute 1.0 ml of reference solution (b) to 10.0 ml with the mobile phase.

Reference solution (d) Dissolve 50.0 mg of the substance to be examined in 25.0 ml of a 40 g/l solution of *sodium edetate R* adjusted to pH 7.0 with *dilute sodium hydroxide R*. Heat in a boiling water-bath for 30 min. Cool to room temperature.

Blank solution A 40 g/l solution of *sodium edetate R* adjusted to pH 7.0 with *dilute sodium hydroxide R*.

Column:

— size: *l* = 0.25 m, Ø = 4.6 mm,

— *stationary phase: end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Add 520 volumes of *methanol R1*, 40 volumes of *acetonitrile R* and 300 volumes of *water R* to 100 volumes of a 34.8 g/l solution of *dipotassium hydrogen phosphate R* adjusted to pH 6.0 with a 27.2 g/l solution of *potassium dihydrogen phosphate R*.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 100 µl; inject the blank, the test solution and reference solutions (a) and (c).

Run time   3 times the retention time of bacitracin A.

Relative retention with reference to bacitracin A (retention time = 15 min to 25 min): bacitracin B1 = about 0.6; bacitracin B3 = about 0.8; impurity E = about 2.5.

If necessary, adjust the composition of the mobile phase by changing the amount of organic modifier whilst keeping the ratio constant between methanol and acetonitrile.

System suitability   Reference solution (a):

— *peak-to-valley ratio*: minimum of 1.2, where H_p = height above the baseline of the peak due to bacitracin B1 and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to bacitracin B2.

Limits:

— *bacitracin A*: minimum 40.0 per cent,

— *sum of bacitracins A, B1, B2 and B3*: minimum 70.0 per cent,

— *disregard limit*: the area of the peak due to bacitracin A in the chromatogram obtained with reference solution (c) (0.5 per cent); disregard any peak observed in the blank run.

Related peptides

Liquid chromatography *(2.2.29)* as described in the test for composition.

See Figure 0465.-1.

Limit:

— *sum of the areas of all peaks eluting before the peak due to bacitracin B1*: maximum 20.0 per cent.

Impurity E

Liquid chromatography *(2.2.29)* as described in the test for composition.

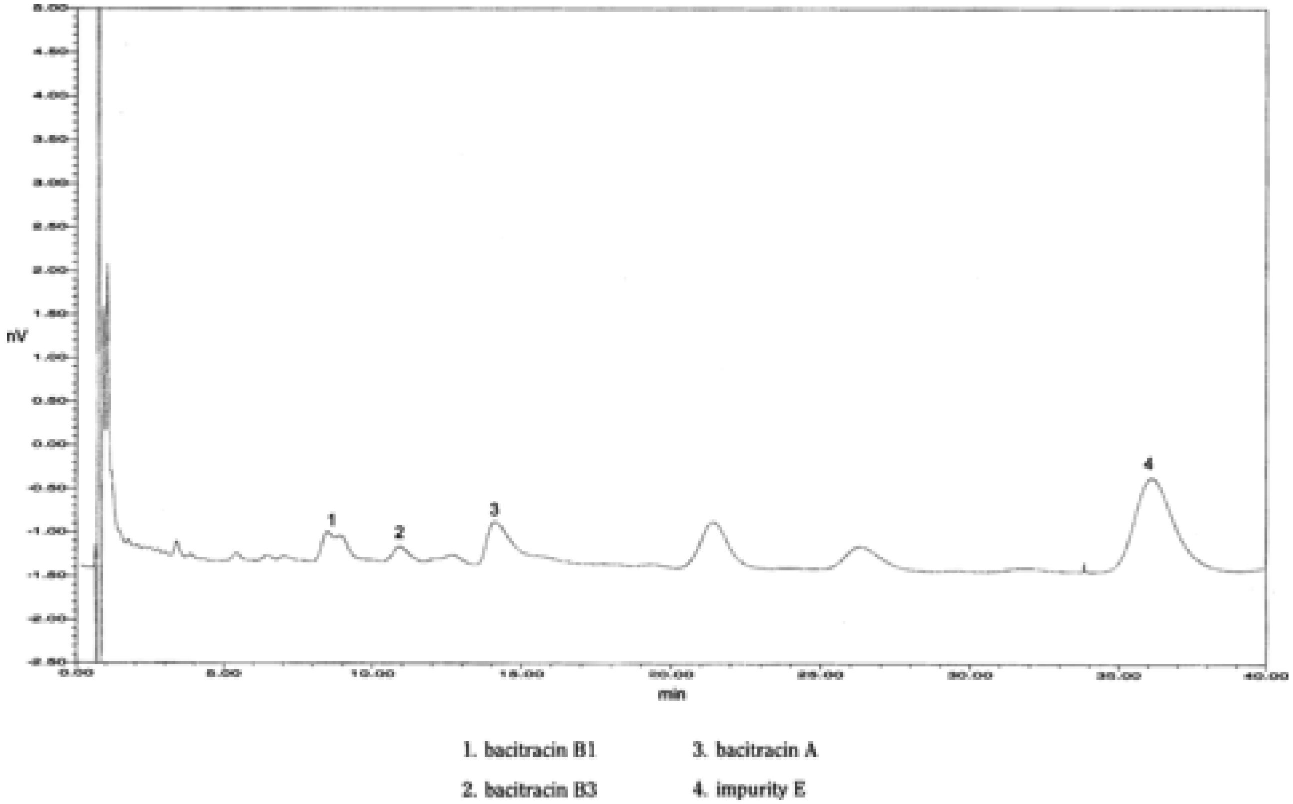

Figure 0465.-2. – *Chromatogram of the test for impurity E in bacitracin obtained with reference solution (d) at 300 nm*

Detection Spectrophotometer at 254 nm; spectrophotometer at 300 nm for reference solution (d).

Injection Test solution and reference solutions (b) and (d).

Limit:

— *impurity E*: not more than 1.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (6.0 per cent).

Loss on drying *(2.2.32)*

Maximum 5.0 per cent, determined on 1.000 g by drying at 60 °C over *diphosphorus pentoxide R* at a pressure not exceeding 0.1 kPa for 3 h.

Sulphated ash *(2.4.14)*

Maximum 1.0 per cent, determined on 1.0 g.

Sterility *(2.6.1)*

If intended for the preparation of ophthalmic dosage forms without a further appropriate sterilisation procedure, it complies with the test for sterility.

Bacterial endotoxins *(2.6.14)*

Less than 0.8 IU/mg, if intended for use in the manufacture of ophthalmic dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

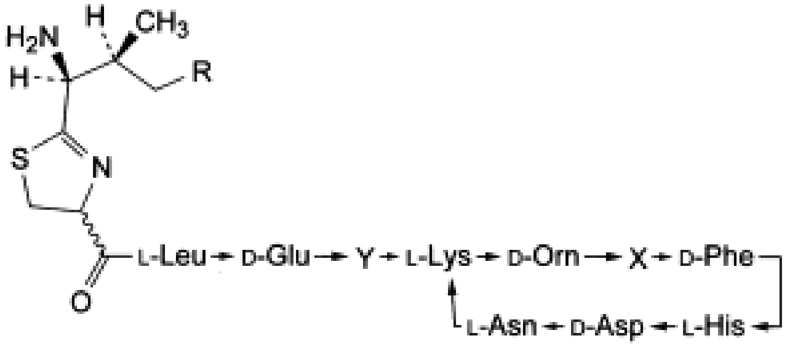
ASSAY

Carry out the microbiological assay of antibiotics *(2.7.2)*. Use *bacitracin zinc CRS* as the reference substance.

STORAGE

In an airtight container at 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

IMPURITIES



A. X = L-Val, Y = L-Ile, R = H: bacitracin C1,

B. X = L-Ile, Y = L-Val, R = H: bacitracin C2,

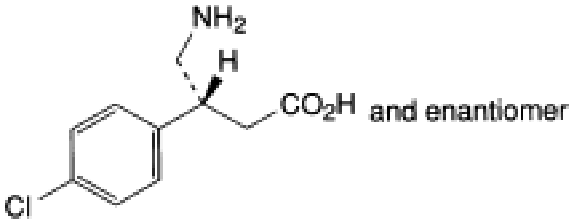
Ph Eur

Baclofen

General Notices

(Ph Eur monograph 0653)



$C_{10}H_{12}ClNO_2$ 213.7 *1134-47-0*

Action and use

Skeletal muscle relaxant.

Preparations

Baclofen Oral Solution

Baclofen Tablets

Ph Eur

DEFINITION

(3RS)-4-Amino-3-(4-chlorophenyl)butanoic acid.

Content

98.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Slightly soluble in water, very slightly soluble in ethanol (96 per cent), practically insoluble in acetone. It dissolves in dilute mineral acids and in dilute solutions of alkali hydroxides.

It shows polymorphism *(5.9)*.

IDENTIFICATION

First identification B.

Second identification A, C.

A. Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution Dissolve 70 mg in *water R* and dilute to 100.0 ml with the same solvent.

Spectral range 220-320 nm.

Absorption maxima At 259 nm, 266 nm and 275 nm.

Resolution (2.2.25) Minimum 1.5 for the absorbance ratio.

Specific absorbance at the absorption maxima:

— at 259 nm: 9.8 to 10.8;

— at 266 nm: 11.5 to 12.7;

— at 275 nm: 8.4 to 9.3.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs prepared using 3 mg of substance and 300 mg of *potassium bromide R*.

Comparison *baclofen CRS.*

If the spectra obtained in the solid state show differences, dissolve 0.1 g of each of the substances separately in 1 ml of *dilute sodium hydroxide solution R* and add 10 ml of *ethanol (96 per cent) R* and 1 ml of *dilute acetic acid R*. Allow to stand for 1 h. Filter, wash the precipitate with *ethanol (96 per cent) R* and dry *in vacuo*. Prepare new discs and record the spectra.

C. Thin-layer chromatography *(2.2.27).*

Test solution Dissolve 10 mg of the substance to be examined in the mobile phase and dilute to 10 ml with the mobile phase.

Reference solution Dissolve 10 mg of *baclofen CRS* in the mobile phase and dilute to 10 ml with the mobile phase.

Plate *TLC silica gel G plate R.*

Mobile phase *anhydrous formic acid R, water R, methanol R, chloroform R, ethyl acetate R* (5:5:20:30:40 *V/V/V/V/V*).

Application 5 µl.

Development Over a path of 12 cm.

Drying Allow the solvents to evaporate.

Detection Spray with *ninhydrin solution R3* until the plate is slightly wet. Place in an oven maintained at 100 °C for 10 min. Examine in daylight.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Appearance of solution

The solution is not more opalescent than reference suspension II *(2.2.1)* and not more intensely coloured than reference solution BY_5 *(2.2.2, Method II)*.

Dissolve 0.50 g in *1 M sodium hydroxide* and dilute to 25 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dissolve 25.0 mg of *baclofen impurity A CRS* in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 100.0 ml with the mobile phase.

Reference solution (c) Dilute 2.0 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (d) Dilute 2.0 ml of the test solution and 2.0 ml of reference solution (a) to 100.0 ml with the mobile phase.

Column:

— *size:* l = 0.25 m, Ø = 4.0 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (10 µm).

Mobile phase Dissolve 1.822 g of *sodium hexanesulphonate R* in 1 litre of a mixture of 560 volumes of *water R*, 440 volumes of *methanol R* and 5 volumes of *glacial acetic acid R*.

Flow rate 2.0 ml/min.

Detection Spectrophotometer at 266 nm.

Injection 20 µl of the test solution and reference solutions (b), (c) and (d).

Run time 5 times the retention time of baclofen.

System suitability Reference solution (d):

— *resolution:* minimum 2.0 between the peaks due to baclofen and impurity A.

Limits:

— *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

— *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (2.0 per cent).

Water *(2.5.12)*

Maximum 1.0 per cent, determined on 1.000 g.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

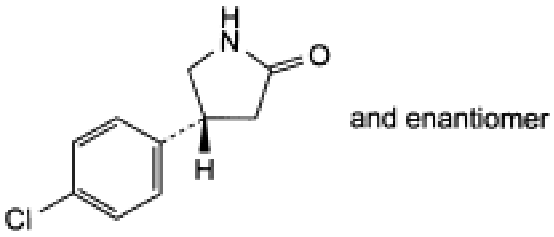
Dissolve 0.1500 g in 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 21.37 mg of $C_{10}H_{12}ClNO_2$.

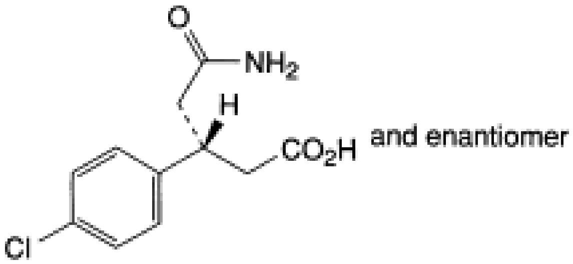
IMPURITIES

Specified impurities A.

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use):B.*



A. (4*RS*)-4-(4-chlorophenyl)pyrrolidin-2-one,



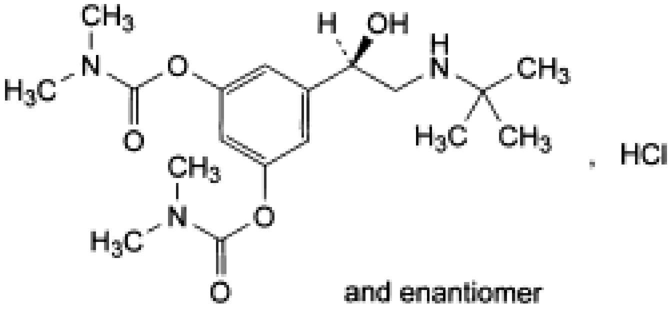
B. (3*RS*)-5-amino-3-(4-chlorophenyl)-5-oxopentanoic acid.

Ph Eur

Bambuterol Hydrochloride

General Notices

(Ph Eur monograph 1293)



$C_{18}H_{29}N_3O_5,HCl$ 403.9 *81732-46-9*

Action and use

Beta$_2$-adrenoceptor agonist; bronchodilator.

Ph Eur

DEFINITION

5-[(1*RS*)-2-[(1,1-Dimethylethyl)amino]-1-hydroxyethyl]-1,3-phenylene bis(dimethylcarbamate) hydrochloride.

Content

98.5 per cent to 101.5 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water, soluble in ethanol (96 per cent).

It shows polymorphism *(5.9)*.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *bambuterol hydrochloride CRS.*

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in a mixture of 1 volume of *water R* and 6 volumes of *acetone R*, cool in ice to precipitate and dry both precipitates *in vacuo* at 50 °C to constant weight. Record new spectra using the residues.

B. It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 4.0 g in *carbon dioxide-free water R* and dilute to 20.0 ml with the same solvent.

Acidity or alkalinity

To 10 ml of solution S add 0.2 ml of *methyl red solution R* and 0.2 ml of *0.01 M hydrochloric acid*. The solution is red. Add 0.4 ml of *0.01 M sodium hydroxide*. The solution is yellow.

Optical rotation *(2.2.7)*

– 0.10 ° to + 0.10 °.

Dilute 1 ml of solution S to 10 ml with *carbon dioxide-free water R*.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 5.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dissolve 1.0 mg of *formoterol fumarate dihydrate CRS* in the mobile phase and dilute to 10.0 ml with the mobile phase. Mix 0.8 ml of this solution with 0.4 ml of the test solution and dilute to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 50.0 ml with the mobile phase. Dilute 2.0 ml of this solution to 20.0 ml with the mobile phase.

Column:

- *size:* *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase: base-deactivated octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Dissolve 1.3 g of *sodium octanesulphonate R* in 430 ml of a mixture of 25 volumes of *acetonitrile R1* and 75 volumes of *methanol R*; then mix this solution with 570 ml of 0.050 M phosphate buffer pH 3.0 prepared as follows: dissolve 6.90 g of *sodium dihydrogen phosphate monohydrate R* in *water R* and dilute to 1000 ml with *water R*, adjust to pH 3.0 with a 50 g/l solution of *dilute phosphoric acid R*.

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 214 nm.

Injection 20 µl; inject the mobile phase as a blank.

Run time 1.5 times the retention time of bambuterol.

Retention time formoterol = about 7 min; bambuterol = about 9 min. If necessary, adjust the composition of the mobile phase; increase the content of phosphate buffer to increase the retention time.

System suitability Reference solution (a):

— *resolution*: minimum 5.0 between the peaks due to bambuterol and formoterol.

Limits:

— *impurities A, B, C, D, E, F*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

— *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.6 per cent);

— *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak due to the mobile phase.

Water *(2.5.12)*

Maximum 0.5 per cent, determined on 0.500 g.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

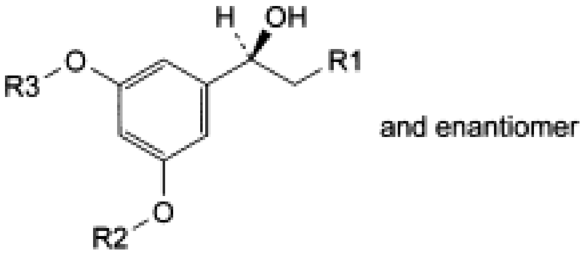
ASSAY

Dissolve 0.320 g in 50 ml of *ethanol (96 per cent) R* and add 5 ml of *0.01 M hydrochloric acid*. Carry out a potentiometric titration (2.2.20), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 40.39 mg of $C_{18}H_{30}ClN_3O_5$.

IMPURITIES

Specified impurities: A, B, C, D, E, F.

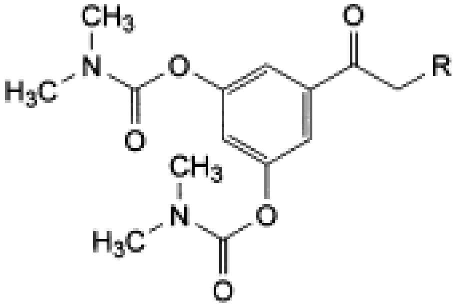


A. R1 = NH-C$(CH_3)_3$, R2 = R3 = H: (1*RS*)-1-(3,5-dihydroxyphenyl)-2-[(1,1-dimethylethyl) amino]ethanol (terbutaline),

B. R1 = OH, R2 = R3 = CO-N$(CH_3)_2$: 5-[(1*RS*)-1,2-dihydroxyethyl]-1,3-phenylene bis (dimethylcarbamate),

C. R1 = NH-C$(CH_3)_3$, R2 = H, R3 = CO-N$(CH_3)_2$: 3-[(1*RS*)-2-[(1,1-dimethylethyl)amino]-1-hydroxyethyl]-5-hydroxyphenyl dimethylcarbamate,

D. R1 = H, R2 = R3 = CO-N$(CH_3)_2$: 5-[(1*RS*)-1-hydroxyethyl]-1,3-phenylene bis (dimethylcarbamate),



E. R = H: 5-acetyl-1,3-phenylene bis(dimethylcarbamate),

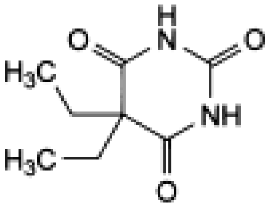
F. R = $NH-C(CH_3)_3$: 5-[[(1,1-dimethylethyl)amino]acetyl]-1,3-phenylene bis (dimethylcarbamate).

Ph Eur

Barbital

General Notices

(Ph Eur monograph 0170)



$C_8H_{12}N_2O_3$ 184.2 *57-44-3*

Action and use

Barbiturate.

Ph Eur

DEFINITION

Barbital contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 5,5-diethylpyrimidine-2,4,6(1*H*,3*H*,5*H*)-trione, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, slightly soluble in water, soluble in boiling water and in alcohol. It forms water-soluble compounds with alkali hydroxides and carbonates and with ammonia.

IDENTIFICATION

First identification A, B.

Second identification A, C, D.

A. Determine the melting point *(2.2.14)* of the substance to be examined. Mix equal parts of the substance to be examined and *barbital CRS* and determine the melting point of the mixture. The difference between the melting points (which are about 190 °C) is not greater than 2 °C.

B. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *barbital CRS*.

C. Examine by thin-layer chromatography *(2.2.27)*, using *silica gel* GF_{254} *R* as the coating substance.

Test solution Dissolve 75 mg of the substance to be examined in *alcohol R* and dilute to 25 ml with the same solvent.

Reference solution Dissolve 75 mg of *barbital CRS* in alcohol R and dilute to 25 ml with the same solvent.

Apply separately to the plate 10 µl of each solution. Develop over a path of 18 cm using the lower layer of a mixture of 5 volumes of *concentrated ammonia R*, 15 volumes of *alcohol R* and 80 volumes of *chloroform R*. Examine immediately in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. It gives the reaction of non-nitrogen substituted barbiturates *(2.3.1)*.

TESTS

Appearance of solution

Dissolve 1.0 g in a mixture of 4 ml of *dilute sodium hydroxide solution R* and 6 ml of *water R*. The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

Acidity

Boil 1.0 g with 50 ml of *water R* for 2 min, allow to cool and filter. To 10 ml of the filtrate add 0.15 ml of *methyl red solution R*. The solution is orange-yellow. Not more than 0.1 ml of *0.1 M sodium hydroxide* is required to produce a pure yellow colour.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel* GF_{254} *R* as the coating substance.

Test solution Dissolve 1.0 g of the substance to be examined in *alcohol R* and dilute to 100 ml with the same solvent.

Reference solution Dilute 0.5 ml of the test solution to 100 ml with *alcohol R*.

Apply separately to the plate 20 µl of each solution. Develop over a path of 15 cm using the lower layer of a mixture of 5 volumes of *concentrated ammonia R*, 15 volumes of *alcohol R* and 80 volumes of *chloroform R*. Examine immediately in ultraviolet light at 254 nm. Spray with *diphenylcarbazone mercuric reagent R*. Allow the plate to dry in air and spray with freshly prepared *alcoholic potassium hydroxide solution R* diluted 1 in 5 with *aldehyde-free alcohol R*. Heat at 100 °C to 105 °C for 5 min and examine immediately. When examined in ultraviolet light and after spraying, any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.00 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 85.0 mg in 5 ml of *pyridine R*. Add 0.5 ml of *thymolphthalein solution R* and 10 ml of *silver nitrate solution in pyridine R*. Titrate with 0.1 M *ethanolic sodium hydroxide* until a pure blue colour is obtained. Carry out a blank titration.

1 ml of *0.1 M ethanolic sodium hydroxide* is equivalent to 9.21 mg of $C_8H_{12}N_2O_3$.

Ph Eur

Barium Sulphate for Suspension

General Notices

Action and use

Radio-opaque preparation used in the investigation of the gastro-intestinal tract.

Preparation

Barium Sulphate Oral Suspension

DEFINITION

Barium Sulphate for Suspension is a dry mixture of Barium Sulphate with a suitable dispersing agent and may contain suitable flavours and suitable antimicrobial preservatives.

Content of barium sulphate, $BaSO_4$

90.0 to 110.0% of the stated amount.

CHARACTERISTICS

A fine, white or creamy white powder.

IDENTIFICATION

A. Ignite 1 g to constant weight. To 0.2 g of the residue add 5 ml of a 50% w/v solution of *sodium carbonate* and boil for 5 minutes. Add 10 ml of *water* and filter. Reserve the residue for test B. Acidify a portion of the filtrate with *2M hydrochloric acid*. The solution yields the reactions characteristic of *sulphates*, Appendix VI.

B. Wash the residue reserved in test A with *water*, add 5 ml of *2M hydrochloric acid*, mix well and filter. Add 0.3 ml of *1M sulphuric acid* to the filtrate. A white precipitate is produced which is insoluble in *2M hydrochloric acid*.

TESTS

Acidity or alkalinity

pH of an aqueous suspension containing the equivalent of 60% w/w of Barium Sulphate or, for lower strengths, the aqueous suspension at the strength of intended use, 3.5 to 8.5, Appendix V L.

Loss on drying

When dried at 105° for 4 hours, loses not more than 1.0% of its weight. Use 1 g.

ASSAY

To a quantity containing 0.6 g of Barium Sulphate in a platinum dish add 5 g of *sodium carbonate* and 5 g of *potassium carbonate sesquihydrate* and mix. Heat to 1000° and maintain at this temperature for 15 minutes. Allow to cool and suspend the residue in 150 ml of *water*. Wash the dish with 2 ml of *6M acetic acid* and add the washings to the suspension. Cool in ice and decant the supernatant liquid, transferring as little of the solid matter as possible to the filter. Wash the residue with successive quantities of a 2% w/v solution of *sodium carbonate* until the washings are free from sulphate and discard the washings. Add 5 ml of *2M hydrochloric acid* to the filter, wash through into the vessel containing the bulk of the solid matter with *water*, add 5 ml of *hydrochloric acid* and dilute to 100 ml with *water*. Add 10 ml of a 40% w/v solution of *ammonium acetate*, 25 ml of a 10% w/v solution of *potassium dichromate* and 10 g of *urea*. Cover and digest in a hot-air oven at 80° to 85° for 16 hours. Filter whilst still hot through a sintered-glass filter (ISO 4793, porosity grade 4, is suitable), washing the precipitate initially with a 0.5% w/v solution of *potassium dichromate* and finally with 2 ml of *water*. Dry to constant weight at 105°. Each g of the residue is equivalent to 0.9213 g of barium sulphate, $BaSO_4$.

Barium Sulphate

General Notices

(Ph Eur monograph 0010)

$BaSO_4$ 233.4 *7727-43-7*

Action and use

Radio-opaque substance used in the investigation of the gastro-intestinal tract.

Preparation

Barium Sulphate for Suspension

Ph Eur

CHARACTERS

Appearance

Fine, white or almost white powder, free from gritty particles.

Solubility

Practically insoluble in water and in organic solvents. It is very slightly soluble in acids and in solutions of alkali hydroxides.

IDENTIFICATION

A. Boil a suspension of 0.2 g with 5 ml of a 500 g/l solution of *sodium carbonate R* for 5 min, add 10 ml of *water R*, filter and acidify a part of the filtrate with *dilute hydrochloric acid R*. The solution gives the reactions of sulphates *(2.3.1)*.

B. Wash the residue collected in the preceding test with 3 successive small quantities of *water R*. To the residue add 5 ml of *dilute hydrochloric acid R*, filter and add to the filtrate 0.3 ml of *dilute sulphuric acid R*. A white precipitate is formed that is insoluble in *dilute sodium hydroxide solution R*.

TESTS

Solution S

To 20.0 g add 40 ml of *distilled water R* and 60 ml of *dilute acetic acid R*. Boil for 5 min, filter and dilute the cooled filtrate to 100 ml with *distilled water R*.

Acidity or alkalinity

Heat 5.0 g with 20 ml of *carbon dioxide-free water R* on a water-bath for 5 min and filter. To 10 ml of the filtrate add 0.05 ml of *bromothymol blue solution R1*. Not more than 0.5 ml of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Acid-soluble substances

Maximum 0.3 per cent.

Evaporate 25 ml of solution S to dryness on a water-bath and dry to constant mass at 100-105 °C. The residue weighs a maximum of 15 mg.

Oxidisable sulphur compounds

Shake 1.0 g with 5 ml of *water R* for 30 s and filter. To the filtrate add 0.1 ml of *starch solution R*, dissolve 0.1 g of *potassium iodide R* in the mixture, add 1.0 ml of a freshly prepared 3.6 mg/l solution of *potassium iodate R* and 1 ml of *1 M hydrochloric acid* and shake well. The colour of the solution is more intense than that of a standard prepared at the same time and in the same manner, but omitting the potassium iodate.

Soluble barium salts

Maximum 10 ppm.

To 2.5 ml of a 0.2 mg/l solution of *barium nitrate R* in a mixture of 30 volumes of *ethanol (96 per cent) R* and 70 ml of *water R*, add 10 ml of *dilute sulphuric acid R.* Shake and allow to stand for 5 min. To 1 ml of this solution, add 10 ml of solution S. Prepare a standard in the same manner using 10 ml of *barium standard solution (2 ppm Ba) R* instead of solution S.

After 10 min, any opalescence in the test solution is not more intense than that in the standard.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

Dilute 10 ml of solution S to 20 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on ignition

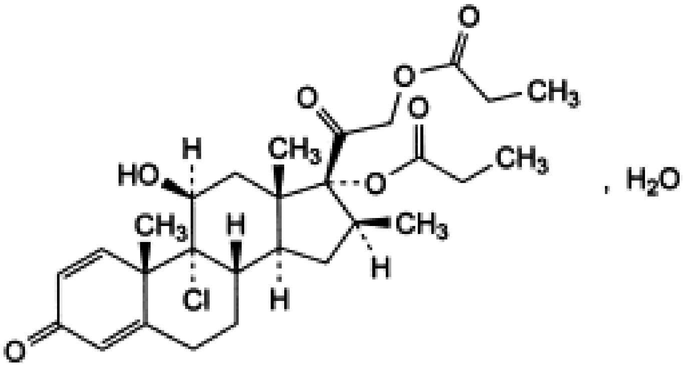
Maximum 2.0 per cent, determined on 1.0 g at 600 ± 50 °C.

Ph Eur

Beclometasone Dipropionate Monohydrate

General Notices

(Ph Eur monograph 1709)



$C_{28}H_{37}ClO_7,H_2O$ 539.1 *5534-09-8*

Action and use

Glucocorticoid.

Ph Eur

DEFINITION

9-Chloro-11β-hydroxy-16β-methyl-3,20-dioxopregna-1,4-diene-17,21-diyl dipropanoate monohydrate.

Content

97.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, freely soluble in acetone, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *beclometasone dipropionate monohydrate CRS*.

B. Treat 25 mg by the oxygen-flask method *(2.5.10)*. Use a mixture of 1 ml of *1 M sodium hydroxide* and 20 ml of *water R* to absorb the combustion products. The solution gives reaction (a) of chlorides *(2.3.1)*.

C. Loss on drying (see Tests).

TESTS

Specific optical rotation *(2.2.7)*

+ 108 to + 115 (dried substance).

Dissolve 0.100 g in *ethanol (96 per cent) R* and dilute to 10.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution (a) Dissolve 50.0 mg of the substance to be examined in *acetonitrile R* and dilute to 50.0 ml with the same solvent.

Test solution (b) Dilute 1.0 ml of test solution (a) to 50.0 ml with *acetonitrile R*.

Reference solution (a) Dilute 5.0 ml of test solution (b) to 100.0 ml with *acetonitrile R*.

Reference solution (b) Dissolve 5 mg of *beclometasone dipropionate for system suitability CRS* (containing impurity D) in *acetonitrile R* and dilute to 5 ml with the same solvent.

Reference solution (c) Dissolve 5 mg of *beclometasone dipropionate for peak identification CRS* (containing impurities A, B, C, L and M) in *acetonitrile R* and dilute to 5 ml with the same solvent.

Reference solution (d) Dissolve 50.0 mg of *beclometasone dipropionate anhydrous CRS* in *acetonitrile R* and dilute to 50.0 ml with the same solvent. Dilute 1.0 ml to 50.0 ml with *acetonitrile R*.

Column:

— *size*: *l* = 0.25 m, Ø = 4.0 mm;

— *stationary phase: end-capped octadecylsilyl silica gel for chromatography R* (5 µm);

— *temperature*: 30 °C.

Mobile phase *acetonitrile R, water R* (45:55 *V/V*).

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 238 nm.

Injection 20 µl of test solution (a) and reference solutions (a), (b) and (c).

Run time 2.5 times the retention time of beclometasone dipropionate.

Identification of impurities Use the chromatogram supplied with *beclometasone dipropionate for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B, C, L and M; use the chromatogram supplied with *beclometasone dipropionate for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peak due to impurity D; if necessary, use the responses of impurities D and M detected at 284 nm to distinguish the 2 impurities: the response of impurity D decreases and that of impurity M increases.

Relative retention With reference to beclometasone dipropionate (retention time = about 29 min): impurity A = about 0.3; impurity B = about 0.6; impurity D = about 1.1; impurity M = about 1.1; impurity L = about 1.3; impurity C = about 1.6.

System suitability Reference solution (b):

— *peak-to-valley ratio*: minimum 2.0, where H_p = height above the baseline of the peak due to impurity D and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to beclometasone dipropionate.

Limits:
— *correction factor*: for the calculation of content, multiply the peak area of impurity D by 1.3;

— *impurities B, L*: for each impurity, not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *impurities A, C, D, M*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying *(2.2.32)*

2.8 per cent to 3.8 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Mobile phase *water R, acetonitrile R* (40:60 *V/V*).

Flow rate 1.0 ml/min.

Injection Test solution (b) and reference solution (d).

Calculate the percentage content of $C_{28}H_{37}ClO_7$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities *A, B, C, D, L, M.*

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034*). It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances* *for pharmaceutical use): E, F, G, H, I, J, K, N, O, P, Q, R.*

Action and use

Salicylate-paracetamol derivative; antipyretic; analgesic; anti-inflammatory.

Preparations

Benorilate Oral Suspension

Benorilate Tablets

DEFINITION

Benorilate is 4-acetamidophenyl *O*-acetylsalicylate. It contains not less than 99.0% and not more than 100.5% of $C_{17}H_{15}NO_5$, calculated with reference to the dried substance.

CHARACTERISTICS

A white or almost white, crystalline powder.

Practically insoluble in *water*; soluble in *acetone*; sparingly soluble in *ethanol (96%)* and in *methanol*.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of benorilate *(RS 023)*.

B. To 10 mg add 10 ml of 6M *hydrochloric acid* and boil until completely dissolved. To 5 ml of the resulting solution add 0.1 ml of *strong 1-naphthol solution*, mix and add sufficient 1M *sodium hydroxide* to make the solution just alkaline. A blue colour is produced which is extracted into *butan-1-ol*.

C. The *light absorption*, Appendix II B, in the range 230 to 350 nm of a 0.001% w/v solution in *absolute ethanol* exhibits a maximum only at 240 nm. The *absorbance* at 240 nm is about 0.74.

TESTS

Melting point

178° to 181°, Appendix V A.

Heavy metals

1.0 g complies with *limit test C for heavy metals*, Appendix VII. Use 2 ml of *lead standard solution (10 ppm Pb)* to prepare the standard (20 ppm).

4-Aminophenol

Shake 2.5 g with 100 ml of *water* for 15 minutes and filter. To 20 ml of the filtrate add 0.2 ml of *sodium nitroprusside-carbonate solution*, mix and allow to stand for 30 minutes. The solution is not more intensely coloured than a solution prepared at the same time and in the same manner but using 2 ml of a solution of *4-aminophenol* containing 5 µg per ml and 18 ml of *water* in place of the filtrate (20 ppm).

Salicylic acid

Shake 0.50 g with 20 ml of *water* for 15 minutes and filter. Transfer 10 ml of the filtrate to a *Nessler cylinder*, dilute to 50 ml with *water*, add 0.2 ml of a 0.5% w/v solution of *iron(III) chloride* and allow to stand for 1 minute. The colour obtained is not more intense than that of a solution prepared at the same time by adding 0.2 ml of a 0.5% w/v solution of *iron(III) chloride* to a mixture of 1 ml of a 0.025% w/v solution of *salicylic acid* in *ethanol (96%)* and sufficient *water* to produce 50 ml (0.1%).

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, using a silica gel HF_{254} precoated plate (Analtech plates are suitable) and a mixture of 80 volumes of *dichloromethane*, 15 volumes of *ether* and 5 volumes of *glacial acetic acid* as the mobile phase. Apply separately to the plate 10 µl of each of four solutions in a mixture of 9 volumes of *dichloromethane* and 1 volume of *methanol* containing (1) 4.0% w/v of the substance being examined, (2) 0.040% w/v of the substance being examined, (3) 0.0080% w/v of the substance being examined and (4) 0.0080% w/v of *paracetamol*. After removal of the plate, allow it to dry in air and develop in a second mobile phase consisting of a mixture of 45 volumes of *ether*, 45 volumes of *2,2,4-trimethylpentane* and 10 volumes of *formic acid*. After removal of the plate, allow it to dry in air and examine under *ultraviolet light (254 nm)*.

Any spot corresponding to paracetamol in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (4) (0.2%). Any *secondary spot* in the chromatogram obtained with solution (1) with an Rf value slightly higher than that of the principal spot is not more intense than the principal spot in the chromatogram obtained with solution (2) (1%). Any other *secondary spot* in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (3) (0.2%).

Loss on drying

When dried to constant weight at 105°, loses not more than 0.5% of its weight. Use 1 g.

Sulphated ash

Not more than 0.1%, Appendix IX A.

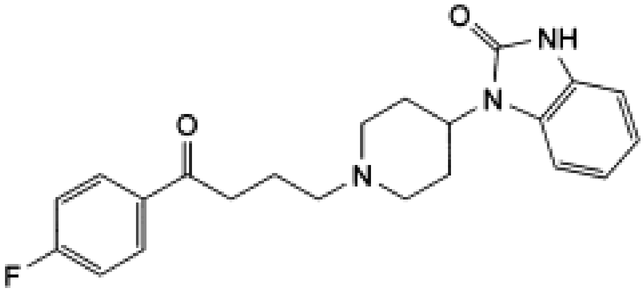
ASSAY

Carry out Method I for the *determination of nitrogen*, Appendix VIII H, using 0.6 g and 10 ml of *nitrogen-free sulphuric acid*. Each ml of 0.05M *sulphuric acid VS* is equivalent to 31.33 mg of $C_{17}H_{15}NO_5$.

Benperidol

General Notices

(Ph Eur monograph 1172)



$C_{22}H_{24}FN_3O_2$ 381.4 *2062-84-2*

Action and use

Dopamine receptor antagonist; neuroleptic.

Ph Eur

DEFINITION

1-[1-[4-(4-Fluorophenyl)-4-oxobutyl]piperidin-4-yl]-1,3-dihydro-2*H*-benzimidazol-2-one.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, freely soluble in dimethylformamide, soluble in methylene chloride, slightly soluble in ethanol (96 per cent).

It shows polymorphism *(5.9)*.

IDENTIFICATION

First identification *A.*

Second identification *B, C, D.*

A. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *benperidol CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *methyl isobutyl ketone R*, evaporate to dryness and record new spectra using the residues.

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 30 mg of the substance to be examined in the mobile phase and dilute to 10 ml with the mobile phase.

Reference solution (a) Dissolve 30 mg of *benperidol CRS* in the mobile phase and dilute to 10 ml with the mobile phase.

Reference solution (b) Dissolve 30 mg of *benperidol CRS* and 30 mg of *droperidol CRS* in the mobile phase and dilute to 10 ml with the mobile phase.

Plate *TLC silica gel* F_{254} *plate R.*

Mobile phase *acetone R, methanol R* (1:9 *V/V*).

Application 10 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution (b)

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve about 10 mg in 5 ml of *anhydrous ethanol R*. Add 0.5 ml of *dinitrobenzene solution R* and 0.5 ml of *2 M alcoholic potassium hydroxide R*. A violet colour is produced which becomes brownish-red after 20 min.

D. Mix about 5 mg with 45 mg of heavy *magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 ml of *water R*, 0.05 ml of *phenolphthalein solution R1* and about 1 ml of *dilute hydrochloric acid R* to render the solution colourless. Filter. To a freshly prepared mixture of 0.1 ml of *alizarin S solution R* and 0.1 ml of *zirconyl nitrate solution R*, add 1.0 ml of the filtrate. Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank prepared in the same manner. The test solution is yellow and the blank is red.

TESTS

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the solutions immediately before use*.

Test solution Dissolve 0.10 g of the substance to be examined in *dimethylformamide R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve 2.5 mg of *benperidol CRS* and 2.5 mg of *droperidol CRS* in *dimethylformamide R* and dilute to 100.0 ml with the same solvent.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with *dimethylformamide R*. Dilute 5.0 ml of this solution to 20.0 ml with *dimethylformamide R*.

Column:

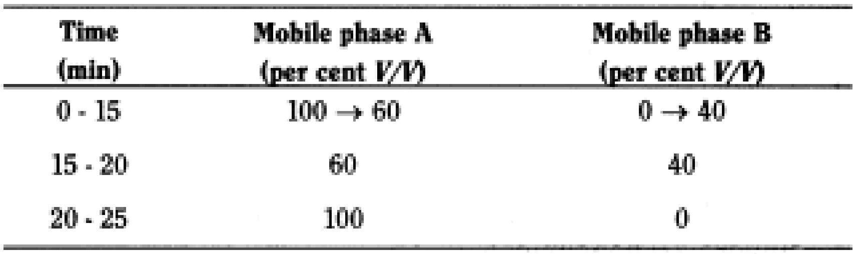
— *size*: *l* = 0.1 m, Ø = 4.6 mm;

— *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase:

— *mobile phase A*: 10 g/l solution of *tetrabutylammonium hydrogen sulphate R*;

— *mobile phase B*: *acetonitrile R*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 15	100 → 60	0 → 40
15 - 20	60	40
20 - 25	100	0

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 275 nm.

Equilibration With *acetonitrile R* for at least 30 min and then with the mobile phase at the initial composition for at least 5 min.

Injection 10 µl; inject *dimethylformamide R* as a blank.

Retention time Benperidol = about 6.5 min; droperidol = about 7 min.

System suitability Reference solution (a)

— *resolution*: minimum 2.0 between the peaks due to benperidol and droperidol; if necessary, adjust the concentration of acetonitrile in the mobile phase or adjust the time programme for the linear gradient.

Limits:

— *impurities A, B, C, D, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak due to the blank.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

Dissolve 0.300 g in 50 ml of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R* and titrate with *0.1 M perchloric acid*, using 0.2 ml of *naphtholbenzein solution R* as indicator.

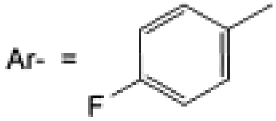
1 ml of *0.1 M perchloric acid* is equivalent to 38.14 mg of $C_{22}H_{24}FN_3O_2$.

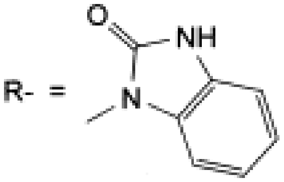
STORAGE

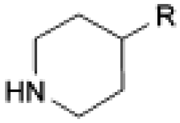
Protected from light.

IMPURITIES

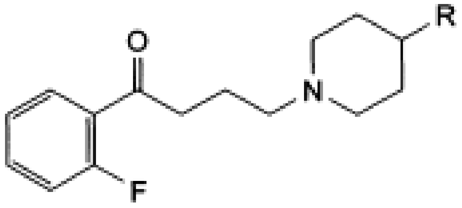
Specified impurities A, B, C, D, E.



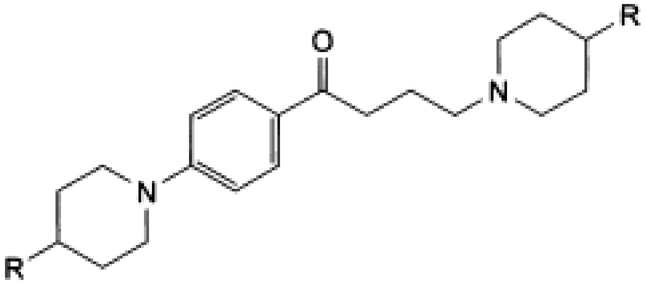




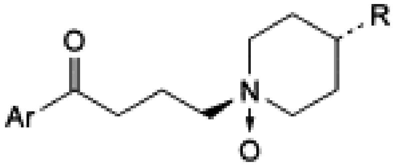
A. 1-(piperidin-4-yl)-1,3-dihydro-2*H*-benzimidazol-2-one,



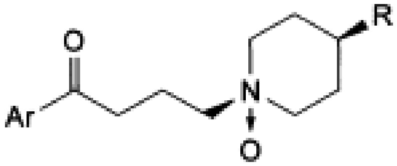
B. 1-[1-[4-(2-fluorophenyl)-4-oxobutyl]piperidin-4-yl]-1,3-dihydro-2*H*-benzimidazol-2-one,



C. 1-[1-[4-oxo-4-[4-[4-(2-oxo-2,3-dihydro-1*H*-benzimidazol-1-yl)piperidin-1-yl]phenyl]butyl] piperidin-4-yl]-1,3-dihydro-2*H*-benzimidazol-2-one,



D. *cis*-1-[1-[4-(4-fluorophenyl)-4-oxobutyl]piperidin-4-yl 1-oxide]-1,3-dihydro-2H-benzimidazol-2-one,



E. *trans*-1-[1-[4-(4-fluorophenyl)-4-oxobutyl]piperidin-4-yl 1-oxide]-1,3-dihydro-2H-benzimidazol-2-one.

Bentonite

General Notices

(Ph Eur monograph 0467)

1302-78-9

Ph Eur

DEFINITION

Natural clay containing a high proportion of montmorillonite, a native hydrated aluminium silicate in which some aluminium and silicon atoms may be replaced by other atoms such as magnesium and iron.

CHARACTERS

Appearance

Very fine, homogeneous, greyish-white powder with a more or less yellowish or pinkish tint.

Solubility

Practically insoluble in water and in aqueous solutions.

It swells with a little water forming a malleable mass.

IDENTIFICATION

A. To 0.5 g in a metal crucible add 1 g of *potassium nitrate R* and 3 g of *sodium carbonate R* and heat until the mixture melts. Allow to cool. To this residue add 20 ml of boiling *water R*, mix and filter. Wash the insoluble residue with 50 ml of *water R*. To this residue add 1 ml of *hydrochloric acid R* and 5 ml of *water R*. Filter. To the filtrate add 1 ml of *strong sodium hydroxide solution R* and filter. To this filtrate add 3 ml of *ammonium chloride solution R*. A gelatinous white precipitate is formed.

B. Swelling power with water (see Tests).

C. 0.25 g gives the reaction of silicates *(2.3.1)*.

TESTS

Alkalinity

To 2 g add 100 ml of *carbon dioxide-free water R* and shake for 5 min. To 5 ml of this suspension add 0.1 ml of *thymolphthalein solution R*. The liquid becomes bluish. Add 0.1 ml of *0.1 M hydrochloric acid*. The liquid is decolourised within 5 min.

Coarse particles

Maximum 0.5 per cent.

To 20 g add 1000 ml of *water R* and mix for 15 min using a high-speed mixer capable of operating at not less than 5000 r/min. Transfer the suspension to a wet sieve (75), tared after drying at 100-105 °C. Wash with 3 quantities, each of 500 ml, of *water R*, ensuring that any agglomerates have been dispersed. Dry the sieve at 100-105 °C and weigh. The particles on the sieve weigh a maximum of 0.1 g.

Sedimentation volume

To 6.0 g add 200 ml of *water R* and mix for 20 min using a high-speed mixer capable of operating at 10 000 r/min. Transfer 100 ml of this suspension to a graduated cylinder. Allow to stand for 24 h. The volume of the clear supernatant liquid is not greater than 2 ml.

Swelling power with water

Add 2.0 g in 20 portions to 100 ml of a 10 g/l solution of *sodium laurilsulfate R* in a 100 ml graduated cylinder about 30 mm in diameter. Allow 2 min between additions for each portion to settle. Allow to stand for 2 h. The apparent volume of the sediment is not less than 22 ml.

Heavy metals ***(2.4.8)***

Maximum 50 ppm.

To 5.0 g add 7.5 ml of *dilute hydrochloric acid R* and 27.5 ml of *water R*. Boil for 5 min. Centrifuge and filter the supernatant liquid. Wash the centrifugation residue with *water R* and filter. Dilute the combined filtrates to 50.0 ml with *water R*. To 5 ml of this solution add 5 ml of *water R*, 10 ml of *hydrochloric acid R* and 25 ml of *methyl isobutyl ketone R* and shake for 2 min. Separate the layers. Evaporate the aqueous layer to dryness on a water-bath. Dissolve the residue in 1 ml of *acetic acid R*, dilute to 25 ml with *water R* and filter. 12 ml of the filtrate complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Maximum 15 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 103 micro-organisms per gram, determined by plate-count.

Ph Eur

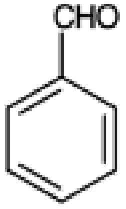
Benzaldehyde

General Notices



C_7H_6O 106.1 *100-52-7*

Action and use

Flavour.

DEFINITION

Benzaldehyde contains not less than 98.0% w/w and not more than 100.5% w/w of C_7H_6O.

CHARACTERISTICS

A clear, colourless liquid.

Slightly soluble in *water*; miscible with *ethanol (96%)* and with *ether*.

TESTS

Refractive index

1.544 to 1.546, Appendix V E.

Weight per ml

1.043 to 1.049 g, Appendix V G.

Free acid

Not more than 1.0% w/v, calculated as benzoic acid, $C_7H_6O_2$, when determined by the following method. To 10 ml add 20 ml of *ethanol (96%)* previously neutralised to *phenolphthalein solution R1* and titrate with 0.1M *sodium hydroxide VS* using *phenolphthalein solution R1* as indicator. Each ml of 0.1M *sodium hydroxide VS* is equivalent to 12.21 mg of $C_7H_6O_2$.

Chlorinated compounds

Not more than 0.05% w/v, calculated as Cl, when determined by the following method. To 5 ml add 50 ml of *isoamyl alcohol* and 3 g of *sodium* and boil under a reflux condenser for 1 hour. Cool, add 50 ml of *water* and 15 ml of *nitric acid*, cool, add 5 ml of 0.1M *silver nitrate VS*, shake and titrate the excess silver nitrate with 0.1M *ammonium thiocyanate VS* using *ammonium iron(III) sulphate solution R2* as indicator. Repeat the procedure without the substance being examined. The difference between the titrations represents the amount of silver nitrate required. Each ml of 0.1M *silver nitrate VS* is equivalent to 3.545 mg of Cl.

ASSAY

Carry out the method for *determination of aldehydes*, Appendix X K, using 0.5 g. Each ml of *0.5M potassium hydroxide in ethanol (60%) VS* is equivalent to 53.06 mg of C_7H_6O.

STORAGE

Benzaldehyde should be kept in a well-filled container, protected from light and stored at a temperature not exceeding 15°.

Benzalkonium Chloride Solution

General Notices

(Ph Eur monograph 0371)

Action and use

Antiseptic.

Ph Eur

DEFINITION

Benzalkonium chloride solution is an aqueous solution of a mixture of alkylbenzyldimethylammonium chlorides, the alkyl groups having chain lengths of C_8 to C_{18}. Benzalkonium chloride solution contains not less than 475 g/l and not more than 525 g/l of alkylbenzyldimethylammonium chlorides, calculated as $C_{22}H_{40}ClN$ (M_r 354.0). The solution may contain alcohol.

CHARACTERS

A clear, colourless or slightly yellowish liquid, miscible with water and with alcohol. It froths copiously when shaken.

IDENTIFICATION

A. Dilute 0.3 ml to 100 ml with *water R*. Examined between 220 nm and 350 nm *(2.2.25)*, the solution shows three absorption maxima, at 257 nm, 263 nm and 269 nm, and a shoulder at about 250 nm.

B. To 0.05 ml add 2 ml of *water R*, 0.1 ml of *glacial acetic acid R* and, dropwise, *1 ml of sodium tetraphenylborate solution R*. A white precipitate is formed. Filter. Dissolve the precipitate in a mixture of 1 ml of *acetone R* and 5 ml of *alcohol R*, heating to not more than 70 °C. Add *water R* dropwise to the warm solution until a slight opalescence forms. Heat gently until the solution is clear and allow to cool. White crystals separate. Filter, wash with three quantities, each of 10 ml, of *water R* and dry *in vacuo* over *diphosphorus pentoxide R* or *anhydrous silica gel R* at a temperature not exceeding 50 °C. The crystals melt *(2.2.14)* at 127 °C to 133 °C.

C. To 5 ml of *dilute sodium hydroxide solution R* add 0.1 ml of *bromophenol blue solution R1* and 5 ml of *chloroform R* and shake. The chloroform layer is colourless. Add 0.05 ml of the solution to be examined and shake. The chloroform layer becomes blue.

D. To 0.05 ml add 1 ml of *dilute nitric acid R*. A white precipitate is formed which dissolves on the addition of 5 ml of *alcohol R*. The solution gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dilute 2.0 g to 100 ml with *carbon dioxide-free water R*.

Appearance of solution.

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

Acidity or alkalinity

To 50 ml of solution S add 0.1 ml of *bromocresol purple solution R*. Not more than 0.1 ml of *0.1 M hydrochloric acid* or *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Amines and amine salts

Mix 10.0 g, while heating, with 20 ml of a mixture of 3 volumes of *1 M hydrochloric acid* and 97 volumes of *methanol R* and add 100 ml of *2-propanol R*. Pass a stream of *nitrogen R* slowly through the solution. Gradually add 12.0 ml of *0.1 M tetrabutylammonium hydroxide* and record the potentiometric titration curve *(2.2.20)*. If the curve shows two points of inflexion, the volume of titrant added between the two points is not greater than 5.0 ml. If the curve shows no point of inflexion, the solution to be examined does not comply with the test. If the curve shows one point of inflexion, repeat the test but add 3.0 ml of a 25.0 g/l solution of *dimethyldecylamine R* in *2-propanol R* before the titration. If the titration curve after the addition of 12.0 ml of the titrant shows only one point of inflexion, the solution to be examined does not comply with the test.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Determine the density *(2.2.5)* of the solution to be examined. Dilute 4.00 g to 100.0 ml with *water R*. Transfer 25.0 ml of the solution to a separating funnel, add 25 ml of *chloroform R*, 10 ml of *0.1 M sodium hydroxide* and 10.0 ml of a freshly prepared 50 g/l *solution of potassium iodide R*. Shake well, allow to separate and discard the chloroform layer. Shake the aqueous layer with three quantities, each of 10 ml, of *chloroform R* and discard the chloroform layers. To the aqueous layer add 40 ml of *hydrochloric acid R*, allow to cool and titrate with *0.05 M potassium iodate* until the deep-brown colour is almost discharged. Add 2 ml of *chloroform R* and continue the titration, shaking vigorously, until the chloroform layer no longer changes colour. Carry out a blank titration on a mixture of 10.0 ml of the freshly prepared 50 g/l solution of *potassium iodide R*, 20 ml of *water R* and 40 ml of *hydrochloric acid R*.

1 ml of *0.05 M potassium iodate* is equivalent to 35.4 mg of $C_{22}H_{40}ClN$.

LABELLING

The label states the content of alcohol, if any.

Ph Eur

Benzalkonium Chloride

General Notices

(Ph Eur monograph 0372)

8001-54-5

Action and use

Antiseptic.

Ph Eur

DEFINITION

Benzalkonium chloride is a mixture of alkylbenzyldimethylammonium chlorides, the alkyl groups having chain lengths of C_8 to C_{18}. It contains not less than 95.0 per cent and not more than the equivalent of 104.0 per cent of alkylbenzyldimethylammonium chlorides, calculated as $C_{22}H_{40}ClN$ (M_r 354.0) with reference to the anhydrous substance.

CHARACTERS

A white or yellowish-white powder or gelatinous, yellowish-white fragments, hygroscopic, soapy to the touch, very soluble in water and in alcohol. On heating it forms a clear molten mass. An aqueous solution froths copiously when shaken.

IDENTIFICATION

A. Dissolve 80 mg in *water R* and dilute to 100 ml with the same solvent. Examined between 220 nm and 350 nm *(2.2.25)*, the solution shows three absorption maxima, at 257 nm, 263 nm and 269 nm, and a shoulder at about 250 nm.

B. To 2 ml of solution S (see Tests) add 0.1 ml of *glacial acetic acid R* and, dropwise, 1 ml of *sodium tetraphenylborate solution R*. A white precipitate is formed. Filter. Dissolve the precipitate in a mixture of 1 ml of *acetone R* and 5 ml of *alcohol R*, heating to not more than 70 °C. Add *water R* dropwise to the warm solution until a slight opalescence forms. Heat gently until the solution is clear and allow to cool. White crystals separate. Filter, wash with three quantities, each of 10 ml, of *water R* and dry in vacuo over *diphosphorus pentoxide R* or *anhydrous silica gel R* at a temperature not exceeding 50 °C. The crystals melt *(2.2.14)* at 127 °C to 133 °C.

C. To 5 ml of *dilute sodium hydroxide solution R* add 0.1 ml of *bromophenol blue solution R1* and 5 ml of *chloroform R* and shake. The chloroform layer is colourless. Add 0.1 ml of solution S and shake. The chloroform layer becomes blue.

D. To 2 ml of solution S add 1 ml of *dilute nitric acid R*. A white precipitate is formed which dissolves on the addition of 5 ml of *alcohol R*. The solution gives reaction (a) of chlorides *(2.3.1).*

TESTS

Solution S

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

Acidity or alkalinity

To 50 ml of solution S add 0.1 ml of *bromocresol purple solution R*. Not more than 0.1 ml of *0.1 M hydrochloric acid* or *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Amines and amine salts

Dissolve 5.0 g with heating in 20 ml of a mixture of 3 volumes of *1 M hydrochloric acid* and 97 volumes of *methanol R* and add 100 ml of *2-propanol R*. Pass a stream of *nitrogen R* slowly through the solution. Gradually add 12.0 ml of *0.1 M tetrabutylammonium hydroxide* and record the potentiometric titration curve *(2.2.20)*. If the curve shows two points of inflexion, the volume of titrant added between the two points is not greater than 5.0 ml. If the curve shows no point of inflexion, the substance to be examined does not comply with the test. If the curve shows one point of inflexion, repeat the test but add 3.0 ml of a 25.0 g/l solution of *dimethyldecylamine R* in *2-propanol R* before the titration. If the titration curve after addition of 12.0 ml of the titrant shows only one point of inflexion, the substance to be examined does not comply with the test.

Water *(2.5.12)*

Not more than 10 per cent, determined on 0.300 g by the semi-micro determination of water.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 2.00 g in *water R* and dilute to 100.0 ml with the same solvent. Transfer 25.0 ml of the solution to a separating funnel, add 25 ml of *chloroform R*, 10 ml of *0.1 M sodium hydroxide* and 10.0 ml of a freshly prepared 50 g/l solution of *potassium iodide R*. Shake well, allow to separate and discard the chloroform layer. Shake the aqueous layer with three quantities, each of 10 ml, of *chloroform R* and discard the chloroform layers. To the aqueous layer add 40 ml of *hydrochloric acid R*, allow to cool and titrate with 0.05 M potassium iodate until the deep-brown colour is almost discharged. Add 2 ml of *chloroform R* and continue the titration, shaking vigorously, until the chloroform layer no longer changes colour. Carry out a blank titration on a mixture of 10.0 ml of the freshly prepared 50 g/l solution of *potassium iodide R*, 20 ml of *water R* and 40 ml of *hydrochloric acid R*.

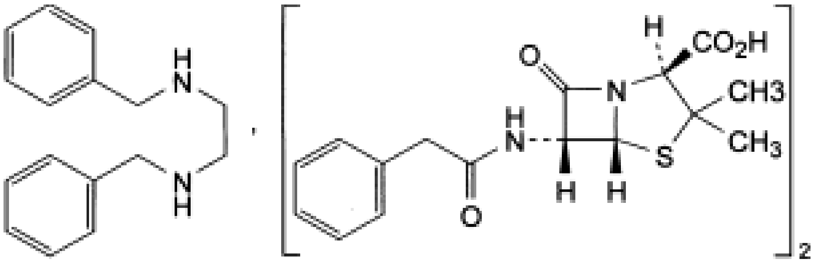
1 ml of *0.05 M potassium iodate* is equivalent to 35.4 mg of $C_{22}H_{40}ClN$.

Ph Eur

Benzathine Benzylpenicillin

General Notices

(Ph Eur monograph 0373)



$(C_{16}H_{18}N_2O_4S)_2C_{16}H_{20}N_2$ *909* 1538-09-6

Action and use

Penicillin antibacterial.

Ph Eur

DEFINITION

N,N′-Dibenzylethane-1,2-diamine compound (1:2) with (2*S*,5*R*,6*R*)-3,3-dimethyl-7-oxo-6-[(phenylacetyl)amino]-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid.

Substance produced by the growth of certain strains of *Penicillium notatum* or related organisms, or obtained by any other means.

Content

- *benzathine benzylpenicillin*: 96.0 per cent to 102.0 per cent (anhydrous substance);
- *N,N′-dibenzylethylenediamine* (benzathine $C_{16}H_{20}N_2$; M_r 240.3): 24.0 per cent to 27.0 per cent (anhydrous substance).

It contains a variable quantity of water. Dispersing or suspending agents may be added.

CHARACTERS

Appearance

White or almost white powder.

Solubility

Very slightly soluble in water, freely soluble in dimethylformamide and in formamide, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

First identification *A.*

Second identification *B, C, D.*

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *benzathine benzylpenicillin CRS*.

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 25 mg of the substance to be examined in 5 ml of *methanol R*.

Reference solution Dissolve 25 mg of *benzathine benzylpenicillin CRS* in 5 ml of *methanol R*.

Plate *TLC silanised silica gel plate R.*

Mobile phase Mix 30 volumes of *acetone R* and 70 volumes of a 154 g/l solution of *ammonium acetate R* adjusted to pH 7.0 with *ammonia R*.

Application 1 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Expose to iodine vapour until the spots appear and examine in daylight.

System suitability Reference solution

— The chromatogram shows 2 clearly separated spots.

Results The 2 principal spots in the chromatogram obtained with the test solution are similar in position, colour and size to the 2 principal spots in the chromatogram obtained with the reference solution.

C. Place about 2 mg in a test-tube about 150 mm long and 15 mm in diameter. Moisten with 0.05 ml of *water R* and add 2 ml of *sulphuric acid-formaldehyde reagent R*. Mix the contents of the tube by swirling; the solution is practically colourless. Place the test-tube on a water-bath for 1 min; a reddish-brown colour develops.

D. To 0.1 g add 2 ml of *1 M sodium hydroxide* and shake for 2 min. Shake the mixture with 2 quantities, each of 3 ml, of *ether R*. Evaporate the combined ether layers to dryness and dissolve the residue in 1 ml of *ethanol (50 per cent V/V) R*. Add 5 ml of *picric acid solution R*, heat at 90 °C for 5 min and allow to cool slowly. Separate the crystals and recrystallise from *ethanol (25 per cent V/V) R* containing 10 g/l of *picric acid R*. The crystals melt *(2.2.14*) at about 214 °C.

TESTS

Acidity or alkalinity

To 0.50 g add 100 ml of *carbon dioxide-free water R* and shake for 5 min. Filter through a sintered-glass filter (2.1.2). To 20 ml of the filtrate add 0.1 ml of *bromothymol blue solution R1*. The solution is green or yellow. Not more than 0.2 ml of *0.02 M sodium hydroxide* is required to change the colour of the indicator to blue.

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the solutions immediately before use, using sonication (for about 2 min) to dissolve the samples. Avoid any overheating during the sample preparation.*

Test solution Dissolve 70.0 mg of the substance to be examined in 25 ml of *methanol R* and dilute to 50.0 ml with a solution containing 6.8 g/l of *potassium dihydrogen phosphate R* and 1.02 g/l of *disodium hydrogen phosphate R*.

Reference solution (a) Dissolve 70.0 mg of *benzathine benzylpenicillin CRS* in 25 ml of *methanol R* and dilute to 50.0 ml with a solution containing 6.8 g/l of *potassium dihydrogen phosphate R* and 1.02 g/l of *disodium hydrogen phosphate R*.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 100.0 ml with mobile phase A.

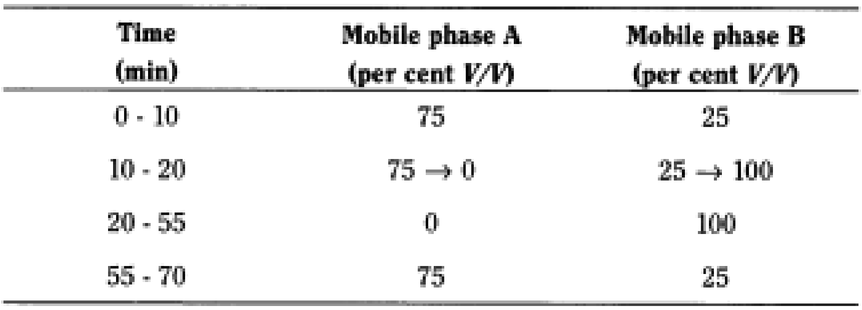
Column:
— *size*: *l* = 0.25 m, Ø = 4.0 mm;

— *stationary phase: end-capped octadecylsilyl silica gel for chromatography R (5 µm);*

— *temperature*: 40 °C.

Mobile phase:
— *mobile phase A*: mix 10 volumes of a 34 g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 3.5 with *phosphoric acid R*, 30 volumes of *methanol R* and 60 volumes of *water R*;

— *mobile phase B*: mix 10 volumes of a 34 g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 3.5 with *phosphoric acid R*, 30 volumes of *water R* and 60 volumes of *methanol R;*



Time (min)	**Mobile phase A (per cent *V/V*)**	**Mobile phase B (per cent *V/V*)**
0 - 10	75	25
10 - 20	75 → 0	25 → 100
20 - 55	0	100
55 - 70	75	25

Flow rate 1 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 20 µl.

System suitability Reference solution (a):

— *relative retention* with reference to benzylpenicillin: benzathine = 0.3 to 0.4 impurity C = about 2.4; if necessary, adjust the concentration of methanol in the mobile phase.

Limits:
— *impurity C*: not more than twice the sum of the areas of the 2 principal peaks in the chromatogram obtained with reference solution (b) (2 per cent);

— *any other impurity*: for each impurity, not more than the sum of the areas of the 2 principal peaks in the chromatogram obtained with reference solution (b) (1 per cent);

— *disregard limit*: 0.05 times the sum of the areas of the 2 principal peaks in the chromatogram obtained with reference solution (b) (0.05 per cent).

Water ***(2.5.12)***

5.0 per cent to 8.0 per cent, determined on 0.300 g.

Bacterial endotoxins ***(2.6.14, Method E)***

Less than 0.13 IU/ml, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

Suspend 20 mg in 20 ml of a solution of *0.1 M sodium hydroxide* diluted 1 to 100, shake thoroughly and centrifuge. Examine the supernatant.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Mobile phase *phosphate buffer solution pH 3.5 R, methanol R, water R* (10:35:55 *V/V/V*).

Injection Test solution and reference solution (a).

Calculate the percentage contents of benzathine and benzathine benzylpenicillin. Calculate the percentage content of benzathine benzylpenicillin by multiplying the percentage content of benzylpenicillin by 1.36.

STORAGE

In an airtight container . If the substance is sterile, store in a sterile, airtight, tamper-proof container .

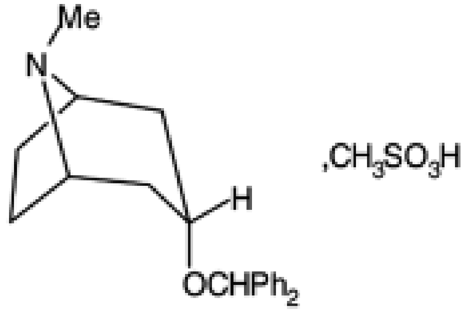
Ph Eur

Benzatropine Mesilate

General Notices



$C_{21}H_{25}NO,CH_4O_3S$ 403.5 *132-17-2*

Action and use

Anticholinergic.

Preparations

Benzatropine Injection

Benzatropine Tablets

DEFINITION

Benzatropine Mesilate is (1*R*,3*R*,5*S*)-3-benzhydryloxytropane methanesulphonate. It contains not less than 98.0% and not more than 100.5% of $C_{21}H_{25}NO,CH_4O_3S$, calculated with reference to the dried substance.

CHARACTERISTICS

A white, crystalline powder. It melts at about 144°.

Very soluble in *water*; freely soluble in *ethanol (96%)*; practically insoluble in *ether*.

IDENTIFICATION

A. Dry the substance at 105° for 3 hours. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of benzatropine mesilate (*RS 026*).

B. The *light absorption*, Appendix II B, in the range 230 to 350 nm of a 0.1% w/v solution in *2M hydrochloric acid* exhibits two maxima, at 253 and 258 nm. The *absorbance* at 253 nm is about 0.96 and at 258 nm is about 1.1.

C. Dissolve 10 mg in 2 ml of *water*, pour into 5 ml of hot *picric acid solution R1* and allow to cool. The *melting point* of the precipitate, after drying at 105°, is about 185°, Appendix V A.

TESTS

Tropine

Carry out the method for *thin-layer chromatography*, Appendix III A, using *silica gel G* as the coating substance and a mixture of 75 volumes of *ethanol (96%)* and 15 volumes of *13.5M ammonia* as the mobile phase. Apply separately to the plate 10 µl of each of two solutions in *acetone* containing (1) 4.0% w/v of the substance being examined and (2) 0.020% w/v of *tropine*. After removal of the plate, allow it to dry in air and spray with *sodium iodobismuthate solution* and then with a 0.4% w/v solution of *sulphuric acid*. Any spot corresponding to tropine in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (2).

Related substances

Carry out the method for *liquid chromatography*, Appendix III D, using the following solutions. For solution (1) mix with the aid of ultrasound 50 mg of the substance being examined with 15 ml of mobile phase A, dilute to 50 ml with the same solvent and filter. For solution (2) dilute 1 volume of solution (1) to 100 volumes with mobile phase A and further dilute 1 volume of the resulting solution to 5 volumes with the same solvent. For solution (3) mix with the aid of ultrasound 50 mg of *desmethyl benzatropine hydrochloride BPCRS* with 15 ml of mobile phase A, dilute to 100 ml and dilute 1 volume of the resulting solution to 100 volumes with the same solvent. Solution (4) contains 0.01% w/v each of *benzatropine mesilate BPCRS* and *desmethyl benzatropine hydrochloride BPCRS* in mobile phase A.

The chromatographic procedure may be carried out using (a) a stainless steel column (25 cm × 4.6 mm) packed with *phenylsilyl silica gel for chromatography* (5 µm) (Zorbax SB-Phenyl 5µ is suitable). Carry out a linear gradient elution with a flow rate of 1 ml per minute using the following conditions. Use a detection wavelength of 220 nm.

Mobile phase A A mixture of 5 volumes of a 1M potassium phosphate buffer prepared as described for mobile phase B, 20 volumes of *acetonitrile* and 75 volumes of *water*.

Mobile phase B A mixture of 35 volumes of *water*, 60 volumes of *acetonitrile* and 5 volumes of a 1M potassium phosphate buffer prepared in the following manner: dissolve 136.1 g of *potassium dihydrogen orthophosphate* in 900 ml of *water*, add 5 ml of *orthophosphoric acid (85%)* and dilute to 1000 ml.

Time (minutes)	Mobile phase A % v/v	Mobile phase B % v/v
0	70	30
20	30	70
30	0	100
50	0	100
55	70	30
65	70	30

Inject 20 µl of solution (4). The test is not valid unless the *resolution factor* between the two principal peaks is at least 1. If necessary adjust the concentration of acetonitrile or adjust the time program of the linear gradient elution.

Inject separately 20 µl of mobile phase A as a blank and 20 µl each of solutions (1), (2) and

(3). In the chromatogram obtained with solution (1) the area of any peak corresponding to desmethyl benzatropine is not greater than the area of the principal peak in the chromatogram obtained with solution (3) (0.5%), the area of any other *secondary peak* is not greater that the area of the principal peak in the chromatogram obtained with solution (2) (0.2%) and the sum of the areas of any such peaks is not greater than 2.5 times the area of the principal peak in the chromatogram obtained with solution (2) (0.5%). In solution (1) disregard any peaks corresponding to the peaks in the chromatogram obtained with the blank solution.

Loss on drying

When dried to constant weight at 105°, loses not more than 5.0% of its weight. Use 1 g.

Sulphated ash

Not more than 0.1%, Appendix IX A.

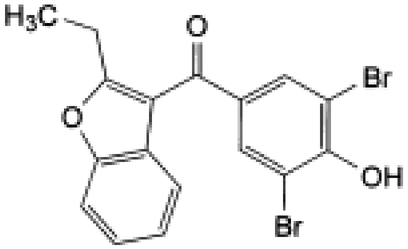
ASSAY

Dissolve 0.6 g in 25 ml of *water*, add 5 ml of *dilute sodium carbonate solution* and extract with four 10 ml quantities of *chloroform*. Wash the combined extracts with 10 ml of *water*, extract the washings with 5 ml of *chloroform* and add the chloroform to the combined extracts. Filter and wash the filter with 5 ml of *chloroform*. To the combined filtrate and washings add 25 ml of *1,4-dioxan* and titrate with *0.1M perchloric acid VS* using 0.15 ml of a 0.1% w/v solution of *methyl red* in *methanol* as indicator. Each ml of *0.1M perchloric acid VS* is equivalent to 40.35 mg of $C_{21}H_{25}NO,CH_4O_3S$.

Benzbromarone

General Notices

(Ph Eur monograph 1393)



$C_{17}H_{12}Br_2O_3$ 424.1 *3562-84-3*

Action and use

Uricosuric; treatment of hyperuricaemia.

Ph Eur

DEFINITION

(3,5-Dibromo-4-hydroxyphenyl)(2-ethylbenzofuran-3-yl)methanone.

Content

98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in acetone and in methylene chloride, sparingly soluble in ethanol (96 per cent).

mp: about 152 °C.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *benzbromarone CRS*.

B. By means of a copper wire, previously ignited, introduce a small amount of the substance to be examined into the non-luminous part of a flame. The colour of the flame becomes green.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_5 *(2.2.2, Method II).*

Dissolve 1.25 g in *dimethylformamide R* and dilute to 25 ml with the same solvent.

Acidity or alkalinity

Shake 0.5 g with 10 ml of *carbon dioxide-free water R* for 1 min and filter. To 2.0 ml of the filtrate add 0.1 ml of *methyl red solution R* and 0.1 ml of *0.01 M hydrochloric acid*. The solution is red. Add 0.3 ml of *0.01 M sodium hydroxide*. The solution is yellow.

Related substances

Liquid chromatography *(2.2.29).*

Test solution Dissolve 0.125 g of the substance to be examined in 30 ml of *methanol R* and dilute to 50.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve 10 mg of *benzarone CRS* (impurity C) in the mobile phase and dilute to 20 ml with the mobile phase. To 5 ml of this solution add 1 ml of the test solution and dilute to 100 ml with the mobile phase.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography* R (5 µm).

Mobile phase *glacial acetic acid R, acetonitrile R, water R, methanol R* (5:25:300:990 *V/V/V/V*).

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 231 nm.

Injection 20 µl.

Run time 2.5 times the retention time of benzbromarone.

Relative retention With reference to benzbromarone: impurity A = about 0.6; impurity B = about 2.

System suitability Reference solution (b).

— *resolution*: minimum 10.0 between the peaks due to impurity C (1st peak) and benzbromarone (2nd peak).

Limits:

— *impurity A*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent);

— *impurity B*: not more than 10 times the area of the principal peak in the chromatogram

obtained with reference solution (a) (1.0 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *sum of impurities* other than A and B: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent).

Halides expressed as chlorides *(2.4.4)*

Maximum 400 ppm.

Shake 1.25 g with a mixture of 5 ml of *dilute nitric acid R* and 15 ml of *water R*. Filter. Rinse the filter with *water R* and dilute the filtrate to 25 ml with the same solvent. Dilute 2.5 ml of this solution to 15 ml with *water R*.

Iron *(2.4.9)*

Maximum 125 ppm.

Moisten the residue obtained in the test for sulphated ash with 2 ml of *hydrochloric acid R* and evaporate to dryness on a water-bath. Add 0.05 ml of *hydrochloric acid R* and 10 ml of *water R,* heat to boiling and maintain boiling for 1 min. Allow to cool. Rinse the crucible with *water R*, collect the rinsings and dilute to 25 ml with *water R*. Dilute 2 ml of this solution to 10 ml with *water R*.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

0.5 g complies with test C. Prepare the reference solution using 1 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 50 °C for 4 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 60 ml of *methanol R*. Stir until completely dissolved and add 10 ml of *water R.* Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M sodium hydroxide* is equivalent to 42.41 mg of $C_{17}H_{12}Br_2O_3$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities *A, B.*

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. DEFINITION

N-Benzyl-*N,N*-dimethyl-2-[2-[4-(1,1,3,3-tetramethylbutyl)phenoxy]ethoxy]ethanaminium chloride.

Content

97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

Appearance

White or yellowish-white powder.

Solubility

Very soluble in water and in ethanol (96 per cent), freely soluble in methylene chloride.

An aqueous solution froths copiously when shaken.

IDENTIFICATION

A. Melting point *(2.2.14)*: 158 °C to 164 °C, after drying at 105 °C for 4 h.

B. Thin-layer chromatography *(2.2.27).*

Test solution Dissolve 25 mg of the substance to be examined in *water R* and dilute to 5 ml with the same solvent.

Reference solution Dissolve 25 mg of *benzethonium chloride CRS* in *water R* and dilute to 5 ml with the same solvent.

Plate *TLC silica gel F_{254} plate R.*

Mobile phase *glacial acetic acid R, water R, methanol R* (5:5:100 *V/V/V*).

Application 20 µl.

Development Over a path of 12 cm.

Drying In a current of warm air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

C. To 5 ml of *dilute sodium hydroxide solution R* add 0.1 ml of *bromophenol blue solution R1* and 5 ml of *methylene chloride R* and shake. The lower layer is colourless. Add 0.1 ml of solution S (see Tests) and shake. A blue colour develops in the lower layer.

D. To 2 ml of solution S add 1 ml of *dilute nitric acid R*. A white precipitate is formed which dissolves upon addition of 5 ml of *ethanol (96 per cent) R*. The solution gives reaction (a) of chlorides *(2.3.1).*

TESTS

Solution S

Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II).*

Acidity or alkalinity

To 25 ml of solution S add 0.1 ml of *phenolphthalein solution R*. The solution is colourless. Add 0.3 ml of *0.01 M sodium hydroxide*. The solution is pink. Add 0.1 ml of *methyl red solution R* and 0.5 ml of *0.01 M hydrochloric acid*. The solution is orange-red.

Volatile bases and salts of volatile bases *(2.4.1,*

Method B)

Maximum 50 ppm, determined on 0.20 g.

Prepare the standard using 0.1 ml of *ammonium standard solution (100 ppm NH_4) R.* Replace heavy magnesium oxide by 2.0 ml of *strong sodium hydroxide solution* R.

Loss on drying *(2.2.32)*

Maximum 5.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 2.000 g in *water R* and dilute to 100.0 ml with the same solvent. Transfer 25.0 ml of the solution to a separating funnel, add 10 ml of a 4 g/l solution of *sodium hydroxide R*, 10.0 ml of a freshly prepared 50 g/l solution of *potassium iodide R* and 25 ml of *methylene chloride R*. Shake vigorously, allow to separate and discard the lower layer. Shake the upper layer with 3 quantities, each of 10 ml, of *methylene chloride R* and discard the lower layers. To the upper layer add 40 ml of *hydrochloric acid R*, allow to cool and titrate with *0.05 M potassium iodate* until the deep brown colour is almost discharged. Add 4 ml of *methylene chloride R* and continue the titration, shaking vigorously, until the lower layer is no longer brown. Carry out a blank titration using a mixture of 10.0 ml of a freshly prepared 50 g/l solution of *potassium iodide R,* 20 ml of *water R* and 40 ml of *hydrochloric acid R*.

1 ml of *0.05 M potassium iodate* is equivalent to 44.81 mg of $C_{27}H_{42}ClNO_2$.

STORAGE

Protected from light.

Very slightly soluble in water, freely soluble in ethanol (96 per cent).

IDENTIFICATION

First identification A, B.

Second identification A, C, D.

A. Melting point *(2.2.14)*: 89 °C to 92 °C.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison benzocaine CRS.

C. To about 50 mg in a test tube add 0.2 ml of a 500 g/l solution of *chromium trioxide R*. Cover the mouth of the tube with a piece of filter paper moistened with a freshly prepared mixture of equal volumes of a 50 g/l solution of *sodium nitroprusside R* and a 200 g/l solution of *piperazine hydrate R*. Boil gently for at least 30 s. A blue colour develops on the filter paper.

D. Dissolve about 50 mg in *ethanol (96 per cent) R* and dilute to 100 ml with the same solvent. 2 ml of the solution gives the reaction of primary aromatic amines *(2.3.1)*.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Dissolve 1.0 g in *ethanol (96 per cent) R* and dilute to 20 ml with the same solvent.

Acidity or alkalinity

Dissolve 0.5 g in 10 ml of *ethanol (96 per cent) R* previously neutralised to 0.05 ml of *phenolphthalein solution R*. Add 10 ml of *carbon dioxide-free water R*. The solution remains colourless and not more than 0.5 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.00 g by drying *in vacuo*.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Carry out the determination of primary aromatic amino-nitrogen *(2.5.8)*, using 0.400 g dissolved in a mixture of 25 ml of *hydrochloric acid R* and 50 ml of *water R*.

1 ml of *0.1 M sodium nitrite* is equivalent to 16.52 mg of $C_9H_{11}NO_2$.

STORAGE

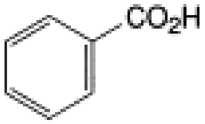
Protected from light.

Ph Eur

Benzoic Acid

General Notices

(Ph Eur monograph 0066)



$C_7H_6O_2$ *122.1* 65-85-0

Action and use

Antimicrobial preservative.

Preparations

Compound Benzoic Acid Ointment

Benzoic Acid Solution

Ph Eur

DEFINITION

Benzenecarboxylic acid.

Content

99.0 per cent to 100.5 per cent.

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals.

Solubility

Slightly soluble in water, soluble in boiling water, freely soluble in ethanol (96 per cent) and in fatty oils.

IDENTIFICATION

A. Melting point *(2.2.14)*: 121 °C to 124 °C.

B. Solution S (see Tests) gives reaction (a) of benzoates *(2.3.1)*.

TESTS

Solution S

Dissolve 5.0 g in *ethanol (96 per cent) R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Carbonisable substances

Dissolve 0.5 g with shaking in 5 ml of *sulphuric acid R*. After 5 min, the solution is not more intensely coloured than reference solution Y_5 *(2.2.2, Method I)*.

Oxidisable substances

Dissolve 0.2 g in 10 ml of boiling *water R*. Cool, shake and filter. To the filtrate add 1 ml of *dilute sulphuric acid R* and 0.2 ml of *0.02 M potassium permanganate*. After 5 min, the solution is still coloured pink.

Halogenated compounds and halides

Maximum 300 ppm.

All glassware used must be chloride-free and may be prepared by soaking overnight in a 500 g/l solution of nitric acid R, rinsed with water R and stored full of water R. It is recommended that glassware be reserved for this test.

Solution (a) Dissolve 6.7 g in a mixture of 40 ml of *1 M sodium hydroxide* and 50 ml of *ethanol (96 per cent) R* and dilute to 100.0 ml with *water R*. To 10.0 ml of this solution add 7.5 ml of *dilute sodium hydroxide solution R* and 0.125 g of *nickel-aluminium alloy R* and heat on a water-bath for 10 min. Allow to cool to room temperature, filter into a 25 ml volumetric flask and wash with 3 quantities, each of 2 ml, of *ethanol (96 per cent) R*. Dilute the filtrate and washings to 25.0 ml with *water R*. This solution is used to prepare solution A.

Solution (b) In the same manner, prepare a similar solution without the substance to be examined. This solution is used to prepare solution B.

In four 25 ml volumetric flasks, place separately 10 ml of solution (a), 10 ml of solution (b), 10 ml of *chloride standard solution (8 ppm Cl) R* (used to prepare solution C) and 10 ml of *water R*. To each flask add 5 ml of *ferric ammonium sulphate solution R5*, mix and add dropwise and with swirling 2 ml of *nitric acid R* and 5 ml *of mercuric thiocyanate solution R*. Shake. Dilute the contents of each flask to 25.0 ml with *water R* and allow the solutions to stand in a water-bath at 20 °C for 15 min. Measure at 460 nm the absorbance *(2.2.25)* of solution A using solution B as the compensation liquid, and the absorbance of solution C using the solution obtained with 10 ml of *water R* as the compensation liquid. The absorbance of solution A is not greater than that of solution C.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

12 ml of solution S complies with test B. Prepare the reference solution using a mixture of 5 ml of *lead standard solution (1 ppm Pb) R* and 5 ml of *ethanol (96 per cent) R*.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

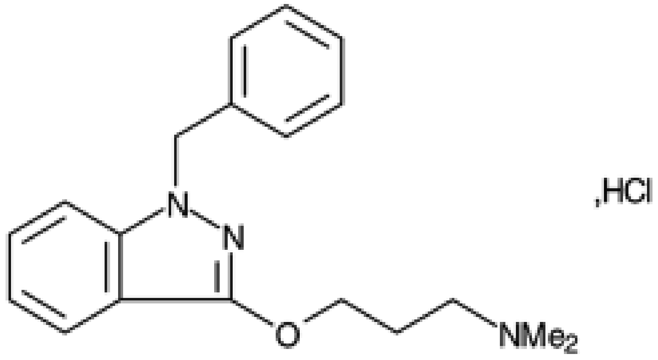
Dissolve 0.200 g in 20 ml of *ethanol (96 per cent) R* and titrate with *0.1 M sodium hydroxide*, using 0.1 ml of *phenol red solution R* as indicator, until the colour changes from yellow to violet-red.

1 ml of *0.1 M sodium hydroxide* is equivalent to 12.21 mg of $C_7H_6O_2$.

Ph Eur

Benzydamine Hydrochloride

General Notices



$C_{19}H_{23}N_3O,HCl$ 345.9 *132-69-4*

Action and use

Cyclo-oxygenase inhibitor; analgesic; anti-inflammatory.

Preparations

Benzydamine Cream

Benzydamine Mouthwash

Benzydamine Oromucosal Spray

DEFINITION

Benzydamine Hydrochloride is 3-(1-benzylindazol-3-yloxy)propyldimethylamine hydrochloride. It contains not less than 99.0% and not more than 101.0% of $C_{19}H_{23}N_3O,HCl$, calculated with reference to the dried substance.

PRODUCTION

The method of manufacture is such that the level of 3-chloropropyl(dimethyl)amine hydrochloride is not more than 5 ppm when determined by a suitable method.

CHARACTERISTICS

A white crystalline powder.

Very soluble in *water*; freely soluble in *ethanol (96%)*; practically insoluble in *ether*.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference* *spectrum* of benzydamine hydrochloride *(RS 027)*.

B. Yields reaction A characteristic of *chlorides*, Appendix VI.

TESTS

Clarity and colour of solution

A 10.0% w/v solution is *clear*, Appendix IV A, and not more intensely coloured than *reference solution* Y_6, Appendix IV B, Method II.

Acidity

pH of a 10% w/v solution, 4.0 to 5.5, Appendix V L.

Heavy metals

12 ml of a 10% w/v solution complies with *limit test A for heavy metals*, Appendix VII (10 ppm) . Use 1 ml of *lead standard solution (10 ppm Pb)* to prepare the standard.

Related substances

Carry out the method for *liquid chromatography*, Appendix III D, using the following solutions in *methanol (50%)*. Solution (1) contains 0.25% w/v of the substance being examined. Solution (2) contains 0.0005% w/v of *3-dimethylaminopropyl 2-benzylaminobenzoate hydrochloride BPCRS* (impurity A) and 0.00125% w/v of 3-(*1,5-dibenzyl-1*H*-indazole-3-yl) oxypropyldimethylamine hydrochloride BPCRS* (impurity B). Solution (3) contains 0.00025% w/v of *1-benzyl-1*H*-indazol-3-ol BPCRS* (impurity C). Solution (4) contains 0.00025% w/v of the substance being examined. Solution (5) contains equal volumes of solutions (1), (2) and (3).

The chromatographic procedure may be carried out using a stainless steel column (25 cm × 4.6 mm) packed with *end-capped octadecylsilyl silica gel for chromatography* (5 µm) (Suplex pKB-100 is suitable), fitted with a stainless steel guard column (2 cm × 4.6 mm) packed with the same material. Use as the initial mobile phase with a flow rate of 1.5 ml per minute, a mixture of 50 volumes of solution A and 50 volumes of *methanol*. Solution A contains *0.01M potassium dihydrogen orthophosphate* and *0.005M sodium octyl sulphate* in *water*, adjusted to pH 3.0 ± 0.1 with *orthophosphoric acid*. Carry out a linear gradient elution increasing the percentage of *methanol* to 70% over 20 minutes from the moment of injection and then decreasing the percentage of *methanol* to 50% over 2 minutes and maintain the final mobile phase until the completion of that run. Use a detection wavelength of 320 nm.

Inject 20 µl of solution (5) and modify the rate of change of the mobile phase, if necessary, to obtain a retention time of about 10 minutes for the substance being examined.

The test is not valid unless, in the chromatogram obtained with solution (5), the *resolution factor* between any two adjacent peaks is at least 2.5.

Inject 20 µl of solution (1) and allow the chromatography to proceed for 30 minutes. In the chromatogram obtained the areas of any peak corresponding to impurity A or impurity B is not greater than the area of the corresponding peak in the chromatogram obtained with solution (2) (0.2% of impurity A and 0.5% of impurity B), the area of any peak corresponding to impurity C is not greater than the area of the peak in the chromatogram obtained with solution (3) (0.1%) and the area of any other *secondary peak* is not greater than the area of the peak in the chromatogram obtained with solution (4) (0.1%). The sum of the areas of any such peaks is not greater than 1%.

Primary amines

Dissolve 50 mg of the substance being examined in 10 ml of *ethanol (96%)*, add 0.1 ml of *hydrochloric acid* and 2 ml of a 5% w/v solution of *4-dimethylaminobenzaldehyde* in *ethanol (96%)*. The yellow colour obtained is not more intense than that obtained by treating 10 ml of a 0.00005% w/v solution of *2-aminobenzoic acid* in *ethanol (96%)* in the same manner.

Loss on drying

When dried for 3 hours at 100° to 105° at a pressure not exceeding 0.7 kPa, loses not more than 0.5% of its weight. Use 1 g.

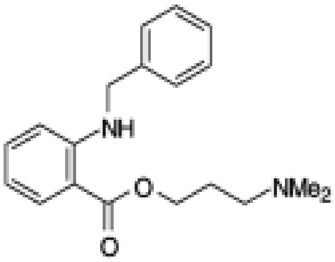
Sulphated ash

Not more than 0.1%, Appendix IX A. Use 1 g.

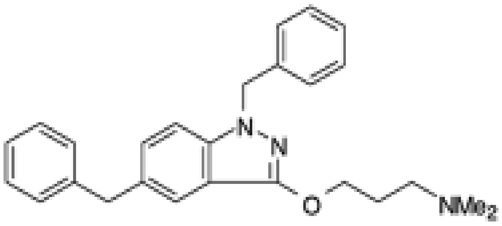
ASSAY

Dissolve 0.3 g in 100 ml of *anhydrous acetic acid* and carry out Method I for *non-aqueous titration*, Appendix VIII A, determining the end point potentiometrically. Each ml of *0.1M perchloric acid VS* is equivalent to 34.59 mg of $C_{19}H_{23}N_3O,HCl$.

IMPURITIES



A. 3-dimethylaminopropyl 2-benzylaminobenzoate



B. 3-(1,5-dibenzyl-1*H*-indazol-3-yl)oxypropyldimethylamine

Benzyl alcohol not intended for parenteral use

Injection Without air-plug, 0.1 µl of the test solution and reference solution (a).

Relative retention With reference to benzyl alcohol (retention time = about 26 min): ethylbenzene = about 0.28; dicyclohexyl = about 0.59; impurity A = about 0.68; impurity B = about 0.71.

System suitability Reference solution (a):

— *resolution*: minimum 3.0 between the peaks due to impurity A and impurity B.

In the chromatogram obtained with the test solution, verify that there are no peaks with the same retention time as ethylbenzene and dicyclohexyl.

Limits:

— *impurity A*: not more than the difference between the area of the peak due to impurity A in the chromatogram obtained with reference solution (a) and the area of the peak due to impurity A in the chromatogram obtained with the test solution (0.15 per cent);

— *impurity B*: not more than the difference between the area of the peak due to impurity B in the chromatogram obtained with reference solution (a) and the area of the peak due to impurity B in the chromatogram obtained with the test solution (0.10 per cent);

— *sum of other peaks with a relative retention less than that of benzyl alcohol*: not more than 4 times the area of the peak due to ethylbenzene in the chromatogram obtained with reference solution (a) (0.04 per cent);

— *sum of peaks with a relative retention greater than that of benzyl alcohol*: not more than the area of the peak due to dicyclohexyl in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *disregard limit*: 0.01 times the area of the peak due to ethylbenzene in the chromatogram obtained with reference solution (a) (0.0001 per cent).

Benzyl alcohol intended for parenteral use

Injection Without air-plug, 0.1 µl of the test solution and reference solution (b).

Relative retention With reference to benzyl alcohol (retention time = about 26 min): ethylbenzene = about 0.28; dicyclohexyl = about 0.59; impurity A = about 0.68; impurity B = about 0.71.

System suitability Reference solution (b):

— *resolution*: minimum 3.0 between the peaks due to impurity A and impurity B.

In the chromatogram obtained with the test solution, verify that there are no peaks with the same retention time as the standards.

Limits:

— *impurity A*: not more than the difference between the area of the peak due to impurity A in the chromatogram obtained with reference solution (b) and the area of the peak due to impurity A in the chromatogram obtained with the test solution (0.05 per cent);

— *impurity B*: not more than the difference between the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) and the area of the peak due to impurity B in the chromatogram obtained with the test solution (0.10 per cent);

— *sum of other peaks with a relative retention less than that of benzyl alcohol*: not more than twice the area of the peak due to ethylbenzene in the chromatogram obtained with reference solution (b) (0.02 per cent);

— *sum of peaks with a relative retention greater than that of benzyl alcohol*: not more than the area of the peak due to dicyclohexyl in the chromatogram obtained with reference solution (b) (0.2 per cent);

— *disregard limit*: 0.01 times the area of the peak due to ethylbenzene in the chromatogram obtained with reference solution (b) (0.0001 per cent).

Residue on evaporation

Maximum 0.05 per cent.

After ensuring that the substance to be examined complies with the test for peroxide value, evaporate 10.0 g to dryness in a tared quartz or porcelain crucible or platinum dish on a hot plate at a temperature not exceeding 200 °C. Ensure that the substance to be examined does not boil during evaporation. Dry the residue on the hot plate for 1 h and allow to cool in a desiccator. The residue weighs a maximum of 5 mg.

ASSAY

To 0.900 g (*m* g) add 15.0 ml of a freshly prepared mixture of 1 volume of *acetic anhydride R* and 7 volumes of *pyridine R* and boil under a reflux condenser on a water-bath for 30 min. Cool and add 25 ml of *water R*. Using 0.25 ml of *phenolphthalein solution R* as indicator, titrate with *1 M sodium hydroxide* (n_1 ml). Carry out a blank titration (n_2 ml).

Calculate the percentage content of C_7H_8O using the following expression:

$$\frac{10.81\left(n_2 - n_1\right)}{m}$$

STORAGE

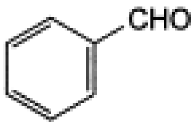
In an airtight container, under nitrogen, protected from light and at a temperature between 2 °C and 8 °C.

LABELLING

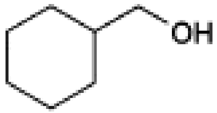
The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral dosage forms.

IMPURITIES

Specified impurities A, B.



A. benzaldehyde,



B. cyclohexylmethanol.

Minimum 17.0 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

To 2.000 g add 50.0 ml of *0.5 M alcoholic potassium hydroxide* and boil gently under a reflux condenser for 1 h. Titrate the hot solution with *0.5 M hydrochloric acid* using 1 ml of *phenolphthalein solution R* as indicator. Carry out a blank determination.

1 ml of *0.5 M alcoholic potassium hydroxide* is equivalent to 106.1 mg of $C_{14}H_{12}O_2$.

STORAGE

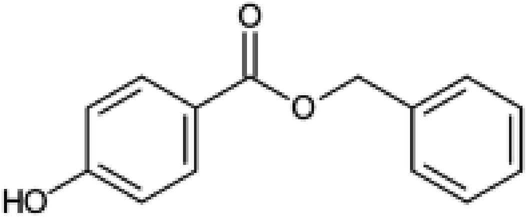
In an airtight, well-filled container, protected from light.

Ph Eur

Benzyl Hydroxybenzoate

General Notices

Benzylparaben



$C_{14}H_{12}O_3$ 228.3 *94-18-8*

Action and use

Antimicrobial preservative.

DEFINITION

Benzyl Hydroxybenzoate is benzyl 4-hydroxybenzoate. It contains not less than 99.0% and not more than 101.0% of $C_{14}H_{12}O_3$.

CHARACTERISTICS

A white to creamy white, crystalline powder.

Practically insoluble in *water*; freely soluble in *ethanol (96%)* and in *ether*. It dissolves in solutions of alkali hydroxides.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of benzyl hydroxybenzoate *(RS 028)*.

B. The *light absorption*, Appendix II B, in the range 230 to 350 nm of a 0.001% w/v solution in *ethanol (96%)* exhibits a maximum only at 260 nm. The *absorbance* at the maximum at 260 nm is about 0.76.

C. Dissolve 0.1 g in 2 ml of *ethanol (96%)*, boil and add 0.5 ml of *nitric acid solution of mercury*. A precipitate is produced slowly and the supernatant liquid becomes red.

D. *Melting point*, about 112°, Appendix V A.

TESTS

Acidity

Dissolve 0.2 g in 10 ml of *ethanol (50%)* previously neutralised to *methyl red solution* and titrate with 0.1M *sodium hydroxide VS* using *methyl red solution* as indicator. Not more than 0.1 ml of *0.1M sodium hydroxide VS* is required to change the colour of the solution.

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, using a plate precoated with silica gel F_{254}, the surface of which has been modified with chemically-bonded octadecylsilyl groups (Whatman KC18F plates are suitable) and a mixture of 70 volumes of *methanol*, 30 volumes of *water* and 1 volume of *glacial acetic acid* as the mobile phase. Apply separately to the plate 2 µl of each of two solutions of the substance being examined in *acetone* containing (1) 1.0% w/v and (2) 0.010% w/v. After removal of the plate, allow it to dry in air and examine under *ultraviolet light (254 nm)*. Any *secondary spot* in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (2).

Sulphated ash

Not more than 0.1%, Appendix IX A.

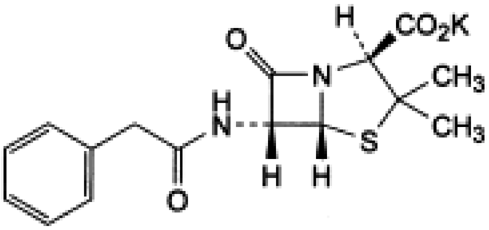
ASSAY

Gently boil 0.12 g under a reflux condenser with 20 ml of *2M sodium hydroxide* for 30 minutes. Cool and extract with three 20-ml quantities of *1,2-dichloroethane*. Wash the combined extracts with 20 ml of *0.1M sodium hydroxide* and add the washings to the main aqueous phase, discarding the organic layer. To the aqueous solution add 25 ml of *0.0333M potassium bromate VS*, 5 ml of a 12.5% w/v solution of *potassium bromide* and 10 ml of *hydrochloric acid* and immediately stopper the flask. Shake for 15 minutes and allow to stand for 15 minutes. Add 25 ml of *dilute potassium iodide solution* and shake vigorously. Titrate the liberated iodine with *0.1M sodium thiosulphate VS* using *starch mucilage*, added towards the end of the titration, as indicator. Repeat the operation without the substance being examined. The difference between the titrations represents the amount of potassium bromate required. The volume of *0.0333M potassium bromate VS* used is equivalent to half of the volume of *0.1M sodium thiosulphate VS* required for the titration. Each ml of *0.0333M potassium bromate VS* is equivalent to 7.608 mg of $C_{14}H_{12}O_3$.

Benzylpenicillin Potassium

General Notices

(Ph Eur monograph 0113)



$C_{16}H_{17}KN_2O_4S$ 372.5 *113-98-4*

Action and use

Penicillin antibacterial.

Preparation

Benzylpenicillin Injection

Ph Eur

DEFINITION

Potassium (2*S*,5*R*,6*R*)-3,3-dimethyl-7-oxo-6-[(phenylacetyl)amino]-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate.

Substance produced by the growth of certain strains of *Penicillium notatum* or related organisms, or obtained by any other means.

Content

96.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Very soluble in water, practically insoluble in fatty oils and in liquid paraffin.

IDENTIFICATION

First identification A, D.

Second identification B, C, D.

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *benzylpenicillin potassium CRS.*

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 25 mg of the substance to be examined in 5 ml of *water R*.

Reference solution (a) Dissolve 25 mg of *benzylpenicillin potassium CRS* in 5 ml of *water R*.

Reference solution (b) Dissolve 25 mg of *benzylpenicillin potassium CRS* and 25 mg of *phenoxymethylpenicillin potassium CRS* in 5 ml of *water R*.

Plate *TLC silanised silica gel plate R*.

Mobile phase Mix 30 volumes of *acetone R* and 70 volumes of a 154 g/l solution of *ammonium acetate R* previously adjusted to pH 5.0 with *glacial acetic acid R*.

Application 1 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Expose to iodine vapour until the spots appear and examine in daylight.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in obtained with reference solution (a).

C. Place about 2 mg in a test-tube about 150 mm long and 15 mm in diameter. Moisten with 0.05 ml of *water R* and add 2 ml of *sulphuric acid-formaldehyde reagent R*. Mix the contents of the tube by swirling; the solution is practically colourless. Place the test-tube on a water-bath for 1 min; a reddish-brown colour develops.

D. It gives reaction (a) of potassium *(2.3.1)*.

TESTS

pH *(2.2.3)*

5.5 to 7.5.

Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Specific optical rotation *(2.2.7)*

+ 270 to + 300 (dried substance).

Dissolve 0.500 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

Absorbance *(2.2.25)*

Dissolve 94.0 mg in *water R* and dilute to 50.0 ml with the same solvent. Measure the absorbance of the solution at 325 nm, 280 nm and at the absorption maximum at 264 nm, diluting the solution, if necessary, for the measurement at 264 nm. The absorbances at 325 nm and 280 nm do not exceed 0.10 and that at the absorption maximum at 264 nm is 0.80 to 0.88, calculated on the basis of the undiluted (1.88 g/l) solution. Verify the resolution of the apparatus *(2.2.25)*; the ratio of the absorbances is at least 1.7.

Related substances

Liquid chromatography *(2.2.29)*.

Prepare the solutions immediately before use.

Test solution (a) Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 50.0 ml with the same solvent.

Test solution (b) Dissolve 80.0 mg of the substance to be examined in *water R* and dilute to 20.0 ml with the same solvent.

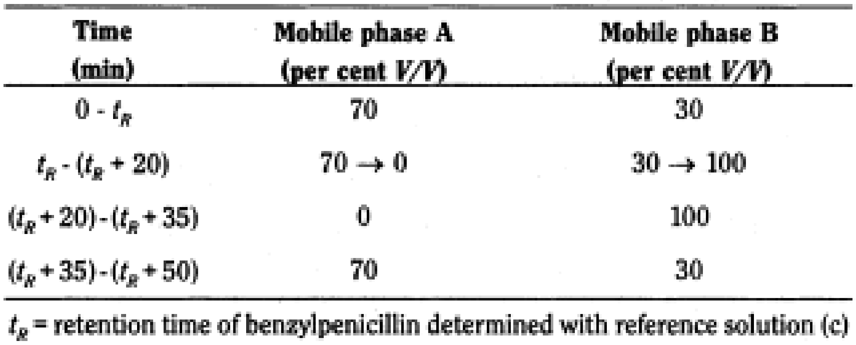
Reference solution (a) Dissolve 50.0 mg of *benzylpenicillin sodium CRS* in *water R* and dilute to 50.0 ml with the same solvent.

Reference solution (b) Dissolve 10 mg of *benzylpenicillin sodium CRS* and 10 mg of *phenylacetic acid R* (impurity B) in *water R*, then dilute to 50 ml with the same solvent.

Reference solution (c) Dilute 4.0 ml of reference solution (a) to 100.0 ml with *water R*.

Column:
- *size: l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:
- *mobile phase A*: mix 10 volumes of a 68 g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 3.5 with a 500 g/l solution of *dilute phosphoric acid R*, 30 volumes of *methanol R* and 60 volumes of *water R*;
- *mobile phase B*: mix 10 volumes of a 68 g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 3.5 with a 500 g/l solution of *dilute phosphoric acid R*, 40 volumes of *water R* and 50 volumes of *methanol R*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - t_R	70	30
t_R - (t_R + 20)	70 → 0	30 → 100
(t_R + 20) - (t_R + 35)	0	100
(t_R + 35) - (t_R + 50)	70	30

t_R = retention time of benzylpenicillin determined with reference solution (c)

If the mobile phase composition has been adjusted to achieve the required resolution, the adjusted composition will apply at time zero in the gradient and in the assay.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 225 nm.

Injection 20 µl of reference solutions (b) and (c) with isocratic elution at the initial mobile phase composition and 20 µl of test solution (b) according to the elution gradient described

under Mobile phase; inject *water R* as a blank according to the elution gradient described under Mobile phase.

System suitability Reference solution (b):

— *resolution*: minimum 6.0 between the peaks due to impurity B and benzylpenicillin; if necessary, adjust the ratio A:B of the mobile phase.

Limit:

— *any impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (1 per cent).

Loss on drying ***(2.2.32)***

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Bacterial endotoxins ***(2.6.14, Method E)***

Less than 0.16 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Mobile phase Initial composition of the mixture of mobile phases A and B, adjusted where applicable.

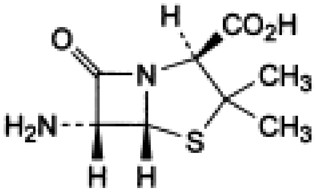
Injection Test solution (a) and reference solution (a).

Calculate the percentage content of $C_{16}H_{17}KN_2O_4S$ by multiplying the percentage content of benzylpenicillin sodium by 1.045.

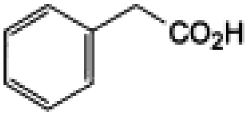
STORAGE

In an airtight container . If the substance is sterile, store in a sterile, airtight, tamper-proof container .

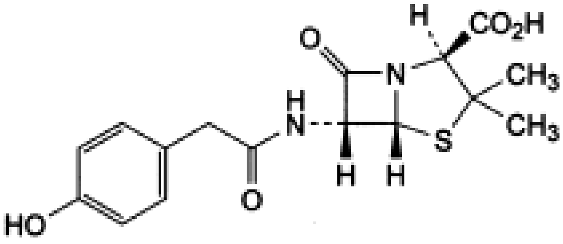
IMPURITIES



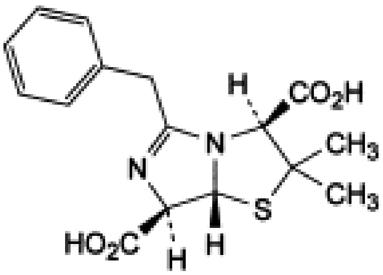
A. (2*S*,5*R*,6*R*)-6-amino-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (6-aminopenicillanic acid),



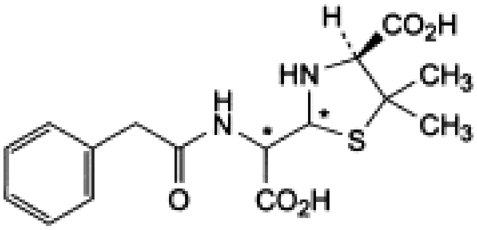
B. phenylacetic acid,



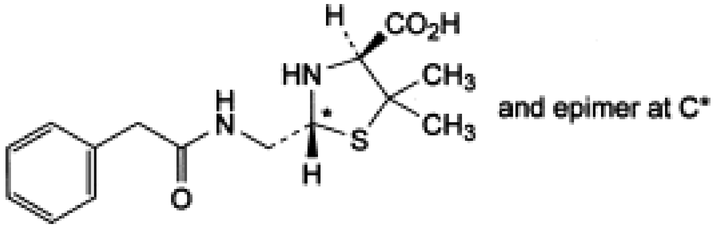
C. (2*S*,5*R*,6*R*)-6-[[(4-hydroxyphenyl)acetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo [3.2.0]heptane-2-carboxylic acid,



D. (3*S*,7*R*,7a*R*)-5-benzyl-2,2-dimethyl-2,3,7,7a-tetrahydroimidazo[5,1-*b*]thiazole-3,7-dicarboxylic acid (penillic acid of benzylpenicillin),



E. (4*S*)-2-[carboxy[(phenylacetyl)amino]methyl]-5,5-dimethylthiazolidine-4-carboxylic acid (penicilloic acids of benzylpenicillin),



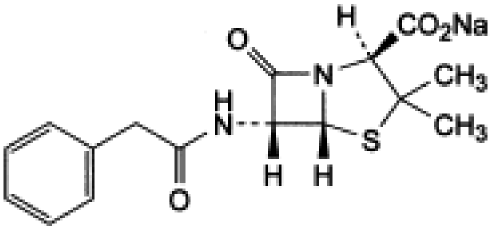
F. (2*RS*,4*S*)-2-[[(phenylacetyl)amino]methyl]-5,5-dimethylthiazolidine-4-carboxylic acid (penilloic acids of benzylpenicillin).

Ph Eur

Benzylpenicillin Sodium

General Notices

(Ph Eur monograph 0114)



$C_{16}H_{17}N_2NaO_4S$ 356.4   *69-57-8*

Action and use

Penicillin antibacterial.

Preparation

Benzylpenicillin Injection

Ph Eur

DEFINITION

Sodium (2*S*,5*R*,6*R*)-3,3-dimethyl-7-oxo-6-[(phenylacetyl)amino]-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate.

Substance produced by the growth of certain strains of *Penicillium notatum* or related organisms, or obtained by any other means.

Content

96.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Very soluble in water, practically insoluble in fatty oils and in liquid paraffin.

IDENTIFICATION

First identification A, D.

Second identification B, C, D.

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *benzylpenicillin sodium CRS.*

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 25 mg of the substance to be examined in 5 ml of *water R*.

Reference solution (a) Dissolve 25 mg of *benzylpenicillin sodium CRS* in 5 ml of *water R*.

Reference solution (b) Dissolve 25 mg of *benzylpenicillin sodium CRS* and 25 mg of *phenoxymethylpenicillin potassium CRS* in 5 ml of *water R*.

Plate *TLC silanised silica gel plate R*.

Mobile phase Mix 30 volumes of *acetone R* and 70 volumes of a 154 g/l solution of *ammonium acetate R* previously adjusted to pH 5.0 with *glacial acetic acid R*.

Application 1 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Expose to iodine vapour until the spots appear and examine in daylight.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results

The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Place about 2 mg in a test-tube about 150 mm long and 15 mm in diameter. Moisten with 0.05 ml of *water R* and add 2 ml of *sulphuric acid-formaldehyde reagent R*. Mix the contents of the tube by swirling; the solution is practically colourless. Place the test-tube on a water-bath for 1 min; a reddish-brown colour develops.

D. It gives reaction (a) of sodium *(2.3.1)*.

TESTS

pH *(2.2.3)*

5.5 to 7.5.

Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Specific optical rotation *(2.2.7)*

+ 285 to + 310 (dried substance).

Dissolve 0.500 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

Absorbance *(2.2.25)*

Dissolve 90.0 mg in *water R* and dilute to 50.0 ml with the same solvent. Measure the absorbance of the solution at 325 nm, at 280 nm and at the absorption maximum at 264 nm, diluting the solution, if necessary, for the measurement at 264 nm. The absorbances at 325 nm and 280 nm are not greater than 0.10 and the absorbance at the absorption maximum at 264 nm is 0.80 to 0.88, calculated on the basis of the undiluted (1.80 g/l) solution. Verify the resolution of the apparatus *(2.2.25)*; the ratio of the absorbances is at least 1.7.

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the solutions immediately before use.*

Test solution (a) Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 50.0 ml with the same solvent.

Test solution (b) Dissolve 80.0 mg of the substance to be examined in *water R* and dilute to 20.0 ml with the same solvent.

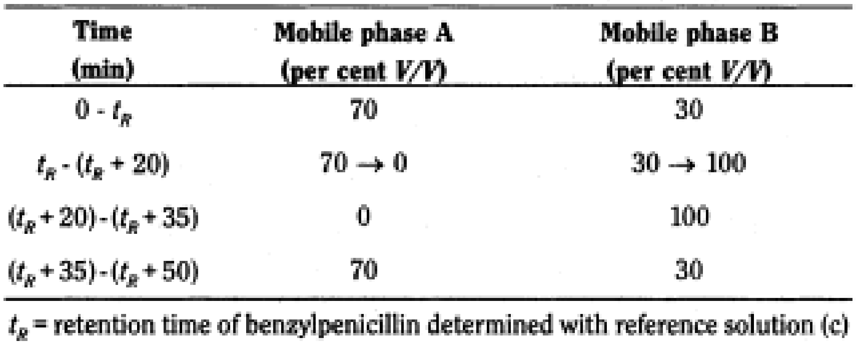
Reference solution (a) Dissolve 50.0 mg of *benzylpenicillin sodium CRS* in *water R* and dilute to 50.0 ml with the same solvent.

Reference solution (b) Dissolve 10 mg of *benzylpenicillin sodium CRS* and 10 mg of *phenylacetic acid R* (impurity B) in *water R*, then dilute to 50 ml with the same solvent.

Reference solution (c) Dilute 4.0 ml of reference solution (a) to 100.0 ml with *water R*.

Column:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:
- *mobile phase A*: mix 10 volumes of a 68 g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 3.5 with a 500 g/l solution of *dilute phosphoric acid* R, 30 volumes of *methanol R* and 60 volumes of *water R*;
- *mobile phase B*: mix 10 volumes of a 68 g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 3.5 with a 500 g/l solution of *dilute phosphoric acid R*, 40 volumes of *water R* and 50 volumes of *methanol R*;



Time (min)	**Mobile phase A (per cent *V/V*)**	**Mobile phase B (per cent *V/V*)**
0 - t_R	70	30
t_R - (t_R + 20)	70 → 0	30 → 100
(t_R + 20) - (t_R + 35)	0	100
(t_R + 35) - (t_R + 50)	70	30

t_R = retention time of benzylpenicillin determined with reference solution (c)

If the mobile phase composition has been adjusted to achieve the required resolution, the adjusted composition will apply at time zero in the gradient and in the assay.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 225 nm.

Injection 20 µl of reference solutions (b) and (c) with isocratic elution at the initial mobile phase composition and 20 µl of test solution (b) according to the elution gradient described under Mobile phase; inject *water R* as a blank according to the elution gradient described under Mobile phase.

System suitability Reference solution (b):

— *resolution*: minimum 6.0 between the peaks due to impurity B and benzylpenicillin; if necessary, adjust the ratio A:B of the mobile phase.

Limit:

— *any impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (1 per cent).

2-Ethylhexanoic acid *(2.4.28)*

Maximum 0.5 per cent *m/m*.

Loss on drying *(2.2.32)*

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Bacterial endotoxins *(2.6.14, Method E)*

Less than 0.16 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Mobile phase Initial composition of the mixture of mobile phases A and B, adjusted where applicable.

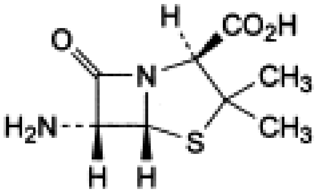
Injection Test solution (a) and reference solution (a).

Calculate the percentage content of $C_{16}H_{17}N_2NaO_4S$ from the declared content of *benzylpenicillin sodium CRS*.

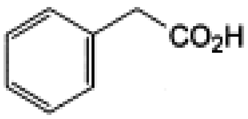
STORAGE

In an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

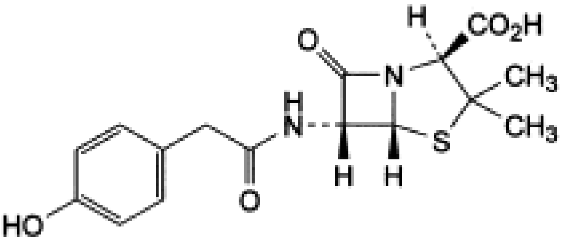
IMPURITIES



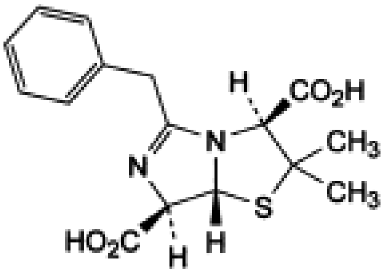
A. (2*S*,5*R*,6*R*)-6-amino-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (6-aminopenicillanic acid),



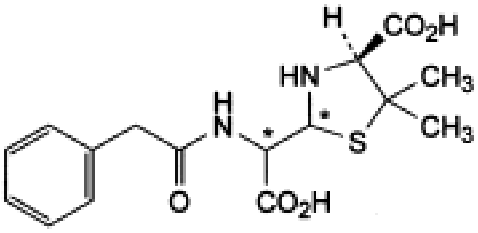
B. phenylacetic acid,



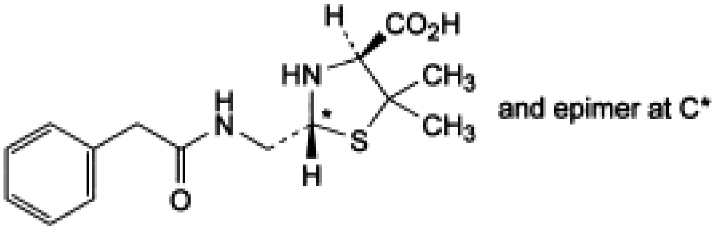
C. (2*S*,5*R*,6*R*)-6-[[(4-hydroxyphenyl)acetyl]amino]-3,3-dimethyl-7-oxo-4-thia- 1-azabicyclo [3.2.0]heptane-2-carboxylic acid,



D. (3*S*,7*R*,7a*R*)-5-benzyl-2,2-dimethyl-2,3,7,7a-tetrahydroimidazo[5,1-*b*]thiazole-3,7-dicarboxylic acid (penillic acid of benzylpenicillin),



E. (4*S*)-2-[carboxy[(phenylacetyl)amino]methyl]-5,5-dimethylthiazolidine-4-carboxylic acid (penicilloic acids of benzylpenicillin),



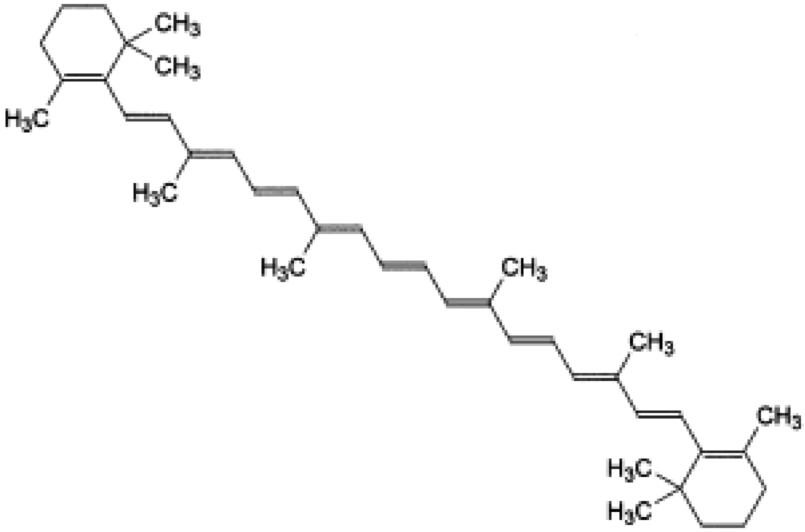
F. (2*RS*,4*S*)-2-[[(phenylacetyl)amino]methyl]-5,5-dimethylthiazolidine-4-carboxylic acid (penilloic acids of benzylpenicillin).

Ph Eur

Betacarotene

General Notices

(Ph Eur monograph 1069)



$C_{40}H_{56}$ *536.9* 7235-40-7

Action and use

Precursor of vitamin A.

Ph Eur

DEFINITION

(all-*E*)-3,7,12,16-Tetramethyl-1,18-bis(2,6,6-trimethylcyclohex-1-enyl)octadeca-1,3,5,7,9,11,13,15,17-nonaene.

Content

96.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

Brown-red or brownish-red, crystalline powder.

Solubility

Practically insoluble in water, slightly soluble in cyclohexane, practically insoluble in anhydrous ethanol.

It is sensitive to air, heat and light, especially in solution.

Carry out all operations as rapidly as possible avoiding exposure to actinic light; use freshly prepared solutions.

IDENTIFICATION

Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution (a) Dissolve 50.0 mg in 10 ml of *chloroform R* and dilute immediately to 100.0 ml with *cyclohexane R*. Dilute 5.0 ml of this solution to 100.0 ml with *cyclohexane R*.

Test solution (b) Dilute 5.0 ml of test solution (a) to 50.0 ml with *cyclohexane R*.

Absorption maximum At 455 nm for test solution (b).

Absorbance ratio A_{455} / A_{483} = 1.14 to 1.18 for test solution (b).

TESTS

Related substances

Determine the absorbance *(2.2.25)* of test solutions (b) and (a) used in Identification, at 455 nm and at 340 nm respectively.

Absorbance ratio A_{455} / A_{340}: minimum 1.5.

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

2.0 g complies with test D. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 0.2 per cent, determined on 1.000 g by drying *in vacuo* over *diphosphorus pentoxide R* at 40 °C for 4 h.

Sulphated ash *(2.4.14)*

Maximum 0.2 per cent, determined on 1.0 g, moistened with a mixture of 2 ml of *dilute sulphuric acid R* and 5 ml of *ethanol (96 per cent) R*.

ASSAY

Measure the absorbance *(2.2.25)* of test solution (b) used in Identification at the absorption maximum at 455 nm, using *cyclohexane R* as the compensation liquid.

Calculate the content of $C_{40}H_{56}$ taking the specific absorbance to be 2500.

STORAGE

In an airtight container , protected from light, at a temperature not exceeding 25 °C.

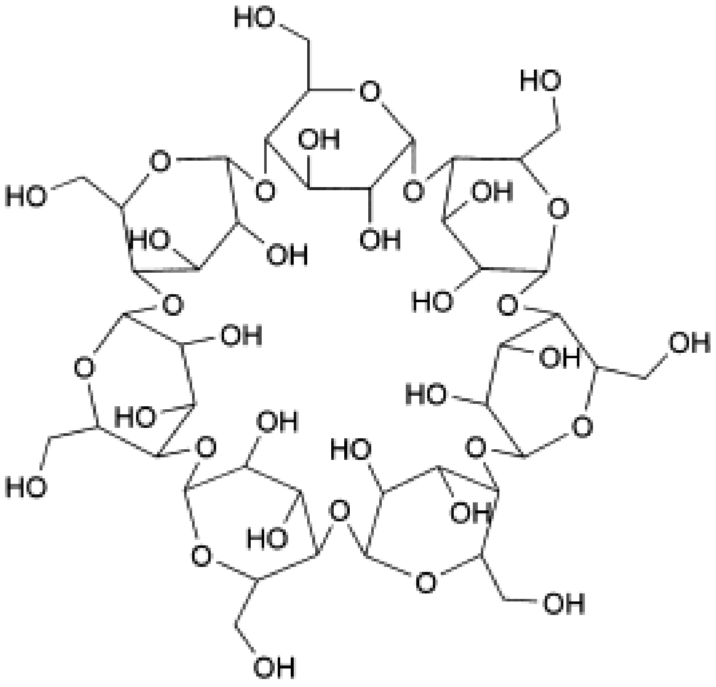
Ph Eur

Betadex

General Notices

Betacyclodextrin

(Ph Eur monograph 1070)



$[C_6H_{10}O_5]_7$ *1135* 68168-23-0

(monohydrate)

Action and use

Carrier molecule for drug delivery systems.

Ph Eur

DEFINITION

Cyclo-α-(1→4)-D-heptaglucopyranoside (betacyclodextrin).

Content

98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, amorphous or crystalline powder.

Solubility

Sparingly soluble in water, freely soluble in propylene glycol, practically insoluble in anhydrous ethanol and in methylene chloride.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with test solution (b) is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (c).

C. Dissolve 0.2 g in 2 ml of *iodine solution R4* by warming on a water-bath, and allow to stand at room temperature. A yellowish-brown precipitate is formed.

TESTS

Solution S

Dissolve 1.000 g in *carbon dioxide-free water R* with heating, allow to cool and dilute to 100.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)*.

pH *(2.2.3)*

5.0 to 8.0.

To 10 ml of solution S add 0.1 ml of a saturated solution of *potassium chloride R*.

Specific optical rotation *(2.2.7)*

+ 160 to + 164 (dried substance), determined on solution S.

Reducing sugars

Maximum 0.2 per cent.

Test solution To 1 ml of solution S add 1 ml of *cupri-tartaric solution R4*. Heat on a water-bath for 10 min, cool to room temperature. Add 10 ml of *ammonium molybdate reagent R1* and allow to stand for 15 min.

Reference solution Prepare a reference solution at the same time and in the same manner as the test solution, using 1 ml of a 0.02 g/l solution of *glucose R*.

Measure the absorbance *(2.2.25)* of the test solution and the reference solution at the absorption maximum at 740 nm using *water R* as the compensation liquid. The absorbance of the test solution is not greater than that of the reference solution.

Light-absorbing impurities

Examine solution S between 230 nm and 750 nm. Between 230 nm and 350 nm, the absorbance *(2.2.25)* is not greater than 0.10. Between 350 nm and 750 nm, the absorbance *(2.2.25)* is not greater than 0.05.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution (a) Dissolve 0.25 g of the substance to be examined in *water R* with heating, cool and dilute to 25.0 ml with the same solvent.

Test solution (b) Dilute 5.0 ml of test solution (a) to 50.0 ml with *water R*.

Reference solution (a) Dissolve 25.0 mg of *alfadex CRS* (impurity A), 25.0 mg of *gammacyclodextrin CRS* (impurity B) and 50.0 mg of *betadex CRS* in *water R*, then dilute to 50.0 ml with the same solvent.

Reference solution (b) Dilute 5.0 ml of reference solution (a) to 50.0 ml with *water R*.

Reference solution (c) Dissolve 25.0 mg of *betadex CRS* in *water R* and dilute to 25.0 ml with the same solvent.

Column:
- — *size*: *l* = 0.25 m, Ø = 4.6 mm;
- — *stationary phase: octadecylsilyl silica gel for chromatography R* (10 µm).

Mobile phase *methanol R, water R* (10:90 *V/V*).

Flow rate 1.5 ml/min.

Detection Differential refractometer.

Equilibration With the mobile phase for about 3 h.

Injection 50 µl of test solution (a) and reference solutions (a) and (b).

Run time 1.5 times the retention time of betadex.

Relative retention With reference to betadex (retention time = about 10 min): impurity B = about 0.3; impurity A = about 0.45.

System suitability Reference solution (a):
- — *resolution*: minimum 1.5 between the peaks due to impurities B and A; if necessary, adjust the concentration of methanol in the mobile phase.

Limits:
- — *impurities A, B*: for each impurity, not more than 0.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.25 per cent);
- — *sum of impurities other than A and B*: not more than 0.5 times the area of the peak due to betadex in the chromatogram obtained with reference solution (b) (0.5 per cent).

Residual solvents

Head-space gas chromatography *(2.2.28)*: use the standard additions method.

Internal standard *ethylene chloride R*.

Test solutions In each of 4 identical 20 ml flasks, dissolve 0.5 g of the substance to be examined in *water R* and add 0.10 g of *calcium chloride R* and 30 µl of α-*amylase solution R*.

Add 1 ml of reference solutions (a), (b), (c) and (d), adding a different solution to each flask. Dilute to 10 ml with *water R*.

Reference solutions Prepare a 10 µl/l solution of *ethylene chloride R* (reference solution (a)). Prepare reference solutions (b), (c) and (d) from reference solution (a) to contain respectively, per litre, 5 µl, 10 µl and 15 µl of both *trichloroethylene R* and *toluene R*.

Column:
— *material*: fused silica;

— *size*: *l* = 25 m, Ø = 0.32 mm;

— *stationary phase: macrogol 20 000 R* (film thickness 1 µm).

Carrier gas *helium for chromatography R.*

Static head-space conditions which may be used:
— *equilibration temperature: 45 °C;*

— *equilibration time: 2 h.*

Temperature:
— *column*: 50 °C;

— *injection port*: 140 °C;

— *detector*: 280 °C.

Detection Flame ionisation.

Injection 200 µl of the head space, at least 3 times.

Retention time toluene = about 10 min.

System suitability:
— *resolution*: minimum 1.1 between the peaks due to trichloroethylene and toluene; minimum 1.1 between the peaks due to toluene and ethylene chloride;

— *repeatability*: maximum relative standard deviations of the ratios of the areas of the peaks due to trichloroethylene and toluene to that of the peak due to ethylene chloride of 5 per cent.

Calculate the content of trichloroethylene and of toluene taking their relative densities to be 1.46 and 0.87, respectively.

Limits:
— *trichloroethylene*: maximum 10 ppm;

— *toluene*: maximum 10 ppm.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

1.0 g complies with test C. Prepare the reference solution using 1 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 16.0 per cent, determined on 1.000 g by drying in an oven at 120 °C for 2 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Injection Test solution (b) and reference solutions (a) and (c).

System suitability Reference solution (a):

— *repeatability*: maximum relative standard deviation of the area of the peak due to betadex of 2.0 per cent.

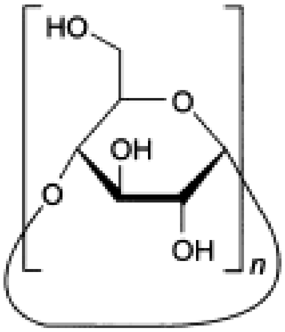
Calculate the percentage content of $[C_6H_{10}O_5]_7$ from the declared content of *betadex CRS*.

STORAGE

In an airtight container .

IMPURITIES

Specified impurities *A, B*.



A. *n* = 6: alfadex,

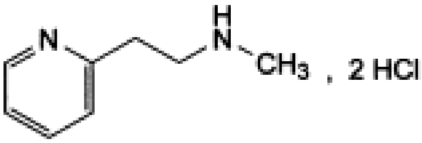
B. *n* = 8: gammacyclodextrin.

Ph Eur

Betahistine Dihydrochloride

General Notices

(Ph Eur monograph 1665)



$C_8H_{12}N_2$,2HCl 209.1 *5579-84-0*

Action and use

Histamine H_1 receptor antagonist; antihistamine.

Preparation

Betahistine Dihydrochloride Tablets

Ph Eur

DEFINITION

N-Methyl-2-(pyridin-2-yl)ethanamine dihydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White to slightly yellow powder, very hygroscopic.

Solubility

Very soluble in water, soluble in ethanol (96 per cent), practically insoluble in 2-propanol.

IDENTIFICATION

First identification B, D.

Second identification A, C, D.

A. Melting point *(2.2.14)*: 150 °C to 154 °C.

B. Infrared absorption spectrophotometry *(2.2.24).*

Comparison *betahistine dihydrochloride CRS.*

C. Thin-layer chromatography *(2.2.27).*

Test solution Dissolve 10 mg of the substance to be examined in 2 ml of *ethanol (96 per cent) R*.

Reference solution Dissolve 10 mg of *betahistine dihydrochloride CRS* in 2 ml of *ethanol (96 per cent) R*.

Plate *TLC silica gel* GF_{254} *plate R*.

Mobile phase *concentrated ammonia R, ethyl acetate R, methanol R* (0.75:15:30 *V/V/V*).

Application 2 µl.

Development Over 2/3 of the plate.

Drying At 110 °C for 10 min.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 5.0 g in *carbon dioxide-free water R*, and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution B_8 *(2.2.2, Method II).*

pH *(2.2.3)*

2.0 to 3.0 for solution S.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 25 mg of the substance to be examined in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (a) Dissolve 10 mg of *betahistine dihydrochloride CRS* and 10 mg of *2-vinylpyridine R* in the mobile phase and dilute to 50.0 ml with the mobile phase. Dilute 2.0 ml of the solution to 50.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (c) Dilute 2.0 ml of reference solution (b) to 10.0 ml with the mobile phase.

Column:

— *size*: *l* = 0.15 m, Ø = 3.0 mm,

— *stationary phase*: *end-capped octadecylsilyl base deactivated silica gel for chromatography R* (5 µm).

Mobile phase Dissolve 2.0 g of *sodium dodecyl sulphate R* in a mixture of 15 ml of a 10 per cent *V/V* solution of *sulphuric acid R*, 35 ml of a 17 g/l solution of *tetrabutylammonium hydrogen sulphate R* and 650 ml of *water R*; adjust to pH 3.3 using *dilute sodium hydroxide solution R* and mix with 300 ml of *acetonitrile R*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 260 nm.

Injection 20 µl.

Run time 4 times the retention time of betahistine.

Relative retention With reference to betahistine (retention time = about 7 min): impurity B = about 0.2; impurity A = about 0.3; impurity C = about 3.

System suitability: reference solution (a):

— *resolution*: minimum 3.5 between the peaks due to 2-vinylpyridine and betahistine.

Limits:

— *correction factor*: for the calculation of content, multiply the peak area of impurity B by 0.4;

— *impurities A, B, C*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);

— *any other impurity*: for each impurity, not more than 0.5 times of the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent);

— *total*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 80.0 mg in 50 ml of *ethanol (96 per cent) R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically *(2.2.20)*. Read the volume added to reach the second point of inflexion.

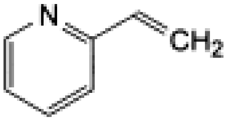
1 ml of *0.1 M sodium hydroxide* is equivalent to 10.46 mg of $C_8H_{14}Cl_2N_2$.

STORAGE

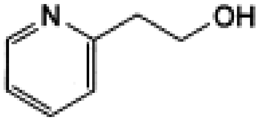
In an airtight container .

IMPURITIES

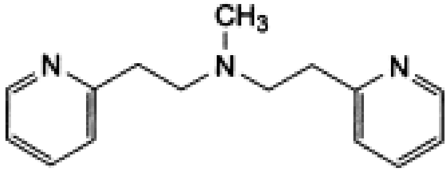
Specified impurities   A, B, C.



A. 2-ethenylpyridine (2-vinylpyridine),



B. 2-(pyridin-2-yl)ethanol,



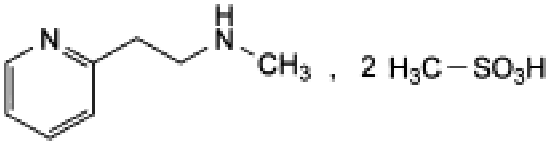
C. *N*-methyl-2-(pyridin-2-yl)-*N*-[2-(pyridin-2-yl)ethyl]ethanamine.

Ph Eur

Betahistine Mesilate

General Notices

(Ph Eur monograph 1071)



$C_8H_{12}N_2,2CH_3SO_3H$ *328.4* 54856-23-4

Action and use

Histamine H_1 receptor antagonist; antihistamine.

Ph Eur

DEFINITION

N-Methyl-2-(pyridin-2-yl)ethanamine bis(methanesulphonate).

Content

98.0 per cent to 101.0 per cent (anhydrous substance).

PRODUCTION

The production method must be evaluated to determine the potential for formation of alkyl mesilates, which is particularly likely to occur if the reaction medium contains lower alcohols. Where necessary, the production method is validated to demonstrate that alkyl mesilates are not detectable in the final product.

CHARACTERS

Appearance

White or almost white, crystalline powder, very hygroscopic.

Solubility

Very soluble in water, freely soluble in ethanol (96 per cent), very slightly soluble in 2-propanol.

IDENTIFICATION

First identification B.

Second identification *A, C, D*.

A. Melting point *(2.2.14)*: 108 °C to 112 °C.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *betahistine mesilate CRS.*

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 10 mg of the substance to be examined in *ethanol (96 per cent) R* and dilute to 2 ml with the same solvent.

Reference solution Dissolve 10 mg of *betahistine mesilate CRS*, in *ethanol (96 per cent) R* and dilute to 2 ml with the same solvent.

Plate *TLC silica gel* F_{254} *plate R*.

Mobile phase *concentrated ammonia R, ethyl acetate R, methanol R* (0.75:15:30 *V/V/V*).

Application 2 µl.

Development Over a path of 15 cm.

Drying At 110 °C for 10 min.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. To 0.1 g add 5 ml of *dilute hydrochloric acid R* and shake for about 5 min. Add 1 ml of *barium chloride solution R1*. The solution remains clear. To a further 0.1 g add 0.5 g of *anhydrous sodium carbonate R*, mix and ignite until a white residue is obtained. Allow to cool and dissolve the residue in 7 ml of *water R*. The solution gives reaction (a) of sulphates *(2.3.1)*.

TESTS

Solution S

Dissolve 5.0 g in *carbon dioxide-free water R* prepared from *distilled water R*, and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

2.0 to 3.0 for solution S.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dissolve 10 mg of *betahistine mesilate CRS* and 10 mg of *2-vinylpyridine R* (impurity A) in the mobile phase and dilute to 50.0 ml with the mobile phase. Dilute 2.0 ml of this solution to 50.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (c) Dilute 2.0 ml of reference solution (b) to 10.0 ml with the mobile phase.

Column:

- *size:* l = 0.25 m, Ø = 4.6 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Dissolve 2.0 g of *sodium dodecyl sulphate R* in a mixture of 15 volumes of a 10 per cent V/V solution of *sulphuric acid R*, 35 volumes of a 17 g/l solution of *tetrabutylammoniumhydrogen sulphate R* and 650 volumes of *water R*; adjust to pH 3.3 using *dilute sodium hydroxide solution R* and mix with 300 volumes of *acetonitrile R*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 260 nm.

Injection 20 µl.

Run time 3 times the retention time of betahistine mesilate.

Retention time betahistine mesilate = about 8 min.

System suitability Reference solution (a):

- *resolution*: minimum 3.5 between the peaks due to impurity A and betahistine mesilate.

Limits:

- *impurity A:* not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);
- *total*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *disregard limit*: 0.025 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.025 per cent).

2-Propanol ***(2.4.24)***

Maximum 0.5 per cent.

Chlorides ***(2.4.4)***

Maximum 35 ppm.

To 14 ml of solution S add 1 ml of *water R*.

Sulphates ***(2.4.13)***

Maximum 250 ppm.

Dilute 6 ml of solution S to 15 ml with *distilled water R*.

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

Water ***(2.5.12)***

Maximum 2.0 per cent, determined on 0.50 g.

ASSAY

Dissolve 0.140 g in 50 ml of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

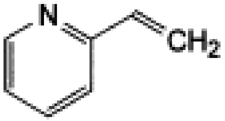
1 ml of *0.1 M perchloric acid* is equivalent to 16.42 mg of $C_{10}H_{20}N_2O_6S_2$.

STORAGE

In an airtight container .

IMPURITIES

Specified impurities A.



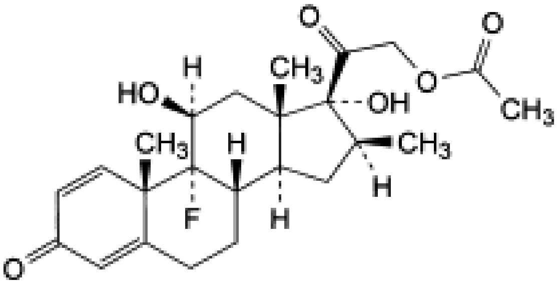
A. 2-ethenylpyridine.

Ph Eur

Betamethasone Acetate

General Notices

(Ph Eur monograph 0975)



$C_{24}H_{31}FO_6$ *434.5* 987-24-6

Action and use

Glucocorticoid.

Ph Eur

DEFINITION

9-Fluoro-11β,17-dihydroxy-16β-methyl-3,20-dioxopregna-1,4-diene-21-yl acetate.

Content

97.0 per cent to 103.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in acetone, soluble in ethanol (96 per cent) and in methylene chloride.

It shows polymorphism *(5.9)*.

IDENTIFICATION

First identification *B, C.*

Second identification *A, C, D, E, F*.

A. Dissolve 10.0 mg in *anhydrous ethanol R* and dilute to 100.0 ml with the same solvent. Place 2.0 ml of this solution in a ground-glass-stoppered tube, add 10.0 ml of *phenylhydrazine-sulphuric acid solution R*, mix and heat in a water-bath at 60 °C for 20 min. Cool immediately. The absorbance *(2.2.25)* measured at 419 nm is not greater than 0.10.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *betamethasone acetate CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *methanol R*, evaporate to dryness on a water-bath and record new spectra using the residues.

C. Thin-layer chromatography *(2.2.27)*.

Solvent mixture *methanol R, methylene chloride R* (1:9 *V/V*).

Test solution Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 10 ml with the solvent mixture.

Reference solution (a) Dissolve 20 mg of *betamethasone acetate CRS* in the solvent mixture and dilute to 20 ml with the solvent mixture.

Reference solution (b) Dissolve 10 mg of *prednisolone acetate CRS* in reference solution (a) and dilute to 10 ml with reference solution (a).

Plate *TLC silica gel F_{254} plate R.*

Mobile phase Add a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R*.

Application 5 µl.

Development Over a path of 15 cm.

Drying In air.

Detection A Examine in ultraviolet light at 254 nm.

Results A The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

Detection B Spray with *alcoholic solution of sulphuric acid R*. Heat at 120 °C for 10 min or until the spots appear. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm.

Results B The principal spot in the chromatogram obtained with the test solution is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with reference solution (a).

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

D. Add about 2 mg to 2 ml of *sulphuric acid R* and shake to dissolve. Within 5 min, a deep reddish-brown colour develops. Add this solution to 10 ml of *water R* and mix. The colour is discharged and a clear solution remains.

E. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 ml of *water R*, 0.05 ml of *phenolphthalein solution R1* and about 1 ml of *dilute hydrochloric acid R* to render the solution colourless. Filter. To a freshly prepared mixture of 0.1 ml of *alizarin S* *solution R* and 0.1 ml of *zirconyl nitrate solution R*, add 1.0 ml of the filtrate. Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank prepared in the same manner. The test solution is yellow and the blank is red.

F. About 10 mg gives the reaction of acetyl *(2.3.1)*.

TESTS

Specific optical rotation *(2.2.7)*

+ 120 to + 128 (anhydrous substance).

Dissolve 0.250 g in *dioxan R* and dilute to 25.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 25.0 mg of the substance to be examined in 4 ml of *acetonitrile R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve 2 mg of *betamethasone acetate CRS* and 2 mg of *dexamethasone acetate CRS* (impurity B) in the mobile phase, then dilute to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Column:

- *size: l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase In a 1000 ml volumetric flask mix 380 ml of acetonitrile R with 550 ml of *water R* and allow to equilibrate; dilute to 1000 ml with *water R* and mix again.

Flow rate 1 ml/min.

Detection Spectrophotometer at 254 nm.

Equilibration With the mobile phase for about 30 min.

Injection 20 µl.

Run time 2.5 times the retention time of betamethasone acetate.

Retention time betamethasone acetate = about 19 min; impurity B = about 22 min.

System suitability Reference solution (a):

- *resolution*: minimum 3.3 between the peaks due to betamethasone acetate and impurity B; if necessary, adjust slightly the concentration of acetonitrile in the mobile phase.

Limits:

- *impurities A, B, C, D*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *total*: not more than 1.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.25 per cent);
- *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Water ***(2.5.12)***

Maximum 4.0 per cent, determined on 0.100 g.

ASSAY

Dissolve 0.100 g in *ethanol (96 per cent) R* and dilute to 100.0 ml with the same solvent. Dilute 2.0 ml of this solution to 100.0 ml with *ethanol (96 per cent) R*. Measure the absorbance (2.2.25) at the absorption maximum at 240 nm.

Calculate the content of $C_{24}H_{31}FO_6$ taking the specific absorbance to be 350.

STORAGE

DEFINITION

9-Fluoro-11β,17-dihydroxy-16β-methyl-3,20-dioxopregna-1,4-diene-21-yl disodium phosphate.

Content

96.0 per cent to 103.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder, very hygroscopic.

Solubility

Freely soluble in water, slightly soluble in ethanol (96 per cent), practically insoluble in

methylene chloride.

IDENTIFICATION

First identification *B, C.*

Second identification *A, C, D, E, F.*

A. Dissolve 10.0 mg in 5 ml of *water R* and dilute to 100.0 ml with *anhydrous ethanol R*. Place 2.0 ml of this solution in a ground-glass-stoppered tube, add 10.0 ml of *phenylhydrazine-sulphuric acid solution R*, mix and heat in a water-bath at 60 °C for 20 min. Cool immediately. The absorbance *(2.2.25)* measured at the absorption maximum at 450 nm is not more than 0.10.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *betamethasone sodium phosphate CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *ethanol (96 per cent) R*, evaporate to dryness on a water-bath and record new spectra using the residues.

C. Thin-layer chromatography *(2.2.27).*

Test solution Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 10 mg of *betamethasone sodium phosphate CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 10 mg of *prednisolone sodium phosphate CRS* in *methanol R* and dilute to 10 ml with the same solvent. Dilute 5 ml of this solution to 10 ml with reference solution (a).

Plate *TLC silica gel F_{254} plate R.*

Mobile phase *glacial acetic acid R, water R, butanol R* (20:20:60 *V/V/V*).

Application 5 µl.

Development Over a path of 15 cm.

Drying In air.

Detection A Examine in ultraviolet light at 254 nm.

Results A The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

Detection B Spray with *alcoholic solution of sulphuric acid R*. Heat at 120 °C for 10 min or until the spots appear. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm.

Results B The principal spot in the chromatogram obtained with the test solution is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with reference solution (a).

System suitability Reference solution (b):

— the chromatogram shows 2 spots which may, however, not be completely separated.

D. Add about 2 mg to 2 ml of *sulphuric acid R* and shake to dissolve. Within 5 min, an intense reddish-brown colour develops. Add the solution to 10 ml of *water R* and mix. The colour is discharged and a clear solution remains.

E. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 ml of *water R*, 0.05 ml of *phenolphthalein solution R1* and about 1 ml of *dilute hydrochloric acid R* to render the solution colourless. Filter. Add 1.0 ml of the filtrate to a freshly prepared mixture of 0.1 ml *of alizarin S solution R* and 0.1 ml of *zirconyl nitrate solution R*. Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank prepared in the same manner. The test solution is yellow and the blank is red.

F. To about 40 mg add 2 ml of *sulphuric acid R* and heat gently until white fumes are evolved. Add *nitric acid R* dropwise, continue the heating until the solution is almost colourless and cool. Add 2 ml of *water R*, heat until white fumes are again evolved, cool, add 10 ml of *water R* and neutralise to *red litmus paper R* with *dilute ammonia R1*. The solution gives reaction (a) of sodium *(2.3.1)* and reaction (b) of phosphates *(2.3.1)*.

TESTS

Solution S

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution B_7 *(2.2.2, Method II)*.

pH *(2.2.3)*

7.5 to 9.0.

Dilute 1 ml of solution S to 5 ml with *carbon dioxide-free water* R.

Specific optical rotation *(2.2.7)*

+ 98 to + 104 (anhydrous substance).

Dissolve 0.250 g in *water R* and dilute to 25.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 62.5 mg of the substance to be examined in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (a) Dissolve 25 mg of *betamethasone sodium phosphate CRS* and 25 mg of *dexamethasone sodium phosphate CRS* in the mobile phase and dilute to 25.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 25.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 50.0 ml with the mobile phase.

Column:

- *size:* l = 0.25 m, Ø = 4.6 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase In a 250 ml conical flask, weigh 1.360 g of *potassium dihydrogen phosphate R* and 0.600 g of *hexylamine R*, mix and allow to stand for 10 min and then dissolve in 185 ml of *water R*; add 65 ml of *acetonitrile R*, mix and filter (0.45 µm).

Flow rate 1 ml/min.

Detection Spectrophotometer at 254 nm.

Equilibration With the mobile phase for about 45 min.

Injection 20 µl.

Run time Twice the retention time of betamethasone sodium phosphate.

Retention time Betamethasone sodium phosphate = about 14 min; dexamethasone sodium phosphate = about 15.5 min.

System suitability Reference solution (a):

— *resolution*: minimum 2.0 between the peaks due to betamethasone sodium phosphate and dexamethasone sodium phosphate; if necessary, increase the concentration of acetonitrile or increase the concentration of water in the mobile phase.

Limits:

— *any impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (2 per cent), and not more than 1 such peak has an area greater than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent);

— *total:* not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (3 per cent);

— *disregard limit*: 0.025 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Inorganic phosphate Maximum 1 per cent.

Dissolve 50 mg in *water R* and dilute to 100 ml with the same solvent. To 10 ml of this solution add 5 ml of *molybdovanadic reagent R*, mix and allow to stand for 5 min. Any yellow colour in the solution is not more intense than that in a standard prepared at the same time and in the same manner using 10 ml of *phosphate standard solution (5 ppm PO4) R*.

Water *(2.5.12)*

Maximum 8.0 per cent, determined on 0.200 g.

ASSAY

Dissolve 0.100 g in *water R* and dilute to 100.0 ml with the same solvent. Dilute 5.0 ml of this solution to 250.0 ml with *water R*. Measure the absorbance *(2.2.25)* at the absorption maximum at 241 nm.

Calculate the content of $C_{22}H_{28}FNa_2O_8P$ taking the specific absorbance to be 297.

STORAGE

In an airtight container, protected from light.

Betamethasone and Clioquinol Cream

Betamethasone Valerate Lotion

Betamethasone Valerate Ointment

Betamethasone and Clioquinol Ointment

Ph Eur

DEFINITION

Betamethasone valerate contains not less than 97.0 per cent and not more than the equivalent of 103.0 per cent of 9-fluoro-11β,21-dihydroxy-16β-methyl-3,20-dioxopregna-1,4-dien-17-yl pentanoate, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, practically insoluble in water, freely soluble in acetone and in methylene chloride, soluble in ethanol (96 per cent).

It melts at about 192 °C, with decomposition.

IDENTIFICATION

First identification C, D.

Second identification A, B, E, F, G.

A. It complies with the test for specific optical rotation (see Tests).

B. Dissolve 10.0 mg in *anhydrous ethanol R* and dilute to 100.0 ml with the same solvent. Place 2.0 ml of this solution in a ground-glass-stoppered tube, add 10.0 ml of *phenylhydrazine-sulphuric acid solution R*, mix and heat in a water-bath at 60 °C for 20 min. Cool immediately. The absorbance *(2.2.25)* of the solution measured at 419 nm is not more than 0.10.

C. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *betamethasone 17-valerate CRS*. If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *chloroform R*, evaporate to dryness on a water-bath and record new spectra using the residues.

D. Examine by thin-layer chromatography *(2.2.27)*, using as the coating substance a suitable silica gel with a fluorescent indicator having an optimal intensity at 254 nm.

Test solution Dissolve 10 mg of the substance to be examined in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 10 ml with the same mixture of solvents.

Reference solution (a) Dissolve 10 mg of *betamethasone 17-valerate CRS* in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 10 ml with the same mixture of solvents.

Reference solution (b) Dissolve 5 mg of *betamethasone 21-valerate CRS* in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 5 ml with the same mixture of solvents, then dilute to 10 ml with reference solution (a).

Apply to the plate 5 µl of each solution. Prepare the mobile phase by adding a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R*. Develop over a path of 15 cm. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a). Spray the plate with *alcoholic solution of sulphuric acid R*. Heat at 120 °C for 10 min or until the spots appear. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm. The principal spot in the chromatogram obtained with the test solution is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with reference solution (a). The test is not valid unless the chromatogram obtained with reference solution (b) shows 2 clearly separated spots.

E. Examine by thin-layer chromatography *(2.2.27)*, using as the coating substance a suitable silica gel with a fluorescent indicator having an optimal intensity at 254 nm.

Test solution (a) Dissolve 25 mg of the substance to be examined in *methanol R* with gentle heating and dilute to 5 ml with the same solvent. This solution is also used to prepare test solution (b). Dilute 2 ml of the solution to 10 ml with *methylene chloride R*.

Test solution (b) Transfer 2 ml of the solution obtained during preparation of test solution (a) to a 15 ml glass tube with a ground-glass stopper or a polytetrafluoroethylene cap. Add 10 ml of *saturated methanolic potassium hydrogen carbonate solution R* and immediately pass a current of *nitrogen R* briskly through the solution for 5 min. Stopper the tube. Heat in a water-bath at 45 °C, protected from light, for 3 h. Allow to cool.

Reference solution (a) Dissolve 25 mg of *betamethasone 17-valerate CRS* in *methanol R* with gentle heating and dilute to 5 ml with the same solvent. This solution is also used to prepare reference solution (b). Dilute 2 ml of the solution to 10 ml with *methylene chloride R*.

Reference solution (b) Transfer 2 ml of the solution obtained during preparation of reference solution (a) to a 15 ml glass tube with a ground glass-stopper or a polytetrafluoroethylene cap. Add 10 ml of *saturated methanolic potassium hydrogen carbonate solution R* and immediately pass a current of *nitrogen R* briskly through the solution for 5 min. Stopper the tube. Heat in a water-bath at 45 °C, protected from light, for 3 h. Allow to cool.

Apply to the plate 5 µl of each solution. Prepare the mobile phase by adding a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R*. Develop over a path of 15 cm. Allow the plate to dry in air and examine under ultraviolet light at 254 nm. The principal spot in each of the chromatograms obtained with the test solutions is similar in position and size to the principal spot in the chromatogram obtained with the corresponding reference solution. Spray with *alcoholic solution of sulphuric acid R*. Heat at 120 °C for 10 min or until the spots appear. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm. The principal spot in each of the chromatograms obtained with the test solutions is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatograms obtained with the corresponding reference solution. The principal spot in each of the chromatograms obtained with test solution (b) and reference solution (b) has an R_F value distinctly lower than that of the principal spots in each of the chromatograms obtained with test solution (a) and reference solution (a).

F. Add about 2 mg to 2 ml of *sulphuric acid R* and shake to dissolve. Within 5 min, a deep reddish-brown colour develops. Add the solution to 10 ml of *water R* and mix. The colour is discharged and a clear solution remains.

G. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 ml of *water R*, 0.05 ml of *phenolphthalein solution R1* and about 1 ml of *dilute hydrochloric acid R* to render the solution colourless. Filter. Add 1.0 ml of the filtrate to a freshly prepared mixture of 0.1 ml of *alizarin S solution R* and 0.1 ml of *zirconyl nitrate solution R*. Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank prepared in the same manner. The test solution is yellow and the blank solution is red.

TESTS

Specific optical rotation *(2.2.7)*

Dissolve 0.250 g in *dioxan R* and dilute to 25.0 ml with the same solvent. The specific optical rotation is + 75 to + 82, calculated with reference to the dried substance.

Related substances

Examine by liquid chromatography *(2.2.29)*.

Solution A To 1000 ml of the mobile phase add 1 ml of *glacial acetic acid R* and mix carefully.

Test solution Dissolve 62.5 mg of the substance to be examined in solution A and dilute to 25.0 ml with solution A.

Reference solution (a) Dissolve 2 mg of *betamethasone 17-valerate CRS* and 2 mg of *betamethasone 21-valerate CRS* in solution A and dilute to 50.0 ml with solution A.

Reference solution (b) Dilute 1.0 ml of the test solution to 50.0 ml with solution A.

The chromatographic procedure may be carried out using:

— a stainless steel column 0.25 m long and 4.6 mm in internal diameter packed with *octadecylsilyl silica gel for chromatography R* (5 µm);

— as mobile phase at a flow rate of 1 ml/min a mixture prepared as follows: mix 350 ml of *water R* with 600 ml of *acetonitrile R* and allow to equilibrate; adjust the volume to 1000 ml with *water R* and mix again;

— as detector a spectrophotometer set at 254 nm.

Equilibrate the column with the mobile phase for about 45 min.

Adjust the sensitivity so that the height of the principal peak in the chromatogram obtained with reference solution (b) is 70 per cent to 90 per cent of the full scale of the recorder.

Inject 20 µl of reference solution (a). When the chromatograms are recorded in the prescribed conditions, the retention times are: betamethasone 17-valerate, about 7 min; betamethasone 21-valerate, about 9 min. The test is not valid unless the resolution between the peaks due to betamethasone 17-valerate and betamethasone 21-valerate is at least 5.0; if necessary, adjust the concentration of acetonitrile in the mobile phase.

Inject 20 µl of the test solution and 20 µl of reference solution (b). Continue the chromatography for 2.5 times the retention time of the principal peak. In the chromatogram obtained with the test solution: the area of any peak apart from the principal peak is not greater than 0.75 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent) and not more than one such peak has an area greater than half the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent); the sum of the areas of all the peaks, apart from the principal peak, is not greater than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (3.0 per cent). Disregard any peak with an area less than 0.025 times the area of the principal peak in the chromatogram obtained with reference solution (b).

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

Dissolve 50.0 mg in *ethanol (96 per cent) R* and dilute to 100.0 ml with the same solvent. Dilute 2.0 ml of the solution to 50.0 ml with *ethanol (96 per cent) R* . Measure the absorbance *(2.2.25)* at the maximum at 240 nm.

Calculate the content of $C_{27}H_{37}FO_6$ taking the specific absorbance to be 325.

STORAGE

Protected from light.

DEFINITION

9-Fluoro-11β,17,21-trihydroxy-16β-methylpregna-1,4-diene 3,20-dione.

Content

97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, sparingly soluble in anhydrous ethanol, very slightly soluble in methylene chloride.

IDENTIFICATION

First identification B, C.

Second identification A, C, D, E.

A. Dissolve 10.0 mg in *anhydrous ethanol R* and dilute to 100.0 ml with the same solvent. Place 2.0 ml of this solution in a stoppered tube, add 10.0 ml of *phenylhydrazine-sulphuric acid solution R*, mix and heat in a water-bath at 60 °C for 20 min. Cool immediately. The absorbance *(2.2.25)* measured at 419 nm is not greater than 0.10.

B. Infrared absorption spectrophotometry *(2.2.24).*

Comparison *betamethasone CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *methylene chloride R*, evaporate to dryness on a water-bath and record new spectra using the residues.

C. Thin-layer chromatography *(2.2.27)*.

Solvent mixture *methanol R, methylene chloride R* (1:9 *V/V*).

Test solution Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 10 ml with the solvent mixture.

Reference solution (a) Dissolve 20 mg of *betamethasone CRS* in the solvent mixture and dilute to 20 ml with the solvent mixture.

Reference solution (b) Dissolve 10 mg of *dexamethasone CRS* in reference solution (a) and dilute to 10 ml with reference solution (a).

Plate *TLC silica gel F_{254} plate R*.

Mobile phase *butanol R* saturated with *water R, toluene R, ether R* (5:10:85 *V/V/V*).

Application 5 µl.

Development Over a path of 15 cm.

Drying In air.

Detection A Examine in ultraviolet light at 254 nm.

Results A The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

Detection B Spray with *alcoholic solution of sulphuric acid R*. Heat at 120 °C for 10 min or until the spots appear. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with reference solution (a).

System suitability Reference solution (b):

— the chromatogram shows 2 spots which may, however, not be completely separated.

D. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 ml *of water R*, 0.05 ml of *phenolphthalein solution R1* and about 1 ml of *dilute hydrochloric acid R* to render the solution colourless. Filter. Add 1.0 ml of the filtrate to a freshly prepared mixture of 0.1 ml of *alizarin S solution R* and 0.1 ml *of zirconyl nitrate solution R*. Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank prepared in the same manner. The test solution is yellow and the blank is red.

E. Add about 2 mg to 2 ml of *sulphuric acid R* and shake to dissolve. Within 5 min, a deep reddish-brown colour develops. Add this solution to 10 ml of *water R* and mix. The colour is discharged and a clear solution remains.

TESTS

Specific optical rotation *(2.2.7)*

+ 118 to + 126 (dried substance).

Dissolve 0.125 g in *methanol R* and dilute to 25.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 25.0 mg of the substance to be examined in a mixture of equal volumes of *acetonitrile R* and *methanol R* and dilute to 10.0 ml with the same mixture of solvents.

Reference solution (a) Dissolve 2 mg of *betamethasone CRS* and 2 mg of *methylprednisolone CRS* in mobile phase A, then dilute to 100.0 ml with mobile phase A.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with mobile phase A.

Column:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 45 °C.

Mobile phase:
- *mobile phase A*: in a 1000 ml volumetric flask mix 250 ml of *acetonitrile R* with 700 ml of *water R* and allow to equilibrate; dilute to 1000 ml with *water R* and mix again;
- *mobile phase B*: *acetonitrile R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 15	100	0
15 - 40	100 → 0	0 → 100
40 - 41	0 → 100	100 → 0
41 - 46	100	0

Flow rate 2.5 ml/min.

Detection Spectrophotometer at 254 nm.

Equilibration With mobile phase B for at least 30 min and then with mobile phase A for 5 min. For subsequent chromatograms, use the conditions described from 40 min to 46 min.

Injection 20 µl; inject the mixture of equal volumes of *acetonitrile R* and *methanol R* as a blank.

Retention time methylprednisolone = about 11.5 min; betamethasone = about 12.5 min.

System suitability Reference solution (a):

— *resolution*: minimum 1.5 between the peaks due to methylprednisolone and betamethasone; if necessary, adjust the concentration of acetonitrile in mobile phase A.

Limits:

— *impurities A, B, C, D, E, F, G, H, I, J*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent), and not more than 1 such peak has an area greater than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent);

— *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 0.500 g by drying in an oven at 105 °C.

ASSAY

Dissolve 0.100 g in *ethanol (96 per cent) R* and dilute to 100.0 ml with the same solvent. Dilute 2.0 ml of this solution to 100.0 ml with *ethanol (96 per cent) R*. Measure the absorbance *(2.2.25)* at the absorption maximum at 238.5 nm.

Calculate the content of $C_{22}H_{29}FO_5$ taking the specific absorbance to be 395.

Application 2 µl.

Development Over a path of 10 cm.

Drying In air.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Detection A Examine in ultraviolet light at 254 nm.

Results A The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

Detection B Spray with a 50 g/l solution of *vanillin R* in a mixture of 5 volumes of *sulphuric acid R*, 10 volumes of *glacial acetic acid R* and 85 volumes of *methanol R*. Heat at 100-105 °C until the colour of the spots reaches maximum intensity (10-15 min). Examine in daylight.

Results B The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Dissolve 0.5 g in *water R* and dilute to 25 ml with the same solvent.

Acidity or alkalinity

Dissolve 0.20 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent. Add 0.2 ml of *methyl red solution R* and 0.2 ml of *0.01 M hydrochloric acid*. The solution is red. Add 0.4 ml of *0.01 M sodium hydroxide*. The solution is yellow.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 10.0 mg of the substance to be examined in the mobile phase and dilute to 5.0 ml with the mobile phase.

Reference solution (a) Dissolve 8 mg of the substance to be examined and 4 mg of *betaxolol impurity A CRS* in 20.0 ml of the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Column:

- *size:* l = 0.25 m, Ø = 4 mm;
- *stationary phase: octylsilyl silica gel for chromatography R (5 µm).*

Mobile phase Mix 175 ml of *acetonitrile R* with 175 ml of *methanol R* and dilute the mixture to 1 litre with a 3.4 g/l solution of *potassium dihydrogen phosphate R*, previously adjusted to pH 3.0 with *phosphoric acid R*.

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 273 nm.

Injection 20 µl.

Run time 4 times the retention time of betaxolol.

System suitability Reference solution (a):

- *resolution*: minimum 2.0 between the peaks due to impurity A and betaxolol.

Limits:

- *impurities A, B, C, D, E*: for each impurity, not more than 0.3 times the area of the peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *total*: not more than the area of the peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *disregard limit*: 0.025 times the area of the peak in the chromatogram obtained with reference solution (b) (0.025 per cent).

Heavy metals *(2.4.8)*

Maximum 10 ppm.

Dissolve 2.0 g in 20 ml of *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using 10 ml of *lead standard solution (1 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in a mixture of 10.0 ml of *0.01 M hydrochloric acid* and 50 ml of *ethanol (96 per cent) R*. Carry out a potentiometric titration (2.2.20), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 34.39 mg of $C_{18}H_{30}ClNO_3$.

Ph Eur

DEFINITION

2-[4-[2-[(4-Chlorobenzoyl)amino]ethyl]phenoxy]-2-methylpropanoic acid.

Content

98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white crystalline powder.

Solubility

Practically insoluble in water, freely soluble in dimethylformamide, sparingly soluble in acetone and in ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

It shows polymorphism *(5.9)*.

IDENTIFICATION

First identification A, B.

Second identification A, C.

A. Melting point *(2.2.14)*: 181 °C to 185 °C.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *bezafibrate CRS.*

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in *methanol R* and evaporate to dryness. Dry the residues in vacuo at 80 °C for 1 h and record new spectra using the residues.

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution Dissolve 10 mg of *bezafibrate CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Plate *TLC silica gel* F_{254} *plate R.*

Mobile phase *glacial acetic acid R, methyl ethyl ketone R, xylene R* (2.7:30:60 *V/V/V*).

Application 5 µl.

Development Over a path of 10 cm.

Drying At 120 °C for at least 15 min.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Solution S

Dissolve 1.0 g in *dimethylformamide R* and dilute to 20 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution BY_5 *(2.2.2, Method II)*.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dilute 10.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 5.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 5.0 ml of reference solution (a) to 50.0 ml with the mobile phase.

Reference solution (c) To 1 ml of the test solution, add 1 ml of *0.1 M hydrochloric acid* and evaporate to dryness on a hot plate. Dissolve the residue in 20 ml of the mobile phase.

Column:
- *size: l* = 0.125 m, Ø = 4 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 40 volumes of a 2.72 g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 2.3 with *phosphoric acid R*, and 60 volumes of *methanol R.*

Flow rate 1 ml/min.

Detection Spectrophotometer at 228 nm.

Injection 20 µl.

Run time The time necessary to detect the ester, which, depending on the route of synthesis, may be impurity C, D or E.

Retention time Impurity A = about 3 min; impurity B = about 3.5 min; bezafibrate = about 6.0 min; impurity C = about 9 min; impurity D = about 14 min; impurity E = about 37 min.

System suitability:
- *resolution*: minimum 5.0 between the 2 principal peaks in the chromatogram obtained with reference solution (c);
- *signal-to-noise ratio*: minimum 5 for the principal peak in the chromatogram obtained with reference solution (b).

Limits:
- *impurities A, B, C, D, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *total*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.75 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Chlorides *(2.4.4)*

Maximum 300 ppm.

Dilute 10 ml of solution S to 50 ml with *water R*. Filter the resultant suspension through a wet filter previously washed with *water R* until free from chlorides. Prepare the standard using 9 ml of *chloride standard solution (5 ppm Cl) R* and 6 ml of *water R*.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

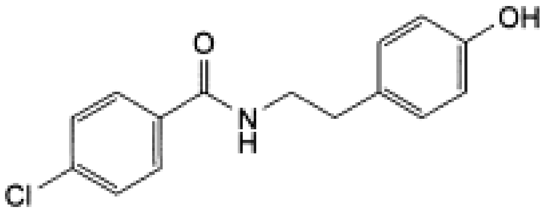
ASSAY

Dissolve 0.300 g in 50 ml of a mixture of 25 volumes of *water R* and 75 volumes of *ethanol (96 per cent) R*. Using 0.1 ml of *phenolphthalein solution R* as indicator, titrate with *0.1 M sodium hydroxide* until a pink colour is obtained. Carry out a blank titration.

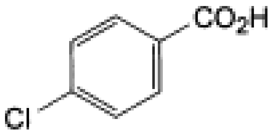
1 ml *of 0.1 M sodium hydroxide* is equivalent to 36.18 mg of $C_{19}H_{20}ClNO_4$.

IMPURITIES

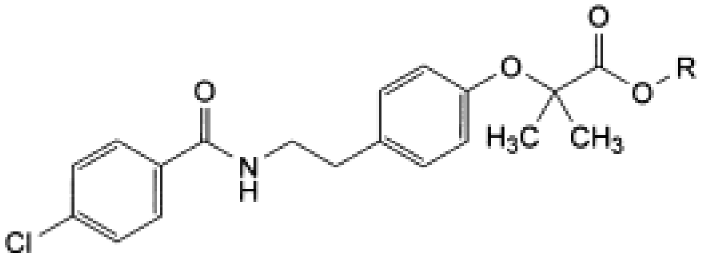
Specified impurities   A, B, C, D, E.



A. 4-chloro-*N*-[2-(4-hydroxyphenyl)ethyl]benzamide (chlorobenzoyltyramine),



B. 4-chlorobenzoic acid,



C. R = CH_3: methyl 2-[4-[2-[(4-chlorobenzoyl)amino]ethyl]phenoxy]-2 methylpropanoate,

D. R = CH_2-CH_3: ethyl 2-[4-[2-[(4-chlorobenzoyl)amino]ethyl]phenoxy]-2-methylpropanoate,

E. R = CH_2-CH_2-CH_2-CH_3: butyl 2-[4-[2-[(4-chlorobenzoyl)amino]ethyl]phenoxy]-2-methylpropanoate.

Ph Eur

Bifonazole

General Notices

$C_{22}H_{18}N_2$ *310.4* *60628-96-8*

Action and use

Antifungal.

Ph Eur

DEFINITION

1-[(*RS*)-(Biphenyl-4-yl)phenylmethyl]-1*H*-imidazole.

Content

98.0 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, sparingly soluble in anhydrous ethanol.

It shows polymorphism *(5.9)*.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)*.

Comparison bifonazole CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *2-propanol R*, evaporate to dryness and record new spectra using the residues.

TESTS

Optical rotation *(2.2.7)*

- 0.10° to + 0.10°.

Dissolve 0.20 g in 20.0 ml of *methanol R*.

Related substances

Liquid chromatography *(2.2.29)*.

Buffer solution pH 3.2 Mix 2.0 ml of *phosphoric acid R* with *water R* and dilute to 1000.0 ml with the same solvent. Adjust to pH 3.2 *(2.2.3)* with *triethylamine R.*

Test solution Dissolve 50.0 mg of the substance to be examined in 25 ml of *acetonitrile R* and dilute to 50.0 ml with buffer solution pH 3.2.

Reference solution (a) Dilute 0.25 ml of the test solution to 50.0 ml with buffer solution pH 3.2.

Reference solution (b) Dissolve 25.0 mg of *imidazole R* (impurity C) in *acetonitrile R* and dilute to 25.0 ml with the same solvent. Dilute 0.25 ml of this solution to 100.0 ml with buffer solution pH 3.2.

Reference solution (c) Dissolve 5.0 mg of *bifonazole impurity B CRS* in *acetonitrile R* and dilute to 5.0 ml with the same solvent.

Reference solution (d) Mix 0.25 ml of the test solution and 0.25 ml of reference solution (c) and dilute to 50.0 ml with buffer solution pH 3.2.

Column:

— *size: l* = 0.125 m, Ø = 4.6 mm;

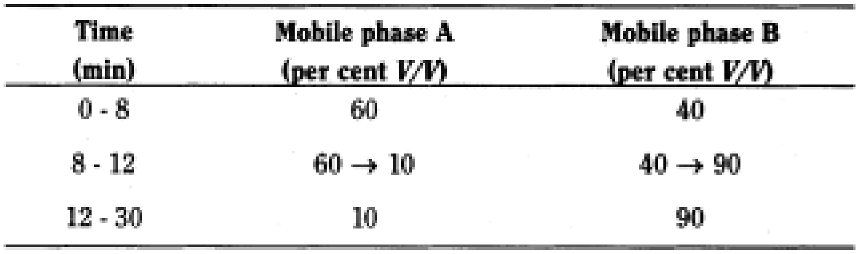
— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm);

— *temperature*: 40 °C.

Mobile phase:

— *mobile phase A*: *acetonitrile R1*, buffer solution pH 3.2 (20:80 *V/V*);

— *mobile phase B*: buffer solution pH 3.2, *acetonitrile R1* (20:80 *V/V*);



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 8	60	40
8 - 12	60 → 10	40 → 90
12 - 30	10	90

Flow rate 1 ml/min.

Detection Spectrophotometer at 210 nm.

Injection 50 µl of the test solution and reference solutions (a), (b) and (d).

Retention time Impurity B = about 4 min; bifonazole = about 4.5 min.

System suitability Reference solution (d):

— *resolution*: minimum 2.5 between the peaks due to impurity B and bifonazole.

Limits:

— *impurity B*: not more than 3 times the area of the corresponding peak in the chromatogram obtained with reference solution (a) (1.5 per cent);

— *impurity C*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.25 per cent);

— *impurities A, D*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *total*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (2 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

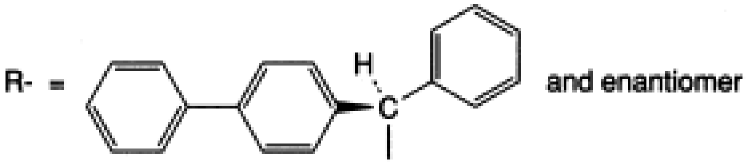
ASSAY

Dissolve 0.250 g in 80 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

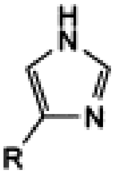
1 ml of *0.1 M perchloric acid* is equivalent to 31.04 mg of $C_{22}H_{18}N_2$.

IMPURITIES

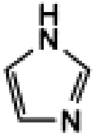
Specified impurities A, B, C, D.



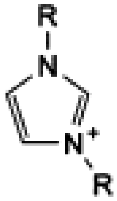
A. R-OH: (*RS*)-(biphenyl-4-yl)phenylmethanol,



B. 4-[(*RS*)-(biphenyl-4-yl)phenylmethyl]-1*H*-imidazole,



C. 1*H*-imidazole,



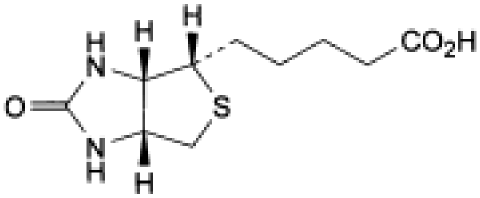
D. 1,3-bis[(biphenyl-4-yl)phenylmethyl]-1*H*-imidazolium ion.

Ph Eur

Biotin

General Notices

(Ph Eur monograph 1073)



$C_{10}H_{16}N_2O_3S$ 244.3 *58-85-5*

Action and use

Vitamin.

Ph Eur

DEFINITION

Biotin contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of 5-[(3a*S*,4*S*,6a*R*)-2-oxohexahydrothieno[3,4-*d*]imidazol-4-yl]pentanoic acid, calculated with reference to the dried substance.

CHARACTERS

A white or almost white crystalline powder or colourless crystals, very slightly soluble in water and in alcohol, practically insoluble in acetone. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification A.

Second identification B, C.

A. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *biotin CRS*.

B. Examine the chromatograms obtained in the test for related substances (see Tests). The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve about 10 mg in 20 ml of *water R* with heating. Allow to cool. Add 0.1 ml of *bromine water R*. The bromine water is decolourised.

TESTS

Solution S

Dissolve 0.250 g in a 4 g/l solution of *sodium hydroxide R* and dilute to 25.0 ml with the same alkaline solution.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Specific optical rotation *(2.2.7)*

The specific optical rotation is + 89 to + 93, determined on solution S and calculated with reference to the dried substance.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using as the coating substance a suitable silica gel (5 µm). *Prepare the solutions immediately before use and keep protected from bright light.*

Test solution (a) Dissolve 50 mg of the substance to be examined in *glacial acetic acid R* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with *glacial acetic acid R*.

Reference solution (a) Dissolve 5 mg of *biotin CRS* in *glacial acetic acid R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dilute 1 ml of test solution (b) to 20 ml with *glacial acetic acid R*.

Reference solution (c) Dilute 1 ml of test solution (b) to 40 ml with *glacial acetic acid R*.

Apply to the plate 10 µl of each solution. Develop over a path of 15 cm using a mixture of 5 volumes of *methanol R*, 25 volumes of *glacial acetic acid R* and 75 volumes of *toluene R*. Dry the plate in a current of warm air. Allow to cool and spray with *4-dimethylaminocinnamaldehyde solution R*. Examine immediately in daylight. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent) and at most one such spot is more intense than the spot in the chromatogram obtained with reference solution (c) (0.25 per cent).

Heavy metals *(2.4.8)*

1.0 g complies with limit test C for heavy metals (10 ppm). Prepare the standard using 10 ml of *lead standard solution (1 ppm Pb) R*.

Loss on drying *(2.2.32)*

Not more than 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

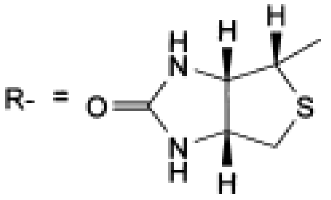
Suspend 0.200 g in 5 ml of *dimethylformamide R*. Heat until the substance has dissolved completely. Add 50 ml of *ethanol R* and titrate with 0.1 *M tetrabutylammonium hydroxide*, determining the end-point potentiometrically *(2.2.20)*.

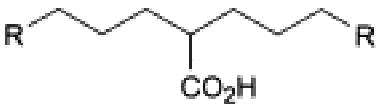
1 ml of *0.1 M tetrabutylammonium hydroxide* is equivalent to 24.43 mg of $C_{10}H_{16}N_2O_3S$.

STORAGE

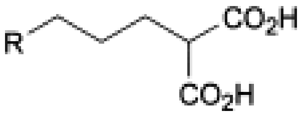
Store protected from light.

IMPURITIES

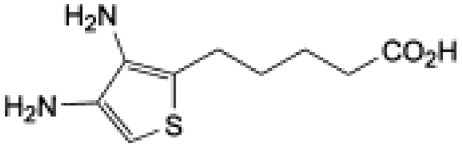




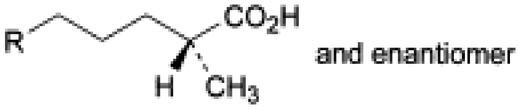
A. di[3-[(3a*S*,4*S*,6a*R*)-2-oxohexahydrothieno[3,4-*d*]imidazol-4-yl]propyl]acetic acid,



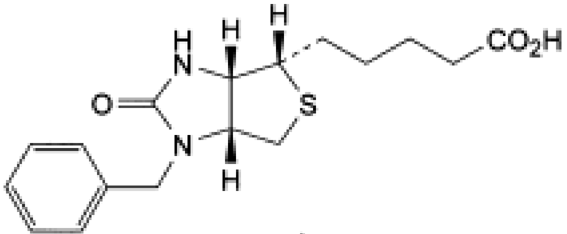
B. 4-[(3a*S*,4*S*,6a*R*)-2-oxohexahydrothieno[3,4-*d*]imidazol-4-yl]butane-1,1-dicarboxylic acid,



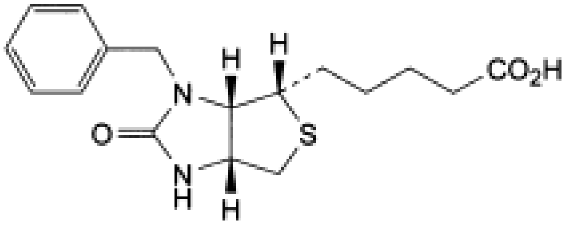
C. 5-(3,4-diamino-2-thienyl)pentanoic acid,



D. 2-methyl-5-[(3a*S*,4S,6a*R*)-2-oxohexahydrothieno[3,4-*d*]imidazol-4-yl]pentanoic acid,



and



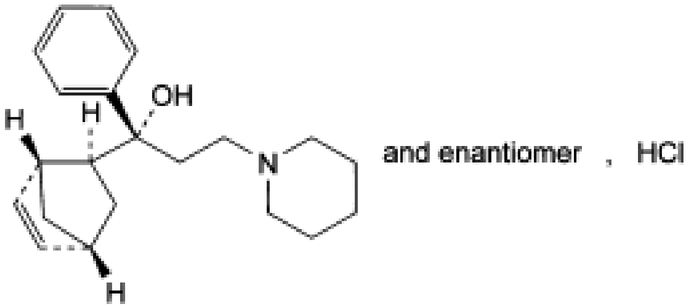
E. 5-[(3a*S*,4*S*,6a*R*)-3-benzyl-2-oxohexahydrothieno[3,4-*d*]imidazol-4-yl]pentanoic acid and 5-[(3a*S*,4*S*,6a*R*)-1-benzyl-2-oxohexahydrothieno[3,4-*d*]imidazol-4-yl]pentanoic acid.

Ph Eur

Biperiden Hydrochloride

General Notices

(Ph Eur monograph 1074)



$C_{21}H_{29}NO, HCl$ 347.9 *1235-82-1*

Action and use

Anticholinergic.

Ph Eur

DEFINITION

(1*RS*)-1-[(1*RS*,2*SR*,4*RS*)-Bicyclo[2.2.1]hept-5-en-2-yl]-1-phenyl-3-(piperidin-1-yl)propan-1-ol hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Slightly soluble in water and in alcohol, very slightly soluble in methylene chloride.

mp

About 280 °C, with decomposition.

IDENTIFICATION

First identification A, D.

Second identification B, C, D.

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *biperiden hydrochloride CRS.*

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 25 mg of the substance to be examined in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution (a) Dissolve 25 mg of *biperiden hydrochloride CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution (b) Dissolve 5 mg of *biperiden impurity A CRS* in reference solution (a) and dilute to 2 ml with the same solution.

Plate *TLC silica gel F_{254} plate R*.

Mobile phase *diethylamine R, methanol R, toluene R* (1:1:20 *V/V/V*).

Application 5 µl.

Development Over a path of 15 cm.

Drying In air.

Detection A Examine in ultraviolet light at 254 nm.

Results A The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

Detection B Spray with *dilute potassium iodobismuthate solution R* and then with *sodium nitrite solution R* and examine in daylight.

Results B The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

C. To about 20 mg add 5 ml of *phosphoric acid R*. A green colour develops.

D. It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 0.10 g in *carbon dioxide-free water R*, heating gently if necessary, and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II *(2.2.1)* and is colourless *(2.2.2, Method II)*.

pH ***(2.2.3)***

5.0 to 6.5 for solution S.

Related substances

Gas chromatography *(2.2.28).*

Test solution Dissolve 0.10 g of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dilute 0.5 ml of the test solution to 100 ml with *methanol R*. Dilute 10 ml of this solution to 50 ml with *methanol R*.

Reference solution (b) Dissolve 5 mg of the substance to be examined and 5 mg of *biperiden impurity A CRS* in *methanol R* and dilute to 5 ml with the same solvent. Dilute 1 ml of the solution to 10 ml with *methanol R.*

Column:
- *material*: fused silica,
- *size*: *l* = 50 m, Ø = 0.25 mm,
- *stationary phase: poly(dimethyl)(diphenyl)(divinyl)siloxane R* (film thickness 0.25 µm).

Carrier gas *nitrogen for chromatography R.*

Flow rate 0.4 ml/min.

Split ratio 1:250.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 5	200
	5 - 40	200 → 270
Injection port		250
Detector		300

Detection Flame ionisation.

Injection 2 µl.

Run time Twice the retention time of biperiden.

Relative retention With reference to biperiden: impurities A, B and C = between 0.95 and 1.05.

System suitability:
- *resolution*: minimum 2.5 between the peak due to biperiden (1st peak) and the peak due to impurity A (2nd peak) in the chromatogram obtained with reference solution (b),
- *signal-to-noise ratio*: minimum 6 for the principal peak in the chromatogram obtained with reference solution (a).

Limits:

— *impurities A, B, C*: for each impurity, maximum 0.50 per cent of the area of the principal peak,

— *any other impurity*: for each impurity, maximum 0.10 per cent of the area of the principal peak,

— *total of impurities A, B and C*: maximum 1.0 per cent of the area of the principal peak,

— *total of impurities other than A, B and C*: maximum 0.50 per cent of the area of the principal peak,

— *disregard limit*: 0.05 per cent of the area of the principal peak.

Impurity F *(2.4.24)*

Maximum 2 ppm.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with limit test D. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 60 ml of *alcohol R*. In a closed vessel, titrate with *0.1 M alcoholic potassium hydroxide*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M alcoholic potassium hydroxide* is equivalent to 34.79 mg of $C_{21}H_{30}ClNO$.

STORAGE

In an airtight container, protected from light.

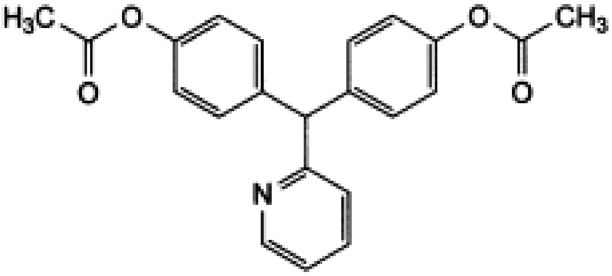
Bisacodyl

General Notices

(Ph Eur monograph 0595)



$C_{22}H_{19}NO_4$ 361.4 *603-50-9*

Action and use

Stimulant laxative.

Preparations

Bisacodyl Suppositories

Bisacodyl Tablets

Ph Eur

DEFINITION

4,4′-(Pyridin-2-ylmethylene)diphenyl diacetate.

Content

98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, soluble in acetone, sparingly soluble in ethanol (96 per cent). It dissolves in dilute mineral acids.

IDENTIFICATION

First identification *C.*

Second identification *A, B, D.*

A. Melting point *(2.2.14)*: 131 °C to 135 °C.

B. Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution Dissolve 10.0 mg in a 6 g/l solution of *potassium hydroxide R* in *methanol R* and dilute to 100.0 ml with the same solution. Dilute 10.0 ml of this solution to 100.0 ml with a 6 g/l solution of *potassium hydroxide R* in *methanol R*.

Spectral range 220-350 nm.

Absorption maximum At 248 nm.

Shoulder At 290 nm.

Specific absorbance at the absorption maximum *632 to 672.*

C. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *bisacodyl CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *chloroform R*, evaporate to dryness and record new spectra using the residues.

D. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 20 mg of the substance to be examined in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 20 mg of *bisacodyl CRS* in *acetone R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel* GF_{254} *plate R.*

Mobile phase *methyl ethyl ketone R, xylene R* (50:50 *V/V*).

Application 10 µl.

Development Over a path of 10 cm.

Drying In air, if necessary heating at 100-105 °C.

Detection Spray with a mixture of equal volumes of *0.05 M iodine* and *dilute sulphuric acid* R.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Acidity or alkalinity

To 1.0 g add 20 ml of *carbon dioxide-free water R*, shake, heat to boiling, cool and filter. Add 0.2 ml of 0.01 M *sodium hydroxide* and 0.1 ml of *methyl red solution R*. The solution is yellow. Not more than 0.4 ml of *0.01 M hydrochloric acid* is required to change the colour of the indicator to red.

Related substances

Liquid chromatography *(2.2.29)*.

Prepare the solutions immediately before use.

Solvent mixture *glacial acetic acid R, acetonitrile R, water R* (4:30:66 *V/V/V*).

Test solution Dissolve 50 mg of the substance to be examined in 25 ml of *acetonitrile R* and dilute to 50.0 ml with the solvent mixture.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 10.0 ml with the solvent mixture.

Reference solution (b) Dissolve 2.0 mg of *bisacodyl for system suitability CRS* (containing impurities A, B, C, D and E) in 1.0 ml of *acetonitrile R* and dilute to 2.0 ml with the solvent mixture.

Reference solution (c) Dissolve 5.0 mg of *bisacodyl for peak identification CRS* (containing impurity F) in 2.5 ml of *acetonitrile R* and dilute to 5.0 ml with the solvent mixture.

Column:
- *size:* l = 0.25 m, Ø = 4.6 mm;
- *stationary phase: end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 45 volumes of *acetonitrile R* and 55 volumes of a 1.58 g/l solution of *ammonium formate R* previously adjusted to pH 5.0 with *anhydrous formic acid R*.

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 265 nm.

Injection 20 µl.

Run time 3.5 times the retention time of bisacodyl.

Identification of impurities Use the chromatogram supplied with *bisacodyl for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C, D and E.

Relative retention With reference to bisacodyl (retention time = about 13 min): impurity A = about 0.2; impurity B = about 0.4; impurity C = about 0.45; impurity D = about 0.8; impurity E = about 0.9; impurity F = about 2.6.

System suitability Reference solution (b):

- *peak-to-valley ratio*: minimum 1.5, where H_p = height above the baseline of the peak due to impurity E and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to bisacodyl.

Limits:
- *correction factor*: for the calculation of content, multiply the peak area of impurity A by 0.7;
- *impurities A, B*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *impurities C, E*: for each impurity, not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *impurity D*: not more than twice the area of the principal peak in the chromatogram

obtained with reference solution (a) (0.2 per cent);

— *impurity F*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 0.500 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 60 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid* determining the end-point potentiometrically *(2.2.20)*.

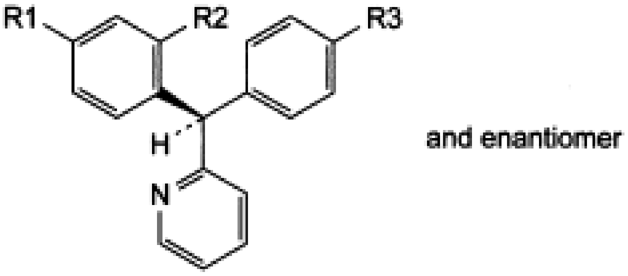
1 ml of *0.1 M perchloric acid* is equivalent to 36.14 mg of $C_{22}H_{19}NO_4$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C, D, E, F.



A. R1 = R3 = OH, R2 = H: 4,4′-(pyridin-2-ylmethylene)diphenol,

B. R1 = H, R2 = R3 = OH: 2-[(*RS*)-(4-hydroxyphenyl)(pyridin-2-yl)methyl]phenol,

C. R1 = OH, R2 = H, R3 = O-CO-CH_3: 4-[(*RS*)-(4-hydroxyphenyl)(pyridin-2-yl)methyl]phenyl acetate,

E. R1 = H, R2 = R3 = O-CO-CH_3: 2-[(*RS*)-[4-(acetyloxy)phenyl](pyridin-2-yl)methyl]phenyl acetate,

D. unknown structure,

F. unknown structure.

Bismuth Subcarbonate

General Notices

Bismuth Carbonate

(Ph Eur monograph 0012)

Ph Eur

DEFINITION

Content

80.0 per cent to 82.5 per cent of Bi (A_r 209.0) (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water and in ethanol (96 per cent). It dissolves with effervescence in mineral acids.

IDENTIFICATION

A. It gives the reaction of carbonates *(2.3.1)*.

B. It gives the reactions of bismuth *(2.3.1)*.

TESTS

Solution S

Shake 5.0 g with 10 ml of *water R* and add 20 ml of *nitric acid R*. Heat to dissolve, cool and dilute to 100 ml with *water R*.

Appearance of solution

Solution S is not more opalescent than reference suspension II *(2.2.1)* and is colourless *(2.2.2, Method II)*.

Chlorides *(2.4.4)*

Maximum 500 ppm.To 6.6 ml of solution S add 4 ml of *nitric acid R* and dilute to 50 ml with *water R*.

Nitrates

Maximum 0.4 per cent.

To 0.25 g in a 125 ml conical flask, add 20 ml of *water R*, 0.05 ml of *indigo carmine solution R1* and then, as a single addition but with caution, 30 ml of *sulphuric acid R*. Titrate immediately with *indigo carmine solution R1* until a stable blue colour is obtained. Not more than *n* ml of the titrant is required, *n* being the volume corresponding to 1 mg of NO_3.

Alkali and alkaline-earth metals

Maximum 1.0 per cent.

To 1.0 g add 10 ml of *water R* and 10 ml of *acetic acid R*. Boil for 2 min, cool and filter. Wash the residue with 20 ml of *water R*. To the combined filtrate and washings add 2 ml of *dilute hydrochloric acid R* and 20 ml of *water R*. Boil and pass *hydrogen sulphide R* through the boiling solution until no further precipitate is formed. Filter, wash the residue with *water R*, evaporate the combined filtrate and washings to dryness on a water-bath and add 0.5 ml of *sulphuric acid R*. Ignite gently and allow to cool. The residue weighs a maximum of 10 mg.

Arsenic ***(2.4.2, Method A)***

Maximum 5 ppm.

To 0.5 g in a distillation flask add 5 ml of *water R* and 7 ml of *sulphuric acid R*, allow to cool and add 5 g of *reducing mixture R* and 10 ml of *hydrochloric acid R*. Heat the contents of the flask to boiling gradually over 15-30 min and continue heating at such a rate that the distillation proceeds steadily until the volume in the flask is reduced by half or until 5 min after the air-condenser has become full of steam. It is important that distillation be discontinued before fumes of sulphur trioxide appear. Collect the distillate in a tube containing 15 ml of *water R* cooled in ice-water. Wash down the condenser with *water R* and dilute the distillate to 25 ml with the same solvent. Prepare the standard using a mixture of 2.5 ml of *arsenic standard solution (1 ppm As) R* and 22.5 ml of *water* R.

Copper

Maximum 50 ppm.

To 5 ml of solution S, add 2 ml of *ammonia R* and dilute to 50 ml with *water R*. Filter. To 10 ml of the filtrate add 1 ml of a 1 g/l solution of *sodium diethyldithiocarbamate R*. The solution is not more intensely coloured than a standard prepared at the same time in the same manner using a mixture of 0.25 ml of *copper standard solution (10 ppm Cu) R* and 9.75 ml of *water R* instead of 10 ml of the filtrate.

Lead

Maximum 20.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method II)*.

Test solution Dissolve 12.5 g in 75 ml of a mixture of equal volumes of *lead-free nitric acid R* and *water R*. Boil for 1 min, cool and dilute to 100.0 ml with *water R*.

Reference solutions Prepare the reference solutions using appropriate quantities of lead standard solution and a 37 per cent *V/V* solution of *lead-free nitric acid R*.

Source Lead hollow-cathode lamp.

Wavelength 283.3 nm (depending on the apparatus, the line at 217.0 nm may be used).

Atomisation device Air-acetylene flame.

Silver

Maximum 25 ppm.

To 2.0 g add 1 ml of *water R* and 4 ml of *nitric acid R*. Heat gently until dissolved and dilute to 11 ml with *water R*. Cool and add 2 ml of *1 M hydrochloric acid*. Allow to stand protected from light for 5 min. Any opalescence in the solution is not more intense than that in a standard prepared at the same time in the same manner using a mixture of 10 ml of *silver standard solution (5 ppm Ag) R*, 1 ml of *nitric acid R* and 2 ml of *1 M hydrochloric acid*.

Loss on drying *(2.2.32)*

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

Dissolve 0.500 g in 3 ml of *nitric acid R* and dilute to 250 ml with *water R*. Carry out the complexometric titration of bismuth *(2.5.11)*.

1 ml of *0.1 M sodium edetate* is equivalent to 20.90 mg of Bi.

STORAGE

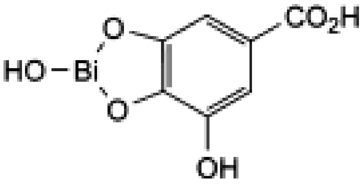
Protected from light.

Ph Eur

Bismuth Subgallate

General Notices

(Ph Eur monograph 1493)



$C_7H_5BiO_6$ 394.1 *149-91-7*

Ph Eur

DEFINITION

Complex of bismuth and gallic acid.

Content

48.0 per cent to 51.0 per cent of Bi (A_r 209.0) (dried substance).

CHARACTERS

Appearance

Yellow powder.

Solubility

Practically insoluble in water and in alcohol. It dissolves in mineral acids with decomposition and in solutions of alkali hydroxides, producing a reddish-brown liquid.

IDENTIFICATION

A. Mix 0.1 g with 5 ml of *water R* and 0.1 ml of *phosphoric acid R*. Heat to boiling and maintain boiling for 2 min. Cool and filter. To the filtrate, add 1.5 ml of *ferric chloride solution R1*, a blackish-blue colour develops.

B. It gives reaction (b) of bismuth *(2.3.1)*.

TESTS

Solution S

In a porcelain or quartz dish, ignite 1.0 g, increasing the temperature very gradually. Heat in a muffle furnace at 600 ± 50 °C for 2 h. Cool and dissolve the residue with warming in 4 ml of a mixture of equal volumes of *lead-free nitric acid R* and *water R* and dilute to 20 ml with *water R*.

Acidity

Shake 1.0 g with 20 ml of *water R* for 1 min and filter. To the filtrate add 0.1 ml of *methyl red solution R*. Not more than 0.15 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator to yellow.

Chlorides ***(2.4.4)***

Maximum 200 ppm.

To 0.5 g add 10 ml of *dilute nitric acid R*. Heat on a water-bath for 5 min and filter. Dilute 5 ml of the filtrate to 15 ml with *water R*.

Nitrates

Maximum 0.2 per cent.

To 1.0 g add 25 ml of *water R* then 25 ml of a mixture of 2 volumes of *sulphuric acid R* and 9 volumes of *water R*. Heat at about 50 °C for 1 min with stirring and filter. To 10 ml of the filtrate, carefully add 30 ml of *sulphuric acid R*. The solution is not more intensely brownish-yellow coloured than a reference solution prepared at the same time as follows: to 0.4 g of *gallic acid R*, add 20 ml of *nitrate standard solution (100 ppm* NO_3*) R* and 30 ml of a mixture of 2 volumes of *sulphuric acid R* and 9 volumes of *water R*, then filter; to 10 ml of the filtrate, carefully add 30 ml of *sulphuric acid R*.

Copper

Maximum 50.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I).*

Test solution Solution S.

Reference solutions Prepare the reference solutions using *copper standard solution (10 ppm Cu) R* and diluting with a 6.5 per cent *V/V* solution of *lead-free nitric acid R*.

Source Copper hollow-cathode lamp.

Wavelength 324.7 nm.

Atomisation device Air-acetylene flame.

Lead

Maximum 20.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method II)*.

Test solution Solution S.

Reference solutions Prepare the reference solutions using *lead standard solution (10 ppm Pb) R* and diluting with a 6.5 per cent *V/V* solution of *lead-free nitric acid R*.

Source Lead hollow-cathode lamp.

Wavelength 283.3 nm (depending on the apparatus, the line at 217.0 nm may be used).

Atomisation device Air-acetylene flame.

Silver

Maximum 25.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Solution S.

Reference solutions Prepare the reference solutions using *silver standard solution (5 ppm Ag) R* and diluting with a 6.5 per cent *V/V* solution of *lead-free nitric acid R*.

Source Silver hollow-cathode lamp.

Wavelength 328.1 nm.

Atomisation device Air-acetylene flame.

Substances not precipitated by ammonia

Maximum 1.0 per cent.

In a porcelain or quartz dish, ignite 2.0 g, increasing the temperature very gradually to 600 ± 50 °C; allow to cool. Moisten the residue with 2 ml of *nitric acid R*, evaporate to dryness on a water-bath and carefully heat and ignite once more at 600 ± 50 °C. After cooling, dissolve the residue in 5 ml of *nitric acid R* and dilute to 20 ml with *water R*. To 10 ml of this solution, add *concentrated ammonia R* until alkaline and filter. Wash the residue with *water R*, evaporate the combined filtrate and washings to dryness on a water-bath and add 0.3 ml of *dilute sulphuric acid R*. Ignite, the residue weighs a maximum of 10 mg.

Loss on drying *(2.2.32)*

Maximum 7.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

ASSAY

To 0.300 g add 10 ml of a mixture of equal volumes of *nitric acid R* and *water R*, heat to boiling and maintain boiling for 2 min. Add 0.1 g of *potassium chlorate R*, heat to boiling and maintain boiling for 1 min. Add 10 ml of *water R* and heat until the solution becomes colourless. To the hot solution, add 200 ml of *water R* and 50 mg of *xylenol orange triturate R*. Titrate with *0.1 M sodium edetate* until a yellow colour is obtained.

1 ml of *0.1 M sodium edetate* is equivalent to 20.90 mg of Bi.

STORAGE

Protected from light.

Ph Eur

Bismuth Subsalicylate

General Notices

(Ph Eur monograph 1495)

$C_7H_5BiO_4$ 362.1 *14882-18-9*

Ph Eur

DEFINITION

Complex of bismuth and salicylic acid.

Content

56.0 per cent to 59.4 per cent of Bi (A_r 209.0) (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water and in alcohol. It dissolves in mineral acids with decomposition.

IDENTIFICATION

A. To 0.5 g add 10 ml *of hydrochloric acid R1*. Heat on a boiling water-bath for 5 min. Cool and filter. Retain the filtrate for identification test B. Wash the residue with *dilute hydrochloric acid R* and then with *water R*. Dissolve the residue in 0.5-1 ml of *dilute sodium hydroxide solution R*. Add 15 ml of *water R.* Neutralise with *dilute hydrochloric acid R*. The solution gives reaction (a) of salicylates *(2.3.1)*.

B. The filtrate obtained in identification test A gives reaction (b) of bismuth *(2.3.1)*.

TESTS

Solution S

In a porcelain or quartz dish, ignite 1.0 g, increasing the temperature very gradually. Heat in a muffle furnace at 600 ± 25 °C for 2 h. Cool and dissolve the residue with warming in 4 ml of a mixture of equal volumes of *lead-free nitric acid R* and *water R* and dilute to 20 ml with *water R.*

Acidity

Shake 2.0 g with 30 ml of *ether R* for 1 min and filter. To the filtrate add 30 ml of *alcohol R* and 0.1 ml of *thymol blue solution R*. Not more than 0.35 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator to blue.

Chlorides *(2.4.4)*

Maximum 200 ppm.

Dissolve 0.250 g in a mixture of 2 ml of *nitric acid R*, 5 ml of *water R* and 8 ml of *methanol R*.

Nitrates

Maximum 0.4 per cent.

To 0.1 g add 10 ml of *water R* and, with caution, 20 ml of *sulphuric acid R* and stir. The solution is not more intensely yellow coloured than a reference solution prepared at the same time using 0.1 g of *salicylic acid R*, 6 ml of *water R*, 4 ml of *nitrate standard solution* (100 ppm NO_3) R and 20 ml of *sulphuric acid R.*

Copper

Maximum 50.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Solution S.

Reference solutions Prepare the reference solutions using *copper standard solution (10 ppm Cu) R* and diluting with a 6.5 per cent *V/V* solution of *lead-free nitric acid R*.

Source Copper hollow-cathode lamp.

Wavelength 324.7 nm.

Atomisation device Air-acetylene flame.

Lead

Maximum 20.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method II)*.

Test solution Solution S.

Reference solutions Prepare the reference solutions using *lead standard solution (10 ppm Pb) R* and diluting with a 6.5 per cent *V/V* solution of *lead-free nitric acid R*.

Source Lead hollow-cathode lamp.

Wavelength 283.3 nm (depending on the apparatus, the line at 217.0 nm may be used).

Atomisation device Air-acetylene flame.

Silver

Maximum 25.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Solution S.

Reference solutions Prepare the reference solutions using *silver standard solution (5 ppm Ag) R* and diluting with a 6.5 per cent *V/V* solution of *lead-free nitric acid R*.

Source Silver hollow-cathode lamp.

Wavelength 328.1 nm.

Atomisation device Air-acetylene flame.

Soluble bismuth

Maximum 40.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Suspend 5.0 g in 100 ml of *water R*. Stir constantly for 2 h at 20-23 °C. Filter through filter paper (slow filtration) then through a cellulose micropore membrane filter (0.1 µm). To 10.0 ml of clear filtrate, add 0.1 ml of *nitric acid R*.

Reference solutions Prepare the reference solutions using *bismuth standard solution (100 ppm Bi) R* and diluting with a mixture of equal volumes of *dilute nitric acid R* and *water R*.

Source Bismuth hollow-cathode lamp.

Wavelength 223.06 nm.

Atomisation device Air-acetylene flame.

Loss on drying *(2.2.32)*

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

Dissolve with heating 0.300 g in 10 ml of a mixture of 2 volumes of *perchloric acid R* and 5 volumes of *water R*. To the hot solution, add 200 ml of water R and 50 mg of *xylenol orange triturate R*. Titrate with *0.1 M sodium edetate* until a yellow colour is obtained.

1 ml of 0*.1 M sodium edetate* is equivalent to 20.90 mg of Bi.

STORAGE

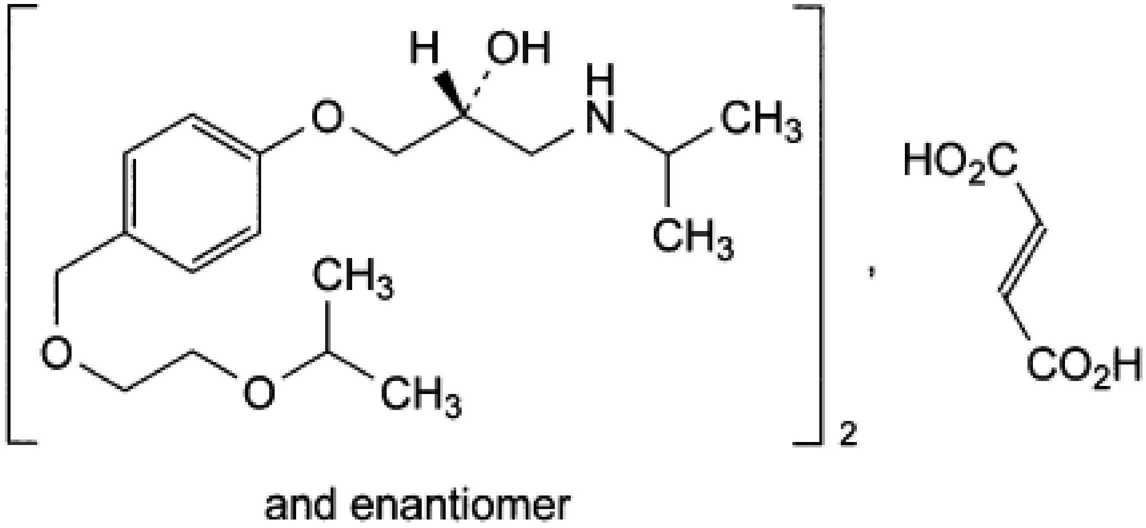
Protected from light.

Ph Eur

Bisoprolol Fumarate

General Notices

(Ph Eur monograph 1710)



$C_{40}H_{66}N_2O_{12}$ 767 *66722-44-9*

Action and use

Beta-adrenoceptor antagonist.

Ph Eur

DEFINITION

(*RS*)-1-[4-[[2-(1-Methylethoxy)ethoxy]methyl]phenoxy]-3-[(1-methylethyl)amino]propan-2-ol fumarate.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, slightly hygroscopic powder.

Solubility

Very soluble in water, freely soluble in methanol.

It shows polymorphism *(5.9)*.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *bisoprolol fumarate CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate and dry the residue at 60 °C at a pressure not exceeding 700 Pa and record new spectra using the residues.

TESTS

Related substances

A. Impurities A and E. Liquid chromatography *(2.2.29)*.

Test solution Dissolve 25 mg of the substance to be examined in mobile phase A and dilute to 25.0 ml with mobile phase A.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with mobile phase A. Dilute 1.0 ml of this solution to 10.0 ml with mobile phase A.

Reference solution (b) Dissolve the contents of a vial of *bisoprolol for system suitability method A CRS* (containing impurities A, B and E) in 1.0 ml of mobile phase A.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

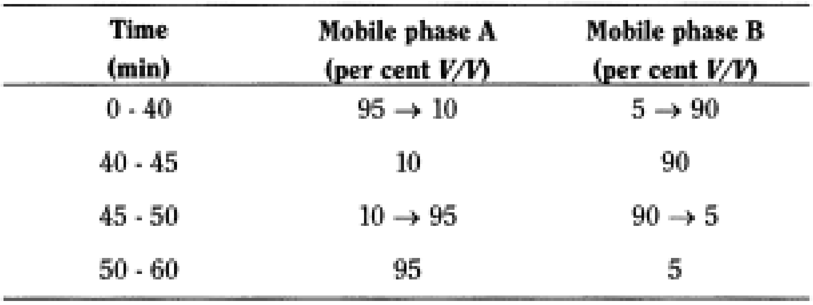
— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);

— *temperature*: 30 °C.

Mobile phase:

— *mobile phase A*: mix 10 volumes of *acetonitrile R1* and 90 volumes of a solution containing 0.4 ml/l of *triethylamine R1* and 3.12 g/l of *sodium dihydrogen phosphate R*, previously adjusted to pH 4.2 with *dilute phosphoric acid R;*

— *mobile phase B*: mix 25 volumes of a solution containing 0.4 ml/l of *triethylamine R1* and 3.12 g/l of *sodium dihydrogen phosphate R*, previously adjusted to pH 4.2 with *dilute phosphoric acid R* and 75 volumes of *acetonitrile R1;*



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 40	95 → 10	5 → 90
40 - 45	10	90
45 - 50	10 → 95	90 → 5
50 - 60	95	5

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 225 nm.

Injection 10 µl.

Identification of impurities Use the chromatogram supplied with *bisoprolol for system suitability method A CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to fumaric acid and impurities A, B and E.

Relative retention With reference to bisoprolol (retention time = about 14.5 min): impurity A = about 0.25; impurity G = about 1.05; impurity B = about 1.1; impurity E = about 1.3.

System suitability Reference solution (b):

— *resolution*: minimum 5.0 between the peaks due to bisoprolol and impurity B.

Limits:

— *impurity A*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *impurity E*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent); disregard the peak due to fumaric acid and any peak due to impurity G.

B. Impurities A and G. Liquid chromatography (*2.2.29*).

Solvent mixture *acetonitrile R1*, *water for chromatography R* (20:80 *V/V*).

Test solution Dissolve 25 mg of the substance to be examined in the solvent mixture and dilute to 25.0 ml with the solvent mixture.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the solvent mixture. Dilute 2.0 ml of this solution to 10.0 ml with the solvent mixture.

Reference solution (b) Dissolve the contents of a vial of *bisoprolol for system suitability method B CRS* (containing impurities A and G) in 1.0 ml of the solvent mixture.

Column:

— *size: l* = 0.25 m, Ø = 4.6 mm;

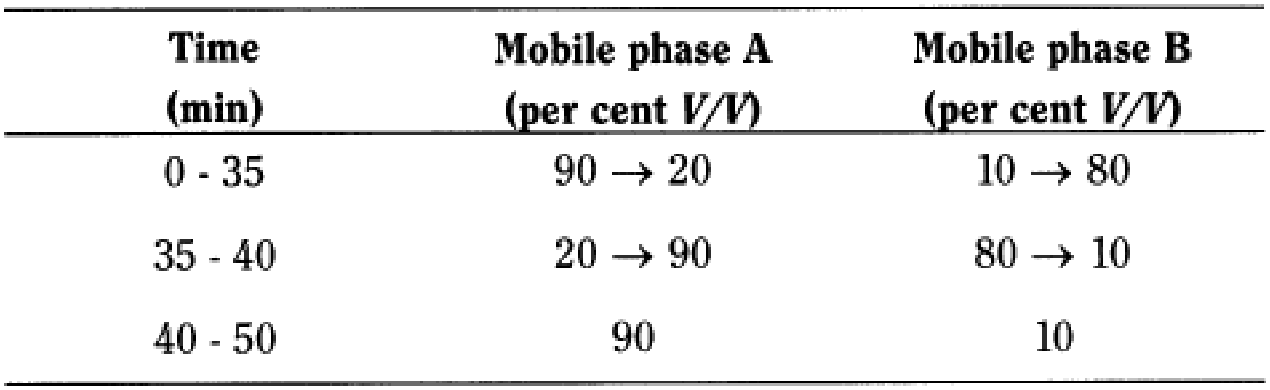
— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);

— *temperature*: 30 °C.

Mobile phase:

— *mobile phase A*: 10 g/l solution of *phosphoric acid R*;

— *mobile phase B*: 10 g/l solution of *phosphoric acid R* in *acetonitrile R1*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 35	90 → 20	10 → 80
35 - 40	20 → 90	80 → 10
40 - 50	90	10

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 225 nm.

Injection 10 µl.

Identification of impurities Use the chromatogram supplied with *bisoprolol for system suitability method B CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to fumaric acid and impurities A and G.

Relative retention with reference to bisoprolol (retention time = about 13.4 min): impurity A = about 0.4; impurity G = about 1.02; impurity E = about 1.2.

System suitability Reference solution (b):

— *peak-to-valley ratio*: minimum 2.5, where H_p = height above the baseline of the peak due to impurity G, and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to bisoprolol.

Limits:

— *impurity G*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *impurity A*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent); disregard the peak due to fumaric acid and any peak due to impurity E.

Water ***(2.5.12)***

Maximum 0.5 per cent, determined on 1.000 g.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 38.35 mg of $C_{40}H_{66}N_2O_{12}$.

STORAGE

In an airtight container, protected from light.

IMPURITIES

Specified impurities A, E, G.

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*):

Ph Eur

DEFINITION

Sulphate of a mixture of glycopeptides produced by *Streptomyces verticillus* or by any other means; the 2 principal components of the mixture are *N*-[3-(dimethylsulphonio)propyl]bleomycinamide (bleomycin A_2) and *N*-[4-(carbamimidoylamino)butyl]bleomycinamide (bleomycin B_2).

Potency Minimum 1500 IU/mg (dried substance).

CHARACTERS

Appearance

White or yellowish-white, very hygroscopic powder.

Solubility

Very soluble in water, slightly soluble in anhydrous ethanol, practically insoluble in acetone.

IDENTIFICATION

A. Examine the chromatograms obtained in the test for composition.

Results The 2 principal peaks in the chromatogram obtained with the test solution are similar in retention time and size to the 2 principal peaks in the chromatogram obtained with reference solution (a).

B. It gives the reactions of sulphates *(2.3.1)*.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and its absorbance *(2.2.25)* at 430 nm is not greater than 0.10.

Dissolve 0.200 g in *water R* and dilute to 10.0 ml with the same solvent.

pH *(2.2.3)*

4.5 to 6.0.

Dissolve 50 mg in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Composition

Liquid chromatography *(2.2.29)*: use the normalisation procedure.

Test solution Dissolve 25.0 mg of the substance to be examined in *water R* and dilute to 50.0 ml with the same solvent.

Reference solution (a) Dissolve 25.0 mg of *bleomycin sulphate CRS* in *water R* and dilute to 50.0 ml with the same solvent.

Reference solution (b) Dilute 1.5 ml of reference solution (a) to 100.0 ml with *water R*.

Column:

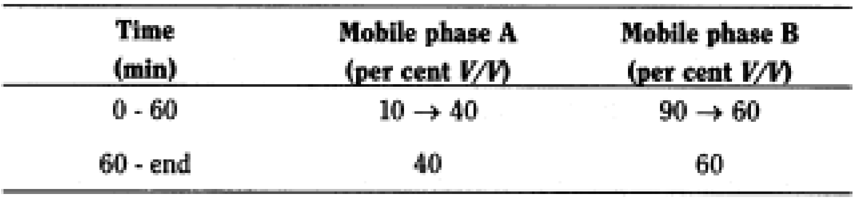
— *size:* l = 0.25 m, Ø = 4.6 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (7 µm).

Mobile phase:

— *mobile phase A*: *methanol R*;

— *mobile phase B:* dissolve 0.960 g of *sodium pentanesulphonate R* in 900 ml of acetic acid (4.8 g/l $C_2H_4O_2$), add 1.86 g of *sodium edetate R*, dilute to 1000 ml with the same solvent and adjust to pH 4.3 with *ammonia R*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 60	10 → 40	90 → 60
60 - end	40	60

Flow rate 1.2 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 20 µl.

Run time Until impurity D is eluted (about 80 min).

Relative retention With reference to bleomycin A_2: impurity D = 1.5 to 2.5.

System suitability:

— *resolution*: minimum 5 between the peaks due to bleomycin A_2 (1st principal peak) and bleomycin B_2 (2nd principal peak) in the chromatogram obtained with reference solution (a);

— *signal-to-noise ratio*: minimum 20 for the principal peak in the chromatogram obtained with reference solution (b);

— *repeatability*: maximum relative standard deviation of 2 per cent for the principal peak after 6 injections of reference solution (a).

Limits:

— *bleomycin* A_2: 55 per cent to 70 per cent;

— *bleomycin* B_2: 25 per cent to 32 per cent;

— *sum of bleomycin* A_2 *and* B_2: minimum 85 per cent;

— *impurity D:* maximum 5.5 per cent;

— *sum of impurities other than D*: maximum 9.5 per cent;

— *disregard limit*: 0.1 per cent of the total.

Copper

Maximum 2.00×10^2 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Dissolve 50 mg in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution Dilute 1.0 ml of *copper standard solution (10 ppm Cu) R* to 10.0 ml with *water R*.

Source Copper hollow-cathode lamp.

Wavelength 324.7 nm.

Atomisation device Air-acetylene flame.

Loss on drying ***(2.2.32)***

Maximum 3.0 per cent, determined on 50 mg by drying at 60 °C at a pressure not exceeding 0.67 kPa for 3 h.

Bacterial endotoxins ***(2.6.14)***

Less than 5 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Carry out the microbiological assay of antibiotics *(2.7.2)*, using the diffusion method. Use *bleomycin sulphate CRS* as the chemical reference substance.

STORAGE

In an airtight container, at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

IMPURITIES

Specified impurities D.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034).* It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C*.

A. R = OH: bleomycinic acid,

B. R = $NH-[CH_2]_3-NH-[CH_2]_4-NH_2$: bleomycin A_5,

C. R = $NH-[CH_2]_4-NH-C(=NH)-NH-[CH_2]_4-NH-C(=NH)-NH_2$: bleomycin B_4,

D. R = $NH-[CH_2]_3-S-CH_3$: demethylbleomycin A_2.

Borax

General Notices

Sodium Borate; Sodium Tetraborate

(Ph Eur monograph 0013)

$Na_2B_4O_7,10H_2O$ 381.4 *1303-96-4*

Ph Eur

DEFINITION

Disodium tetraborate decahydrate.

Content

99.0 per cent to 103.0 per cent of $Na_2B_4O_7,10H_2O$.

CHARACTERS

Appearance

White or almost white, crystalline powder, colourless crystals or crystalline masses, efflorescent.

Solubility

Soluble in water, very soluble in boiling water, freely soluble in glycerol.

IDENTIFICATION

A. To 1 ml of solution S (see Tests) add 0.1 ml of *sulphuric acid R* and 5 ml of *methanol R* and ignite. The flame has a green border.

B. To 5 ml of solution S add 0.1 ml of *phenolphthalein solution R*. The solution is red. On the addition of 5 ml of *glycerol (85 per cent) R* the colour disappears.

C. Solution S gives the reactions of sodium *(2.3.1)*.

TESTS

Solution S

Dissolve 4.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

9.0 to 9.6 for solution S.

Sulphates ***(2.4.13)***

Maximum 50 ppm, determined on solution S.

Use in this test 1.0 ml of *acetic acid R*. Prepare the standard using a mixture of 3 ml of *sulphate standard solution (10 ppm* SO_4*) R* and 12 ml of *distilled water R.*

Ammonium ***(2.4.1)***

Maximum 10 ppm.

Dilute 6 ml of solution S to 14 ml with *water R.* Prepare the standard using a mixture of 2.5 ml of *ammonium standard solution (1 ppm* NH_4*) R* and 7.5 ml of *water R*.

Arsenic ***(2.4.2, Method A)***

Maximum 5 ppm, determined on 5 ml of solution S.

Calcium ***(2.4.3)***

Maximum 100 ppm, determined on solution S.

Prepare the standard using a mixture of 6 ml of *calcium standard solution (10 ppm Ca) R* and 9 ml of *distilled water R.*

Heavy metals ***(2.4.8)***

Maximum 25 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

ASSAY

Dissolve 20 g of *mannitol R* in 100 ml of *water R*, heating if necessary, cool and add 0.5 ml of *phenolphthalein solution R* and neutralise with 0.1 *M sodium hydroxide* until a pink colour is obtained. Add 3.00 g of the substance to be examined, heat until dissolution is complete, cool, and titrate with *1 M sodium hydroxide* until the pink colour reappears.

1 ml of *1 M sodium hydroxide* is equivalent to 0.1907 g of $Na_2B_4O_7,10H_2O$.

Ph Eur

Boric Acid

General Notices

(Ph Eur monograph 0001)

H_3BO_3 61.8 *10043-35-3*

Ph Eur

DEFINITION

Content

99.0 per cent to 100.5 per cent.

CHARACTERS

Appearance

White or almost white, crystalline powder, colourless, shiny plates greasy to the touch, or white or almost white crystals.

Solubility

Soluble in water and in ethanol (96 per cent), freely soluble in boiling water and in glycerol (85 per cent).

IDENTIFICATION

A. Dissolve 0.1 g by gently heating in 5 ml of *methanol R*, add 0.1 ml of *sulphuric acid R* and ignite the solution. The flame has a green border.

B. Solution S (see Tests) is acid *(2.2.4)*.

TESTS

Solution S

Dissolve 3.3 g in 80 ml of boiling *distilled water R*, cool and dilute to 100 ml with *carbon dioxide-free water R* prepared from *distilled water R*.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

3.8 to 4.8 for solution S.

Solubility in ethanol (96 per cent)

The solution is not more opalescent than reference suspension II *(2.2.1)* and is colourless *(2.2.2, Method II)*.

Dissolve 1.0 g in 10 ml of boiling *ethanol (96 per cent) R*.

Organic matter

It does not darken on progressive heating to dull redness.

Sulphates *(2.4.13)*

Maximum 450 ppm.

Dilute 10 ml of solution S to 15 ml with *distilled water R*.

Heavy metals *(2.4.8)*

Maximum 15 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using a mixture of 2.5 ml of *lead standard solution (2 ppm Pb) R* and 7.5 ml of *water R*.

ASSAY

Dissolve 1.000 g with heating in 100 ml of *water R* containing 15 g of *mannitol R*. Titrate with *1 M sodium hydroxide*, using 0.5 ml of *phenolphthalein solution R* as indicator, until a pink colour is obtained.

1 ml of *1 M sodium hydroxide* is equivalent to 61.8 mg of H_3BO_3.

Ph Eur

Botulinum Toxin Type A For Injection

General Notices

(Ph Eur monograph 2113)

Ph Eur

DEFINITION

Botulinum toxin type A for injection is a dried preparation containing purified botulinum neurotoxin type A which may be present in the form of a complex with haemagglutinins and non-toxic proteins. Botulinum neurotoxin type A or its haemagglutinin complex is prepared by a suitable purification process of the liquid supernatant from a broth-culture of a suitable strain of *Clostridium botulinum* type A.

The purified complexes consist of several proteins and can be of various sizes. The largest complex (relative molecular mass of about 900 000) consists of a 150 000 relative molecular mass neurotoxin, a 130 000 relative molecular mass non-toxic protein and various haemagglutinins ranging between relative molecular mass 14 000 and 43 000. The purified toxin moiety is composed of only the same 150 000 relative molecular mass neurotoxin as is found in the 900 000 relative molecular mass neurotoxin complex, which is initially produced as a single chain and further cleaved (nicked) by endogenous proteases into a fully active, disulphide-linked, 54 000 relative molecular mass light chain and a 97 000 relative molecular mass heavy chain.

The preparation is reconstituted before use, as stated on the label.

PRODUCTION

GENERAL PROVISIONS

Production of the toxin is based on seed cultures, managed in a defined seed-lot system in which the ability to produce toxin is conserved. The production method must be shown to yield consistently product of activity and profile comparable to that of lots shown in clinical studies to be of adequate safety and efficacy.

The production method is validated to demonstrate that the product, if tested, would comply with the general test of abnormal toxicity *(2.6.9)* using not less than the maximum human clinical dose, in the presence of a suitable amount of specific botulinum type A antitoxin used for neutralisation.

The production method and stability of the finished product and relevant intermediates are evaluated using the tests below. Such tests include the specific toxin activity per milligram of protein of purified toxin in an appropriate functional model of toxin activity and may be supported by tests confirming the presence of botulinum toxin type A, and, if appropriate, associated non-toxic proteins.

BACTERIAL SEED LOTS

A highly toxigenic strain of *C. botulinum* of known toxin type A and confirmed absence of genes encoding other botulinum toxins (particularly botulinum toxin type B), with known origin and history, is grown using suitable media. The bacterial strain, used for the master seed lot, shall be identified by historical records that include information on its origin and the tests used to characterise the strain. These will include morphological, cultural, biochemical, genetic and serological properties of the strain. The master seed lot and the working seed lot, where applicable, must be demonstrated to have identical profiles. Only a seed lot that complies with the following requirements may be used.

Identification

Each seed lot is identified as containing pure cultures of *C. botulinum* type A bacteria with no extraneous bacterial or fungal contamination.

Microbial purity

Each seed lot complies with the requirements for absence of contaminating micro-organisms. The purity of bacterial cultures is verified by methods of suitable sensitivity. These may include inoculation into suitable media and examination of colony morphology.

Phenotypic parameters

Each seed lot must have a known fatty acid profile, sugar fermentation profile (glucose, lactose, mannose, etc.) and proteolytic activity and must demonstrate relevant lipase, lecithinase and gelatinase activity.

Genetic purity

Each seed lot must have information on the toxin gene sequence and comply with requirements for the absence of other genes encoding other toxin serotypes.

Production of active toxin

A bacterial strain producing a high yield of active toxin, as determined by an acute toxicity assay, is suitable. Seed lots should demonstrate a capability of producing at least a minimum toxicity level appropriate for the manufacturing process and scale.

MANUFACTURER'S REFERENCE PREPARATIONS

During development, reference preparations are established for subsequent verification of batch consistency during production and for control of the bulk purified toxin and finished product. They are derived from representative batches of botulinum toxin type A that are characterised as described under Bulk Purified Toxin.

The reference preparations are suitably characterised for their intended purpose and are stored in suitably sized aliquots under conditions ensuring their suitability.

BULK PURIFIED TOXIN

C. botulinum type A strain is grown anaerobically, in suitable media, from which cultures are selected for step-up incubations under a suitably controlled anaerobic atmosphere through the seed culture and bulk fermentation stages to allow maximum production of toxin. The toxin is purified by suitable methods to remove nucleic acids and components likely to cause adverse reactions.

Only a purified toxin that complies with the following requirements may be used in the preparation of the final bulk. For each test and for each product, limits of acceptance are established and each new purified toxin must comply with these limits.

Residual reagents

Removal of residual reagents used in purification steps is confirmed by suitable limit tests or by validation of the process.

Nucleic acids

Removal of nucleic acids is confirmed by suitable limit tests or by validation of the process.

Immunological identity

The presence of specific type A toxin is confirmed by a suitable immunochemical method *(2.7.1)*.

Specific activity

The specific activity is confirmed in a mouse model of toxicity or by *in vivo/ex vivo* methods validated with respect to the LD50 assay and expressed in mouse LD50 units per milligram of protein. Specific activity must not be less than 1×10^8 mouse LD50 units per milligram of protein for the 150 000 relative molecular mass neurotoxin and must not be less than 1×10^7 mouse LD50 units per milligram of protein for the 900 000 relative molecular mass neurotoxin complex.

Protein

The total protein concentration is determined by a suitable method. An acceptable value is established for the product and each batch must be shown to comply with the limits.

Protein profile

Identity and protein composition are determined by polyacrylamide gel electrophoresis *(2.2.31)* under reducing or non-reducing conditions or by other suitable physicochemical methods such as size-exclusion chromatography *(2.2.30)*, comparing with suitable reference standards.

Total viable count

It complies with the limits approved for the particular product.

FINAL BULK

The final bulk is prepared by adding approved excipients to the bulk purified toxin. The solution is filtered through a bacteria-retentive filter. If human albumin is added, it complies with the monograph on *Human albumin solution (0255)*.

FINAL LOT

The final bulk is distributed aseptically into sterile, tamper-proof containers. Uniformity of fill is verified during filling and the test for uniformity of content *(2.9.6)* is not required. The containers are closed so as to prevent contamination.

Only a final lot that is within the limits approved for the particular product and is satisfactory with respect to each of the requirements given below under Identification, Tests and Assay may be released for use.

pH *(2.2.3)*

The pH of the reconstituted product is within ± 0.5 pH units of the limit approved for the particular product.

Water

Not more than the limit approved for the particular product.

IDENTIFICATION

The presence of botulinum toxin type A is confirmed by a suitable immunochemical method *(2.7.1)*.

TESTS

Sterility *(2.6.1)*

It complies with the test for sterility.

Bacterial endotoxins *(2.6.14)*

Less than 10 IU per vial.

ASSAY

The potency of the reconstituted product is determined by an LD50 assay in mice or by a method validated with respect to the LD50 assay. The potency is expressed in terms of the LD50 for mice or relative to the reference preparation.

For determination of the LD50, graded doses of the product are injected intraperitoneally into groups of mice and the LD50 is calculated by the usual statistical methods (*5.3*) from the mouse lethality in each group. A suitable reference preparation is assayed in parallel; the potency of the toxin is expressed relative to the reference or the value found for the reference is within suitable limits defined in terms of the assigned potency.

After validation with respect to the LD50 assay (reference method), the product may also be assayed by other methods that are preferable in terms of animal welfare, including 1 of the following:

1. endopeptidase assay *in vitro*;
2. *ex vivo* assay using the mouse phrenic nerve diaphragm;
3. mouse bioassay using paralysis as the end-point.

For these other methods, the potency is calculated with respect to a suitable reference preparation calibrated in mouse LD50 units.

The estimated potency is not less than 80 per cent and not more than 125 per cent of the stated potency. The confidence limits (P = 0.95) are not less than 80 per cent and not more than 125 per cent of the estimated potency.

The test may be repeated but when more than 1 test is performed, the results of all valid tests must be combined in the estimate of potency.

LABELLING

The label states:

— the number of units of toxin per vial with a statement that units are product specific and not applicable to other preparations containing botulinum toxin type A;

— the name and the volume of the diluent to be added for reconstitution of a dried product.

Bovine Serum

General Notices

(Ph Eur monograph 2262)

Ph Eur

DEFINITION

Liquid fraction of blood obtained from the ox (*Bos taurus* L.) and from which cells, fibrin and clotting factors have been removed.

Different types of bovine serum are used:

— *adult bovine serum* obtained at slaughter from cattle that are declared fit for human consumption;

— *calf serum* obtained at slaughter from animals, fit for human consumption, before the age of 12 months;

— *new-born calf serum* obtained at slaughter from animals before the age of 20 days;

— *foetal bovine serum* obtained from normal foetuses from dams fit for human consumption;

— *donor bovine serum* obtained by repeated bleeding of donor animals from controlled donor herds.

This monograph provides a general quality specification for bovine serum. Various measures are applied during the production of bovine serum aimed at obtaining a product that is acceptable as regards viral safety. No single measure, nor the combination of measures outlined below can guarantee complete viral safety but they rather reduce the risk involved in the use of serum in the manufacture of medicinal products. It is therefore necessary for the manufacturer of a medicinal product to take account of this when choosing the serum for a particular use by making a risk assessment.

PRODUCTION

All stages of serum production are submitted to a suitable quality assurance system.

Traceability of serum is maintained from the final container to the abattoir of origin (for blood collected from slaughtered animals) or to the herd of origin (for blood collected from donor animals).

Further guarantee of the safety and quality of serum may be ensured by the use of a controlled donor herd. Where serum is obtained from such a herd, the animals are subjected to regular veterinary examination to ascertain their health status. Animals introduced into the herd are traceable as regards source, breeding and rearing history. The introduction of animals into the herd follows specified procedures, including defined quarantine measures. During the quarantine period the animals are observed and tested to establish that they are free from all agents and antibodies from which the donor herd is claimed to be free. It may be necessary to test the animals in quarantine for freedom from additional agents, depending on factors such as information available on their breeding and rearing history. It is recommended that animals in the herd should not be vaccinated against bovine viral diarrhoea virus. Tests are carried out for any agent and/or antibody from which the herd is claimed to be free.

Serum is obtained by separation of the serum from blood cells and clot under conditions designed to minimise microbial contamination. Serum from a number of animals is pooled and a batch number is allocated to the pool. Appropriate steps are taken to ensure homogeneity of the harvested material, intermediate pools and the final batch. Suitable measures (for example filtration) are taken to ensure sterility or a low bioburden. Before further processing, the serum is tested for sterility or bioburden. General and specific tests for viral contaminants are carried out as described below.

A step or steps for virus inactivation/removal are applied to serum intended for production of immunological veterinary medicinal products. Unless otherwise justified and authorised for a particular medicinal product, a step or steps for virus inactivation/removal are applied to serum intended for production of human and non-immunological veterinary medicinal products.

INACTIVATION

The inactivation procedure applied is validated with respect to a suitable representative range of viruses covering different types (enveloped, non-enveloped, DNA, RNA viruses). The optimal choice of relevant and model viruses depends strongly on the specific inactivation/ removal procedure; representative viruses with different degrees of resistance to the type of treatment must be included. Bovine viral diarrhoea virus must be included in the viruses used for validation. Serum free from antibodies against bovine viral diarrhoea virus is used in part or all of the validation studies.

For bovine serum intended for use in immunological veterinary medicinal products, for inactivation by gamma irradiation a minimum dose of 30 kGy is applied, unless otherwise justified and authorised.

Critical parameters for the method of virus inactivation/removal are established and the parameters used in the validation study are strictly adhered to during subsequent application of the procedures to each batch of serum.

For inactivation by gamma irradiation, critical parameters include:

— the temperature;

— packaging configuration;

— distribution of dosimeters to assess the effective dose received by the product whatever its position;

— the minimum and maximum dose received.

QUALITY CONTROL TESTS APPLIED TO EACH BATCH

A suitable sample size for each batch is established. Specific tests for viral contaminants are validated with respect to sensitivity and specificity. The cell cultures used for general tests for viral contaminants are shown to be sensitive to a suitable range of potential contaminants. Control cells used in the tests are cultivated, where relevant, with a bovine serum controlled and inactivated as described in this monograph. Serum free from antibodies to bovine viral diarrhoea virus is required for validation of the effect of antibodies on the detection limits for bovine viral diarrhoea virus.

Tests carried out on the batch prior to treatment

The following tests are carried out on the serum (before any virus inactivation/removal steps, where applicable).

Tests for viral contaminants General tests supplemented by specific tests are carried out.

General tests Validated tests are carried out by inoculation of the serum on at least 2 distinct cell lines, one of which is of bovine origin. The cell lines used are suitable for detecting haemadsorbing viruses such as bovine parainfluenza virus 3 and cytopathic agents such as bovine herpesvirus 1.

Specific tests For viral contaminants (if not detected by general tests), where relevant in view of the country of origin of the serum: bluetongue virus, bovine adenovirus, bovine parvovirus, bovine respiratory syncytial virus, bovine viral diarrhoea virus, rabies virus and reovirus. Depending on the country of origin, specific tests for other viruses may be needed. The animal health status of countries is defined by the 'Office International des Epizooties' (OIE).

For serum to be subjected to a virus inactivation/removal procedure, if evidence of viral contamination is found in any of the tests described above, the serum is acceptable only if the virus is identified and shown to be present in an amount that has been shown in a validation study to be effectively inactivated.

For serum that is not to be subjected to a virus inactivation/removal procedure, if evidence of viral contamination is found in any of the tests described above, the serum is not acceptable.

A test for bovine viral diarrhoea virus antibodies is carried out; an acceptance criterion for the titre is established taking account of the risk assessment.

Composition The content of a suitable selection of the following components is determined and shown to be within the expected range for the type of serum: cholesterol, α-, β- and γ-globulin, albumin, creatinine, bilirubin, glucose, serum aspartate transaminase (SAST, formerly SGOT - serum glutamic-oxaloacetic transaminase), serum alanine transaminase (SALT, formerly SGPT - glutamic-pyruvic transaminase), phosphorus, potassium, calcium, sodium and pH.

Tests carried out on the batch post-treatment

If bovine viral diarrhoea virus was detected before virus inactivation/removal, the following test for bovine viral diarrhoea virus is carried out after virus inactivation/removal.

Test for bovine viral diarrhoea virus A validated test for bovine viral diarrhoea virus is carried out, for example by inoculation into susceptible cell cultures, followed by not fewer than 3 subcultures and detection by immunostaining. No evidence of the presence of bovine viral diarrhoea virus is found.

IDENTIFICATION

A. The electrophoretic pattern corresponds to that for serum and is consistent with the type (foetal or other) of bovine serum.

B. Bovine origin is confirmed by a suitable immunochemical method *(2.7.1)*.

TESTS

Osmolality *(2.2.35)*

280 mosmol/kg to 365 mosmol/kg for foetal bovine serum and 240 mosmol/kg to 340 mosmol/kg for other types.

Total protein *(2.5.33)*

30 mg/ml to 45 mg/ml for foetal bovine serum and minimum 35 mg/ml for other types.

Haemoglobin

Maximum 4 mg/ml, determined by a validated method, such as spectrophotometry.

Bacterial endotoxins *(2.6.14)*

Less than 10 IU/ml for donor bovine serum, less than 25 IU/ml for foetal bovine serum, less than 100 IU/ml for other types.

Sterility *(2.6.1)*

It complies with the test. Use 10 ml for each medium.

Mycoplasmas *(2.6.7)*

It complies with the test.

STORAGE

Frozen at - 10 °C or below.

LABELLING

The label states:

— the type of serum;

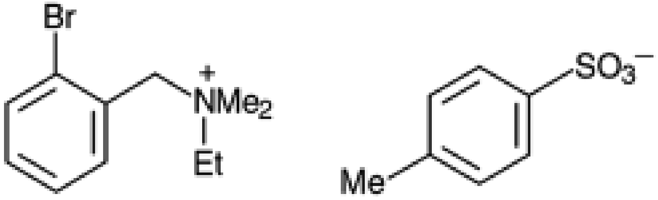
— where applicable, that the serum has been inactivated and the inactivation method;

— where the serum has been inactivated by gamma irradiation, the target minimum dose of the irradiation procedure.

Ph Eur

Bretylium Tosilate

General Notices



$C_{18}H_{24}BrNO_3S$ 414.4 *61-75-6*

Action and use

Antiarrhythmic.

Preparation

Bretylium Injection

DEFINITION

Bretylium Tosilate is 2-bromobenzyl-*N*-ethyldimethylammonium-*p*-toluenesulphonate. It contains not less than 99.0% and not more than 101.0% of $C_{18}H_{24}BrNO_3S$, calculated with reference to the dried substance.

CHARACTERISTICS

A white, crystalline powder. It melts at about 98°. It exhibits polymorphism.

Freely soluble in *water*, in *ethanol (96%)* and in *methanol*.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of bretylium tosilate *(RS 030)*. If the spectra are not concordant, dissolve a quantity of the substance being examined in the minimum volume of *acetone* by heating on a water bath at 50°, evaporate to dryness at room temperature under a current of nitrogen and prepare a new spectrum of the residue.

B. Carry out the method for *thin-layer chromatography*, Appendix III A, using a silica gel F_{254} precoated plate (Merck plates are suitable) and a mixture of 15 volumes of *glacial acetic acid*, 30 volumes of *water* and 75 volumes of *butan-1-ol* as the mobile phase. Apply separately to the plate 10 µl of each of two solutions in *water* containing (1) 0.5% w/v of the substance being examined and (2) 0.5% w/v of *bretylium tosilate BPCRS*. After removal of the plate, dry it in a current of air and examine under *ultraviolet light (254 nm)*. In the chromatogram obtained with solution (1) the two principal spots correspond to those in the

chromatogram obtained with solution (2).

TESTS

Acidity

pH of a 5.0% w/v solution, 5.0 to 6.5, Appendix V L.

Clarity and colour of solution

A 5.0% w/v solution is *clear*, Appendix IV A, and *colourless*, Appendix IV B, Method II.

Related substances

Carry out the method for *liquid chromatography*, Appendix III D, using solutions in the mobile phase containing (1) 0.20% w/v of the substance being examined, (2) 0.002% w/v of the substance being examined and (3) 0.05% w/v of *bretylium tosilate BPCRS* and 0.05% w/v of *2-bromobenzyldimethylamine hydrochloride BPCRS*.

The chromatographic procedure may be carried out using (a) a stainless steel column (25 cm × 4.6 mm) packed with particles of silica the surface of which has been modified by chemically bonded phenyl groups (5 µm) (Spherisorb Phenyl is suitable), (b) as the mobile phase with a flow rate of 2 ml per minute a mixture of 0.5 volume of *triethylamine*, 2 volumes of *glacial acetic acid*, 19 volumes of *acetonitrile* and 81 volumes of *0.01M sodium octanesulphonate* and (c) a detection wavelength of 265 nm.

The test is not valid unless, in the chromatogram obtained with solution (3), the *resolution factor* between the two principal peaks is at least 6.

In the chromatogram obtained with solution (1), the area of any *secondary peak* is not greater than half the area of the peak in the chromatogram obtained with solution (2) (0.5%) and the sum of the areas of all such peaks is not greater than the area of the principal peak in the chromatogram obtained with solution (2) (1%). Disregard the peak due to tosilate (retention time, about 2 minutes) and any peak with an area less than 0.05 times the area of the peak in the chromatogram obtained with solution (2) (0.05%).

Loss on drying

When dried to constant weight over *phosphorus pentoxide* at 60° at a pressure not exceeding 0.7 kPa, loses not more than 3.0% of its weight. Use 1 g.

Sulphated ash

Not more than 0.1%, Appendix IX A. Use 1 g.

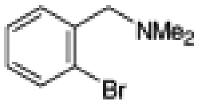
ASSAY

Dissolve 0.2 g in 50 ml of *1,4-dioxan* and carry out Method I for *non-aqueous titration*, Appendix VIII A, using *0.025M perchloric acid VS* as titrant and determining the end-point potentiometrically. Each ml of *0.025M perchloric acid VS* is equivalent to 10.36 mg of $C_{18}H_{24}BrNO_3S$.

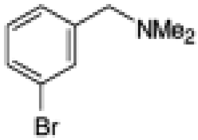
STORAGE

Bretylium Tosilate should be kept in an airtight container and protected from light.

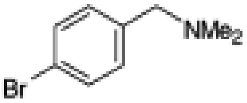
IMPURITIES



A. 2-bromobenzyldimethylamine



B. 3-bromobenzyldimethylamine



C. 4-bromobenzyldimethylamine

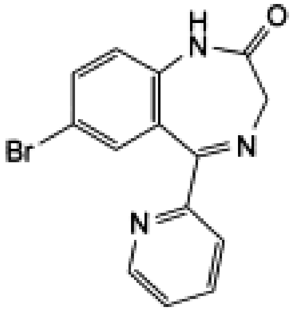
Bromazepam

Bromazepam

General Notices

(Ph Eur monograph 0879)



$C_{14}H_{10}BrN_3O$ 316.2 *1812-30-2*

Action and use

Benzodiazepine.

Ph Eur

DEFINITION

7-Bromo-5-(pyridin-2-yl)-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or yellowish, crystalline powder.

Solubility

Practically insoluble in water, slightly soluble or sparingly soluble in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)*.

Comparison bromazepam CRS.

TESTS

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the solutions immediately before use*.

Test solution Dissolve 10.0 mg of the substance to be examined in 9 ml of a mixture of 1 volume of *acetonitrile R* and 8 volumes of *methanol R*. Dilute to 20.0 ml with an 11.33 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 7.0 with a 100 g/l solution of *potassium hydroxide R*.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve 5 mg of *bromazepam for system suitability* CRS (containing impurities A, B, C, D and E) in 5 ml of a mixture of 1 volume of *acetonitrile R* and 8 volumes of *methanol R*. Dilute to 10.0 ml with an 11.33 g/l solution *of potassium dihydrogen phosphate R* previously adjusted to pH 7.0 with a 100 g/l solution of *potassium hydroxide R*.

Column:

— *size:* l = 0.15 m, Ø = 4.6 mm;

— *stationary phase: end-capped octadecylsilyl silica gel for chromatography R (3.5 µm);*

— temperature: 50 °C.

Mobile phase Mix 5 volumes of *acetonitrile R*, 45 volumes of *methanol R* and 50 volumes of an 11.33 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 7.0 with a 100 g/l solution of *potassium hydroxide R.*

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 235 nm.

Injection 20 µl.

Run time 4 times the retention time of bromazepam.

Identification of impurities Use the chromatogram supplied with *bromazepam for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C, D and E.

Relative retention With reference to bromazepam (retention time = about 5 min): impurity D = about 1.4; impurity A = about 1.5; impurity C = about 1.6; impurity E = about 2.1; impurity B = about 2.2.

System suitability Reference solution (b):

— *resolution*: minimum 4.0 between the peaks due to bromazepam and impurity D and minimum 1.2 between the peaks due to impurities A and C.

Limits:

— *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 1.3; impurity B = 1.8; impurity E = 2.1;

— *impurities A, B, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying ***(2.2.32)***

Maximum 0.2 per cent, determined on 1.000 g by drying at 80 °C at a pressure not exceeding 2.7 kPa for 4 h.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 20 ml of *anhydrous acetic acid R*. Add 50 ml of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 31.62 mg of $C_{14}H_{10}BrN_3O$.

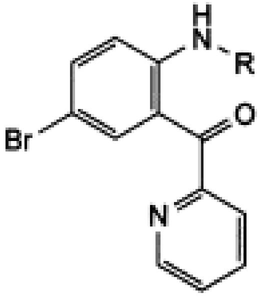
STORAGE

Protected from light.

IMPURITIES

Specified impurities *A, B, E.*

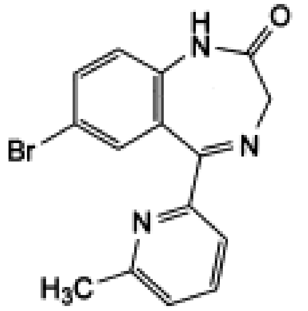
Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): C, D.*



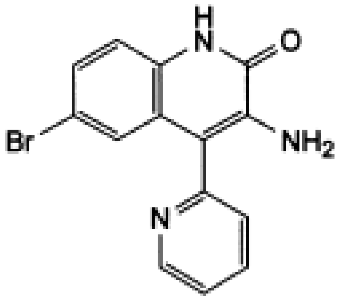
A. R = H: (2-amino-5-bromophenyl)(pyridin-2-yl)methanone,

B. R = CO-CH_2-Cl: *N*-[4-bromo-2-(pyridin-2-ylcarbonyl)phenyl]-2-chloroacetamide,

E. R = CO-CH_2-Br: 2-bromo-*N*-[4-bromo-2-(pyridin-2-ylcarbonyl)phenyl]acetamide,



C. 7-bromo-5-(6-methylpyridin-2-yl)-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one,



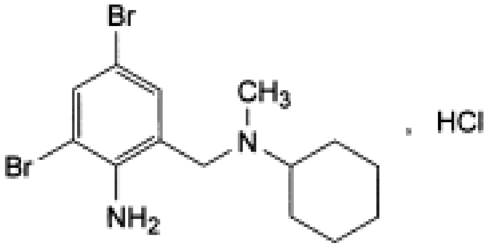
D. 3-amino-6-bromo-4-(pyridin-2-yl)quinolin-2(1*H*)-one.

Ph Eur

Bromhexine Hydrochloride

General Notices

(Ph Eur monograph 0706)



$C_{14}H_{20}Br_2N_2$,HCl 412.6 *611-75-6*

Action and use

Mucolytic.

Ph Eur

DEFINITION

N-(2-Amino-3,5-dibromobenzyl)-*N*-methylcyclohexanamine hydrochloride.

Content

98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Very slightly soluble in water, slightly soluble in alcohol and in methylene chloride.

It shows polymorphism *(5.9)*.

IDENTIFICATION

First identification A, E.

Second identification B, C, D, E.

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *bromhexine hydrochloride CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness and record new spectra using the residues.

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 20 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 20 mg of *bromhexine hydrochloride CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel* F_{254} *plate R.*

Mobile phase *glacial acetic acid R, water R, butanol R* (17:17:66 *V/V/V*).

Application 20 µl.

Development Over 3/4 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

C. Dissolve about 25 mg in a mixture of 1 ml of *dilute sulphuric acid R* and 50 ml of *water R*. Add 2 ml of *methylene chloride R* and 5 ml of *chloramine solution R* and shake. A brownish-yellow colour develops in the lower layer.

D. Dissolve about 1 mg in 3 ml of *0.1 M hydrochloric acid*. The solution gives the reaction of primary aromatic amines *(2.3.1)*.

E. Dissolve about 20 mg in 1 ml of *methanol R* and add 1 ml of *water R*. The solution gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

Dissolve 0.6 g in *methanol R* and dilute to 20 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 50 mg of the substance to be examined in *methanol R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve 5 mg of *bromhexine impurity C CRS* in *methanol R*, add 1.0 ml of the test solution and dilute to 10.0 ml with the same solvent.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with *methanol R.* Dilute 1.0 ml of this solution to 10.0 ml with *methanol R*.

Column:

— *size: l* = 0.12 m, Ø = 4.6 mm;

— *stationary phase: end-capped octadecylsilyl silica gel for chromatography R (3 µm).*

Mobile phase Mix 0.50 ml of *phosphoric acid R* in 950 ml of *water R*, adjust to pH 7.0 with *triethylamine R* (about 1.5 ml) and dilute to 1000 ml with *water R*; mix 20 volumes of this solution with 80 volumes of *acetonitrile R.*

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 248 nm.

Injection 10 µl.

Run time 2.5 times the retention time of bromhexine.

Relative retention With reference to bromhexine (retention time = about 11 min): impurity A = about 0.1; impurity B = about 0.2; impurity C = about 0.4; impurity D = about 0.5.

System suitability Reference solution (a):

— *resolution*: minimum 12.0 between the peaks due to impurity C and bromhexine.

Limits:

— *any impurity*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent), and not more than 1 such peak has an area greater than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 70 ml of *alcohol R* and add 1 ml of *0.1 M hydrochloric acid*. Carry out a potentiometric titration *(2.2.20)*, using *0.1 M sodium hydroxide*. Read the volume between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 41.26 mg of $C_{14}H_{21}Br_2ClN_2$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C, D.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. DEFINITION

(6a*R,*9*R*)-5-Bromo-*N*-[(2*R*,5*S*,10a*S*,10b*S*)-10b-hydroxy-2-(1-methylethyl)-5-(2-methylpropyl)-3,6-dioxooctahydro-8*H*-oxazolo[3,2-*a*]pyrrolo[2,1-*c*]pyrazin-2-yl]-7-methyl-4,6,6a,7,8,9-hexahydroindolo[4,3-*fg*]quinoline-9-carboxamide monomethanesulphonate.

Content

98.0 per cent to 101.0 per cent (dried substance).

PRODUCTION

The production method must be evaluated to determine the potential for formation of alkyl mesilates, which is particularly likely to occur if the reaction medium contains lower alcohols. Where necessary, the production method is validated to demonstrate that alkyl mesilates are not detectable in the final product.

CHARACTERS

Appearance

White or slightly coloured, fine crystalline powder.

Solubility

Practically insoluble in water, freely soluble in methanol, soluble in ethanol (96 per cent), sparingly soluble in methylene chloride.

It is very sensitive to light.

The identification, tests and assay are to be carried out as rapidly as possible, protected from light.

IDENTIFICATION

First identification *B.*

Second identification *A, C, D, E.*

A. Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution Dissolve 10.0 mg in 10 ml of *methanol R* and dilute to 200.0 ml with 0*.01 M hydrochloric acid*.

Spectral range 250-380 nm.

Absorption maximum At 305 nm.

Absorption minimum At 270 nm.

Specific absorbance at the absorption maximum 120 to 135 (dried substance).

B. Infrared absorption spectrophotometry *(2.2.24*).

Comparison *bromocriptine mesilate CRS.*

C. Thin-layer chromatography *(2.2.27)*. *Prepare the solutions immediately before use.*

Solvent mixture *ethanol (96 per cent) R, methanol R, methylene chloride* R (30:30:40 *V/V/V*).

Test solution Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 10 ml with the solvent mixture.

Reference solution Dissolve 10 mg of *bromocriptine mesilate CRS* in the solvent mixture and dilute to 10 ml with the solvent mixture.

Plate *TLC silica gel G plate R.*

Mobile phase *concentrated ammonia R, water R, 2-propanol R, methylene chloride R, ether R* (0.1:1.5:3:88:100 *V/V/V/V/V*).

Application 10 µl.

Development Immediately in an unsaturated tank, over a path of 15 cm.

Drying In a current of cold air for 2 min.

Detection Spray with *ammonium molybdate solution R3* and dry at 100 °C until the spots appear (about 10 min).

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

D. To 0.1 g add 5 ml of *dilute hydrochloric acid R* and shake for about 5 min. Filter and add 1 ml of *barium chloride solution R1*. The filtrate remains clear. To a further 0.1 g add 0.5 g of *anhydrous sodium carbonate R*, mix and ignite until a white residue is obtained. Allow to cool and dissolve the residue in 7 ml of *water R* (solution A). Solution A gives reaction (a) of sulphates *(2.3.1)*.

E. Solution A obtained in identification test D gives reaction (a) of bromides *(2.3.1)*.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution B_5, BY_5 or Y_5 *(2.2.2, Method II)*.

Dissolve 0.25 g in *methanol R* and dilute to 25 ml with the same solvent.

pH *(2.2.3)*

3.1 to 3.8.

Dissolve 0.2 g in a mixture of 2 volumes of *methanol R* and 8 volumes of *carbon dioxide-free water R* and dilute to 20 ml with the same mixture of solvents.

Specific optical rotation *(2.2.7)*

+ 95 to + 105 (dried substance).

Dissolve 0.100 g in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 10.0 ml with the same mixture of solvents.

Related substances.

Liquid chromatography *(2.2.29)*.

Solvent mixture *buffer solution pH 2.0 R, methanol R* (50:50 *V/V*).

Test solution Dissolve 0.500 g of the substance to be examined in 5.0 ml of *methanol R* and dilute to 10.0 ml with *buffer solution pH 2.0 R*.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the solvent mixture.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 10.0 ml with the solvent mixture.

Reference solution (c) Dissolve the contents of a vial of *bromocriptine mesilate for system suitability CRS* (containing impurities A and B) in 1.0 ml of the solvent mixture.

Column:

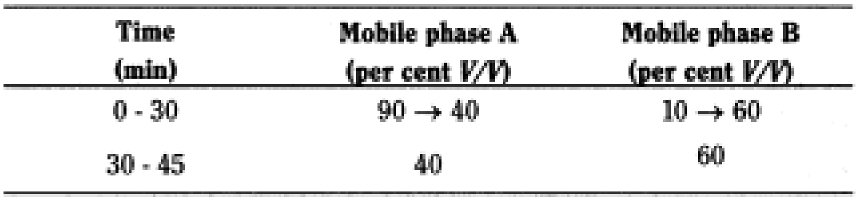
— *size:* l = 0.12 m, Ø = 4 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

— *mobile phase A*: 0.791 g/l solution of *ammonium carbonate R*;

— *mobile phase B*: *acetonitrile R;*



Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 30	90 → 40	10 → 60
30 - 45	40	60

Flow rate 2 ml/min.

Detection Spectrophotometer at 300 nm.

Injection 20 µl.

Identification of impurities Use the chromatogram supplied with *bromocriptine mesilate* for *system suitability CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A and B.

Relative retention With reference to bromocriptine: impurity C = about 1.2.

System suitability Reference solution (c):

— *resolution*: minimum 1.1 between the peaks due to impurities A and B.

Limits:

— *impurity A:* not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.02 per cent);

— *impurity C*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.4 per cent);

— *impurities B, D, E, F, G*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent) and not more than 1 such peak has an area greater than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *total*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.5 per cent);

— *disregard limit:* 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent), apart from the peak due to impurity A.

Loss on drying *(2.2.32)*

Maximum 3.0 per cent, determined on 0.500 g by drying *in vacuo* at 80 °C for 5 h.

ASSAY

Dissolve 0.500 g in 80 ml of a mixture of 10 volumes of *anhydrous acetic acid R* and 70 volumes of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 75.1 mg of $C_{33}H_{44}BrN_5O_8S$.

STORAGE

In an airtight container , protected from light, at a temperature not exceeding - 15 °C.

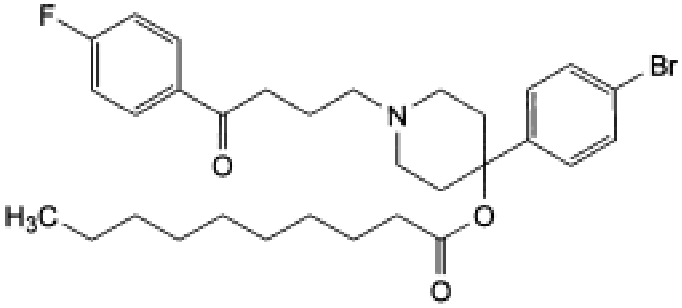
Ph Eur

Bromperidol Decanoate

General Notices

(Ph Eur monograph 1397)



$C_{31}H_{41}BrFNO_3$ 574.6 *75067-66-2*

Action and use

Dopamine receptor antagonist; neuroleptic.

Ph Eur

DEFINITION

4-(4-Bromophenyl)-1-[4-(4-fluorophenyl)-4-oxobutyl]piperidin-4-yl decanoate.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, very soluble in methylene chloride, soluble in ethanol (96 per cent).

mp: about 60 °C.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Mulls in *liquid paraffin R*.

Comparison *bromperidol decanoate CRS.*

B. To 0.1 g in a porcelain crucible add 0.5 g of *anhydrous sodium carbonate R*. Heat over an open flame for 10 min. Allow to cool. Take up the residue with 5 ml of *dilute nitric acid R* and filter. To 1 ml of the filtrate add 1 ml of *water R*. The solution gives reaction (a) of bromides *(2.3.1)*.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution B_5 *(2.2.2, Method II)*.

Dissolve 2.0 g in *methylene chloride R* and dilute to 20 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the solutions immediately before use and protect from light.*

Test solution Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve 2.5 mg *of bromperidol decanoate CRS* and 2.5 mg of *haloperidol decanoate CRS* in *methanol R* and dilute to 50.0 ml with the same solvent.

Reference solution (b) Dilute 5.0 ml of the test solution to 100.0 ml with *methanol R*. Dilute 1.0 ml of this solution to 10.0 ml with *methanol R*.

Column:

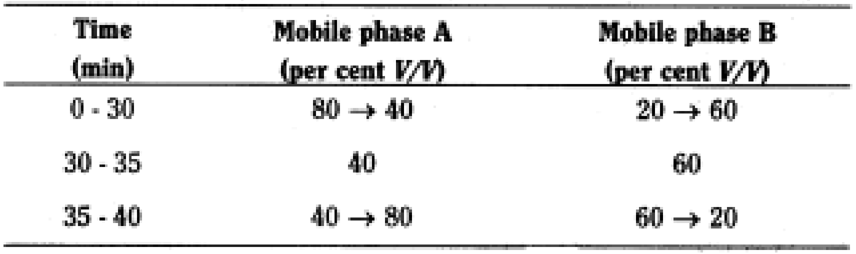
— *size:* *l* = 0.1 m, Ø = 4.0 mm;

— *stationary phase: base-deactivated octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase:

— *mobile phase A*: 27 g/l solution of *tetrabutylammonium hydrogen sulphate R*;

— *mobile phase B*: *acetonitrile R*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 30	80 → 40	20 → 60
30 - 35	40	60
35 - 40	40 → 80	60 → 20

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 230 nm.

Equilibration With *acetonitrile R* for at least 30 min and then with the mobile phase at the initial composition for at least 5 min.

Injection 10 µl; inject *methanol R* as a blank.

Retention time Haloperidol decanoate = about 24 min; bromperidol decanoate = about 24.5

min.

System suitability   Reference solution (a):

— *resolution*: minimum 1.5 between the peaks due to haloperidol decanoate and bromperidol decanoate; if necessary, adjust the gradient or the time programme for the linear gradient elution.

Limits:

— *impurities A, B, C, D, E, F, G, H, I, J, K*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak due to the blank.

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 30 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

Dissolve 0.450 g in 50 ml of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R*. Titrate with *0.1 M perchloric acid* using 0.2 ml of *naphtholbenzein solution R* as indicator.

1 ml of *0.1 M perchloric acid* is equivalent to 57.46 mg of $C_{31}H_{41}BrFNO_3$.

STORAGE

At a temperature below 25 °C, protected from light.

IMPURITIES

Specified impurities   *A, B, C, D, E, F, G, H, I, J, K.*

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): L.*

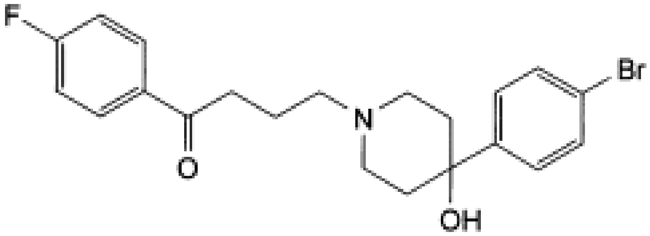
Bromperidol

General Notices

(Ph Eur monograph 1178)



$C_{21}H_{23}BrFNO_2$ 420.3 *10457-90-6*

Action and use

Dopamine receptor antagonist; neuroleptic.

Ph Eur

DEFINITION

4-[4-(4-Bromophenyl)-4-hydroxypiperidin-1-yl]-1-(4-fluorophenyl)butan-1-one.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, sparingly soluble in methanol and in methylene chloride, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

First identification B, E.

Second identification A, C, D, E.

A. Melting point *(2.2.14)*: 156 °C to 159 °C.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *bromperidol CRS.*

C. Thin layer chromatography *(2.2.27)*.

Test solution Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 10 mg of *bromperidol CRS in methanol R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 10 mg of *bromperidol CRS* and 10 mg *of haloperidol CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Plate *TLC octadecylsilyl silica gel plate R*.

Mobile phase *tetrahydrofuran R, methanol R*, 58 g/l solution of *sodium chloride R* (10:45:45 *V/V/V*).

Application 1 µl.

Development In an unsaturated tank over a path of 15 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution (b):

— the chromatogram shows 2 spots which may, however, not be completely separated.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 10 mg in 5 ml of *anhydrous ethanol R*. Add 0.5 ml of *dinitrobenzene solution R* and 0.5 ml of *2 M alcoholic potassium hydroxide solution R*. A violet colour is produced that becomes brownish-red after 20 min.

E. To 0.1 g in a porcelain crucible add 0.5 g of *anhydrous sodium carbonate R*. Heat over an open flame for 10 min. Allow to cool. Take up the residue with 5 ml of *dilute nitric acid R* and filter. To 1 ml of the filtrate add 1 ml of *water R*. The solution gives reaction (a) of bromides *(2.3.1)*.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7 *(2.2.2, Method II)*.

Dissolve 0.2 g in 20 ml of a 1 per cent *V/V* solution of *lactic acid R.*

Related substances

Liquid chromatography *(2.2.29).*

Test solution Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve 2.5 mg of *bromperidol CRS* and 5.0 mg of *haloperidol CRS* in *methanol R* and dilute to 50.0 ml with the same solvent.

Reference solution (b) Dilute 5.0 ml of the test solution to 100.0 ml with *methanol R*. Dilute 1.0 ml of this solution to 10.0 ml with *methanol R.*

Column:

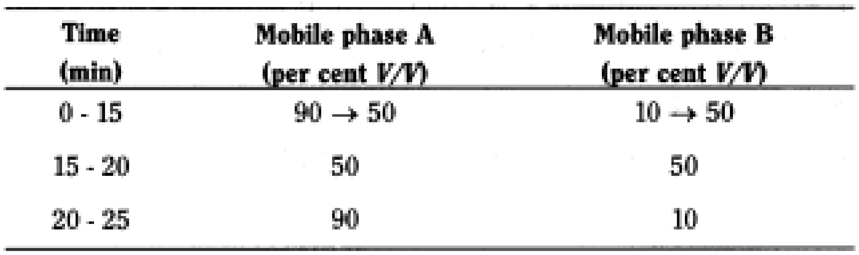
— *size: l* = 0.1 m, Ø = 4.0 mm;

— *stationary phase: base-deactivated octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase:

— *mobile phase A:* 17 g/l solution of *tetrabutylammonium hydrogen sulphate R;*

— *mobile phase B: acetonitrile R;*



Time (min)	**Mobile phase A (per cent *V/V*)**	**Mobile phase B (per cent *V/V*)**
0 - 15	90 → 50	10 → 50
15 - 20	50	50
20 - 25	90	10

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 230 nm.

Equilibration With *acetonitrile R* for at least 30 min and then with the mobile phase at the initial composition for at least 5 min.

Injection 10 µl; inject *methanol R* as a blank.

Retention time haloperidol = about 5.5 min; bromperidol = about 6 min.

System suitability Reference solution (a):

— *resolution*: minimum 3.0 between the peaks due to haloperidol and bromperidol; if necessary, adjust the concentration of acetonitrile in the mobile phase or adjust the time programme for the linear gradient elution.

Limits:

— *impurities A, B, C, D, E, F*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak due to the blank.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

Dissolve 0.300 g in 50 ml of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes *of methyl ethyl ketone R*. Titrate with *0.1 M perchloric acid*, using 0.2 ml *of naphtholbenzein solution R* as indicator.

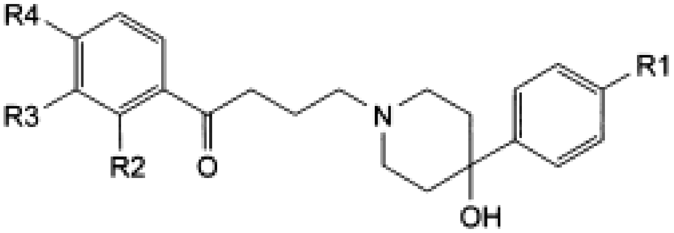
1 ml of *0.1 M perchloric acid* is equivalent to 42.03 mg of $C_{21}H_{23}BrFNO_2$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C, D, E, F.



A. R1 = R2 = R3 = H, R4 = F: 1-(4-fluorophenyl)-4-(4-hydroxy-4-phenylpiperidin-1-yl)butan-1-one,

Ph Eur

DEFINITION

(3*RS*)-3-(4-Bromophenyl)-*N,N*-dimethyl-3-(pyridin-2-yl)propan-1-amine (*Z*)-butenedioate.

Content

98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Soluble in water, freely soluble in ethanol (96 per cent), in methanol and in methylene chloride.

IDENTIFICATION

First identification A, B, C, D, E.

Second identification *A, B, E, F.*

A. Melting point *(2.2.14)*: 130 °C to 135 °C.

B. Ultraviolet and visible absorption spectrophotometry *(2.2.25).*

Test solution Dissolve 65 mg in *0.1 M hydrochloric acid* and dilute to 100.0 ml with the same acid. Dilute 5.0 ml of this solution to 100.0 ml with *0.1 M hydrochloric acid*.

Spectral range 220-320 nm.

Absorption maximum At 265 nm.

Specific absorbance at the absorption maximum 190 to 210.

C. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs of *potassium bromide R*.

Comparison *brompheniramine maleate CRS.*

D. Examine the chromatograms obtained in the test for related substances.

System suitability Reference solution (c):

— the chromatogram shows 2 principal peaks with retention times corresponding to the retention times of the peaks obtained with reference solutions (a) and (b).

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

E. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 0.10 g of the substance to be examined in *methanol R* and dilute to 5.0 ml with the same solvent.

Reference solution Dissolve 56 mg of *maleic acid R* in *methanol R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel* F_{254} *plate R.*

Mobile phase *water R, anhydrous formic acid R, methanol R, di-isopropyl ether* R (3:7:20:70 *V/V/V/V*).

Application 5 µl.

Development Over a path of 12 cm.

Drying In a current of air for a few minutes.

Detection Examine in ultraviolet light at 254 nm.

Results The chromatogram obtained with the test solution shows 2 clearly separated spots. The upper spot is similar in position and size to the spot in the chromatogram obtained with the reference solution.

F. To 0.15 g in a porcelain crucible add 0.5 g of *anhydrous sodium carbonate R*. Heat over an open flame for 10 min. Allow to cool. Take up the residue in 10 ml of *dilute nitric acid R* and filter. To 1 ml of the filtrate add 1 ml of *water R*. The solution gives reaction (a) of bromides *(2.3.1)*.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution BY_6 *2.2.2, Method II*).

Dissolve 2.0 g in *methanol R* and dilute to 20 ml with the same solvent.

pH *(2.2.3)*

4.0 to 5.0.

Dissolve 0.20 g in 20 ml of *carbon dioxide-free water R*.

Optical rotation *(2.2.7)*

- 0.2° to + 0.2° (measured in a 2 dm tube).

Dissolve 2.5 g in *water R* and dilute to 25.0 ml with the same solvent.

Related substances

Gas chromatography *(2.2.28)*.

Test solution Dissolve 0.10 g of the substance to be examined in 10 ml of *methylene chloride R.*

Reference solution (a) Dissolve 10 mg of *brompheniramine maleate CRS* in *methylene chloride R* and dilute to 1 ml with the same solvent.

Reference solution (b) Dissolve 5 mg of *chlorphenamine maleate CRS* (impurity A) in *methylene chloride R* and dilute to 1 ml with the same solvent.

Reference solution (c) To 0.5 ml of the test solution add 0.5 ml of reference solution (b).

Column:

— *material*: glass;

— *size*: *l* = 2.3 m, Ø = 2 mm;

— *stationary phase*: acid- and base-washed *silanised diatomaceous earth for gas chromatography R* (135-175 µm) impregnated with 3 per cent *m/m* of *polymethylphenylsiloxane R*.

Carrier gas *nitrogen for chromatography R*.

Flow rate 20 ml/min.

Temperature:

— *column*: 205 °C;

— *injection port and detector*: 250 °C.

Detection Flame ionisation.

Injection 1 µl.

Run time 2.5 times the retention time of brompheniramine.

System suitability Reference solution (c):

— *resolution*: minimum 1.5 between the peaks due to brompheniramine and impurity A.

Limits:

- *impurities A, B, C*: for each impurity, maximum 0.4 per cent of the area of the principal peak;
- *total*: maximum 1 per cent of the area of the principal peak;
- *disregard limit*: 0.1 per cent of the area of the principal peak.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.260 g in 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid,* determining the end-point potentiometrically (2.2.20).

1 ml of *0.1 M perchloric acid* is equivalent to 21.77 mg of $C_{20}H_{23}BrN_2O_4$.

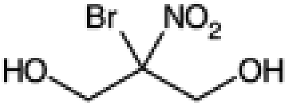
Ph Eur

Bronopol

General Notices



$C_3H_6BrNO_4$ 200.0 *52-51-7*

Action and use

Antibacterial preservative.

DEFINITION

Bronopol is 2-bromo-2-nitropropane-1,3-diol. It contains not less than 99.0% and not more than 101.0% of $C_3H_6BrNO_4$, calculated with reference to the anhydrous substance.

CHARACTERISTICS

White or almost white crystals or crystalline powder.

Freely soluble in *water* and in *ethanol (96%)*; slightly soluble in *glycerol* and in *liquid paraffin*.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of bronopol *(RS 031)*.

B. Dissolve 0.1 g in 10 ml of *water*, add 10 ml of 7.5M *sodium hydroxide* and, carefully with constant stirring and cooling, 0.5 g of *nickel-aluminium alloy*. Allow the reaction to subside, filter and carefully neutralise with *nitric acid*. The resulting solution yields reaction A characteristic of *bromides*, Appendix VI.

C. *Melting point*, after drying over *phosphorus pentoxide* at a pressure not exceeding 0.7 kPa, about 130°, Appendix V A.

TESTS

Acidity or alkalinity

pH of a 1% w/v solution, 5.0 to 7.0, Appendix V L.

Related substances

Carry out the method for *liquid chromatography,* Appendix III D, using the following solutions. Solution (1) contains 0.2% w/v of the substance being examined in the mobile phase. For solution (2) dilute a volume of solution (1) with sufficient mobile phase to produce a solution containing 0.0002% w/v of the substance being examined. Solution (3) contains 0.001% w/v each of *2-methyl-2-nitropropan-1,3-diol* and *tris(hydroxymethyl)nitromethane* in the mobile phase. Solution (4) contains 0.0002% w/v each of *2-methyl-2-nitropropane-1,3-diol, 2-nitroethanol, sodium bromide* and *tris(hydroxymethyl)nitromethane* and 0.2% w/v of the substance being examined in the mobile phase.

The chromatographic procedure may be carried out using (a) a stainless steel column (15 cm × 4.6 mm) packed with *octadecylsilyl silica gel for chromatography* (5 µm) (Phenomenex Luna C18 (2) is suitable) and maintained at 35°, (b) as the mobile phase with a flow rate of 1 ml per minute a mixture of 189 volumes of *water,* 10 volumes of *acetonitrile* and 1 volume of a 10% v/v solution of *orthophosphoric acid ,* adjusting the pH to 3.0 using 2M *sodium hydroxide* and (c) a detection wavelength of 214 nm.

The test is not valid unless, in the chromatogram obtained with solution (4), the *resolution factor* between the peaks due to sodium bromide and tris(hydroxymethyl)nitromethane is at least 1.0 and the *resolution factor* between the peaks due to tris(hydroxymethyl)nitromethane and 2-nitroethanol is at least 1.5.

For solution (1) continue the chromatography for 3 times the retention time of the principal peak. In the chromatogram obtained with solution (1) the areas of any peaks corresponding to 2-methyl-2-nitropropane-1,3-diol and tris(hydroxymethyl)nitromethane are not greater than the area of the corresponding peaks in the chromatogram obtained with solution (3) (0.5% of each) and the area of any other *secondary peak* is not greater than the area of the principal peak in the chromatogram obtained with solution (2)

Sulphated ash

Not more than 0.1%, Appendix IX A.

Water

Not more than 0.5% w/w, Appendix IX C, Method I B. Use 5 g.

ASSAY

In a flask fitted with a reflux condenser dissolve 0.4 g in 15 ml of *water* and add 15 ml of *7.5M sodium hydroxide*. Slowly, with caution, add 2 g of *nickel-aluminium alloy* through the reflux condenser, agitating the flask whilst cooling under running water. Allow the mixture to stand for 10 minutes and boil for 1 hour. Cool and filter under reduced pressure, washing the condenser, flask and residue with 150 ml of *water*. Combine the filtrate and washings, add 25 ml of *nitric acid* and 40 ml of *0.1M silver nitrate VS*, shake vigorously and titrate with *0.1M ammonium thiocyanate VS* using *ammonium iron(III) sulphate solution R2* as indicator. Repeat the operation without the substance being examined. The difference between the titrations represents the amount of silver nitrate required. Each ml of *0.1M silver nitrate VS* is equivalent to 20.00 mg of $C_3H_6BrNO_4$.

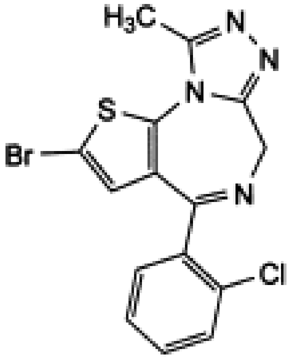
STORAGE

Bronopol should be protected from light.

Brotizolam

General Notices

(Ph Eur monograph 2197)



$C_{15}H_{10}BrClN_4S$ 393.7 *57801-81-7*

Action and use

Benzodiazepine.

4 - 15	63 → 12	37 → 88
15 - 16	12 → 63	88 → 37
16 - 20	63	37

Flow rate 2.0 ml/min.

Detection Spectrophotometer at 242 nm.

Injection 5 µl.

Relative retention With reference to brotizolam (retention time = about 7.4 min): impurity A = about 0.5; impurity B = about 0.9.

System suitability Reference solution (b):

- — — *resolution*: minimum 5.0 between the peaks due to impurity B and brotizolam.

Limits:
- — *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- — *unspecified impurities*: for each impurity, not more than the area of the principal peak in

the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Chlorides ***(2.4.4)***

Maximum 100 ppm.

Dissolve 0.67 g in 20.0 ml of *methanol R*, mix and filter.

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

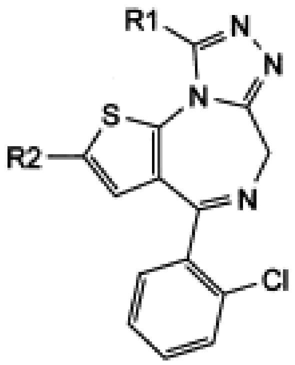
Dissolve 0.150 g in a mixture of 25 ml of *glacial acetic acid R* and 50 ml of *acetic anhydride R*. Titrate to the second point of inflexion with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 19.68 mg of $C_{15}H_{10}BrClN_4S$.

IMPURITIES

Specified impurities B.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): A.*

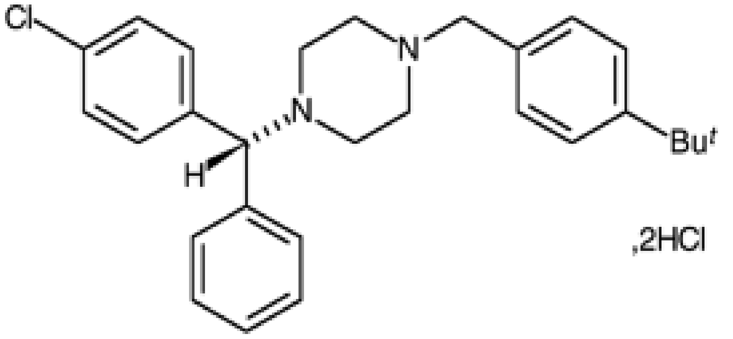


A. R1 = CH_3, R2 = H: 4-(2-chlorophenyl)-9-methyl-6*H*-thieno[3,2-*f*][1,2,4]triazolo[4,3-*a*][1,4] diazepine (desbromobrotizolam),

B. R1 = H, R2 = Br: 2-bromo-4-(2-chlorophenyl)-6*H*-thieno[3,2-*f*][1,2,4]triazolo[4,3-*a*][1,4] diazepine (desmethylbrotizolam).

Buclizine Hydrochloride

General Notices



$C_{28}H_{33}ClN_2,2HCl$ 506.0 *129-74-8*

Action and use

Histamine H_1 receptor antagonist; antiemetic.

DEFINITION

Buclizine Hydrochloride is (*RS*)-1-(4-*tert*-butylbenzyl)-4-(4-chlorobenzhydryl)piperazine dihydrochloride. It contains not less than 99.0% and not more than 100.5% of $C_{28}H_{33}ClN_2$, 2HCl, calculated with reference to the dried substance.

CHARACTERISTICS

A white or slightly yellowish, crystalline powder.

Practically insoluble in *water*; sparingly soluble in *propane-1,2-diol*; very slightly soluble in *ethanol (96%)*.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of buclizine hydrochloride *(RS 032)*.

B. A 0.25% w/v solution in *ethanol (50%)* yields reaction A characteristic of *chlorides*, Appendix VI.

TESTS

Related substances

Carry out the method for *liquid chromatography*, Appendix III D, using four solutions in the initial mobile phase containing (1) 0.0010% w/v of the substance being examined, (2) 0.50% w/v of the substance being examined, (3) 0.0010% w/v of *1,4-bis(4-chlorobenzhydryl)* *piperazine BPCRS* and (4) 0.50% w/v of *buclizine hydrochloride impurity standard BPCRS*.

The chromatographic procedure may be carried out using a stainless steel column (20 cm × 4 mm) packed with *octadecylsilyl silica gel for chromatography* (10 µm) (Nucleosil C18 is suitable). Use as the initial mobile phase *0.01M sodium heptanesulphonate* in a mixture of 55 volumes of *water* and 45 volumes of *acetonitrile* and as the final mobile phase *0.01M sodium heptanesulphonate* in a mixture of 20 volumes of *water* and 80 volumes of *acetonitrile*. Before use, adjust the pH of both the initial and final mobile phases to 4.0 with *1M orthophosphoric acid*. Carry out a linear gradient elution with a flow rate of 2 ml per minute for 30 minutes and maintain the final mobile phase for 10 minutes with the same flow rate. Use a detection wavelength of 230 nm.

The test is not valid unless the chromatogram obtained with solution (4) closely resembles the chromatogram supplied with *buclizine hydrochloride impurity standard BPCRS*.

In the chromatogram obtained with solution (2) the area of any peak corresponding to 1,4-bis (4-chlorobenzhydryl)-piperazine is not greater than the area of the peak obtained in the chromatogram with solution (3) and the area of any other *secondary peak* is not greater than the area of the peak in the chromatogram obtained with solution (1).

Loss on drying

When dried to constant weight at 100° to 105°, loses not more than 1.0% of its weight. Use 1 g.

Sulphated ash

Not more than 0.1%, Appendix IX A.

ASSAY

Carry out Method I for *non-aqueous titration*, Appendix VIII A, using 0.4 g and determining the end point potentiometrically. Each ml of *0.1M perchloric acid VS* is equivalent to 25.30 mg of $C_{28}H_{33}ClN_2$,2HCl.

IMPURITIES

A. 1,4-bis(4-chlorobenzhydryl)piperazine,

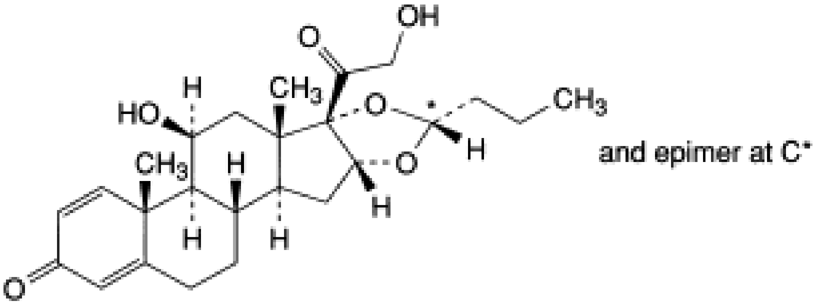
B. 4-chlorobenzhydrol, 1-(4-chlorobenzhydryl)piperazine,

4-chlorobenzophenone.

Budesonide

General Notices

(Ph Eur monograph 1075)



$C_{25}H_{34}O_6$ 430.5 *51333-22-3*

Action and use

Glucocorticoid.

Ph Eur

DEFINITION

Budesonide contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of a mixture of the C-22*S* (epimer A) and the C-22*R* (epimer B) epimers of 16α,17-[(1*RS*)-butylidenebis(oxy)]-11β,21-dihydroxypregna-1,4-diene-3,20-dione, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, practically insoluble in water, freely soluble in methylene chloride, sparingly soluble in alcohol.

IDENTIFICATION

First identification *A.*

Second identification *B, C, D.*

A. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *budesonide CRS*. Examine the substances prepared as discs.

B. Examine by thin-layer chromatography *(2.2.27)*, using as the coating substance a suitable silica gel with a fluorescent indicator having an optimal intensity at 254 nm.

Test solution. Dissolve 25 mg of the substance to be examined in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 10 ml with the same mixture of solvents.

Reference solution (a) Dissolve 25 mg *budesonide CRS* in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 10 ml with the same mixture of solvents.

Reference solution (b) Dissolve 12.5 mg *triamcinolone acetonide CRS* in reference solution (a) and dilute to 5 ml with the same solution.

Apply separately to the plate 5 µl of each solution. Prepare the mobile phase by adding a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R*. Develop over a path of 15 cm. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a). Spray with *alcoholic solution of sulphuric acid R*. Heat at 120 °C for 10 min or until spots appear. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm. The principal spot in the chromatogram obtained with the test solution is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with the reference solution (a). The test is not valid unless the chromatogram obtained with reference solution (b) shows two clearly separated spots.

C. Dissolve about 2 mg in 2 ml of *sulphuric acid R*. Within 5 min, a yellow colour develops. Within 30 min, the colour changes to brown or reddish-brown. Add cautiously the solution to 10 ml of *water R* and mix. The colour fades and a clear solution remains.

D. Dissolve about 1 mg in 2 ml of a solution containing 2 g of *phosphomolybdic acid R* dissolved in a mixture of 10 ml of dilute *sodium hydroxide solution R*, 15 ml of *water R* and 25 ml of *glacial acetic acid R*. Heat for 5 min on a water-bath. Cool in iced water for 10 min and add 3 ml of dilute *sodium hydroxide solution R.* The solution is blue.

TESTS

Related substances

Examine by liquid chromatography *(2.2.29)* as described under Assay.

Inject 20 µl of reference solution (a). Adjust the sensitivity of the system so that the height of the peak corresponding to epimer B (the first of the two principal peaks) in the chromatogram obtained is not less than 50 per cent of the full scale of the recorder. Inject 20 µl of the test solution, 20 µl of reference solution (a) and 20 µl of reference solution (b). Continue the chromatography for 1.5 times the retention time of epimer B. In the chromatogram obtained with the test solution: the area of any peak, apart from the peaks corresponding to epimer A and epimer B, is not greater than the sum of the areas of the epimer peaks in the chromatogram obtained with reference solution (b) (0.5 per cent); the sum of the areas of any such peaks is not greater than the sum of the areas of the epimer peaks in the chromatogram obtained with reference solution (a) (1.5 per cent). Disregard any peak with an area less than 0.1 times the sum of the areas of the epimer peaks in the chromatogram obtained with reference solution (b).

Epimer A

Examine by liquid chromatography *(2.2.29)* as described under Assay.

Inject 20 µl of the test solution. The content of epimer A (second peak) is 40.0 per cent to 51.0 per cent of the sum of the areas of the two epimer peaks of budesonide.

Methanol

Not more than 0.1 per cent, determined by head-space gas chromatography using the standard addition method *(2.2.28)*.

Test solution Dissolve 2.000 g of the substance to be examined in *dimethylacetamide R* and dilute to 20.0 ml with the same solvent.

Reference solution Dilute 0.500 g of *methanol R in dimethylacetamide R* and dilute to 100.0 ml with the same solvent.

The following head-space conditions may be used:
— equilibration temperature: 80 °C,

— equilibration time: 30 min,

— transfer-line temperature: 85 °C,

— pressurisation time: 10 s,

— injection time: 10 s.

The chromatographic procedure may be carried out using:

— a fused-silica capillary column 30 m long and 0.32 mm in internal diameter coated with *macrogol 20 000 R* (film thickness 1 µm),

— *nitrogen for chromatography R* as the carrier gas at a pressure of 55 kPa,

— a flame-ionisation detector,

Maintaining the temperature of the column at 50 °C for 5 min, then raising the temperature at a rate of 30 °C per minute to 220 °C and maintaining at 220 °C for 2 min, and maintaining the temperature of the injection port at 250 °C and that of the detector at 300 °C.

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

Examine by liquid chromatography *(2.2.29)*. *Protect the solutions from light throughout the assay.*

Test solution Dissolve 25.0 mg of the substance to be examined in 15 ml of *acetonitrile R* and dilute to 50.0 ml with *phosphate buffer solution pH 3.2 R*. Allow to stand for at least 15 min before use.

Reference solution (a) Dilute 15.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 10.0 ml with the mobile phase.

Reference solution (b) Dilute 5.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 10.0 ml with the mobile phase.

Reference solution (c) Dissolve 25.0 mg of *budesonide CRS* in 15 ml of *acetonitrile R* and dilute to 50.0 ml with *phosphate buffer solution pH 3.2 R.*

The chromatographic procedure may be carried out using:
— a stainless steel column 0.12 m long and 4.6 mm in internal diameter packed with *octadecylsilyl silica gel for chromatography R* (5 µm),

— as mobile phase at a flow rate of 1.5 ml/min a mixture of 32 volumes of *acetonitrile R* and

68 volumes of *phosphate buffer solution pH 3.2 R*,

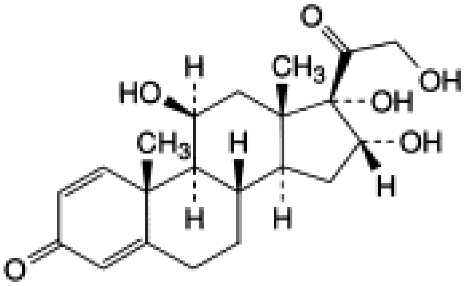
— as detector a spectrophotometer set at 240 nm.

Inject 20 µl of reference solution (c). Adjust the sensitivity of the system so that the height of the peak corresponding to epimer B (the first of the two principal peaks) in the chromatogram obtained is not less than 50 per cent of the full scale of the recorder. When the chromatograms are recorded in the prescribed conditions, the retention time for epimer B is about 16 min. If necessary, adjust the concentration of acetonitrile in the mobile phase (increasing the concentration to decrease the retention time). The test is not valid unless: in the chromatogram obtained with reference solution (c), the resolution between the peaks corresponding to epimer A and epimer B is not less than 1.5; the number of theoretical plates determined from the epimer B peak is at least 4000; the symmetry factor for the same peak is less than 1.5.

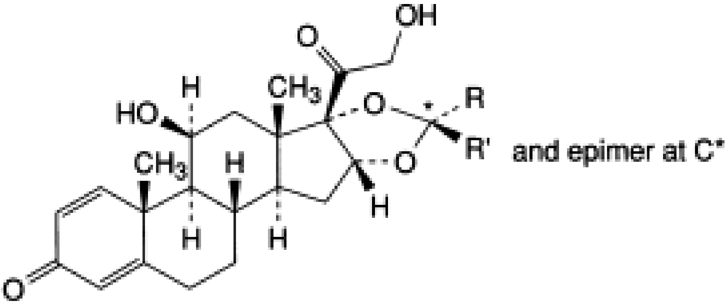
Inject 20 µl of reference solution (c) six times. The assay is not valid unless the relative standard deviation of the sum of the peak areas of the two epimers is at most 1.0 per cent. Inject alternatively the test solution and reference solution (c).

Calculate the percentage content of $C_{25}H_{34}O_6$ from the sum of the areas of the two epimer peaks.

IMPURITIES

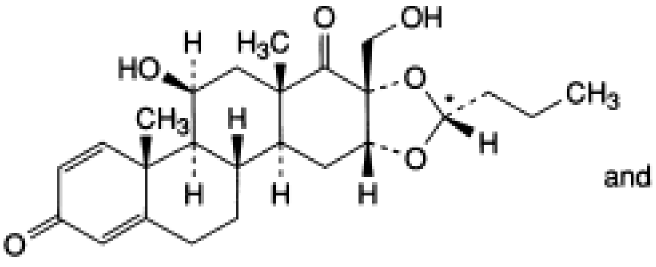


A. 11β,16α,17,21-tetrahydroxypregna-1,4-diene-3,20-dione,



B. R = CH_3, R′ = H: 16α,17-[(1*RS*)-ethylidenebis(oxy)]-11β,21-dihydroxypregna-1,4-diene-3,20-dione,

F. R = R′ = CH_3: 16α,17-[1-methylethylidenebis(oxy)]-11β,21-dihydroxypregna-1,4-diene-3,20-dione,



and epimer at C*

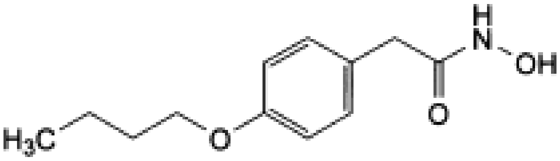
Ph Eur

Bufexamac

General Notices

(Ph Eur monograph 1179)



$C_{12}H_{17}NO_3$ 223.3 *2438-72-4*

Action and use

Cyclo-oxygenase inhibitor; analgesic; anti-inflammatory.

Ph Eur

DEFINITION

2-(4-Butoxyphenyl)-*N*-hydroxyacetamide.

Content

98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, soluble in dimethylformamide, slightly soluble in ethyl acetate and in methanol.

IDENTIFICATION

First identification *B.*

Second identification *A, C.*

A. Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution Dissolve 20 mg in *methanol R* and dilute to 20 ml with the same solvent. Dilute 1 ml of this solution to 50 ml with *methanol R*.

Spectral range 210-360 nm.

Absorption maxima At 228 nm, 277 nm and 284 nm.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *bufexamac CRS.*

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution (a) Dissolve 20 mg of *bufexamac CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 10 mg of *salicylic acid R* in reference solution (a) and dilute to 5 ml with the same solution.

Plate *TLC silica gel F_{254} plate R*.

Mobile phase *glacial acetic acid R, dioxan R, toluene R* (4:20:90 *V/V/V*).

Application 10 µl.

Development Over a path of 15 cm.

Drying In a current of warm air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 20.0 ml with the mobile phase.

Reference solution (a) Dilute 5.0 ml of the test solution to 25.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (b) Dissolve 5 mg of *bufexamac CRS* and 5 mg of *salicylic acid R* in the mobile phase and dilute to 10 ml with the mobile phase. Dilute 1 ml of this solution to 10 ml with the mobile phase.

Column:

— *size*: l = 0.25 m, Ø = 4.6 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm) with a specific surface area of 350 m^2/g and a pore size of 10 nm.

Mobile phase Mix 30 volumes of a 1.4 g/l solution of *dipotassium hydrogen phosphate R* and 70 volumes of *methanol R*, then adjust to pH 3.6 with *dilute phosphoric acid R*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 275 nm.

Injection 20 µl.

Run time 4 times the retention time of bufexamac.

System suitability Reference solution (b):

— *resolution*: minimum 2.0 between the peaks due to salicylic acid and bufexamac.

Limits:

— *impurities A, B, C, D*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.01 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in vacuo at 80 °C for 3 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 50 ml of *dimethylformamide R*. Titrate with *0.1 M lithium methoxide*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M lithium methoxide* is equivalent to 22.33 mg of $C_{12}H_{17}NO_3$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities *A, B, C, D.*

Drying In air.

Detection Spray with *dilute potassium iodobismuthate solution R*.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. Dissolve 0.1 g in 10 ml of *water R,* add 2 ml of *dilute sodium hydroxide solution R* and shake with 2 quantities, each of 15 ml, of *ether R*. Dry the combined ether layers over *anhydrous sodium sulphate R* and filter. Evaporate the ether, recrystallise the residue from *alcohol (90 per cent V/V) R* and dry under reduced pressure. The crystals melt (*2.2.14)* at 105 °C to 108 °C.

D. It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Acidity or alkalinity

To 10 ml of solution S add 0.2 ml of *0.01 M sodium hydroxide*; the pH *(2.2.3)* is not less than 4.7. Add 0.4 ml of *0.01 M hydrochloric acid*; the pH is not greater than 4.7.

Related substances

Gas chromatography *(2.2.28)*.

Internal standard solution Dissolve 25 mg of *methyl behenate R* in *methylene chloride R* and dilute to 500 ml with the same solvent.

Test solution Dissolve 50.0 mg of the substance to be examined in 2.5 ml of *water R*, add 2.5 ml of *dilute sodium hydroxide solution R* and extract with 2 quantities, each of 5 ml, of the internal standard solution. Filter the lower layer.

Reference solution (a) Dissolve 10 mg of the substance to be examined, 10 mg of *bupivacaine impurity B CRS* and 10 mg of *bupivacaine impurity E CRS* in 2.5 ml of *water R*, add 2.5 ml of *dilute sodium hydroxide solution R* and extract with 2 quantities, each of 5 ml, of the internal standard solution. Filter the lower layer and dilute to 20 ml with the internal standard solution.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the internal standard solution.

Reference solution (c) Dilute 5.0 ml of reference solution (b) to 10.0 ml with the internal standard solution.

Reference solution (d) Dilute 1.0 ml of reference solution (b) to 10.0 ml with the internal standard solution.

Column:

- *material*: fused silica,
- *size*: *l* = 30 m, Ø = 0.32 mm,
- *stationary phase: poly(dimethyl)(diphenyl)siloxane R* (film thickness 0.25 µm).

Carrier gas *helium for chromatography R*.

Flow rate 2.5 ml/min.

Split ratio 1:12.

Temperature:

	Time (min)	**Temperature (°C)**
Column	0	180
	0 - 10	180 → 230
	10 - 15	230
Injection port		250
Detector		250

Detection Flame ionisation.

Injection 1 µl.

Relative retention With reference to bupivacaine (retention time = about 10 min): impurity C = about 0.5; impurity A = about 0.6; impurity B = about 0.7; impurity D = about 0.8; impurity E = about 1.1; internal standard = about 1.4.

System suitability Reference solution (a):

— *resolution*: minimum 3.0 between the peaks due to bupivacaine and impurity E.

Limits:

— *impurity B*: calculate the ratio (R) of the area of the principal peak to the area of the peak due to the internal standard from the chromatogram obtained with reference solution (c); from the chromatogram obtained with the test solution, calculate the ratio of the area of the peak due to impurity B to the area of the peak due to the internal standard: this ratio is not greater than R (0.5 per cent),

— *any other impurity*: calculate the ratio (R) of the area of the principal peak to the area of the peak due to the internal standard from the chromatogram obtained with reference solution (d); from the chromatogram obtained with the test solution, calculate the ratio of the area of any peak, apart from the principal peak, the peak due to impurity B and the peak due to the internal standard, to the area of the peak due to the internal standard: this ratio is not greater than R (0.1 per cent),

— *total*: calculate the ratio (R) of the area of the principal peak to the area of the peak due to the internal standard from the chromatogram obtained with reference solution (b); from the chromatogram obtained with the test solution, calculate the ratio of the sum of the areas of any peaks, apart from the principal peak and the peak due to the internal standard, to the area of the peak due to the internal standard: this ratio is not greater than R (1.0 per cent),

— *disregard limit*: ratio less than 0.01 times R (0.01 per cent).

2,6-Dimethylaniline

Maximum 100 ppm.

Dissolve 0.50 g in *methanol R* and dilute to 10 ml with the same solvent. To 2 ml of the solution add 1 ml of a freshly prepared 10 g/l solution of *dimethylaminobenzaldehyde R* in *methanol R* and 2 ml *of glacial acetic acid R* and allow to stand for 10 min. Any yellow colour in the solution is not more intense than that in a standard prepared at the same time and in the same manner using 2 ml of a 5 mg/l solution of *2,6-dimethylaniline R* in *methanol R.*

Heavy metals *(2.4.8)*

Maximum 10 ppm.

Dissolve 2.0 g in a mixture of 15 volumes of *water R* and 85 volumes of *methanol R* and dilute to 20 ml with the same mixture of solvents. 12 ml of the solution complies with limit test B. Prepare the standard using lead standard solution (1 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 15 volumes of *water R* and 85 volumes of *methanol R.*

Loss on drying *(2.2.32)*

4.5 per cent to 6.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

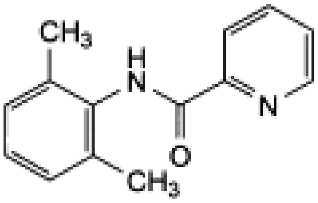
Dissolve 0.250 g in a mixture of 20 ml of *water R* and 25 ml of *alcohol R*. Add 5.0 ml of *0.01 M hydrochloric acid*. Carry out a potentiometric titration *(2.2.20),* using *0.1 M ethanolic sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M ethanolic sodium hydroxide* is equivalent to 32.49 mg of $C_{18}H_{29}ClN_2O$.

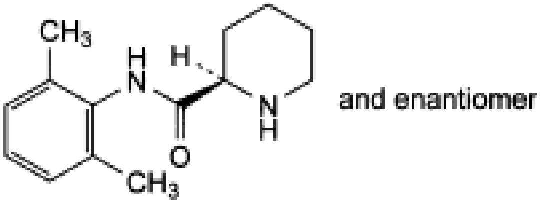
STORAGE

Protected from light.

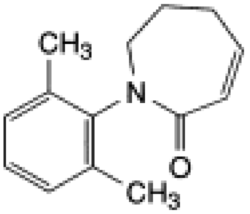
IMPURITIES



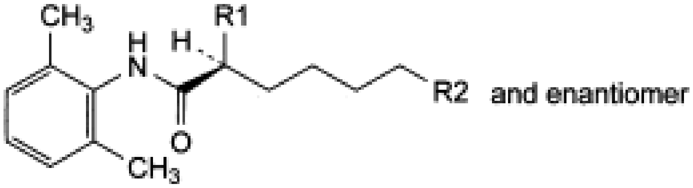
A. *N*-(2,6-dimethylphenyl)pyridine-2-carboxamide,



B. (2*RS*)-*N*-(2,6-dimethylphenyl)piperidine-2-carboxamide,

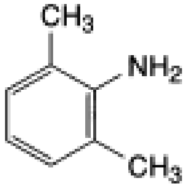


C. 1-(2,6-dimethylphenyl)-1,5,6,7-tetrahydro-2*H*-azepin-2-one,



D. R1 = R2 = Cl: (2*RS*)-2,6-dichloro-*N*-(2,6-dimethylphenyl)hexanamide,

E. R1 = H, R2 = NH-$(CH_2)_3$-CH_3: 6-(butylamino)-*N*-(2,6-dimethylphenyl)hexanamide,



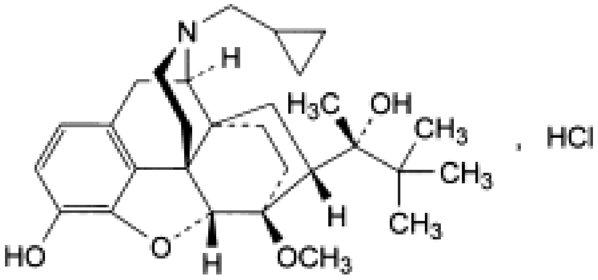
F. 2,6-dimethylaniline.

Ph Eur

Buprenorphine Hydrochloride

General Notices

(Ph Eur monograph 1181)



$C_{29}H_{41}NO_4,HCl$ 504.1 *53152-21-9*

Action and use

Opioid receptor partial agonist; analgesic.

Ph Eur

DEFINITION

Buprenorphine hydrochloride contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (2*S*)-2-[17-(cyclopropylmethyl)-4,5α-epoxy-3-hydroxy-6-methoxy-6α,14-ethano-14α-morphinan-7α-yl]-3,3-dimethylbutan-2-ol hydrochloride, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, sparingly soluble in water, freely soluble in methanol, soluble in alcohol, practically insoluble in cyclohexane.

IDENTIFICATION

A. Examine by infrared absorption spectrophotometry *(2.2.24)* , comparing with the *Ph. Eur. reference spectrum of buprenorphine hydrochloride.*

B. 3 ml of (see Tests) gives reaction (a) of chlorides *(2.3.1)* .

TESTS

Solution S

Dissolve 0.250 g in 5.0 ml of *methanol R* and while stirring dilute to 25.0 ml with *carbon dioxide-free water R* .

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II*).

Acidity or alkalinity

To 10.0 ml of add 0.05 ml of *methyl red solution R* . Not more than 0.2 ml of *0.02 M sodium hydroxide* or *0.02 M hydrochloric acid* is required to change the colour of the indicator.

Specific optical rotation *(2.2.7)*

Dissolve 0.100 g in *methanol R* and dilute to 10.0 ml with the same solvent. The specific optical rotation is - 92 to - 98, calculated with reference to the dried substance.

Related substances

Examine by liquid chromatography *(2.2.29)* .

Test solution Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dissolve 5 mg of the substance to be examined in 2.0 ml of *methanol R* . Add 0.25 ml of *2 M hydrochloric acid R.*

Reference solution (b) Dilute 0.5 ml of the test solution to 200.0 ml with the mobile phase.

Reference solution (c) Dilute 0.65 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (d) Dilute 4.0 ml of reference solution (b) to 10.0 ml with the mobile phase.

The chromatographic procedure may be carried out using:

— a stainless steel column 0.25 m long and 4.6 mm in internal diameter packed with *octadecylsilyl silica gel for chromatography R* (5 µm),

— as the mobile phase at a flow rate of about 1 ml/min, a mixture of 10 volumes of a 10 g/l solution of *ammonium acetate R* and 60 volumes of *methanol R* ,

— as detector a spectrophotometer set at 288 nm,

maintaining the temperature of the column at 40 °C.

Inject 20 µl of reference solution (a). Adjust the flow rate so that the retention time of the peak corresponding to buprenorphine is about 15 min. The test is not valid unless the chromatogram obtained with reference solution (a) presents two peaks, the first having a retention time of 0.93 relative to the second peak (buprenorphine). Inject separately 20 µl of each solution. Record the chromatogram of the test solution for 2.5 times the retention time of the main peak. In the chromatogram obtained with the test solution: the area of any peak, apart from the principal peak, is not greater than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent) and the sum of the areas of such peaks is not greater than the area of the peak in the chromatogram obtained with reference solution (c) (0.65 per cent). Disregard any peak with an area less than that of the principal peak in the chromatogram obtained with reference solution (d).

Loss on drying *(2.2.32)*

Not more than 1.0 per cent, determined on 1.000 g by heating in an oven at 115-120 °C.

ASSAY

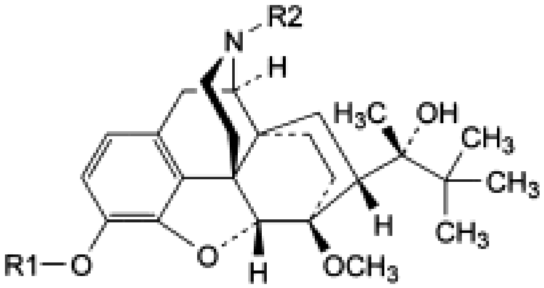
Dissolve 0.400 g in 40 ml of *anhydrous acetic acid R* and add 10 ml of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 50.41 mg of $C_{29}H_{42}ClNO_4$.

STORAGE

Store protected from light.

IMPURITIES



A. R1 = H, R2 = CH_2-CH_2-CH=CH_2: (2*S*)-2-[17-(but-3-enyl)-4,5α-epoxy-3-hydroxy-6-methoxy-6α,14-ethano-14α-morphinan-7α-yl]-3,3-dimethylbutan-2-ol,

B. R1 = H, R2 = H: (2*S*)-2-(4,5α-epoxy-3-hydroxy-6-methoxy-6α,14-ethano-14α-morphinan-7α-yl)-3,3-dimethylbutan-2-ol,

C. R1 = CH_3, R2 = CN: 4,5α-epoxy-7α-[(1*S*)-1-hydroxy-1,2,2-trimethylpropyl]-3,6-dimethoxy-6α,14-ethano-14α-morphinan-17-carbonitrile.

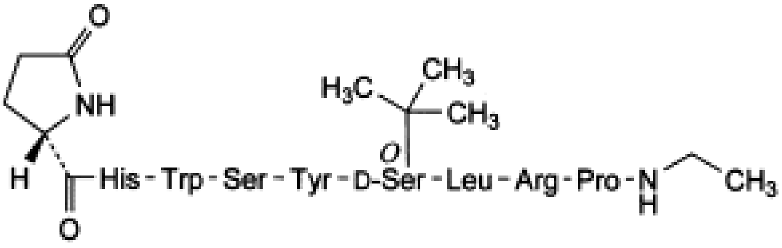
E. R1 = R2 = H: (2*S*)-2-[17-(cyclopropylmethyl)-4,5α-epoxy-3,6-dihydroxy-6α,14-ethano-14α-morphinan-7α-yl]-3,3-dimethylbutan-2-ol (6-*O*-desmethylbuprenorphine).

Ph Eur

Buserelin

General Notices

(Ph Eur monograph 1077)



$C_{60}H_{86}N_{16}O_{13}$ 1239 *68630-75-1*

Action and use

Gonadotrophin releasing hormone (gonadorelin) analogue; treatment of prostate cancer.

Ph Eur

DEFINITION

5-Oxo-L-prolyl-L-histidyl-L-tryptophyl-L-seryl-L-tyrosyl-*O*-(1,1-dimethylethyl)-D-seryl-L-leucyl-L-arginyl-L-prolylethylamide.

Synthetic nonapeptide analogue of human gonadotrophin-releasing hormone GnRH with agonistic activity to gonadorelin. It is obtained by chemical synthesis and is available as an acetate.

Content

95.0 per cent to 102.0 per cent (anhydrous, acetic acid-free substance).

CHARACTERS

Appearance

White or slightly yellowish powder, hygroscopic.

Solubility

Sparingly soluble in water and in dilute acids.

IDENTIFICATION

A. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (b).

B. Nuclear magnetic resonance spectrometry *(2.2.33).*

Preparation 4 mg/ml solution in a mixture of 20 volumes of *deuterated acetic acid R* and 80 volumes of *deuterium oxide R* .

Comparison 4 mg/ml solution of *buserelin CRS* in a mixture of 20 volumes of *deuterated acetic acid R* and 80 volumes of *deuterium oxide R* (dissolve the contents of a vial of *buserelin CRS* in this solvent mixture to obtain the desired concentration).

Operating conditions Field strength: minimum 300 MHz.

Results The ^{1}H NMR spectrum obtained is qualitatively similar to the ^{1}H NMR spectrum obtained with *buserelin CRS* .

C. Amino acid analysis *(2.2.56)* . For protein hydrolysis use Method 1 and for analysis use Method 1.

Express the content of each amino acid in moles. Calculate the relative proportions of the amino acids, taking 1/6 of the sum of the number of moles of glutamic acid, histidine, tyrosine, leucine, arginine and proline as equal to one. The values fall within the following limits: serine 1.4 to 2.0; proline 0.8 to 1.2; glutamic acid 0.9 to 1.1; leucine 0.9 to 1.1; tyrosine 0.9 to 1.1; histidine 0.9 to 1.1; arginine 0.9 to 1.1. Not more than traces of other amino acids are present, with the exception of tryptophan.

TESTS

Appearance of solution

A 10 g/l solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7 *(2.2.2, Method II)*.

Specific optical rotation *(2.2.7)*

- 49 to - 58 (anhydrous, acetic acid-free substance), determined on a 10 g/l solution.

Specific absorbance *(2.2.25)*

49 to 56, measured at the absorption maximum at 278 nm (anhydrous, acetic acid-free substance).

Dissolve 10.0 mg in 100.0 ml of *0.01 M hydrochloric acid* .

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 5.0 mg of the substance to be examined in 5.0 ml of the mobile phase.

Reference solution (a) Dissolve the contents of a vial of *D -His-buserelin CRS* in the mobile phase. Dilute an appropriate volume of this solution in the mobile phase to obtain a final concentration of 1 mg/ml. Add 1.0 ml of the test solution to 1.0 ml of this solution.

Reference solution (b) Dissolve the contents of a vial of *buserelin CRS* in the mobile phase. Dilute an appropriate volume of this solution in the mobile phase to obtain a final concentration of 1.0 mg/ml.

Reference solution (c) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Column:

- *size*: *l* = 0.25 m, Ø = 4 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 200 ml of *acetonitrile R* and 700 ml of an 11.2 g/l solution *of phosphoric acid R* and adjust to pH 2.5 with *triethylamine R.*

Flow rate 0.8 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 10 µl of the test solution, reference solution (a) and reference solution (c).

Relative retention With reference to buserelin (retention time = about 36 min): impurity B = about 0.76; impurity C = about 0.83; impurity A = about 0.90; impurity D = about 0.94; impurity E = about 0.94.

System suitability Reference solution (a):

- *resolution*: minimum 1.5 between the peaks due to impurity A and buserelin.

Limits:

- *sum of impurities D and E*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (c) (3 per cent);
- *any other impurity*: for each impurity, not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (c) (3 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (5 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent).

Acetic acid ***(2.5.34)***

3.0 per cent to 7.0 per cent.

Test solution Dissolve 20.0 mg of the substance to be examined in a mixture of 5 volumes of mobile phase B and 95 volumes of mobile phase A and dilute to 10.0 ml with the same mixture of solvents.

Water ***(2.5.12)***

Maximum 4.0 per cent, determined on 80.0 mg.

Bacterial endotoxins ***(2.6.14)***

Less than 55.5 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

Injection 10 µl of the test solution and reference solution (b).

Calculate the content of buserelin ($C_{60}H_{86}N_{16}O_{13}$) using the areas of the peaks in the chromatograms obtained and the declared content of $C_{60}H_{86}N_{16}O_{13}$ in *buserelin CRS*.

STORAGE

In an airtight container, protected from light, at a temperature of 2 °C to 8 °C. If the substance is sterile, store in an airtight, sterile, tamper-proof container.

LABELLING

The label states the mass of peptide in the container.

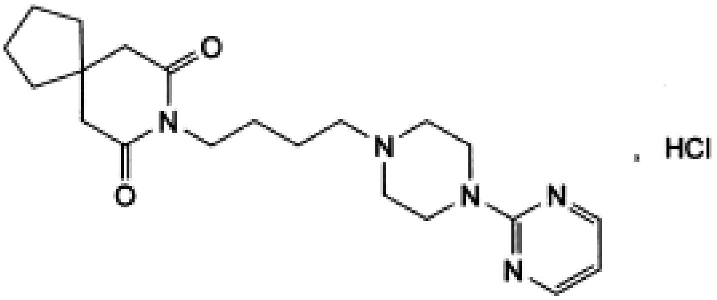
Buspirone Hydrochloride

General Notices

(Ph Eur monograph 1711)



$C_{21}H_{31}N_5O_2,HCl$ 422.0 *33386-08-2*

Non-benzodiazepine hypnotic; treatment of anxiety.

Ph Eur

DEFINITION

8-[4-[4-(Pyrimidin-2-yl)piperazin-1-yl]butyl]-8-azaspiro[4.5]decane-7,9-dione hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water and in methanol, practically insoluble in acetone.

It shows polymorphism *(5.9)* .

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *buspirone hydrochloride CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R* , evaporate to dryness on a water-bath and record new spectra using the residues.

B. It gives reaction (a) of chlorides *(2.3.1)* .

TESTS

Related substances

Liquid chromatography (*2.2.29)* .

Test solution Dissolve 25.0 mg of the substance to be examined in mobile phase A and dilute to 25.0 ml with mobile phase A.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with mobile phase A. Dilute 1.0 ml of this solution to 10.0 ml with mobile phase A.

Reference solution (b) Dissolve the contents of a vial of *buspirone for system suitability CRS* (containing impurities E, G, J, L and N) in 2.0 ml of mobile phase A and sonicate for 10 min.

Column:

— *size*: *l* = 0.15 m, Ø = 4.6 mm,

— *stationary phase: octadecylsilyl silica gel for chromatography R (5 µm),*

— *temperature*: 40 °C.

Mobile phase:

— *mobile phase A*: mix 950 volumes of a solution containing 6.8 g/l of *potassium dihydrogen phosphate R* and 0.93 g/l of *sodium hexanesulphonate monohydrate R* , previously adjusted to pH 3.4 with *phosphoric acid R* and 50 volumes of *acetonitrile R1;*

— *mobile phase B*: mix 250 volumes of a solution containing 3.4 g/l of *potassium dihydrogen phosphate R* and 3.52 g/l of *sodium hexanesulphonate monohydrate R* , previously adjusted to pH 2.2 with *phosphoric acid R* and 750 volumes of *acetonitrile R1* ,

60 - 61	100 → 90	0 → 10

Flow rate 1 ml/min.

Detection Variable wavelength spectrophotometer capable of operating at 240 nm and at 210 nm.

Injection 20 µl.

Identification of impurities Use the chromatogram supplied with *buspirone for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities E, G, J, L and N.

Relative retention at 240 nm with reference to buspirone (retention time = about 25 min): impurity A = about 0.2; impurity B = about 0.3; impurity C = about 0.6; impurity D = about 0.7; impurity E = about 0.8; impurity F = about 0.9; impurity G = about 1.05; impurity H = about 1.1; impurity I = about 1.2; impurity J = about 1.5.

Relative retention at 210 nm with reference to buspirone (retention time = about 25 min): impurity K = about 0.6; impurity L = about 1.7; impurity M = about 1.8; impurity N = about 1.9.

System suitability Reference solution (b):

— *peak-to-valley ratio at 240 nm*: minimum 5.0, where H_p = height above the baseline of the peak due to impurity G and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to buspirone;

— *resolution at 210 nm:* minimum 4.0 between the peaks due to impurity L and impurity N;

— the chromatograms obtained are similar to the chromatograms supplied with *buspirone for system suitability CRS.*

Limits Spectrophotometer at 240 nm:

— *correction factor*: for the calculation of content, multiply the peak area of impurity J by 2,

— *impurity E*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent),

— *impurity J*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent),

— *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),

— *total*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent),

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Limits Spectrophotometer at 210 nm:

— *impurity K*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),

— *any other impurity eluting with a relative retention greater than 1.6*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent),

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 10 ml of *glacial acetic acid R* and add 50 ml of *acetic anhydride R* . Titrate with *0.1 M perchloric acid* , determining the end-point potentiometrically *(2.2.20)* .

1 ml of *0.1 M perchloric acid* is equivalent to 21.10 mg of $C_{21}H_{32}ClN_5O_2$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities *E, J, K.*

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034*). It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): A, B, C, D, F, G, H, I, L, M, N.*

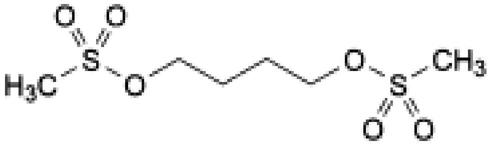
Ph Eur

Busulfan

General Notices

(Ph Eur monograph 0542)



$C_6H_{14}O_6S_2$ 246.3 *55-98-1*

Action and use

Cytotoxic alkylating agent.

Preparation

Busulfan Tablets

Ph Eur

DEFINITION

Butane-1,4-diyl di(methanesulphonate).

Content

99.0 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Very slightly soluble in water, freely soluble in acetone and in acetonitrile, very slightly soluble in ethanol (96 per cent).

mp: about 116 °C.

IDENTIFICATION

First identification *A.*

Second identification *B, C, D.*

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *busulfan CRS.*

B. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 20 mg of the substance to be examined in 2 ml of *acetone R.*

Reference solution Dissolve 20 mg of *busulfan CRS* in 2 ml of *acetone R.*

Plate *TLC silica gel G plate R.*

Mobile phase *acetone R, toluene R* (50:50 *V/V*).

Application 5 µl.

Development Over a path of 15 cm.

Drying In a current of warm air.

Detection Spray with *anisaldehyde solution R* and heat at 120 °C.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. To 0.1 g add 5 ml of *1 M sodium hydroxide* . Heat until a clear solution is obtained. Allow to cool. To 2 ml of the solution add *0.1 ml of potassium permanganate solution R* . The colour changes from purple through violet to blue and finally to green. Filter and add *1 ml of ammoniacal silver nitrate solution R* . A precipitate is formed.

D. To 0.1 g add 0.1 g of *potassium nitrate R* and 0.25 g of *sodium hydroxide R* , mix and heat to fusion. Allow to cool and dissolve the residue in 5 ml of *water R* . Adjust to pH 1-2 using *dilute hydrochloric acid R* . The solution gives reaction (a) of sulphates *(2.3.1)* .

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution B_7 *(2.2.2, Method II)*.

Dissolve 0.25 g in 20 ml of *acetonitrile R* , dilute to 25 ml with *water R* and examine immediately.

Acidity

Dissolve 0.20 g with heating in 50 ml of *anhydrous ethanol R* . Add 0.1 ml of *methyl red solution R .* Not more than 0.05 ml of 0.*1 M sodium hydroxide* is required to change the colour of the indicator.

Loss on drying *(2.2.32)*

Maximum 2.0 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

To 0.250 g add 50 ml of *water R*. Shake. Boil under a reflux condenser for 30 min and, if necessary, make up to the initial volume with *water R*. Allow to cool. Using 0.3 ml of *phenolphthalein solution R* as indicator, titrate with *0.1 M sodium hydroxide* until a pink colour is obtained.

1 ml of 0.*1 M sodium hydroxide* is equivalent to 12.32 mg of $C_6H_{14}O_6S_2$.

STORAGE

In an airtight container, protected from light.

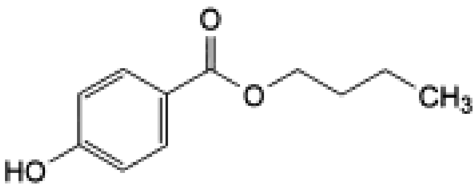
Ph Eur

Butyl Hydroxybenzoate

General Notices

Butylparaben

(Butyl Parahydroxybenzoate, Ph Eur monograph 0881)



$C_{11}H_{14}O_3$ 194.2 *94-26-8*

Action and use

Excipient.

Ph Eur

DEFINITION

Butyl 4-hydroxybenzoate.

Content

98.0 per cent to 102.0 per cent.

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals.

Solubility

Very slightly soluble in water, freely soluble in alcohol and in methanol.

IDENTIFICATION

First identification A, B.

Second identification *A, C, D.*

A. Melting point *(2.2.14)*

68 °C to 71 °C.

B. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *butyl parahydroxybenzoate CRS.*

C. Examine the chromatograms obtained in the test for related substances.

Results The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (b).

D. To about 10 mg in a test-tube add 1 ml of *sodium carbonate solution R* , boil for 30 s and cool (solution A). To a further 10 mg in a similar test-tube add 1 ml of *sodium carbonate solution R* ; the substance partly dissolves (solution B). Add at the same time to solution A and solution B 5 ml of *aminopyrazolone solution R* and 1 ml of *potassium ferricyanide solution R* and mix. Solution B is yellow to orange-brown. Solution A is orange to red, the colour being clearly more intense than any similar colour which may be obtained with solution B.

TESTS

Solution S

Dissolve 1.0 g in *alcohol R* and dilute to 10 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution BY_6 *(2.2.2, Method II)*.

Acidity

To 2 ml of solution S add 3 ml of *alcohol R* , 5 ml of *carbon dioxide-free water R* and 0.1 ml of *bromocresol green solution R* . Not more than 0.1 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator to blue.

Related substances

Thin-layer chromatography *(2.2.27)*

Test solution (a) Dissolve 0.10 g of the substance to be examined in *acetone R* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with *acetone R* .

Reference solution (a) Dilute 0.5 ml of test solution (a) to 100 ml with *acetone R.*

Reference solution (b) Dissolve 10 mg of *butyl parahydroxybenzoate CRS* in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution (c) Dissolve 10 mg of *propyl parahydroxybenzoate R* in 1 ml of test solution (a) and dilute to 10 ml with *acetone R.*

Plate Suitable octadecylsilyl silica gel with a fluorescent indicator having an optimal intensity at 254 nm as the coating substance.

Mobile phase *glacial acetic acid R, water R, methanol R* (1:30:70 *V/V/V*).

Application 2 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability The chromatogram obtained with reference solution (c) shows 2 clearly separated principal spots.

Limits:

— *any impurity*: any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.5 per cent).

Sulphated ash ***(2.4.14)***

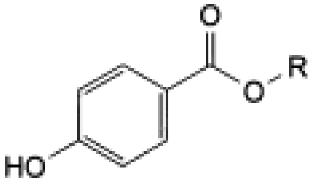
Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

To 1.000 g add 20.0 ml of *1 M sodium hydroxide.* Heat at about 70 °C for 1 h. Cool rapidly in an ice bath. Prepare a blank in the same manner. Carry out the titration on the solutions at room temperature. Titrate the excess sodium hydroxide with *0.5 M sulphuric acid ,* continuing the titration until the second point of inflexion and determining the end-point potentiometrically *(2.2.20).*

1 ml of *1 M sodium hydroxide* is equivalent to 194.2 mg of $C_{11}H_{14}O_3$.

IMPURITIES



A. R = H: 4-hydroxybenzoic acid,

B. R = CH_3: methyl 4-hydroxybenzoate,

C. R = CH_2-CH_3: ethyl 4-hydroxybenzoate,

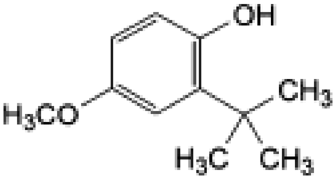
D. R = CH_2-CH_2-CH_3: propyl 4-hydroxybenzoate.

Ph Eur

Butylated Hydroxyanisole

General Notices

(Butylhydroxyanisole, Ph Eur monograph 0880)



$C_{11}H_{16}O_2$ 180.3 *25013-16-5*

Action and use

Antioxidant.

Ph Eur

DEFINITION

Butylhydroxyanisole is 2-(1,1-dimethylethyl)-4-methoxyphenol containing not more than 10 per cent of 3-(1,1-dimethylethyl)-4-methoxyphenol.

CHARACTERS

A white, yellowish or slightly pinkish, crystalline powder, practically insoluble in water, very soluble in methylene chloride, freely soluble in alcohol and in fatty oils. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

A. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

B. To 0.5 ml of solution S (see Tests) add 10 ml of *aminopyrazolone solution R* and 1 ml of *potassium ferricyanide solution R* . Mix and add 10 ml of *methylene chloride R* . Shake vigorously. After separation, the organic layer is red.

C. Dissolve about 10 mg in 2 ml of *alcohol R.* Add 1 ml of a 1 g/l solution of *testosterone propionate R* in *alcohol R* and 2 ml of *dilute sodium hydroxide solution R* . Heat in a water-bath at 80 °C for 10 min and allow to cool. A red colour develops.

TESTS

Solution S

Dissolve 2.5 g in *alcohol R* and dilute to 25 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than intensity 5 of the range of reference solutions of the most appropriate colour *(2.2.2, Method II)*.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel G R* as the coating substance.

Test solution (a) Dissolve 0.25 g of the substance to be examined in *methylene chloride R* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with *methylene chloride R*.

Reference solution (a) Dissolve 25 mg of *butylhydroxyanisole CRS* in *methylene chloride R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dilute 1 ml of reference solution (a) to 20 ml with *methylene chloride* R.

Reference solution (c) Dissolve 50 mg of *hydroquinone R* in 5 ml of *alcohol R* and dilute to 100 ml with *methylene chloride R*. Dilute 1 ml of this solution to 10 ml with *methylene chloride R*.

Apply separately to the plate 5 µl of each solution. Develop over a path of 10 cm using *methylene chloride R*. Allow the plate to dry in air and spray with a freshly prepared mixture of 10 volumes of *potassium ferricyanide solution R*, 20 volumes of *ferric chloride solution R1* and 70 volumes of *water R*. In the chromatogram obtained with test solution (a): any violet-blue spot with an R_F value of about 0.35 (corresponding to 3-(1,1-dimethylethyl)-4-methoxyphenol) is not more intense than the principal spot in the chromatogram obtained with reference solution (a) (10 per cent); any spot corresponding to hydroquinone is not more intense than the principal spot in the chromatogram obtained with reference solution (c) (0.2 per cent); any spot, apart from the principal spot and any spots corresponding to 3-(1,1-dimethylethyl)-4-methoxyphenol and hydroquinone, is not more intense than the principal spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

Heavy metals *(2.4.8)*

1.0 g complies with limit test C for heavy metals (10 ppm). Prepare the standard using 1 ml of *lead standard solution (10 ppm Pb) R*.

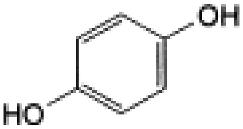
Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

STORAGE

Store protected from light.

IMPURITIES



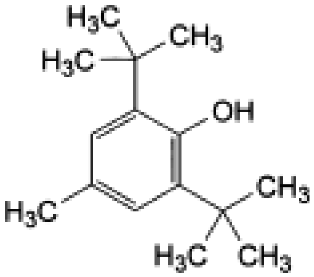
benzene-1,4-diol (hydroquinone).

Ph Eur

Butylated Hydroxytoluene

General Notices

(Butylhydroxytoluene, Ph Eur monograph 0581)



$C_{15}H_{24}O$ 220.4 *128-37-0*

Action and use

Antioxidant.

Ph Eur

DEFINITION

Butylhydroxytoluene is 2,6-bis(1,1-dimethylethyl)-4-methylphenol.

CHARACTERS

A white or yellowish-white, crystalline powder, practically insoluble in water, very soluble in acetone, freely soluble in alcohol and in vegetable oils.

IDENTIFICATION

First identification *A, C.*

Second identification *A, B, D.*

A. It complies with the test for the freezing-point (see Tests).

B. Dissolve 0.500 g in *ethanol R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of this solution to 100.0 ml with *ethanol R* . Examined between 230 nm and 300 nm *(2.2.25)* , the solution shows an absorption maximum at 278 nm. The specific absorbance at the maximum is 80 to 90.

C. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *butylhydroxytoluene CRS.*

D. Dissolve about 10 mg in 2 ml of *alcohol R*. Add 1 ml of a 1 g/l solution of *testosterone propionate R* in *alcohol R* and 2 ml of *dilute sodium hydroxide solution R*. Heat in a water-bath at 80 °C for 10 min and allow to cool. A blue colour develops.

TESTS

Appearance of solution

Dissolve 1.0 g in *methanol R* and dilute to 10 ml with the same solvent. The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_5 or BY_5 *(2.2.2, Method II)*.

Freezing-point *(2.2.18)*

69 °C to 70 °C.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel G R* as the coating substance.

Test solution Dissolve 0.2 g of the substance to be examined in *methanol R* and dilute to 10.0 ml with the same solvent.

Reference solution Dilute 1 ml of the test solution to 200 ml with *methanol R*.

Apply separately to the plate 10 µl of each solution. Develop over a path of 15 cm using *methylene chloride R*. Dry the plate in air and spray with a freshly prepared mixture of 10 volumes of *potassium ferricyanide solution R*, 20 volumes of *ferric chloride solution R1* and 70 volumes of *water R*. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

Maximum 200 ppm.

Dissolve 50 mg in 5 ml of *dilute hydrochloric acid R* and dilute to 10 ml with *water R*.

Magnesium and alkali metals

Maximum 1.5 per cent.

Dissolve 1.0 g in 12 ml of *dilute hydrochloric acid R*. Boil the solution for about 2 min and add 20 ml of *water R*, 1 g of *ammonium chloride R* and 0.1 ml of *methyl red solution R*. Add *dilute ammonia R1* until the colour of the indicator changes and then add 2 ml in excess. Heat to boiling and add 50 ml of hot *ammonium oxalate solution R*. Allow to stand for 4 h, dilute to 100 ml with *water R* and filter through a suitable filter. To 50 ml of the filtrate add 0.25 ml of *sulphuric acid R*. Evaporate to dryness on a water-bath and ignite to constant mass at 600 ± 50 °C. The residue weighs a maximum of 7.5 mg.

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying ***(2.2.32)***

Maximum 2.0 per cent, determined on 1.000 g by drying in an oven at 200 ± 10 °C.

ASSAY

Dissolve 0.150 g in a mixture of 3 ml of *dilute hydrochloric acid R* and 20 ml of *water R* . Boil for 2 min, allow to cool and dilute to 50 ml with *water R* . Carry out the complexometric titration of calcium *(2.5.11)* .

1 ml of *0.1 M sodium edetate* is equivalent to 10.01 mg of $CaCO_3$.

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.The following characteristics may be relevant for calcium carbonate used as filler in tablets and capsules.

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.The following characteristics may be relevant for calcium carbonate used as filler in tablets and capsules.

Ph Eur

Heavy Bismuth Subnitrate

General Notices

(Ph Eur monograph 1494)

$4[BiNO_3(OH)_2],BiO(OH)$ 1462 *1304-85-4*

Ph Eur

DEFINITION

Content

71.0 per cent to 74.0 per cent of Bi (A_r 209.0) (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water and in ethanol (96 per cent). It dissolves in mineral acids with decomposition.

IDENTIFICATION

A. Dilute 1 ml of solution S1 (see Tests) to 5 ml with *water R* and add 0.3 ml of *potassium iodide solution R*. A black precipitate is formed which dissolves into an orange solution with the addition of 2 ml *of potassium iodide solution R*.

B. It gives reaction (b) of bismuth *(2.3.1)*.

C. It gives the reaction of nitrates *(2.3.1)*.

D. pH *(2.2.3)*: maximum 2.0 for solution S2 (see Tests).

TESTS

Solution S1

Shake 5.0 g by gently heating in 10 ml of *water R* and add 20 ml of *nitric acid R*. Heat until dissolution, cool and dilute to 100 ml with *water R*.

Solution S2

Place 1.00 g in a 20 ml volumetric flask and add 2.0 ml of *lead-free nitric acid R*. Allow acid attack to take place without heating and if necessary warm slightly at the end to completely dissolve the test sample. Add 10 ml of *water R*, shake and add, in small fractions, 4.5 ml of *lead-free ammonia R*; shake and allow to cool. Dilute to 20.0 ml with *water R*, shake again and allow the solids to settle. The clear supernatant solution is solution S2.

Acidity

Suspend 1.0 g in 15 ml of *water R* and shake several times. Allow to stand for 5 min and filter. To 10 ml of the filtrate, add 0.5 ml of *phenolphthalein solution R1*. Not more than 0.5 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator to pink.

Chlorides *(2.4.4)*

Maximum 200 ppm.

To 5.0 ml of solution S1, add 3 ml of *nitric acid R* and dilute to 15 ml with *water R*.

Copper

Maximum 50.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Solution S2.

Reference solutions Prepare the reference solutions using *copper standard solution (10 ppm Cu) R* and diluting with a 37 per cent *V/V* solution *of lead-free nitric acid R*.

Source Copper hollow-cathode lamp.

Wavelength 324.7 nm.

Atomisation device Air-acetylene flame.

Lead

Maximum 20.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method II)*.

Test solution Solution S2.

Reference solutions Prepare the reference solutions using *lead standard solution (10 ppm Pb) R* and diluting with a 37 per cent *V/V* solution of *lead-free nitric acid R.*

Source Lead hollow-cathode lamp.

Wavelength 283.3 nm (depending on the apparatus, the line at 217.0 nm may be used).

Atomisation device Air-acetylene flame.

Silver

Maximum 25.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Solution S2.

Reference solutions Prepare the reference solutions using *silver standard solution (5 ppm Ag) R* and diluting with a 37 per cent *V/V* solution *of lead-free nitric acid R*.

Source Silver hollow-cathode lamp.

Wavelength 328.1 nm.

Atomisation device Air-acetylene flame.

Substances not precipitated by ammonia

Maximum 1.0 per cent.

To 20 ml of solution S1, add *concentrated ammonia R* until an alkaline reaction is produced and filter. Wash the residue with *water R*, and evaporate the combined filtrate and washings to dryness on a water-bath. To the residue, add 0.3 ml of *dilute sulphuric acid R* and ignite. The residue weighs a maximum of 10 mg.

Loss on drying *(2.2.32)*

Maximum 3.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

Dissolve with heating 0.250 g in 10 ml of a mixture of 2 volumes of *perchloric acid R* and 5 volumes of *water R*. To the hot solution, add 200 ml of *water R* and 50 mg of *xylenol orange triturate R*. Titrate with *0.1 M sodium edetate* until a yellow colour is obtained.

1 ml of *0.1 M sodium edetate* is equivalent to 20.90 mg of Bi.

Ph Eur

White Beeswax

General Notices

(Ph Eur monograph 0069)

Action and use

Excipient.

Ph Eur

DEFINITION

Wax obtained by bleaching yellow beeswax.

CHARACTERS

Appearance

White or yellowish-white pieces or plates, translucent when thin, with a fine-grained, matt and non-crystalline fracture; when warmed in the hand they become soft and malleable.

It has an odour similar to that of yellow beeswax, though fainter and never rancid. It is tasteless and does not stick to the teeth.

Solubility

Practically insoluble in water, partially soluble in hot ethanol (90 per cent *V/V*) and completely soluble in fatty and essential oils.

Relative density

About 0.960.

TESTS

Drop point *(2.2.17)*

61 °C to 66 °C.

Melt the beeswax by heating on a water-bath, pour onto a glass plate and allow to cool to a semi-solid mass. Fill the metal cup by inserting the wider end into the beeswax and repeating the procedure until beeswax extrudes from the narrow opening. Remove the excess with a spatula and insert the thermometer immediately. Remove the beeswax displaced. Allow to stand at room temperature for at least 12 h before determining the drop point.

Acid value

17.0 to 24.0.

To 2.00 g (m g), in a 250 ml conical flask fitted with a reflux condenser, add 40 ml of *xylene R* and a few glass beads. Heat until the substance is dissolved. Add 20 ml of *ethanol (96 per cent) R* and 0.5 ml of *phenolphthalein solution R1* and titrate the hot solution with *0.5 M alcoholic potassium hydroxide* until a red colour persists for at least 10 s (n_1 ml). Carry out a blank test (n_2 ml).

$$\text{Acid value} = \frac{28.05\,(n_1 - n_2)}{m}$$

Ester value ***(2.5.2)***

70 to 80.

Saponification value

87 to 104.

To 2.00 g (m g), in a 250 ml conical flask fitted with a reflux condenser, add 30 ml of a mixture of equal volumes of *ethanol (96 per cent) R* and *xylene R* and a few glass beads. Heat until the substance is dissolved. Add 25.0 ml of 0.5 M *alcoholic potassium hydroxide* and heat under a reflux condenser for 3 h. Titrate the hot solution immediately with *0.5 M hydrochloric acid*, using 1 ml of *phenolphthalein solution R1* as indicator (n_1 ml). Reheat the solution to boiling several times during the course of the titration. Carry out a blank test (n_2 ml).

$$\text{Saponification value} = \frac{28.05\,(n_2 - n_1)}{m}$$

Ceresin, paraffins and certain other waxes

To 3.0 g, in a 100 ml round-bottomed flask, add 30 ml of a 40 g/l solution of *potassium hydroxide R* in *aldehyde-free alcohol R* and boil gently under a reflux condenser for 2 h. Remove the condenser and immediately insert a thermometer. Place the flask in a water-bath at 80 °C and allow to cool, swirling the solution continuously. No precipitate is formed until 65 °C, although the solution may be slightly opalescent. Beginning at 65 °C, the solution may become cloudy and precipitates may be formed. At 59 °C, the solution is cloudy.

Glycerol and other polyols

Maximum 0.5 per cent *m/m*, calculated as glycerol.

To 0.20 g add 10 ml of *alcoholic potassium hydroxide solution R* and heat on a water-bath under a reflux condenser for 30 min. Add 50 ml of *dilute sulphuric acid* R, cool and filter. Rinse the flask and the filter with *dilute sulphuric acid R*. Combine the filtrate and washings and dilute to 100.0 ml with *dilute sulphuric acid R*. Place 1.0 ml of the solution in a test-tube, add 0.5 ml of a 10.7 g/l solution of *sodium periodate R*, mix and allow to stand for 5 min. Add 1.0 ml of *decolorised fuchsin solution R* and mix. Any precipitate disappears. Place the tube in a beaker containing water at 40 °C. During cooling observe for 10-15 min. Any violet-blue colour in the solution is not more intense than that in a standard prepared at the same time and in the same manner using 1.0 ml of a 10 mg/l solution of *glycerol R* in *dilute sulphuric acid R.*

Ph Eur

Yellow Beeswax

General Notices

(Ph Eur monograph 0070)

Action and use

Excipient.

Ph Eur

DEFINITION

Wax obtained by melting the walls of the honeycomb made by the honey-bee, *Apis mellifera* L., with hot water and removing foreign matter.

CHARACTERS

Appearance

Yellow or light brown pieces or plates with a fine-grained, matt and non-crystalline fracture; when warmed in the hand they become soft and malleable.

It has a faint odour, characteristic of honey. It is tasteless and does not stick to the teeth.

Solubility

Practically insoluble in water, partially soluble in hot ethanol (90 per cent *V/V*) and completely soluble in fatty and essential oils.

Relative density: about 0.960.

TESTS

Drop point *(2.2.17)*

61 °C to 66 °C.

Melt the beeswax by heating on a water-bath, pour onto a glass plate and allow to cool to a semi-solid mass. Fill the metal cup by inserting the wider end into the beeswax and repeating the procedure until beeswax extrudes from the narrow opening. Remove the excess with a spatula and insert the thermometer immediately. Remove the beeswax displaced. Allow to stand at room temperature for at least 12 h before determining the drop point.

Acid value

17.0 to 22.0.

To 2.00 g (*m* g), in a 250 ml conical flask fitted with a reflux condenser, add 40 ml of *xylene R* and a few glass beads. Heat until the substance is dissolved. Add 20 ml of *ethanol (96 per cent) R* and 0.5 ml of *phenolphthalein solution R1* and titrate the hot solution with *0.5 M* *alcoholic potassium hydroxide* until a red colour persists for at least 10 s (n_1 ml). Carry out a blank test (n_2 ml).

Ph Eur

Activated Charcoal

General Notices

Decolourising Charcoal
(Ph Eur monograph 0313)

Action and use

Adsorbent.

Ph Eur

DEFINITION

Obtained from vegetable matter by suitable carbonisation processes intended to confer a high adsorption power.

CHARACTERS

Appearance

Black, light powder free from grittiness.

Solubility

Practically insoluble in all usual solvents.

IDENTIFICATION

A. When heated to redness it burns slowly without a flame.

B. Adsorption power (see Tests).

TESTS

Solution S

To 2.0 g in a conical flask with a ground-glass neck add 50 ml of *dilute hydrochloric acid R*. Boil gently under a reflux condenser for 1 h, filter and wash the filter with *dilute hydrochloric acid R*. Evaporate the combined filtrate and washings to dryness on a water-bath, dissolve the residue in *0.1 M hydrochloric acid* and dilute to 50.0 ml with the same acid.

Acidity or alkalinity

To 2.0 g add 40 ml of *water R* and boil for 5 min. Cool, restore to the original mass with *carbon dioxide-free water R* and filter. Reject the first 20 ml of the filtrate. To 10 ml of the filtrate add 0.25 ml of *bromothymol blue solution R1* and 0.25 ml of *0.02 M sodium hydroxide*. The solution is blue. Not more than 0.75 ml of *0.02 M hydrochloric acid* is required to change the colour of the indicator to yellow.

Acid-soluble substances

Maximum 3 per cent.

To 1.0 g add 25 ml of *dilute nitric acid R* and boil for 5 min. Filter whilst hot through a sintered-glass filter (10) *(2.1.2)* and wash with 10 ml of hot *water R*. Evaporate the combined filtrate and washings to dryness on a water-bath, add to the residue 1 ml of *hydrochloric acid R,* evaporate to dryness again and dry the residue to constant mass at 100-105 °C. The residue weighs a maximum of 30 mg.

Alkali-soluble coloured substances

To 0.25 g add 10 ml of *dilute sodium hydroxide solution R* and boil for 1 min. Cool, filter and dilute the filtrate to 10 ml with *water R*. The solution is not more intensely coloured than reference solution GY_4 *(2.2.2, Method II*).

Ethanol (96 per cent) soluble substances

Maximum 0.5 per cent.

To 2.0 g add 50 ml of *ethanol (96 per cent) R* and boil under a reflux condenser for 10 min. Filter immediately, cool, and dilute to 50 ml with *ethanol (96 per cent) R*. The filtrate is not more intensely coloured than reference solution Y_6 or BY_6 *(2.2.2, Method II)*. Evaporate 40 ml of the filtrate to dryness and dry to constant mass at 100-105 °C. The residue weighs a maximum of 8 mg.

Fluorescent substances

In an intermittent-extraction apparatus, treat 10.0 g with 100 ml of *cyclohexane R1* for 2 h. Collect the liquid and dilute to 100 ml with *cyclohexane R1*. Examine in ultraviolet light at 365 nm. The fluorescence of the solution is not more intense than that of a solution of 83 µg of *quinine R in* 1000 ml of *0.005 M sulphuric acid* examined under the same conditions.

Sulphides

To 1.0 g in a conical flask add 5 ml of *hydrochloric acid R1* and 20 ml of *water R*. Heat to boiling. The fumes released do not turn *lead acetate paper R* brown.

Copper

Maximum 25.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Use solution S.

Reference solutions Prepare the reference solutions using *copper standard solution (0.1 per cent Cu) R* and diluting with *0.1 M hydrochloric acid*.

Source Copper hollow-cathode lamp.

Wavelength 325.0 nm.

Atomisation device Air-acetylene flame.

Lead

Maximum 10.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Use solution S.

Reference solutions Prepare the reference solutions using *lead standard solution (100 ppm Pb) R* and diluting with *0.1 M hydrochloric acid*.

Source Lead hollow-cathode lamp.

Wavelength 283.3 nm; 217.0 nm may be used depending on the apparatus.

Atomisation device Air-acetylene flame.

Zinc

Maximum 25.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Use solution S.

Reference solutions Prepare the reference solutions using *zinc standard solution (100 ppm Zn) R* and diluting with *0.1 M hydrochloric acid*.

Source Zinc hollow-cathode lamp.

Wavelength 214.0 nm.

Atomisation device Air-acetylene flame.

Loss on drying *(2.2.32)*

Maximum 15 per cent, determined on 1.00 g by drying in an oven at 120 °C for 4 h.

Sulphated ash *(2.4.14)*

Maximum 5.0 per cent, determined on 1.0 g.

Adsorption power

To 0.300 g in a 100 ml ground-glass-stoppered conical flask add 25.0 ml of a freshly prepared solution of 0.5 g of *phenazone R* in 50 ml of *water R*. Shake thoroughly for 15 min. Filter and reject the first 5 ml of filtrate. To 10.0 ml of the filtrate add *1.0 g of potassium bromide R* and 20 ml of *dilute hydrochloric acid R*. Using 0.1 ml of *methyl red solution R* as indicator, titrate with 0.*0167 M potassium bromate* until the red colour is discharged. Titrate slowly (1 drop every 15 s) towards the end of the titration. Carry out a blank titration using 10.0 ml of the phenazone solution.

Calculate the quantity of phenazone adsorbed per 100 g of activated charcoal from the following expression:

$$\frac{2.353\,(a-b)}{m}$$

a = number of millilitres of *0.0167 M potassium bromate* used for the blank

b = number of millilitres of *0.0167 M potassium bromate* used for the test

m = mass in grams of the substance to be examined.

Minimum 40 g of phenazone is adsorbed per 100 g of activated charcoal, calculated with reference to the dried substance.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^3 micro-organisms per gram, determined by plate count.

STORAGE

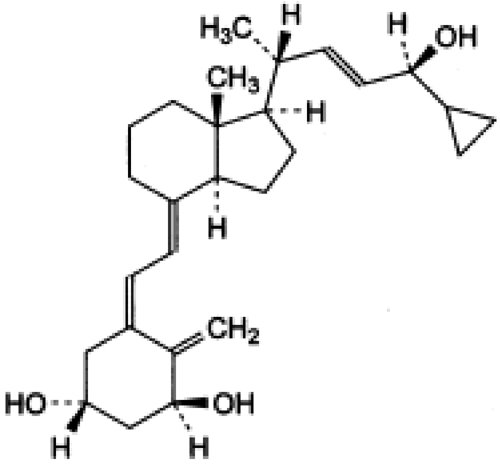
In an airtight container .

Ph Eur

Anhydrous Calcipotriol

General Notices

(Ph Eur monograph 2011)



$C_{27}H_{40}O_3$ 412.6 *112828-00-9*

Action and use

Vitamin D analogue.

Ph Eur

DEFINITION

(*5Z,7E,22E,24S*)-24-Cyclopropyl-9,10-secochola-5,7,10(19),22-tetraene-1α,3β,24-triol.

Content

95.5 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in ethanol (96 per cent), slightly soluble in methylene chloride.

It is sensitive to heat and light.

A reversible isomerisation to pre-calcipotriol takes place in solution, depending on temperature and time. The activity is due to both compounds.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *Ph. Eur. reference spectrum of anhydrous calcipotriol.*

B. Loss on drying (see Tests).

Carry out the tests for related substances and the assay as rapidly as possible and protected from actinic light and air.

TESTS

Related substances

A. Thin-layer chromatography *(2.2.27)* .

Solution A To 1 ml of *triethylamine R* add 9 ml of *chloroform R* .

Test solution Dissolve 1 mg of the substance to be examined in 100 µl of solution A.

Reference solution (a) To 10 µl of the test solution add 990 µl of solution A.

Reference solution (b) To 250 µl of reference solution (a) add 750 µl of solution A.

Reference solution (c) To 100 µl of reference solution (a) add 900 µl of solution A.

Reference solution (d) Place 2 mg of the substance to be examined in a vial and dissolve in 200 µl of solution A. Close the vial and keep it in a water bath at 60 °C for 2 h.

Plate *TLC silica gel F_{254} plate R .*

Mobile phase *2-methylpropanol R, methylene chloride R* (20:80 V/V).

Application 10 µl of the test solution and reference solutions (b), (c) and (d).

Development Over 2/3 of the plate.

Drying In air, then at 140 °C for 10 min.

Detection Spray the hot plate with an *alcoholic solution of sulphuric acid R* , dry at 140 °C for not more than 1 min and examine in ultraviolet light at 366 nm.

Relative retention With reference to calcipotriol (R_F = about 0.4): impurity G = about 0.4; impurity H = about 0.4; pre-calcipotriol = about 0.9; impurity A = about 1.2.

System suitability Reference solution (d):

— the chromatogram shows a secondary spot due to pre-calcipotriol.

Limits:

— *impurity A*: any spot due to impurity A is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.25 per cent),

— *impurities G, H*: any spot due to impurity G or H is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.25 per cent for the sum),

— *any other impurity*: any other spot is not more intense than the spot in the chromatogram obtained with reference solution (c) (0.1 per cent).

B. Liquid chromatography *(2.2.29)* .

Solution A. Dissolve 1.32 g of *ammonium phosphate R* in *water R* and dilute to 10.0 ml with the same solvent.

Solvent mixture solution A, *water R, methanol R* (3:297:700 *V/V/V*).

Test solution (a) Dissolve 2.00 mg of the substance to be examined in the solvent mixture and dilute to 5.0 ml with the solvent mixture.

Test solution (b) Dissolve 2.00 mg of the substance to be examined in the solvent mixture and dilute to 20.0 ml with the same solvent mixture.

Reference solution (a) Dilute 1.0 ml of test solution (a) to 100.0 ml with the solvent mixture.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 10.0 ml with the solvent mixture.

Reference solution (c) Dissolve 1.0 mg of *calcipotriol monohydrate CRS* (containing impurities B, C and D) in the solvent mixture and dilute to 2.5 ml with the solvent mixture.

Reference solution (d) Dissolve 2.00 mg of *calcipotriol monohydrate CRS* in the solvent mixture and dilute to 20.0 ml with the solvent mixture.

Column:

— *size*: *l* = 0.10 m, Ø = 4.0 mm,

— *stationary phase: octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase *water R, methanol R* (30:70 *V/V*).

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 264 nm.

Injection 20 µl of test solution (a) and reference solutions (a), (b) and (c).

Run time Twice the retention time of calcipotriol.

Relative retention With reference to calcipotriol (retention time = about 13.5 min): impurity B = about 0.86; impurity C = about 0.92; impurity D = about 1.3.

System suitability Reference solution (c):

— *peak-to-valley ratio* : minimum 1.5, where H_p = height above the baseline of the peak due to impurity C and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to calcipotriol,

— the chromatogram obtained is similar to the chromatogram supplied with *calcipotriol monohydrate CRS*.

Limits:

— *impurity B*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),

— *impurities C, D*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent),

— *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),

— *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (2.5 per cent),

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying

Maximum 1.0 per cent, determined on 5 mg by thermogravimetry *(2.2.34)* . Heat to 105 °C at a rate of 10 °C/min and maintain at 105 °C for 60 min.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

Injection Test solution (b) and reference solution (d).

Calculate the percentage content of $C_{27}H_{40}O_3$ from the areas of the peaks and the declared content of *calcipotriol monohydrate CRS*.

STORAGE

In an airtight container , protected from light at - 20 °C or below.

IMPURITIES

Specified impurities *A, B, C, D, G, H.*

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): E, F, I.*

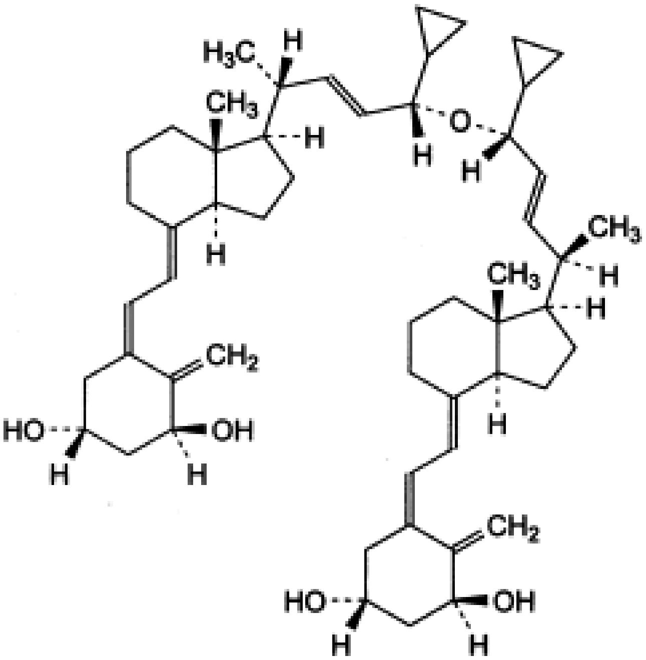
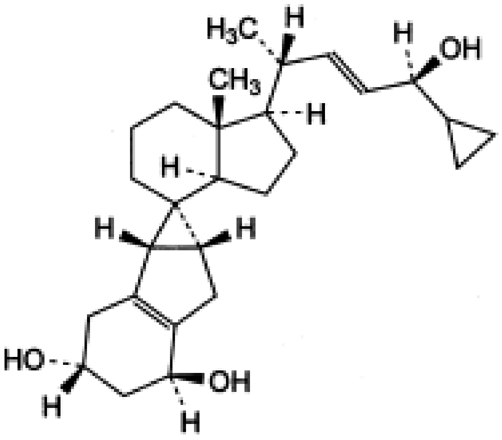
G. 24,24′-oxybis[(5*Z*,7*E*,22*E*,24*S)*-24-cyclopropyl-9,10-secochola-5,7,10(19),22-tetraene-1α, 3β-diol],



H. (5*Z*,7*E*,22*E*,24*R*)-24-cyclopropyl-24-[[(5*Z*,7*E*,22*E*,24*S*)-24-cyclopropyl-1α,3β-dihydroxy-9,10-secochola-5,7,10(19),22-tetraen-24-yl]oxy]-9,10-secochola-5,7,10(19),22-tetraene-1α, 3β-diol,



I. (6*S*,7*R*,8*R*,22*E*,24*S*)-24-cyclopropyl-6,8:7,19-dicyclo-9,10-secochola-5(10),22-diene-1α, 3β,24-triol (suprasterol of calcipotriol).

Ph Eur

Anhydrous Calcium Hydrogen Phosphate

General Notices

(Ph Eur monograph 0981)

$CaHPO_4$ 136.1 *7757-93-9*

Ph Eur

DEFINITION

Content

98.0 per cent to 103.0 per cent.

CHARACTERS

Appearance

White or almost white, crystalline powder, or colourless crystals.

Solubility

Practically insoluble in water and in ethanol (96 per cent). It dissolves in dilute hydrochloric acid and in dilute nitric acid.

IDENTIFICATION

A. Dissolve with heating 0.1 g in 10 ml of *dilute hydrochloric acid R* . Add 2.5 ml of *dilute ammonia R1* shake, and add 5 ml of a 35 g/l solution of *ammonium oxalate R* . A white precipitate is produced.

B. Dissolve 0.1 g in 5 ml of *dilute nitric acid R* , add 2 ml of *ammonium molybdate solution R* and heat at 70 °C for 2 min. A yellow precipitate is produced.

C. It complies with the limits of the assay.

TESTS

Solution S

Dissolve 2.5 g in 20 ml of *dilute hydrochloric acid R* , filter if necessary and add *dilute ammonia R1* until a precipitate is formed. Add just sufficient *dilute hydrochloric acid R* to dissolve the precipitate and dilute to 50 ml with *distilled water R* .

Acid-insoluble substances

Maximum 0.2 per cent.

Dissolve 5.0 g in 40 ml of *water R,* add 10 ml of *hydrochloric acid R* and heat to boiling for 5 min. Cool, then collect the insoluble substances using ashless filter paper. Wash with *water R* until turbidity is no longer produced when *silver nitrate solution R2* is added. Ignite at 600 ± 50 °C. The residue weighs not more than 10 mg.

Carbonates

Shake 0.5 g with 5 ml of *carbon dioxide-free water R* and add 1 ml of *hydrochloric acid R* . No effervescence is produced.

Chlorides

Maximum 0.25 per cent.

Test solution Dissolve 0.20 g in a mixture of 20 ml of *water R* and 13 ml of *dilute nitric acid R* , dilute to 100 ml with *water R* and filter if necessary. Use 50 ml of this solution.

Reference solution To 0.70 ml of *0.01 M hydrochloric acid* , add 6 ml of *dilute nitric acid R* and dilute to 50 ml with *water R* .

Add 1 ml of *silver nitrate solution R2* to the test solution and to the reference solution and mix. After standing for 5 min protected from light, any opalescence in the test solution is not more intense than that in the reference solution.

Fluorides

Maximum 100 ppm.

Potentiometry *(2.2.36, Method II)*.

Chelating solution Dissolve 45 g of *cyclohexylenedinitrilotetra-acetic acid R* in 75 ml of *sodium hydroxide solution R* and dilute to 250 ml with *water R* .

Test solution Dissolve 1.000 g in 4 ml *of hydrochloric acid R1* , add 20 ml of chelating solution, 2.7 ml of *glacial acetic acid R* and 2.8 g of *sodium chloride R* , adjust to pH 5-6 with *sodium hydroxide solution* R and dilute to 50.0 ml with *water R* .

Reference solution Dissolve 4.42 g of *sodium fluoride R* , previously dried at 300 °C for 12 h, in *water R* and dilute to 1000.0 ml with the same solvent. Dilute 50.0 ml of this solution to 500.0 ml with *total-ionic-strength-adjustment buffer R* (200 ppm F).

Indicator electrode Fluoride-selective.

Reference electrode Silver-silver chloride.

Carry out the measurement on 20.0 ml of the test solution. Add at least 3 times 0.10 ml of the reference solution and carry out the measurement after each addition. Calculate the concentration of fluorides using the calibration curve.

Sulphates

Maximum 0.5 per cent.

Test solution Dissolve 0.5 g in a mixture of 5 ml of *water R* and 5 ml of *dilute hydrochloric acid R* and dilute to 100 ml with *water R.* Filter if necessary. To 20 ml of this solution, add 1 ml of *dilute hydrochloric acid R* and dilute to 50 ml with *water R* .

Reference solution To 1.0 ml of *0.005 M sulphuric acid* , add 1 ml of *dilute hydrochloric acid R* and dilute to 50 ml with *water* R. Filter if necessary.

To the test solution and to the reference solution, add 2 ml of a 120 g/l solution of *barium chloride R* and allow to stand for 10 min. Any opalescence in the test solution is not more intense than that in the reference solution.

Arsenic *(2.4.2, Method A)*

Maximum 10 ppm, determined on 2 ml of solution S.

Barium

To 0.5 g, add 10 ml of *water R* and heat to boiling. While stirring, add 1 ml of *hydrochloric acid R* dropwise. Allow to cool and filter if necessary. Add 2 ml of a 10 g/l solution of *dipotassium sulphate R* and allow to stand for 10 min. No turbidity is produced.

Iron *(2.4.9)*

Maximum 400 ppm.

Dilute 0.5 ml of solution S to 10 ml with *water R* .

Heavy metals *(2.4.8)*

Maximum 40 ppm.

Dilute 10 ml of solution S to 20 ml with *water R* . 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R* .

Loss on ignition

6.6 per cent to 8.5 per cent, determined on 1.000 g to constant mass at 800-825 °C.

ASSAY

Dissolve 0.4 g in 12 ml of *dilute hydrochloric acid R* and dilute to 200 ml with *water R* . To 20.0 ml of this solution add 25.0 ml of *0.02 M sodium edetate* , 50 ml of *water R* , 5 ml of *ammonium chloride buffer solution pH 10.7 R* and about 25 mg of *mordant black 11 triturate R*. Titrate the excess of sodium edetate with *0.02 M zinc sulphate* . Carry out a blank titration.

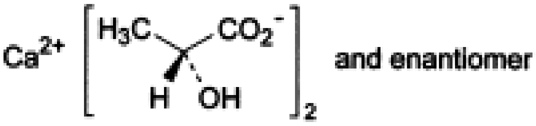
1 ml of *0.02 M sodium edetate* is equivalent to 2.72 mg of $CaHPO_4$.

Ph Eur

Anhydrous Calcium Lactate

General Notices

(Ph Eur monograph 2118)



$C_6H_{10}CaO_6$ 218.2 *814-80-2*

Action and use

Used in treatment of calcium deficiency.

Ph Eur

DEFINITION

Calcium bis(2-hydroxypropanoate) or mixture of calcium (2*R*)-, (2*S*)- and (2*RS*)-2-hydroxypropanoates.

Content

98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance:

White or almost white, crystalline or granular powder.

Solubility

Soluble in water, freely soluble in boiling water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. It complies with the test for loss on drying (see Tests).

B. It gives the reaction of lactates *(2.3.1)* .

C. It gives reaction (b) of calcium *(2.3.1)* .

TESTS

Solution S

Dissolve 5.0 g with heating in *carbon dioxide-free water R* prepared from *distilled water R* , allow to cool and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II *(2.2.1)* and not more intensely coloured than reference solution BY_6 *(2.2.2, Method II)*.

Acidity or alkalinity

To 10 ml of solution S add 0.1 ml of *phenolphthalein solution R* and 0.5 ml of *0.01 M hydrochloric acid* . The solution is colourless. Not more than 2.0 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to pink.

Chlorides *(2.4.4)*

Maximum 200 ppm.

Dilute 5 ml of solution S to 15 ml with *water R* .

Sulphates *(2.4.13)*

Maximum 400 ppm.

Dilute 7.5 ml of solution S to 15 ml with *distilled water R* .

Barium

To 10 ml of solution S add 1 ml of *calcium sulphate solution R* . Allow to stand for 15 min. Any opalescence in the solution is not more intense than that in a mixture of 1 ml of *distilled water R* and 10 ml of solution S.

Iron *(2.4.9)*

Maximum 50 ppm.

Dilute 4 ml of solution S to 10 ml with *water R* .

Magnesium and alkali salts

Maximum 1 per cent.

To 20 ml of solution S add 20 ml of *water R* , 2 g of *ammonium chloride R* and 2 ml of *dilute ammonia R1* . Heat to boiling and rapidly add 40 ml of hot *ammonium oxalate solution R* . Allow to stand for 4 h, dilute to 100.0 ml with *water R* and filter. To 50.0 ml of the filtrate add 0.5 ml of *sulphuric acid R* . Evaporate to dryness and ignite the residue to constant mass at 600 ± 50 °C. The residue weighs a maximum of 5 mg.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying ***(2.2.32)***

Maximum 3.0 per cent, determined on 0.500 g by drying in an oven at 125 °C.

ASSAY

Dissolve 0.200 g in *water R* and dilute to 300 ml with the same solvent. Carry out the complexometric titration of calcium *(2.5.11)*.

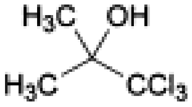
1 ml of *0.1 M sodium edetate* is equivalent to 21.82 mg of $C_6H_{10}CaO_6$.

Ph Eur

Anhydrous Chlorobutanol

General Notices

(Ph Eur monograph 0382)



$C_4H_7Cl_3O$ 177.5 *57-15-8*

Action and use

Disinfectant preservative.

Ph Eur

DEFINITION

1,1,1-Trichloro-2-methylpropan-2-ol.

Content

98.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white crystalline powder or colourless crystals, sublimes readily.

Solubility

Slightly soluble in water, very soluble in ethanol (96 per cent), soluble in glycerol (85 per cent).

mp: about 95 °C (without previous drying).

IDENTIFICATION

A. Add about 20 mg to a mixture of 1 ml of *pyridine R* and 2 ml of *strong sodium hydroxide solution R*. Heat in a water-bath and shake. Allow to stand. The pyridine layer becomes red.

B. Add about 20 mg to 5 ml of *ammoniacal silver nitrate solution R* and warm slightly. A black precipitate is formed.

C. To about 20 mg add 3 ml of *1 M sodium hydroxide* and shake to dissolve. Add 5 ml of *water R* and then, slowly, 2 ml of *iodinated potassium iodide solution R*. A yellowish precipitate is formed.

D. Water (see Tests).

TESTS

Solution S

Dissolve 5 g in *ethanol (96 per cent) R* and dilute to 10 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II *(2.2.1)* and not more intensely coloured than reference solution BY_5 *(2.2.2, Method II)*.

Acidity

To 4 ml of solution S add 15 ml of *ethanol (96 per cent) R* and 0.1 ml of *bromothymol blue solution R1*. Not more than 1.0 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to blue.

Chlorides *(2.4.4)*

Maximum 300 ppm.

Dissolve 0.17 g in 5 ml of *ethanol (96 per cent) R* and dilute to 15 ml with *water R*. When preparing the standard, replace the 5 ml of *water R* by 5 ml of *ethanol (96 per cent) R*.

Water *(2.5.12)*

Maximum 1.0 per cent, determined on 2.00 g.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in 20 ml of *ethanol (96 per cent) R*. Add 10 ml of *dilute sodium hydroxide solution R*, heat in a water-bath for 5 min and cool. Add 20 ml of *dilute nitric acid R*, 25.0 ml of *0.1 M silver nitrate* and 2 ml of *dibutyl phthalate R* and shake vigorously. Add 2 ml of *ferric ammonium sulphate solution R2* and titrate with *0.1 M ammonium thiocyanate* until an orange colour is obtained.

1 ml of *0.1 M silver nitrate* is equivalent to 5.92 mg of $C_4H_7Cl_3O$.

STORAGE

In an airtight container .

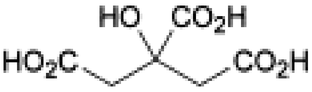
Ph Eur

Anhydrous Citric Acid

General Notices

Citric Acid

(Ph Eur monograph 0455)



$C_6H_8O_7$ 192.1 *77-92-9*

Ph Eur

DEFINITION

2-Hydroxypropane-1,2,3-tricarboxylic acid.

Content

99.5 per cent to 100.5 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder, colourless crystals or granules.

Solubility

Very soluble in water, freely soluble in ethanol (96 per cent).

mp: about 153 °C, with decomposition.

IDENTIFICATION

First identification *B, E.*

Second identification *A, C, D, E.*

A. Dissolve 1 g in 10 ml of *water R*. The solution is strongly acidic *(2.2.4)*.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Dry the substance to be examined and the reference substance at 100-105 °C for 2 h.

Comparison *anhydrous citric acid CRS*.

C. Add about 5 mg to a mixture of 1 ml of *acetic anhydride R* and 3 ml of *pyridine R*. A red colour develops.

D. Dissolve 0.5 g in 5 ml of *water R*, neutralise using *1 M sodium hydroxide* (about 7 ml), add 10 ml of *calcium chloride solution R* and heat to boiling. A white precipitate is formed.

E. Water (see Tests).

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7, BY_7 or GY_7 *(2.2.2, Method II)*.

Dissolve 2.0 g in *water R* and dilute to 10 ml with the same solvent.

Readily carbonisable substances

To 1.0 g in a cleaned test tube add 10 ml of *sulphuric acid R* and immediately heat the mixture in a water-bath at 90 ± 1 °C for 60 min. Cool rapidly immediately afterwards. The solution is not more intensely coloured than a mixture of 1 ml of red primary solution and 9 ml of yellow primary solution *(2.2.2, Method I)*.

Oxalic acid

Maximum 360 ppm, calculated as anhydrous oxalic acid.

Dissolve 0.80 g in 4 ml of *water R*. Add 3 ml of *hydrochloric acid R* and 1 g of *zinc R* in granules. Boil for 1 min. Allow to stand for 2 min. Transfer the supernatant liquid to a test-tube containing 0.25 ml of a 10 g/l solution of *phenylhydrazine hydrochloride R* and heat to boiling. Cool rapidly, transfer to a graduated cylinder and add an equal volume of *hydrochloric acid R* and 0.25 ml of a 50 g/l solution of *potassium ferricyanide R*. Shake and allow to stand for 30 min. Any pink colour in the solution is not more intense than that in a standard prepared at the same time in the same manner using 4 ml of a 0.1 g/l solution of *oxalic acid R*.

Sulphates *(2.4.13)*

Maximum 150 ppm.

Dissolve 2.0 g in *distilled water R* and dilute to 30 ml with the same solvent.

Aluminium *(2.4.17)*

Maximum 0.2 ppm, if intended for use in the manufacture of dialysis solutions.

Prescribed solution Dissolve 20 g in 100 ml of *water R* and add 10 ml of *acetate buffer solution pH 6.0 R*.

Reference solution Mix 2 ml of *aluminium standard solution (2 ppm Al) R*, 10 ml of *acetate buffer solution pH 6.0 R* and 98 ml of *water R*.

Blank solution Mix 10 ml of *acetate buffer solution pH 6.0 R* and 100 ml of *water R.*

Heavy metals *(2.4.8)*

Maximum 10 ppm.

Dissolve 5.0 g in several portions in 39 ml of *dilute sodium hydroxide solution R* and dilute to 50 ml with *distilled water R.* 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

Water ***(2.5.12)***

Maximum 1.0 per cent, determined on 2.000 g.

Sulphated ash ***(2.4.14*****)**

Maximum 0.1 per cent, determined on 1.0 g.

Bacterial endotoxins ***(2.6.14)***

Less than 0.5 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Dissolve 0.550 g in 50 ml of *water R*. Titrate with *1 M sodium hydroxide*, using 0.5 ml of *phenolphthalein solution R* as indicator.

1 ml of *1 M sodium hydroxide* is equivalent to 64.03 mg of $C_6H_8O_7$.

LABELLING

The label states, where applicable, that the substance is intended for use in the manufacture of dialysis solutions.

Ph Eur

Anhydrous Copper Sulphate

General Notices

(Ph Eur monograph 0893)

$CuSO_4$ 159.6 *7758-98-7*

Action and use

Used in treatment of copper deficiency.

Ph Eur

DEFINITION

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

Greenish-grey powder, very hygroscopic.

Solubility

Freely soluble in water, slightly soluble in methanol, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Add several drops of *dilute ammonia R2* to 1 ml of solution S (see Tests). A blue precipitate is formed. On further addition of *dilute ammonia R2* the precipitate dissolves and a dark blue colour is produced.

B. Loss on drying (see Tests).

C. Dilute 1 ml of solution S to 5 ml with *water R*. The solution gives reaction (a) of sulphates *(2.3.1)*.

TESTS

Solution S

Dissolve 1.6 g in *water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)*.

Chlorides ***(2.4.4)***

Maximum 150 ppm.

Dilute 10 ml of solution S to 15 ml with *water R.*

Iron

Maximum 1.50 × 10^2 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Dissolve 0.32 g in 10 ml of *water R*, add 2.5 ml of *lead-free nitric acid R* and dilute to 25.0 ml with *water R.*

Reference solutions Prepare the reference solutions using *iron standard solution (20 ppm Fe) R*, adding 2.5 ml of *lead-free nitric acid R* and diluting to 25.0 ml with *water R*.

Source Iron hollow-cathode lamp.

Wavelength 248.3 nm.

Atomisation device Air-acetylene flame.

Copper may form explosive acetylides with acetylene. Therefore, clean the burner thoroughly before any residues become dry.

Lead

Maximum 80.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Dissolve 1.6 g in 10 ml of *water R*, add 2.5 ml of *lead-free nitric acid R* and dilute to 25.0 ml with *water R.*

Reference solutions Prepare the reference solutions using *lead standard solution (100 ppm Pb) R*, adding 2.5 ml of *lead-free nitric acid R* and diluting to 25.0 ml with *water R.*

Source Lead hollow-cathode lamp.

Wavelength 217.0 nm.

Atomisation device Air-acetylene flame.

Copper may form explosive acetylides with acetylene. Therefore, clean the burner thoroughly before any residues become dry.

Loss on drying ***(2.2.32)***

Maximum 1.0 per cent, determined on 0.500 g by drying in an oven at 250 ± 10 °C.

ASSAY

Dissolve 0.125 g in 50 ml of *water R*. Add 2 ml of *sulphuric acid R* and 3 g of *potassium iodide R*. Titrate with *0.1 M sodium thiosulphate*, using 1 ml of *starch solution R*, added towards the end of the titration.

1 ml of *0.1 M sodium thiosulphate* is equivalent to 15.96 mg of $CuSO_4$.

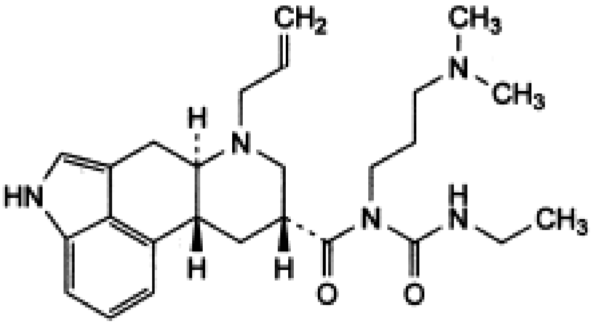
STORAGE

In an airtight container .

Cabergoline

General Notices

(Ph Eur monograph 1773)



$C_{26}H_{37}N_5O_2$ 451.6 *81409-90-7*

Action and use

Dopamine D2 receptor agonist.

Ph Eur

DEFINITION

1-Ethyl-3-[3-(dimethylamino)propyl]-3-[[(6a*R*,9*R*,10a*R*)-7-(prop-2-enyl)-4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-*fg*]quinolin-9-yl]carbonyl]urea.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in ethanol (96 per cent), very slightly soluble in hexane. It is slightly soluble in *0.1 M hydrochloric acid* .

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry *(2.2.24).*

Comparison *cabergoline CRS.*

If the spectra obtained in the solid state show differences, dissolve 50 mg of the substance to be examined and 50 mg of the reference substance separately in 1 ml of *ethanol (96 per cent) R* , evaporate to dryness and record new spectra using the residues.

TESTS

Specific optical rotation *(2.2.7)*

- 77 to - 83 (anhydrous substance).

Dissolve 0.100 g in *ethanol (96 per cent) R* and dilute to 50.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)* . *Prepare the solutions immediately before use and protected from light.*

Test solution Dissolve 30.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (a) Dissolve 30.0 mg of *cabergoline CRS* in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 10.0 ml of this solution to 50.0 ml with the mobile phase.

Reference solution (c) Suspend 50 mg of the substance to be examined in 10 ml of *0.1 M sodium hydroxide* . Stir for about 15 min. To 1 ml of the suspension add 1 ml of *0.1 M hydrochloric acid* and dilute to 10 ml with the mobile phase. Sonicate until dissolution is complete. The main degradation product obtained is impurity A.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm,

— *stationary phase: octadecylsilyl silica gel for chromatography R* (10 µm).

Mobile phase Mix 16 volumes of *acetonitrile R* and 84 volumes of a freshly prepared 6.8 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 2.0 with *phosphoric acid R* . Add 0.2 volumes of *triethylamine R* .

Flow rate 1.2 ml/min.

Detection Spectrophotometer at 280 nm.

Injection 20 µl of the test solution and reference solutions (b) and (c).

Run time 4 times the retention time of cabergoline.

Relative retention With reference to cabergoline (retention time = about 12 min): impurity D = about 0.3; impurity B = about 0.6; impurity A = about 0.8; impurity C = about 2.9.

System suitability   Reference solution (c):

— *resolution*: minimum 3.0 between the peaks due to cabergoline and impurity A.

Limits:

— *impurities A, C*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

— *impurities B, D*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *any other impurity*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *total*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.8 per cent);

— *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Water *(2.5.12)*

Maximum 0.5 per cent, determined on 1.000 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

Injection   Test solution and reference solution (a).

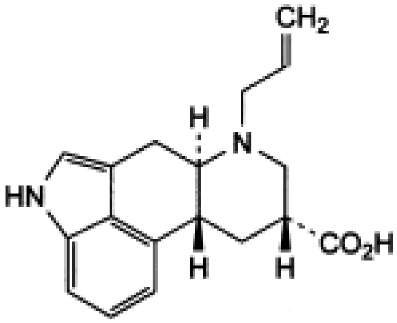
Calculate the percentage content of $C_{26}H_{37}N_5O_2$ from the areas of the peaks and the declared content of *cabergoline CRS.*

STORAGE

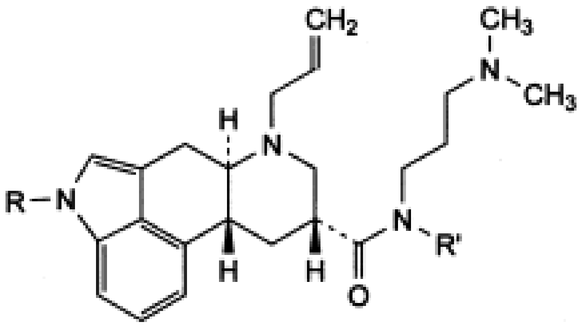
Protected from light.

IMPURITIES

Specified impurities   *A, B, C, D.*



A. (6a*R*,9*R*,10a*R*)-7-(prop-2-enyl)-4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-*fg*]quinoline-9-carboxylic acid,



B. R = CO-NH-C_2H_5, R′ = H: (6a*R*,9*R,*10a*R*)-*N* ^{9}-[3-(dimethylamino)propyl]-*N* ^{4}-ethyl-7-(prop-2-enyl)-6a,7,8,9,10,10a-hexahydroindolo[4,3-*fg*]quinoline-4,9(6*H*)-dicarboxamide,

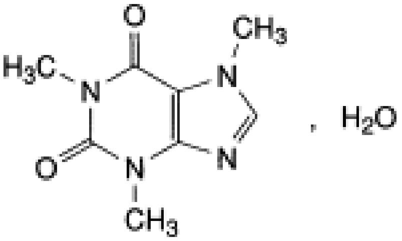
Ph Eur

Caffeine Hydrate

General Notices

(Caffeine Monohydrate, Ph Eur monograph 0268)



$C_8H_{10}N_4O_2,H_2O$ 212.2   5743-12-4

Action and use

Central nervous system stimulant.

Ph Eur

DEFINITION

Caffeine monohydrate contains not less than 98.5 per cent and not more than the equivalent of 101.5 per cent of 1,3,7-trimethyl-3,7-dihydro-1*H*-purine-2,6-dione, calculated with reference to the dried substance.

CHARACTERS

White or almost white, crystalline powder or silky crystals, sublimes readily, sparingly soluble in water, freely soluble in boiling water, slightly soluble in ethanol. It dissolves in concentrated solutions of alkali benzoates or salicylates.

IDENTIFICATION

First identification *A, B, E.*

Second identification *A, C, D, E, F.*

A. Melting point *(2.2.14)* 234 °C to 239 °C, determined after drying at 100-105 °C.

B. Dry the substance to be examined at 100-105 °C. Examine by infrared absorption spectrophotometry *(2.2.24)* , comparing with the spectrum obtained with *caffeine CRS* .

C. To 2 ml of a saturated solution add 0.05 ml of *iodinated potassium iodide solution R*. The solution remains clear. Add 0.1 ml of *dilute hydrochloric acid R*. A brown precipitate is formed. Neutralise with *dilute sodium hydroxide solution R*. The precipitate dissolves.

D. In a glass-stoppered tube, dissolve about 10 mg in 0.25 ml of a mixture of 0.5 ml of *acetylacetone R* and 5 ml of *dilute sodium hydroxide solution R*. Heat in a water-bath at 80 °C for 7 min. Cool and add 0.5 ml of *dimethylaminobenzaldehyde solution R2*. Heat again in a water-bath at 80 °C for 7 min. Allow to cool and add 10 ml of *water R*. An intense blue colour develops.

E. It complies with the test for loss on drying (see Tests).

F. It gives the reaction of xanthines *(2.3.1)*.

TESTS

Solution S.

Dissolve 0.5 g with heating in 50 ml of *carbon dioxide-free water R* prepared from *distilled water R,* cool and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Acidity

To 10 ml of solution S add 0.05 ml of *bromothymol blue solution R1*. The solution is green or yellow. Not more than 0.2 ml of 0*.01 M sodium hydroxide* is required to change the colour of the indicator to blue.

Related substances

Examine by thin-layer chromatography *(2.2.27)* using *silica gel GF$_{254}$ R* as the coating substance.

Test solution Dissolve 0.2 g of the substance to be examined in a mixture of 4 volumes of *methanol R* and 6 volumes of *methylene chloride R* and dilute to 10 ml with the same mixture of solvents.

Reference solution Dilute 0.5 ml of the test solution to 100 ml with a mixture of 4 volumes of *methanol R* and 6 volumes of *methylene chloride R*.

Apply to the plate 10 µl of each solution. Develop over a path of 15 cm using a mixture of 10 volumes of *concentrated ammonia R*, 30 volumes of *acetone R*, 30 volumes of *methylene chloride R* and 40 volumes of *butanol R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

Sulphates ***(2.4.13)***

15 ml of solution S complies with the limit test for sulphates (500 ppm). Prepare the standard using a mixture of 7.5 ml of *sulphate standard solution (10 ppm SO_4) R* and 7.5 ml of *distilled water R.*

Heavy metals *(2.4.8)*

1.0 g complies with limit test C for heavy metals (20 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R* .

Loss on drying *(2.2.32)*

5.0 per cent to 9.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 1 h.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.170 g, previously dried at 100-105 °C, with heating in 5 ml of *anhydrous acetic acid R* . Allow to cool, add 10 ml of *acetic anhydride R* and 20 ml of *toluene R* . Titrate with *0.1 M perchloric acid* , determining the end-point potentiometrically *(2.2.20)* .

1 ml of *0.1 M perchloric acid* is equivalent to 19.42 mg of $C_8H_{10}N_4O_2$.

IMPURITIES

Specified impurities *A.*

Other detectable impurities *B, C.*

A. theophylline,

Ph Eur

DEFINITION

1,3,7-Trimethyl-3,7-dihydro-1*H*-purine-2,6-dione.

Content

98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or silky, white or almost white, crystals.

Solubility

Sparingly soluble in water, freely soluble in boiling water, slightly soluble in ethanol (96 per cent). It dissolves in concentrated solutions of alkali benzoates or salicylates.

It sublimes readily.

IDENTIFICATION

First identification A, B, E.

Second identification A, C, D, E, F.

A. Melting point (*2.2.14*): 234 °C to 239 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison caffeine CRS.

C. To 2 ml of a saturated solution add 0.05 ml of *iodinated potassium iodide solution R*. The solution remains clear. Add 0.1 ml of *dilute hydrochloric acid R*; a brown precipitate is formed. Neutralise with *dilute sodium hydroxide solution R*; the precipitate dissolves.

D. In a ground-glass-stoppered tube, dissolve about 10 mg in 0.25 ml of a mixture of 0.5 ml of *acetylacetone R* and 5 ml of *dilute sodium hydroxide solution R*. Heat in a water-bath at 80 °C for 7 min. Cool and add 0.5 ml of *dimethylaminobenzaldehyde solution R2*. Heat again in a water-bath at 80 °C for 7 min. Allow to cool and add 10 ml of *water R*; an intense blue colour develops.

E. Loss on drying (see Tests).

F. It gives the reaction of xanthines (*2.3.1*).

TESTS

Solution S

Dissolve 0.5 g with heating in 50 ml of *carbon dioxide-free water R* prepared from *distilled water R*, cool and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Acidity

To 10 ml of solution S add 0.05 ml of *bromothymol blue solution R1*; the solution is green or yellow. Not more than 0.2 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to blue.

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 0.100 g of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (a) Dilute 2.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve 5 mg of *caffeine for system suitability CRS* (containing impurities A, C, D and F) in the mobile phase and dilute to 5 ml with the mobile phase. Dilute 2 ml of this solution to 10 ml with the mobile phase.

Column:

— *size*: *l* = 0.15 m, Ø = 4.6 mm;

— *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Dissolve 1.64 g of *anhydrous sodium acetate R* in *water R* and dilute to 2000 ml with the same solvent. Adjust 1910 ml of this solution to pH 4.5 with *glacial acetic acid R* and add 50 ml of *acetonitrile R* and 40 ml of *tetrahydrofuran R.*

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 275 nm.

Injection 10 µl.

Run time 1.5 times the retention time of caffeine.

Identification of impurities Use the chromatogram supplied with *caffeine for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, C, D and F.

Retention time Caffeine = about 8 min.

System suitability Reference solution (b):

— *resolution*: minimum 2.5 between the peaks due to impurities C and D and minimum 2.5 between the peaks due to impurities F and A.

Limits:

— *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Sulphates (*2.4.13*)

Maximum 500 ppm, determined on 15 ml of solution S.

Prepare the standard using a mixture of 7.5 ml of *sulphate standard solution (10 ppm SO_4) R* and 7.5 ml of *distilled water R.*

Heavy metals (*2.4.8*)

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying (*2.2.32*)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 1 h.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.170 g with heating in 5 ml of *anhydrous acetic acid R*. Allow to cool, add 10 ml of *acetic anhydride R* and 20 ml of *toluene R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 19.42 mg of $C_8H_{10}N_4O_2$.

IMPURITIES

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. Ph Eur

Calamine

General Notices

Prepared Calamine

Action and use

Antipruritic.

Preparations

Aqueous Calamine Cream

Calamine Lotion

Calamine Ointment

Calamine and Coal Tar Ointment

DEFINITION

Calamine is a basic zinc carbonate suitably coloured with iron(III) oxide.

CHARACTERISTICS

An amorphous, impalpable, pink or reddish brown powder, the colour depending on the variety and amount of iron(III) oxide present and the process by which it is incorporated.

Practically insoluble in *water*. It dissolves with effervescence in *hydrochloric acid* .

IDENTIFICATION

A. Yields the reactions characteristic of *carbonates* , Appendix VI.

B. To 2 g add 5 ml of *hydrochloric acid* and heat to boiling; if necessary, add *hydrochloric acid* drop wise until a bright yellow solution is obtained. Cool and add *13.5 M ammonia* until the first sign of precipitate (solution A). The solution yields reaction B characteristic of *iron salts* , Appendix VI. Dilute 1 ml of solution A to 5 ml with *water*; the solution yields the reaction characteristic of *zinc salts* , Appendix VI.

TESTS

Calcium

Dissolve 0.50 g in a mixture of 10 ml of *water* and 2.5 ml of *glacial acetic acid* and filter. To 0.5 ml of the filtrate add 15 ml of *5 M ammonia* and 2 ml of a 2.5% w/v solution of *ammonium oxalate* and allow to stand for 2 minutes. The solution remains clear.

Soluble barium salts

To the remainder of the filtrate obtained in the test for Calcium add 2 ml of *1 M sulphuric acid* and allow to stand for 5 minutes. The solution remains clear.

Lead

Not more than 150 ppm when determined by *atomic absorption spectrophotometry*, Appendix II D, Method II, measuring at 283.3 nm or 217 nm and using an air-acetylene flame. Carefully add 5 g of the substance being examined to 25 ml of *hydrochloric acid* and allow to stand for 18 hours. Add 5 ml of *nitric acid* and sufficient *water* to produce 200 ml. Use *lead standard solution (100 ppm Pb)* suitably diluted with a 3.5% v/v solution of *nitric acid* to prepare the standard solution.

Chloride

Dissolve 0.15 g in *water* with the addition of 1 ml of *nitric acid*, filter and dilute to 30 ml with *water*. The resulting solution complies with the *limit test for chlorides*, Appendix VII (0.07%).

Sulphate

Dissolve 0.1 g in *water* with the addition of 3 ml of *2 M hydrochloric acid*, filter and dilute to 60 ml with *water*. The resulting solution complies with the *limit test for sulphates*, Appendix VII (0.6%).

Ethanol-soluble dyes

Shake 1.0 g with 10 ml of *ethanol (90%)* and filter. The filtrate is *colourless*, Appendix IV B, Method II.

Matter insoluble in hydrochloric acid

Dissolve 1 g in 20 ml of warm *2 M hydrochloric acid* and filter. The residue, when washed with *water* and dried to constant weight at 105°, weighs not more than 10 mg.

Water-soluble dyes

Shake 1.0 g with 10 ml of *water* and filter. The filtrate is *colourless*, Appendix IV B, Method II.

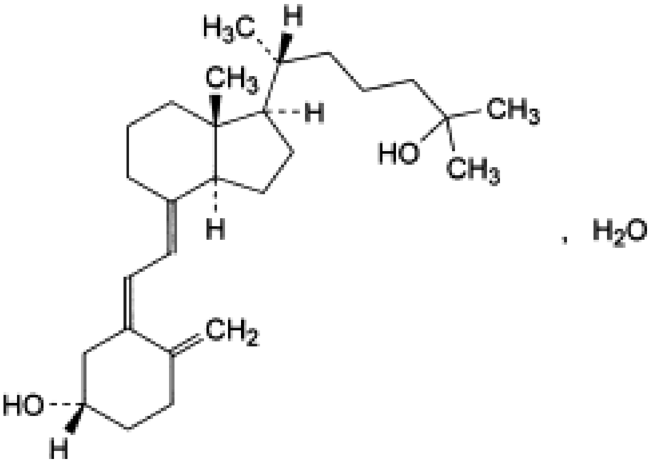
Residue on ignition

68.0 to 74.0%, when ignited at a temperature not lower than 900° until, after further ignition, two successive weighings do not differ by more than 0.2% of the weight of the residue. Use 1 g.

Calcifediol

General Notices

(Ph Eur monograph 1295)



$C_{27}H_{44}O_2,H_2O$ 418.7 *63283-36-3*

Action and use

Vitamin D analogue.

Ph Eur

DEFINITION

(5*Z*,7*E*)-9,10-Secocholesta-5,7,10(19)-triene-3β,25-diol monohydrate.

Content

97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white crystals.

Solubility

Practically insoluble in water, freely soluble in ethanol (96 per cent), soluble in fatty oils.

It is sensitive to air, heat and light.

A reversible isomerisation to pre-calcifediol takes place in solution, depending on temperature and time. The activity is due to both compounds.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Preparation Mix 2 mg of the substance to be examined and 225 mg of *potassium bromide R* .

Comparison *Ph. Eur. reference spectrum of calcifediol.*

B. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

TESTS

Related substances

Liquid chromatography *(2.2.29)* : use the normalisation procedure. *Carry out the test as rapidly as possible, avoiding exposure to actinic light and air.*

Test solution Dissolve 1.0 mg of the substance to be examined without heating in 10.0 ml of the mobile phase.

Reference solution (a) Dissolve 1.0 mg of *calcifediol CRS* without heating in 10.0 ml of the mobile phase.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 100.0 ml with the mobile phase.

Reference solution (c) Heat 2 ml of reference solution (a) in a water-bath at 80 °C under a reflux condenser for 2 h and cool.

Column:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase: octylsilyl silica gel for chromatography R1* (5 µm).

Mobile phase *water R, methanol R* (200:800 *V/V*).

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 265 nm.

Injection 50 µl of the test solution and reference solutions (b) and (c).

Run time Twice the retention time of calcifediol.

Relative retention With reference to calcifediol (retention time = about 11 min): pre-calcifediol = about 1.3.

System suitability Reference solution (c):

— *resolution*: minimum 5.0 between the peaks due to pre-calcifediol and calcifediol; if necessary, adjust the proportions of the constituents in the mobile phase.

Limits:

— *impurities A, B, C, D*: for each impurity, maximum 0.5 per cent;

— *total*: maximum 1.0 per cent;

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent); disregard the peak due to pre-alfacalcidiol.

Water ***(2.5.32)***

3.8 per cent to 5.0 per cent, determined on 10.0 mg.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Injection The test solution and reference solutions (a) and (c).

System suitability Reference solution (c):

— *repeatability*: maximum relative standard deviation of 1 per cent for the peak due to calcifediol after 6 injections.

Calculate the percentage content of $C_{27}H_{44}O_2$ from the declared content of *calcifediol CRS* .

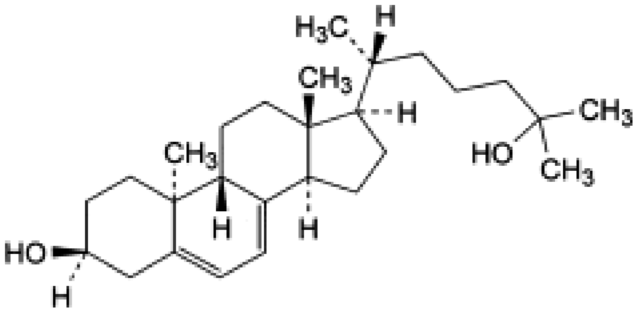
STORAGE

Under nitrogen, in an airtight container , protected from light, at a temperature of 2 °C to 8 °C.

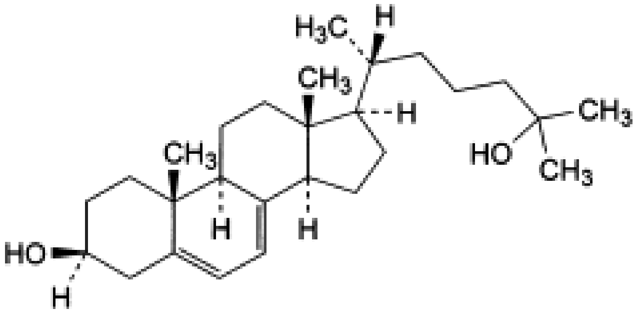
The contents of an opened container are to be used immediately.

IMPURITIES

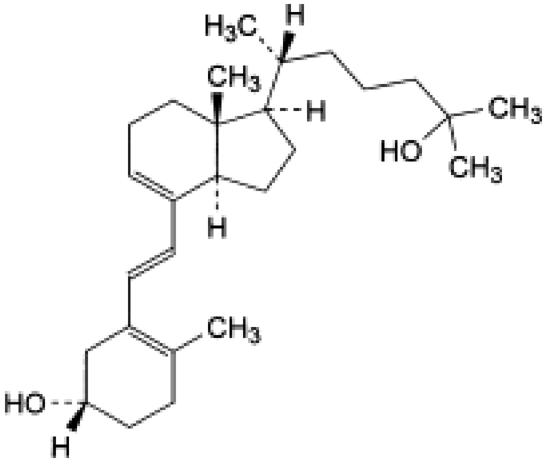
Specified impurities *A, B, C, D.*



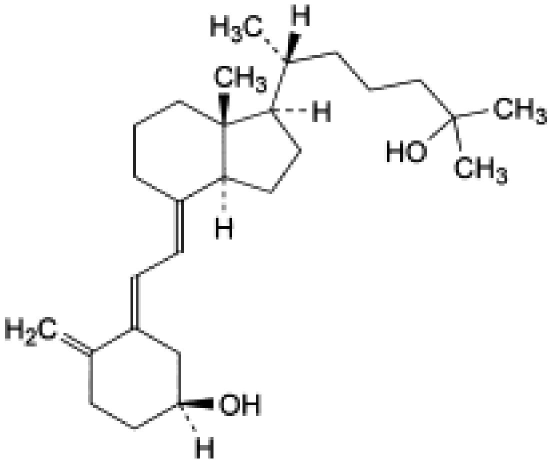
A. 9β,10α-cholesta-5,7-diene-3β,25-diol,



B. cholesta-5,7-diene-3β,25-diol,



C. (6*E*)-9,10-secocholesta-5(10),6,8-triene-3β,25-diol,



D. (5*E*,7*E*)-9,10-secocholesta-5,7,10(19)-triene-3β,25-diol.

(5*Z*,7*E*,22*E*,24*S*)-24-Cyclopropyl-9,10-secochola-5,7,10(19),22-tetraene-1α,3β,24-triol monohydrate.

Content:

95.5 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in ethanol (96 per cent), slightly soluble in methylene chloride.

It is sensitive to light.

A reversible isomerisation to pre-calcipotriol takes place in solution, depending on temperature and time. The activity is due to both compounds.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *Ph. Eur. reference spectrum of calcipotriol monohydrate.*

B. Water (see Tests).

Carry out the tests for related substances and the assay as rapidly as possible and protected from actinic light and air.

TESTS

Related substances

A. Thin-layer chromatography *(2.2.27).*

Solution A To 1 ml of *triethylamine R* add 9 ml of *chloroform R* .

Test solution Dissolve 1 mg of the substance to be examined in 100 µl of solution A.

Reference solution (a) To 10 µl of the test solution add 990 µl of solution A.

Reference solution (b) To 250 µl of reference solution (a) add 750 µl of solution A.

Reference solution (c) To 100 µl of reference solution (a) add 900 µl of solution A.

Reference solution (d) Place 2 mg of the substance to be examined in a vial and dissolve in 200 µl of solution A. Close the vial and keep it in a water bath at 60 °C for 2 h.

Plate *TLC silica gel* F_{254} *plate R* .

Mobile phase *2-methylpropanol R, methylene chloride R* (20:80 *V/V*).

Application 10 µl of the test solution and reference solutions (b), (c) and (d).

Development Over 2/3 of the plate.

Drying In air, then at 140 °C for 10 min.

Detection Spray the hot plate with an *alcoholic solution of sulphuric acid R* , dry at 140 °C for not more than 1 min and examine in ultraviolet light at 366 nm.

Relative retention With reference to calcipotriol (R_F = about 0.4): impurity G = about 0.4; impurity H = about 0.4; pre-calcipotriol = about 0.9; impurity A = about 1.2.

System suitability Reference solution (d):

— the chromatogram shows a secondary spot due to pre-calcipotriol.

Limits:

— *impurity A*: any spot due to impurity A is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.25 per cent),

— *impurities G, H*: any spot due to impurity G or H is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.25 per cent for the sum),

— *any other impurity*: any other spot is not more intense than the spot in the chromatogram obtained with reference solution (c) (0.1 per cent).

B. Liquid chromatography *(2.2.29)* .

Solution A Dissolve 1.32 g of *ammonium phosphate R* in *water R* and dilute to 10.0 ml with the same solvent.

Solvent mixture solution A, *water R, methanol R* (3:297:700 *V/V/V*).

Test solution (a) Dissolve 2.00 mg of the substance to be examined in the solvent mixture and dilute to 5.0 ml with the solvent mixture.

Test solution (b) Dissolve 2.00 mg of the substance to be examined in the solvent mixture and dilute to 20.0 ml with the same solvent mixture.

Reference solution (a) Dilute 1.0 ml of test solution (a) to 100.0 ml with the solvent mixture.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 10.0 ml with the solvent mixture.

Reference solution (c) Dissolve 1.0 mg of *calcipotriol monohydrate CRS* (containing impurities B, C and D) in the solvent mixture and dilute to 2.5 ml with the solvent mixture.

Reference solution (d) Dissolve 2.00 mg of *calcipotriol monohydrate CRS* in the solvent mixture and dilute to 20.0 ml with the solvent mixture.

Column:

— *size*: *l* = 0.10 m, Ø = 4.0 mm,

— *stationary phase: octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase *water R, methanol R* (30:70 *V/V*).

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 264 nm.

Injection 20 µl of test solution (a) and reference solutions (a), (b) and (c).

Run time Twice the retention time of calcipotriol.

Relative retention With reference to calcipotriol (retention time = about 13.5 min): impurity B = about 0.86; impurity C = about 0.92; impurity D = about 1.3.

System suitability Reference solution (c):

— *peak-to-valley ratio* : minimum 1.5, where H_p = height above the baseline of the peak due to impurity C and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to calcipotriol,

— the chromatogram obtained is similar to the chromatogram supplied with *calcipotriol monohydrate CRS.*

Limits:

— *impurity B:* not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),

— *impurities C, D*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent),

— *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),

— *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (2.5 per cent),

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Water ***(2.5.12)***

3.3 per cent to 5.0 per cent, determined on 0.100 g .

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

Injection Test solution (b) and reference solution (d).

Calculate the percentage content of $C_{27}H_{40}O_3$ from the areas of the peaks and the declared content of *calcipotriol monohydrate CRS*.

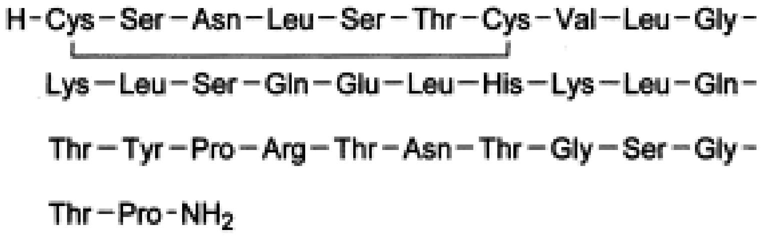
Calcitonin (Salmon)

General Notices

(Ph Eur monograph 0471)



$C_{145}H_{240}N_{44}O_{48}S_2$ 3432 *47931-85-1*

Action and use

Hormone.

Preparation

Calcitonin (Salmon) Injection

Ph Eur

DEFINITION

Polypeptide having the structure determined for salmon calcitonin I. It lowers the calcium concentration in plasma of mammals by diminishing the rate of bone resorption. It is obtained by chemical synthesis or by a method based on recombinant DNA (rDNA) technology. It is available as an acetate.

Content

90.0 per cent to 105.0 per cent of the peptide $C_{145}H_{240}N_{44}O_{48}S_2$ (anhydrous and acetic acid-free substance).

By convention, for the purpose of labelling calcitonin (salmon) preparations, 1 mg of calcitonin (salmon) ($C_{145}H_{240}N_{44}O_{48}S_2$) is equivalent to 6000 IU of biological activity.

PRODUCTION

The following requirements apply only to calcitonin (salmon) produced by a method based on *rDNA technology.*

Prior to release the following tests are carried out on each batch of final bulk product unless exemption has been granted by the competent authority.

Host-cell-derived proteins

The limit is approved by the competent authority.

Host-cell or vector-derived DNA

The limit is approved by the competent authority.

CHARACTERS

Appearance

White or almost white powder.

Solubility

Freely soluble in water.

IDENTIFICATION

A. examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with the reference solution.

The following requirement applies only to calcitonin (salmon) obtained by chemical synthesis.

B. Amino acid analysis *(2.2.56).*

Express the content of each amino acid in moles. Calculate the relative proportions of the amino acids taking as equivalent to 1 the sum, divided by 20, of the number of moles of aspartic acid, glutamic acid, proline, glycine, valine, leucine, histidine, arginine and lysine. The values fall within the following limits: aspartic acid: 1.8 to 2.2; glutamic acid: 2.7 to 3.3; proline: 1.7 to 2.3; glycine: 2.7 to 3.3; valine: 0.9 to 1.1; leucine: 4.5 to 5.3; histidine: 0.9 to 1.1; arginine: 0.9 to 1.1; lysine: 1.8 to 2.2; serine: 3.2 to 4.2; threonine: 4.2 to 5.2; tyrosine: 0.7 to 1.1; half-cystine: 1.4 to 2.1.

The following requirement applies only to calcitonin (salmon) produced by a method based on rDNA technology.

C. Peptide mapping *(2.2.55)* .

SELECTIVE CLEAVAGE OF THE PEPTIDE BONDS

Test solution Prepare a 1 mg/ml solution of the substance to be examined. Transfer 1.0 ml to a clean tube. Add 100 µl of *1 M tris-hydrochloride buffer solution pH 8.0 R* and 20 µl of a freshly prepared 1.0 mg/ml solution of *trypsin for peptide mapping R* . Allow to stand at 2-8 °C for 16-20 h. Stop the reaction by adding 10 µl of a 50 per cent *V/V* solution of *trifluoroacetic acid R* . Cap the vial and mix. Centrifuge the vials to remove air bubbles.

Reference solution Prepare at the same time and in the same manner as for the test solution but using *calcitonin (salmon) CRS* instead of the substance to be examined.

CHROMATOGRAPHIC SEPARATION

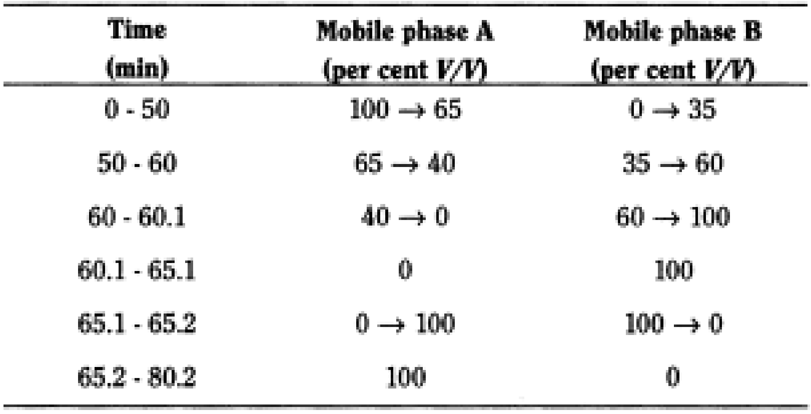
Liquid chromatography *(2.2.29)* .

Column:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R (5 µm) with a pore size of 30 nm.*

Mobile phase:

- *mobile phase A*: mix 1 ml of *trifluoroacetic acid R* and 1000 ml of *water R* ; filter and degas;
- *mobile phase B*: mix 0.850 ml of *trifluoroacetic acid R* , 200 ml of *water R* and 800 ml of *acetonitrile for chromatography R* ; filter and degas;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 50	100 → 65	0 → 35
50 - 60	65 → 40	35 → 60
60 - 60.1	40 → 0	60 → 100
60.1 - 65.1	0	100
65.1 - 65.2	0 → 100	100 → 0
65.2 - 80.2	100	0

Flow rate 1.2 ml/min.

Detection Spectrophotometer at 214 nm.

Equilibration At initial conditions for at least 15 min. Carry out a blank run using the above-mentioned gradient.

Injection 20 µl.

System suitability The chromatograms obtained with the test solution and the reference solution are qualitatively similar to the chromatogram of calcitonin (salmon) digest supplied with *calcitonin (salmon) CRS.*

Results The profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with the reference solution: the retention times of the fragment peaks in the chromatogram obtained with the test solution are within 5 per cent of the retention times of the fragments obtained with the reference solution; the peak area ratios of the fragment peaks in the chromatogram obtained with the test solution, normalised to the area of peak T_2, are within 5 per cent of the corresponding peak ratios in the chromatogram obtained with the reference solution.

TESTS

Acetic acid *(2.5.34)*

4.0 per cent to 15.0 per cent.

Test solution Dissolve 10.0 mg of the substance to be examined in a mixture of 5 volumes of mobile phase B and 95 volumes of mobile phase A and dilute to 10.0 ml with the same mixture of mobile phases.

Related substances

Liquid chromatography *(2.2.29)* : use the normalisation procedure.

The following requirement applies to calcitonin (salmon), whether obtained by chemical synthesis or by a method based on rDNA technology.

A. *Test solution*

Prepare a 1.0 mg/ml solution of the substance to be examined in mobile phase A.

Reference solution Dissolve the contents of a vial of *calcitonin (salmon) CRS* in mobile phase A to obtain a concentration of 1.0 mg/ml.

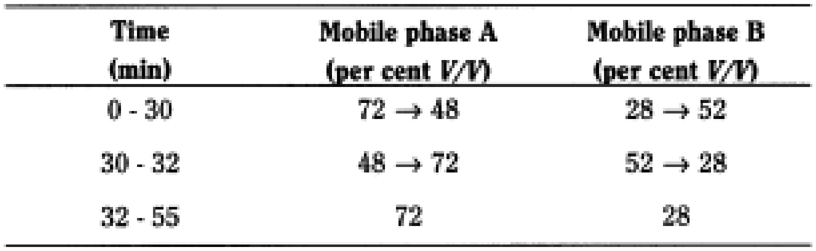
Resolution solution Dissolve the contents of a vial of *N-acetyl-Cys ^{1} -calcitonin CRS* in 400 µl of mobile phase A and add 100 µl of the test solution.

Column:
— *size*: *l* = 0.25 m, Ø = 4.6 mm;
— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm);
— *temperature*: 65 °C.

Mobile phase

— *mobile phase A*: dissolve 3.26 g of *tetramethylammonium hydroxide R* in 900 ml of *water R* , adjust to pH 2.5 with *phosphoric acid R* and mix with 100 ml of *acetonitrile for chromatography R* ; filter and degas;

— *mobile phase B*: dissolve 1.45 g of *tetramethylammonium hydroxide R* in 400 ml of *water R* , adjust to pH 2.5 with *phosphoric acid* R and mix with 600 ml of acetonitrile for *chromatography R;* filter and degas;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 30	72 → 48	28 → 52
30 - 32	48 → 72	52 → 28
32 - 55	72	28

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 20 µl.

Relative retention With reference to calcitonin (salmon) (retention time = about 20 min):

impurity B = about 0.8; impurity C = about 0.9; impurity D = about 1.05; impurity A = about 1.15.

System suitability Resolution solution:

— *resolution*: minimum 5.0 between the peaks due to calcitonin (salmon) and impurity A,

— *symmetry factor* : maximum 2.5 for the peak due to impurity A .

Limits:

— *impurities A, B, C, D*: for each impurity, maximum 3.0 per cent; other unidentified, specified impurities may occur that co-elute with impurities A, B, C and D; the acceptance criterion applies irrespective of whether these impurities co-elute;

— *total*: maximum 5.0 per cent;

— *disregard limit*: 0.1 per cent.

The following requirement applies only to calcitonin (salmon) produced by a method based on rDNA technology.

B. *Test solution*. Prepare a 0.5 mg/ml solution of the substance to be examined. To 1.0 ml of this solution add 100 µl of *0.25 M citrate buffer solution pH 3.0 R*.

Resolution solution Prepare a 1 mg/ml solution of the substance to be examined. Mix 1 volume of the solution and 1 volume of *calcitonin-Gly CRS*. To 1.0 ml of this mixture add 100 µl of *0.25 M citrate buffer solution pH 3.0 R.*

Column:

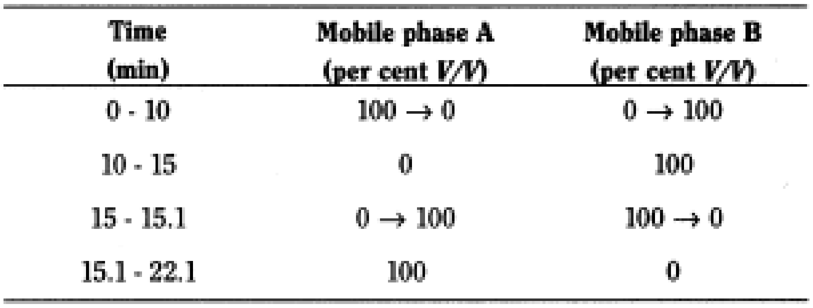
— *size*: *l* = 0.20 m, Ø = 4.6 mm;

— *stationary phase:* a suitable polysulphoethylaspartamide ion-exchange gel (5 µm).

Mobile phase:

— *mobile phase A*: mix 15 volumes of *acetonitrile for chromatography R* and 85 volumes of a 2.72 g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 5.0 with a 600 g/l solution of *potassium hydroxide R* ;

— *mobile phase B*: mix 15 volumes of *acetonitrile for chromatography R* and 85 volumes of a solution containing 2.72 g/l of *potassium dihydrogen phosphate R* and 29.22 g/l of *sodium chloride R* adjusted to pH 4.6 with a 600 g/l solution of *potassium hydroxide R;*



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 10	100 → 0	0 → 100
10 - 15	0	100
15 - 15.1	0 → 100	100 → 0
15.1 - 22.1	100	0

Flow rate 1.2 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 50 µl; rinse the injector with a 40 per cent *V/V* solution of *acetonitrile for chromatography R* .

Relative retention With reference to calcitonin (salmon) (retention time = about 9 min):

impurity G = about 0.4; impurity F = about 0.6; impurity E = about 0.9.

System suitability Resolution solution:

— *resolution*: minimum 3.0 between the peaks due to impurity E and calcitonin (salmon).

Limits:

— *impurity E*: maximum 0.6 per cent;

— *impurities F, G*: for each impurity, maximum 0.2 per cent.

Water ***(2.5.32)***

Maximum 10.0 per cent.

Acetic acid and water

Maximum 20 per cent, calculated by adding together the percentage contents of acetic acid and water determined by the methods described above.

Bacterial endotoxins ***(2.6.14)***

Less than 25 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances. Use method A for calcitonin (salmon) obtained by chemical synthesis and method B for calcitonin (salmon) obtained by a method based on rDNA technology.

Calculate the content of calcitonin (salmon) ($C_{145}H_{240}N_{44}O_{48}S_2$) from the area of the principal peak in each of the chromatograms obtained with the test solution and the reference solution and the declared content of $C_{145}H_{240}N_{44}O_{48}S_2$ in *calcitonin (salmon) CRS* . Proceed with tangential integration of the peak areas.

STORAGE

Protected from light at a temperature between 2 °C and 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-proof container .

LABELLING

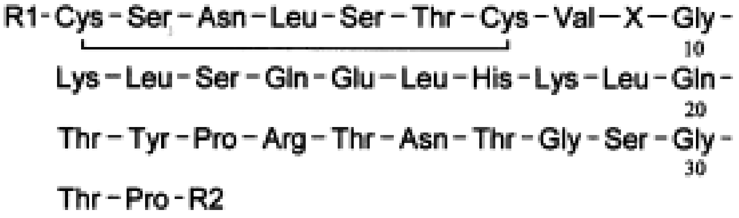
The label states:

— the calcitonin peptide content ($C_{145}H_{240}N_{44}O_{48}S_2$);

— the origin: synthetic or rDNA technology.

IMPURITIES

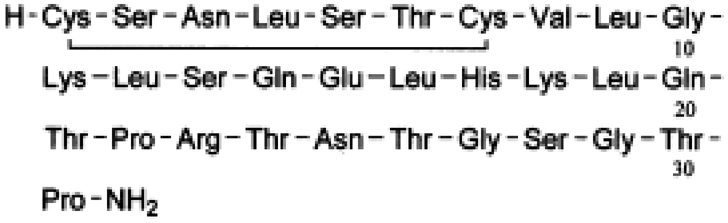
Specified impurities *A, B, C, D, E, F, G.*



A. R1 = CO-CH_3, R2 = NH_2, X = L-Leu: acetylcalcitonin (salmon),

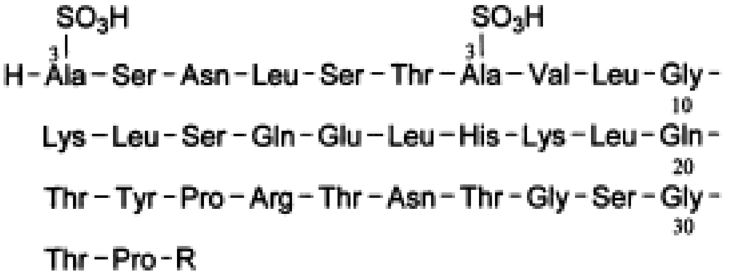
B. R1 = H, R2 = NH_2, X = D-Leu: [9-D-leucine]calcitonin (salmon),

E. R1 = H, R2 = NH-CH_2-CO_2H, X = L-Leu: salmon calcitoninylglycine,



C. des-22-tyrosine-calcitonin (salmon),

D. *C*-acetylated calcitonin (salmon),



F. R = NH_2: [1,7-bis(3-sulpho-L-alanine)]calcitonin (salmon),

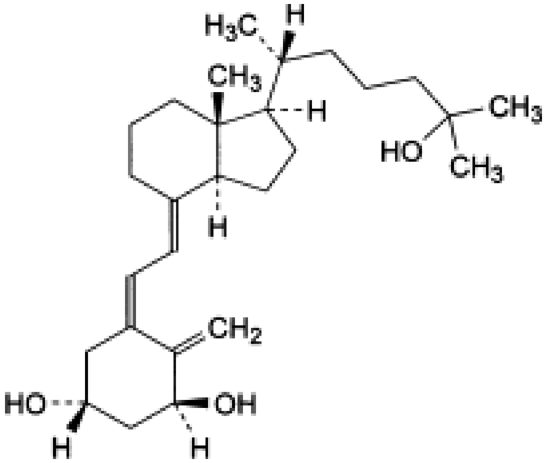
G. R = NH-CH_2-CO_2H: [1,7-bis(3-sulpho-L-alanine)]calcitoninylglycine (salmon).

Ph Eur

Calcitriol

General Notices

(Ph Eur monograph 0883)



$C_{27}H_{44}O_3$ 416.6 *32222-06-3*

Action and use

Vitamin D analogue.

Preparation

Calcitriol Capsules

Ph Eur

DEFINITION

(5*Z*,7*E*)-9,10-Secocholesta-5,7,10(19)-triene-1α,3β,25-triol.

Content

97.0 per cent to 103.0 per cent.

CHARACTERS

Appearance

White or almost white crystals.

Solubility

Practically insoluble in water, freely soluble in ethanol (96 per cent), soluble in fatty oils.

It is sensitive to air, heat and light.

A reversible isomerisation to pre-calcitriol takes place in solution, depending on temperature and time. The activity is due to both compounds.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *Ph. Eur. reference spectrum of calcitriol.*

B. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

TESTS

Related substances

Liquid chromatography *(2.2.29)* : use the normalisation procedure. *Carry out the test as rapidly as possible, avoiding exposure to actinic light and air.*

Test solution Dissolve 1.000 mg of the substance to be examined without heating in 10.0 ml of the mobile phase.

Reference solution (a) Dissolve 1.000 mg of *calcitriol CRS* without heating in 10.0 ml of the mobile phase.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 100.0 ml with the mobile phase.

Reference solution (c) Heat 2 ml of reference solution (a) at 80 °C for 30 min.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase: octylsilyl silica gel for chromatography R1* (5 µm);

— *temperature*: 40 °C.

Mobile phase Mix 450 volumes of a 1.0 g/l solution of *tris(hydroxymethyl)aminomethane R* adjusted to pH 7.0-7.5 with *phosphoric acid R* , and 550 volumes of *acetonitrile R* .

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 230 nm.

Injection 50 µl.

Run time Twice the retention time of calcitriol.

Relative retention With reference to calcitriol (retention time = about 14 min): pre-calcitriol = about 0.9.

System suitability:

— *resolution*: minimum 3.5 between the peaks due to calcitriol and pre-calcitriol in the chromatogram obtained with reference solution (c);

— *number of theoretical plates* : minimum 10 0000, calculated for the peak due to calcitriol in the chromatogram obtained with reference solution (a).

Limits:

— *impurities A, B, C*: for each impurity, maximum 0.5 per cent;

— t*otal*: maximum 1.0 per cent;

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent); disregard the peak due to pre-calcitriol.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Injection The test solution and reference solution (a).

System suitability Reference solution (a):

— *repeatability*: maximum relative standard deviation of 1 per cent for the peak due to calcitriol after 6 injections.

Calculate the percentage content of $C_{27}H_{44}O_3$ from the declared content of *calcitriol CRS* .

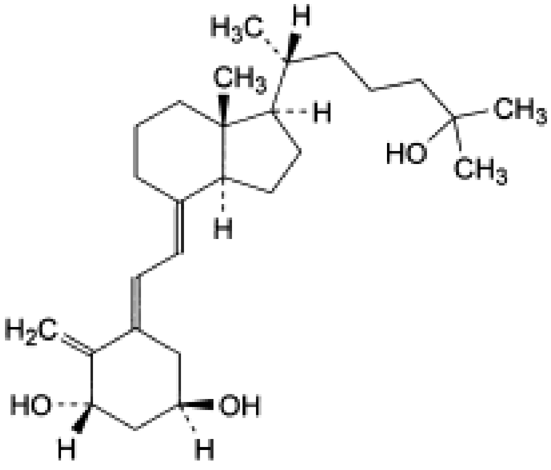
STORAGE

Under nitrogen, in an airtight container , protected from light, at a temperature of 2 °C to 8 °C.

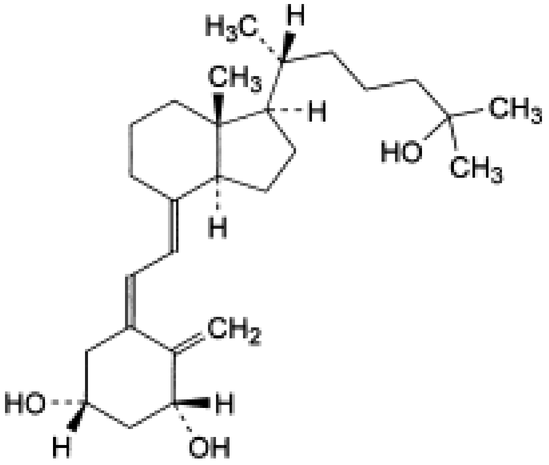
The contents of an opened container are to be used immediately.

IMPURITIES

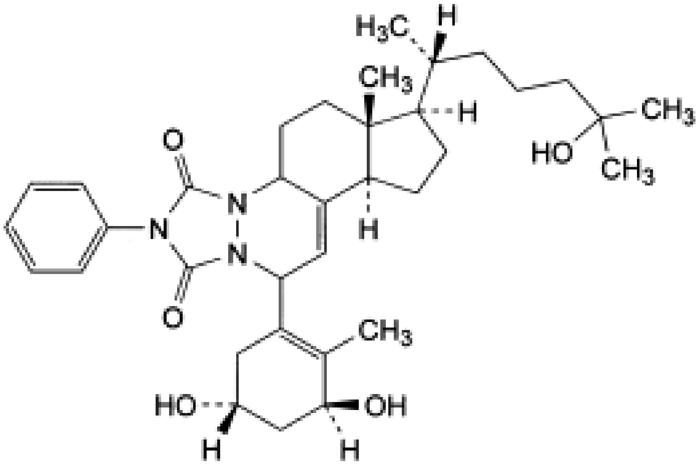
Specified impurities *A, B, C.*



A. (5*E*,7*E*)-9,10-secocholesta-5,7,10(19)-triene-1α,3β,25-triol (*trans*-calcitriol),



B. (5*Z*,7*E*)-9,10-secocholesta-5,7,10(19)-triene-1β,3β,25-triol (1β-calcitriol),



C. (6a*R*,7*R*,9a*R*)-11-[(3*S*,5*R*)-3,5-dihydroxy-2-methylcyclohex-1-enyl]-7-[(1*R*)-5-hydroxy-1,5-dimethylhexyl]-6a-methyl-2-phenyl-5,6,6a,7,8,9,9a,11-octahydro-1*H*,4a*H*-cyclopenta[*i*]1,2,4] triazolo[1,2-a]cinnoline-1,3(2*H*)-dione (triazoline adduct of pre-calcitriol).

General Notices

(Ph Eur monograph 2128)

$Ca^{2+}\ \left[H_3C-CO_2^-\right]_2$

$C_4H_6CaO_4$ 158.2 *62-54-4*

Action and use

Used in solutions for haemodialysis and peritoneal dialysis.

Ph Eur

DEFINITION

Calcium diacetate.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, hygroscopic powder.

Solubility

Freely soluble in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. It gives reaction (b) of calcium *(2.3.1)* .
B. It gives reaction (b) of acetates *(2.3.1)* .

TESTS

pH *(2.2.3)*

7.2 to 8.2.

Dissolve 0.50 g in 10.0 ml of *carbon dioxide-free water R*.

Readily oxidisable substances

Dissolve 2.0 g in boiling *water R* and dilute to 100 ml with boiling *water R*, add a few glass beads, 6 ml of *5 M sulphuric acid* and 0.3 ml of *0.02 M potassium permanganate*, mix, boil gently for 5 min and allow the precipitate to settle. The pink colour in the supernatant is not completely discharged.

Chlorides ***(2.4.4)***

Maximum 330 ppm.

Dissolve 0.15 g in *water R* and dilute to 15 ml with the same solvent.

Nitrates

Dissolve 1.0 g in *water R* and dilute to 10 ml with the same solvent. Add 5 mg of *sodium chloride R*, 0.05 ml of *indigo carmine solution R* and add with stirring, 10 ml of *nitrogen-free sulphuric acid R*. The blue colour remains for at least 10 min.

Sulphates ***(2.4.13)***

Maximum 600 ppm.

Dissolve 0.25 g in *distilled water R* and dilute to 15 ml with the same solvent.

Aluminium ***(2.4.17)***

Maximum 1 ppm.

Test solution Dissolve 4.0 g of the substance to be examined in 100 ml of *water R* and add 10 ml of *acetate buffer solution pH 6.0 R*.

Reference solution Mix 2 ml *of aluminium standard solution (2 ppm Al) R*, 10 ml of *acetate buffer solution pH 6.0 R* and 98 ml of *water R.*

Blank solution Mix 10 ml of *acetate buffer solution pH 6.0 R* and 100 ml of *water R*.

Arsenic ***(2.4.2)***

Maximum 2 ppm.

0.5 g complies with limit test A.

Barium

Maximum 50.0 ppm.

Atomic emission spectrometry *(2.2.22, Method II)*.

Test solution Dissolve 5.00 g of the substance to be examined in *water R* and dilute to 100.0 ml with the same solvent.

Reference solutions Prepare the reference solutions using *barium standard solution (0.1 per* *cent Ba) R*, diluted as necessary with *water R.*

Wavelength 455.4 nm.

Magnesium

Maximum 5.00×10^2 ppm.

Atomic absorption spectrometry *(2.2.23, Method II)*.

Test solution Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 100.0 ml with the same solvent.

Reference solutions Prepare the reference solutions using *magnesium standard solution (0.1 per cent Mg) R,* diluted as necessary with *water R* .

Source Magnesium hollow-cathode lamp.

Wavelength 285.2 nm.

Atomisation device Air-acetylene flame.

Potassium

Maximum 0.10 per cent.

Atomic emission spectrometry *(2.2.22, Method II*).

Test solution Dissolve 1.00 g of the substance to be examined in *water R* and dilute to 25.0 ml with the same solvent.

Reference solutions Prepare the reference solutions using *potassium standard solution (0.2 per cent K) R* , diluted as necessary with *water R* .

Wavelength 766.7 nm.

Sodium

Maximum 0.50 per cent.

Atomic emission spectrometry *(2.2.22, Method II)*.

Test solution Dissolve 1.00 g of the substance to be examined in *water R* and dilute to 100.0 ml with the same solvent.

Reference solutions Prepare the reference solutions using *sodium standard solution (200 ppm Na) R* , diluted as necessary with *water R* .

Wavelength 589.0 nm.

Strontium

Maximum 5.00×10^2 ppm.

Atomic emission spectrometry *(2.2.22, Method II)*.

Test solution Dissolve 2.00 g of the substance to be examined in *water R* and dilute to

100.0 ml with the same solvent.

Reference solutions Prepare the reference solutions using *strontium standard solution (1.0 per cent Sr) R*, diluted as necessary with *water R*.

Wavelength 460.7 nm.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with limit test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

Water *(2.5.12)*

Maximum 7.0 per cent, determined on 0.100 g. Add 2 ml of *anhydrous acetic acid R* to the titration vessel in addition to the methanol. Clean the titration vessel after each determination.

ASSAY

Dissolve 0.150 g in 15 ml of *water R*, add 5 ml of *diethylamine R*. Titrate with *0.1 M sodium edetate*, determining the end-point using *methylthymol blue mixture R*.

1 ml of *0.1 M sodium edetate* is equivalent to 15.82 mg of $C_4H_6CaO_4$.

STORAGE

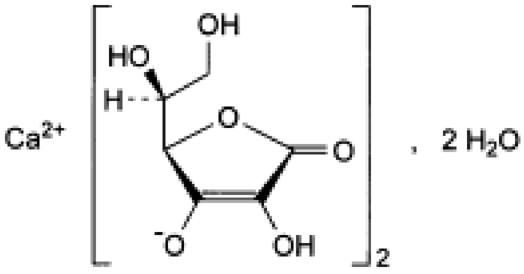
In an airtight container.

Ph Eur

Calcium Ascorbate

General Notices

(Ph Eur monograph 1182)



$C_{12}H_{14}CaO_{12},2H_2O$ 426.3 *5743-28-2*

Action and use

Excipient.

Ph Eur

DEFINITION

Calcium di[(*R*)-2-[(*S*)-1,2-dihydroxyethyl]-4-hydroxy-5-oxo-2*H*-furan-3-olate] dihydrate.

Content

99.0 per cent to 100.5 per cent of $C_{12}H_{14}CaO_{12},2H_2O$.

CHARACTERS

Appearance

White or slightly yellowish, crystalline powder.

Solubility

Freely soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

First identification A, B, E.

Second identification *A, C, D, E.*

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry *(2.2.24*).

Comparison *Ph. Eur. reference spectrum of calcium ascorbate.*

C. Dilute 1 ml of solution S (see Tests) to 10 ml with *water R* . To 2 ml of the solution add 0.2 ml of a 100 g/l solution of *ferrous sulphate R* . A deep violet colour develops.

D. To 1 ml of solution S add 0.2 ml of *dilute nitric acid R* and 0.2 ml of *silver nitrate solution R2* . A grey precipitate is formed.

E. The substance gives reaction (b) of calcium *(2.3.1)* .

TESTS

Solution S

Dissolve 5.00 g in *carbon dioxide-free water R* and dilute to 50.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II*). Examine the colour of the solution immediately after preparation of the solution.

pH *(2.2.3)*

6.8 to 7.4 for solution S.

Specific optical rotation *(2.2.7)*

+ 95 to + 97 (dried substance), determined using freshly prepared solution S.

Related substances

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

Fluorides:

Maximum 10.0 ppm.

Potentiometry *(2.2.36, Method I)*.

Test solution In a 50 ml volumetric flask, dissolve 1.000 g in a 10.3 g/l solution of *hydrochloric acid R* , add 5.0 ml of *fluoride standard solution (1 ppm F) R* and dilute to 50.0 ml with a 10.3 g/l solution of *hydrochloric acid R* . To 20.0 ml of the solution add 20.0 ml of *total-ionic-strength-adjustment buffer R* and 3 ml of an 82 g/l solution of *anhydrous sodium acetate R.* Adjust to pH 5.2 with *ammonia R* and dilute to 50.0 ml with *distilled water R.*

Reference solutions To 0.25 ml, 0.5 ml, 1.0 ml, 2.0 ml and 5.0 ml of *fluoride standard solution (10 ppm F) R* add 20.0 ml of *total-ionic-strength-adjustment buffer R* and dilute to 50.0 ml with *distilled water R.*

Indicator electrode Fluoride selective.

Reference electrode Silver-silver chloride.

Take into account the addition of fluoride to the test solution for the calculation.

Copper

Maximum 5.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Dissolve 2.0 g in a 9.7 g/l solution of *nitric acid R* and dilute to 25.0 ml with the same acid solution.

Reference solutions Prepare the reference solutions using *copper standard solution (10 ppm Cu) R* , diluting with a 9.7 g/l solution of *nitric acid R* .

Source Copper hollow-cathode lamp.

Wavelength 324.8 nm.

Atomisation device Air-acetylene flame.

Iron

Maximum 2.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Dissolve 5.0 g in a 9.7 g/l solution of *nitric acid R* and dilute to 25.0 ml with the same acid solution.

Reference solutions Prepare the reference solutions using *iron standard solution (10 ppm Fe) R*, diluting with a 9.7 g/l solution of *nitric acid R* .

Source Iron hollow-cathode lamp.

Wavelength 248.3 nm.

Atomisation device Air-acetylene flame.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

2.0 g complies with test D. Prepare the reference solution using 2.0 ml of *lead standard solution (10 ppm Pb) R .*

Loss on drying *(2.2.32)*

Maximum 0.1 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

ASSAY

Dissolve 80.0 mg in a mixture of 10 ml of *dilute sulphuric acid R* and 80 ml of *carbon dioxide-free water R* . Add 1 ml of *starch solution R* . Titrate with 0.*05 M iodine* until a persistent violet-blue colour is obtained.

1 ml of 0.*05 M iodine* is equivalent to 10.66 mg of $C_{12}H_{14}CaO_{12},2H_2O$.

STORAGE

In a non-metallic container, protected from light.

Ph Eur

Calcium Carbonate

General Notices

(Ph Eur monograph 0014)

$CaCO_3$ 100.1 *471-34-1*

Action and use

Antacid.

Preparations

Calcium Carbonate Chewable Tablets

Calcium and Colecalciferol Tablets

Ph Eur

DEFINITION

Content

98.5 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water.

IDENTIFICATION

A. It gives the reaction of carbonates *(2.3.1)* .

B. 0.2 ml of solution S (see Tests) gives the reactions of calcium *(2.3.1)* .

TESTS

Solution S

Dissolve 5.0 g in 80 ml of *dilute acetic acid R* . When the effervescence ceases, boil for 2

min. Allow to cool, dilute to 100 ml with *dilute acetic acid R* and filter, if necessary, through a sintered-glass filter *(2.1.2)*.

Substances insoluble in acetic acid

Maximum 0.2 per cent.

Wash any residue obtained during the preparation of solution S with 4 quantities, each of 5 ml, of hot *water R* and dry at 100-105 °C for 1 h. The residue weighs a maximum of 10 mg.

Chlorides ***(2.4.4)***

Maximum 330 ppm.

Dilute 3 ml of solution S to 15 ml with *water R*.

Sulphates ***(2.4.13)***

Maximum 0.25 per cent.

Dilute 1.2 ml of solution S to 15 ml with *distilled water R*.

Arsenic ***(2.4.2, Method A)***

Maximum 4 ppm, determined on 5 ml of solution S.

Barium

To 10 ml of solution S add 10 ml of *calcium sulphate solution R*. After at least 15 min, any opalescence in the solution is not more intense than that in a mixture of 10 ml of solution S and 10 ml of *distilled water R*.

Iron ***(2.4.9)***

Maximum 200 ppm.

Dissolve 50 mg in 5 ml of *dilute hydrochloric acid R* and dilute to 10 ml with *water R*.

Magnesium and alkali metals

Maximum 1.5 per cent.

Dissolve 1.0 g in 12 ml of *dilute hydrochloric acid R*. Boil the solution for about 2 min and add 20 ml of *water R*, 1 g of *ammonium chloride R* and 0.1 ml of *methyl red solution R*. Add *dilute ammonia R1* until the colour of the indicator changes and then add 2 ml in excess. Heat to boiling and add 50 ml of hot *ammonium oxalate solution R*. Allow to stand for 4 h, dilute to 100 ml with *water R* and filter through a suitable filter. To 50 ml of the filtrate add 0.25 ml of *sulphuric acid R*. Evaporate to dryness on a water-bath and ignite to constant mass at 600 ± 50 °C. The residue weighs a maximum of 7.5 mg.

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying ***(2.2.32)***

Maximum 2.0 per cent, determined on 1.000 g by drying in an oven at 200 ± 10 °C.

ASSAY

Dissolve 0.150 g in a mixture of 3 ml of *dilute hydrochloric acid R* and 20 ml of *water R*. Boil for 2 min, allow to cool and dilute to 50 ml with *water R*. Carry out the complexometric titration of calcium *(2.5.11)*.

1 ml of *0.1 M sodium edetate* is equivalent to 10.01 mg of $CaCO_3$.

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.The following characteristics may be relevant for calcium carbonate used as filler in tablets and capsules.

General Notices

(Ph Eur monograph 0015)

$CaCl_2,2H_2O$ 147.0 *10035-04-8*

Preparations

Calcium Chloride Injection

Compound Sodium Lactate Intravenous Infusion

Ph Eur

DEFINITION

Content

97.0 per cent to 103.0 per cent of $CaCl_2,2H_2O$.

CHARACTERS

Appearance

White or almost white, crystalline powder, hygroscopic.

Solubility

Freely soluble in water, soluble in ethanol (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) gives reaction (a) of chlorides *(2.3.1)* .

B. It gives the reactions of calcium *(2.3.1)* .

C. It complies with the limits of the assay.

TESTS

Solution S

Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

Acidity or alkalinity

To 10 ml of freshly prepared solution S add 0.1 ml of *phenolphthalein solution R*. If the solution is red, not more than 0.2 ml of *0.01 M hydrochloric acid* is required to discharge the colour and if the solution is colourless, not more than 0.2 ml of *0.01 M sodium hydroxide* is required to turn it red.

Sulphates ***(2.4.13)***

Maximum 300 ppm.

Dilute 5 ml of solution S to 15 ml with *distilled water R*.

Aluminium

To 10 ml of solution S add 2 ml of *ammonium chloride solution R* and 1 ml of *dilute ammonia R1* and boil the solution. No turbidity or precipitate is formed.

If intended for use in the manufacture of dialysis solutions, the above test is replaced by the following test for aluminium *(2.4.17)*: maximum 1 ppm.

Prescribed solution Dissolve 4 g in 100 ml of *water R* and add 10 ml of *acetate buffer solution pH 6.0 R*.

Reference solution Mix 2 ml of *aluminium standard solution (2 ppm Al) R*, 10 ml of *acetate buffer solution pH 6.0 R* and 98 ml of *water R.*

Blank solution Mix 10 ml of *acetate buffer solution pH 6.0 R* and 100 ml of *water R.*

Barium

To 10 ml of solution S add 1 ml of *calcium sulphate solution R*. After at least 15 min, any opalescence in the solution is not more intense than that in a mixture of 1 ml of distilled *water R* and 10 ml of solution S.

Iron ***(2.4.9)***

Maximum 10 ppm, determined on solution S.

Magnesium and alkali metals

Maximum 0.5 per cent.

To a mixture of 20 ml of solution S and 80 ml of *water R* add 2 g of *ammonium chloride R* and 2 ml of *dilute ammonia R1*, heat to boiling and pour into the boiling solution a hot solution of 5 g of *ammonium oxalate R* in 75 ml of *water R*. Allow to stand for 4 h, dilute to 200 ml with *water R* and filter through a suitable filter. To 100 ml of the filtrate add 0.5 ml of *sulphuric acid R*. Evaporate to dryness on a water-bath and ignite to constant mass at 600 ± 50 °C. The residue weighs a maximum of 5 mg.

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R* .

ASSAY

Dissolve 0.280 g in 100 ml of *water R* and carry out the complexometric titration of calcium (2.5.11).

1 ml of *0.1 M sodium edetate* is equivalent to 14.70 mg of $CaCl_2,2H_2O$.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of dialysis solutions.

STORAGE

In an airtight container .

$CaCl_2,6H_2O$ 219.1 *7774-34-7*

Ph Eur

DEFINITION

Content

97.0 per cent to 103.0 per cent of $CaCl_2,6H_2O$.

CHARACTERS

Appearance

White or almost white, crystalline mass or colourless crystals.

Solubility

Very soluble in water, freely soluble in ethanol (96 per cent).

It solidifies at about 29 °C.

IDENTIFICATION

A. Solution S (see Tests) gives reaction (a) of chlorides *(2.3.1)* .

B. It gives the reactions of calcium *(2.3.1)* .

C. It complies with the limits of the assay.

TESTS

Solution S

Dissolve 15.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 (*2.2.2, Method II*).

Acidity or alkalinity

To 10 ml of freshly prepared solution S add 0.1 ml of *phenolphthalein solution R*. If the solution is red, not more than 0.2 ml of *0.01 M hydrochloric acid* is required to discharge the colour and if the solution is colourless, not more than 0.2 ml of *0.01 M sodium hydroxide* is required to turn it red.

Sulphates ***(2.4.13)***

Maximum 200 ppm.

Dilute 5 ml of solution S to 15 ml with *distilled water R*.

Aluminium

To 10 ml of solution S add 2 ml of *ammonium chloride solution R* and 1 ml of *dilute ammonia R1*. Heat to boiling. No turbidity or precipitate is formed.

If intended for use in the manufacture of dialysis solutions, the above test is replaced by the following test for aluminium (*2.4.17*): maximum 1 ppm.

Prescribed solution Dissolve 6 g in 100 ml of *water R* and add 10 ml of *acetate buffer solution pH 6.0 R*.

Reference solution Mix 2 ml of *aluminium standard solution (2 ppm Al) R*, 10 ml of *acetate buffer solution pH 6.0 R* and 98 ml of *water R*.

Blank solution Mix 10 ml of *acetate buffer solution pH 6.0 R* and 100 ml of *water R.*

Barium

To 10 ml of solution S add 1 ml of *calcium sulphate solution R*. After at least 15 min, any opalescence in the solution is not more intense than that in a mixture of 1 ml of *distilled water R* and 10 ml of solution S.

Iron ***(2.4.9)***

Maximum 7 ppm, determined on solution S.

Magnesium and alkali metals

Maximum 0.3 per cent.

To a mixture of 20 ml of solution S and 80 ml of *water R* add 2 g of *ammonium chloride R* and 2 ml of *dilute ammonia R1*, heat to boiling and pour into the boiling solution a hot solution of 5 g of *ammonium oxalate R* in 75 ml of *water R*. Allow to stand for 4 h, dilute to 200 ml with *water R* and filter through a suitable filter. To 100 ml of the filtrate add 0.5 ml of *sulphuric acid R*. Evaporate to dryness on a water-bath and ignite to constant mass at 600 ± 50 °C. The residue weighs a maximum of 5 mg.

Heavy metals ***(2.4.8)***

Maximum 15 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard*

solution (2 ppm Pb) R.

ASSAY

Dissolve 0.200 g in 100 ml of *water R*. Carry out the complexometric titration of calcium *(2.5.11)*.

1 ml of *0.1 M sodium edetate* is equivalent to 21.91 mg of $CaCl_2,6H_2O$.

LABELLING

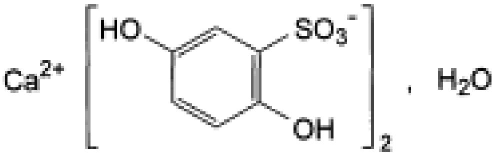
The label states, where applicable, that the substance is suitable for use in the manufacture of dialysis solutions.

Ph Eur

Calcium Dobesilate Monohydrate

General Notices

(Ph Eur monograph 1183)



$C_{12}H_{10}CaO_{10}S_2,H_2O$ 436.4 *20123-80-2*
(anhydrous)

Ph Eur

DEFINITION

Calcium di(2,5-dihydroxybenzenesulphonate) monohydrate.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, hygroscopic powder.

Solubility

Very soluble in water, freely soluble in anhydrous ethanol, very slightly soluble in 2-propanol, practically insoluble in methylene chloride.

IDENTIFICATION

A. Ultraviolet and visible absorption spectrophotometry *(2.2.25)* .

Test solution Dissolve 0.100 g in *water R* and dilute to 200.0 ml with the same solvent. Dilute 5.0 ml of this solution to 100.0 ml with *water R* .

Spectral range 210-350 nm.

Absorption maxima At 221 nm and 301 nm.

Specific absorbance at the absorption maximum at 301 nm 174 to 181.

B. Mix 1 ml of *ferric chloride solution R2* , 1 ml of a freshly prepared 10 g/l solution of *potassium ferricyanide R* and 0.1 ml of *nitric acid R* . To this mixture add 5 ml of freshly prepared solution S (see Tests): a blue colour and a precipitate are immediately produced.

C. 2 ml of freshly prepared solution S gives reaction (b) of calcium *(2.3.1)* .

TESTS

Solution S

Dissolve 10.0 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S, when freshly prepared, is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH ***(2.2.3)***

4.5 to 6.0 for solution S.

Related substances

Liquid chromatography *(2.2.29)* . *Keep all solutions at 2-8 °C*.

Buffer solution Dissolve 1.2 g of *anhydrous sodium dihydrogen phosphate R* in 900 ml of *water for chromatography R* , adjust to pH 6.5 with *disodium hydrogen phosphate solution R* and dilute to 1000 ml with *water for chromatography R* .

Test solution Dissolve 0.100 g of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with *water R* . Dilute 1.0 ml of this solution to 10.0 ml with *water R* .

Reference solution (b) Dissolve 10 mg of the substance to be examined and 10 mg of *hydroquinone R* (impurity A) in *water R* and dilute to 10 ml with the same solvent. Dilute 1 ml of this solution to 100 ml with *water R* .

Column:

— *size:* l = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: spherical *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *acetonitrile R1* , buffer solution (10:90 *V/V*).

Flow rate 0.8 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 10 µl.

Run time 2.5 times the retention time of dobesilate.

Relative retention With reference to dobesilate (retention time = about 6 min): impurity A =

about 1.7.

System suitability Reference solution (b):

— *resolution*: minimum 8.0 between the peaks due to dobesilate and impurity A.

Limits:

— *correction factor*: for the calculation of content, multiply the peak area of impurity A by 0.6;

— *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 15 ppm.

1.0 g complies with test C. Prepare the reference solution using 1.5 ml of *lead standard solution (10 ppm Pb) R* .

Iron *(2.4.9)*

Maximum 10 ppm, determined on 10 ml of solution S.

Water *(2.5.12)*

4.0 per cent to 6.0 per cent, determined on 0.500 g.

ASSAY

Dissolve 0.200 g in a mixture of 10 ml of *water R* and 40 ml of *dilute sulphuric acid R* . Titrate with *0.1 M cerium sulphate* , determining the end-point potentiometrically *(2.2.20)* .

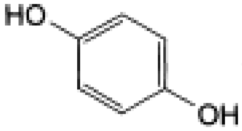
1 ml of *0.1 M cerium sulphate* is equivalent to 10.45 mg of $C_{12}H_{10}CaO_{10}S_2$.

STORAGE

In an airtight container , protected from light.

IMPURITIES

Specified impurities A.



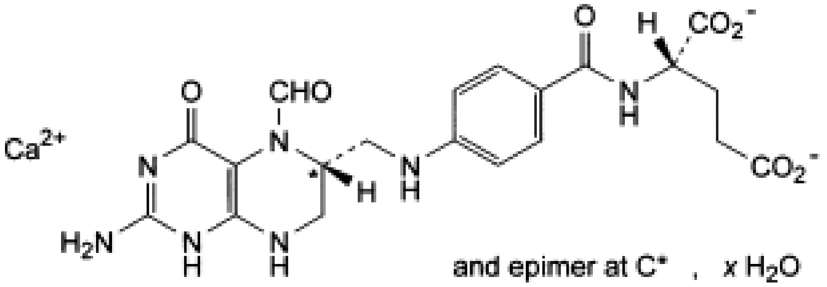
A. benzene-1,4-diol (hydroquinone).

Ph Eur

Calcium Folinate

General Notices

(Ph Eur monograph 0978)



$C_{20}H_{21}CaN_7O_7,xH_2O$ 511.5 *1492-18-8*
(anhydrous*) (anhydrous)*

Action and use

Antidote to folic acid antagonists.

Preparations

Calcium Folinate Injection

Calcium Folinate Tablets

Ph Eur

DEFINITION

Calcium (2*S*)-2-[[4-[[[(6*RS*)-2-amino-5-formyl-4-oxo1,4,5,6,7,8-hexahydropteridin-6-yl]methyl] amino]benzoyl]amino]pentanedioate.

Content:

— *calcium folinate* ($C_{20}H_21CaN_7O_7$): 97.0 per cent to 102.0 per cent (anhydrous substance);

— *calcium* (Ca; *A* $_r$ 40.08): 7.54 per cent to 8.14 per cent (anhydrous substance).

It contains a variable amount of water.

CHARACTERS

Appearance

White or light yellow, amorphous or crystalline powder.

Solubility

Sparingly soluble in water, practically insoluble in acetone and in ethanol (96 per cent).

The amorphous form may produce supersaturated solutions in water.

IDENTIFICATION

First identification *A, B, D.*

Second identification *A, C, D.*

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry *(2.2.24)* .

Preparation Discs.

Comparison *calcium folinate CRS.*

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *water R* and add dropwise sufficient *acetone R* to produce a precipitate. Allow to stand for 15 min, collect the precipitate by centrifugation, wash the precipitate with 2 small quantities of *acetone R* and dry. Record new spectra using the residues.

C. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 15 mg of the substance to be examined in a 3 per cent *V/V* solution of *ammonia R* and dilute to 5 ml with the same solvent.

Reference solution Dissolve 15 mg of *calcium folinate CRS* in a 3 per cent *V/V* solution of *ammonia R* and dilute to 5 ml with the same solvent.

Plate *cellulose for chromatography* F_{254} *R* as the coating substance.

Mobile phase The lower layer of a mixture of 1 volume of *isoamyl alcohol R* and 10 volumes of a 50 g/l solution of *citric acid R* previously adjusted to pH 8 with *ammonia R* .

Application 5 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. It gives reaction (b) of calcium *(2.3.1)* .

Carry out the tests and the assay as rapidly as possible, protected from actinic light.

TESTS

Solution S

Dissolve 1.25 g in *carbon dioxide-free water R*, heating at 40 °C if necessary, and dilute to 50.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and its absorbance *(2.2.25)* at 420 nm is not greater than 0.60. Use *water R* as the compensation liquid.

pH *(2.2.3)*

6.8 to 8.0 for solution S.

Specific optical rotation *(2.2.7)*

+ 14.4 to + 18.0 (anhydrous substance), determined on solution S.

Acetone, ethanol and methanol

Head-space gas chromatography *(2.2.28)* : use the standard additions method.

Test solution Dissolve 0.25 g of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution Dilute 0.125 g of *acetone R*, 0.750 g of *anhydrous ethanol R* and 0.125 g of *methanol R* in *water R* and dilute to 1000.0 ml with *water R*.

Column:
- — *material*: fused silica;
- — *size*: *l* = 10 m, Ø = 0.32 mm;
- — *stationary phase: styrene-divinylbenzene copolymer R*.

Carrier gas *nitrogen for chromatography R*.

Flow rate 4 ml/min.

Static head-space conditions that may be used:
- — *equilibration temperature*: 80 °C;
- — *equilibration time*: 20 min;
- — *pressurisation time*: 30 s.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 6	125 → 185
	6 - 15	185
Injection port		250
Detector		250

Detection Flame ionisation.

Injection At least 3 times.

Limits:
- — *acetone* : maximum 0.5 per cent;
- — *ethanol* : maximum 3.0 per cent;
- — *methanol* : maximum 0.5 per cent.

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 10.0 mg of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve 10.0 mg of *calcium folinate CRS* in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 100.0 ml with *water R.*

Reference solution (c) Dissolve 10.0 mg of *formylfolic acid CRS* (impurity D) in the mobile phase and dilute to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with *water* R.

Reference solution (d) Dilute 1.0 ml of reference solution (b) to 10.0 ml with *water R* .

Reference solution (e) Dilute 5.0 ml of reference solution (c) to 10.0 ml with reference solution (b).

Column:
- — *size*: *l* = 0.25 m, Ø = 4 mm;
- — *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm);
- — *temperature*: 40 °C.

Mobile phase Mix 220 ml of *methanol R* and 780 ml of a solution containing 2.0 ml of *tetrabutylammonium hydroxide solution (400 g/l) R* and *2.2 g of disodium hydrogen phosphate R* , previously adjusted to pH 7.8 with *phosphoric acid R* .

Flow rate 1 ml/min.

Detection Spectrophotometer at 280 nm.

Injection 10 µl of the test solution and reference solutions (b), (c), (d) and (e).

Run time 2.5 times the retention time of folinate.

System suitability Reference solution (e):

— *resolution*: minimum 2.2 between the peaks due to folinate and impurity D.

Limits:

— *impurity D*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (1 per cent);

— *impurities A, B, C, E, F, G*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent);

— *sum of impurities other than D*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (2.5 per cent);

— *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (d) (0.1 per cent).

Chlorides ***(2.4.4)***

Maximum 0.5 per cent.

Dissolve 67 mg in 10 ml of *water R* and add 3 ml of *acetic acid R* . Filter and wash the precipitate with 5 quantities, each of 5 ml, of *water R* . Collect the filtrate and washings and dilute to 100 ml with *water R* .

Heavy metals ***(2.4.8)***

Maximum 50 ppm.

1.0 g complies with test F. Prepare the reference solution using 5 ml of *lead standard solution (10 ppm Pb) R.*

Platinum

Maximum 20.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method II)*.

Test solution Dissolve 1.00 g in *water R* and dilute to 100.0 ml with the same solvent.

Reference solutions Prepare the reference solutions using *platinum standard solution (30 ppm Pt) R*, diluted as necessary with a mixture of 1 volume of *nitric acid R* and 99 volumes of *water R* .

Source Platinum hollow-cathode lamp.

Wavelength 265.9 nm.

Water ***(2.5.12)***

Maximum 17.0 per cent, determined on 0.200 g (ground to a very fine powder). Stir the substance to be examined in the titration solvent for about 6 min before titrating and use a suitable titrant that does not contain pyridine.

Bacterial endotoxins ***(2.6.14)***

Less than 0.5 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Calcium

Dissolve 0.400 g in 150 ml of *water R* and dilute to 300 ml with the same solvent. Carry out the complexometric titration of calcium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 4.008 mg of Ca.

Calcium folinate

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Injection Test solution and reference solution (a).

System suitability:

— *repeatability*: maximum relative standard deviation of 2.0 per cent after 6 injections of reference solution (a).

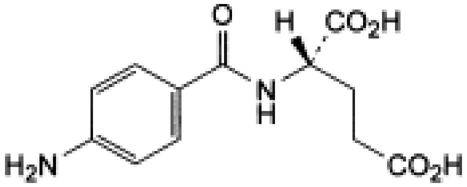
Calculate the percentage content of $C_{20}H_{21}CaN_7O_7$ from the declared content of *calcium folinate CRS* .

STORAGE

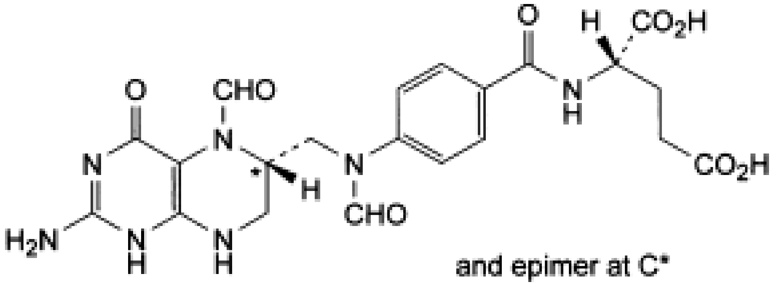
In an airtight container, protected from light. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

IMPURITIES

Specified impurities A, B, C, D, E, F, G.

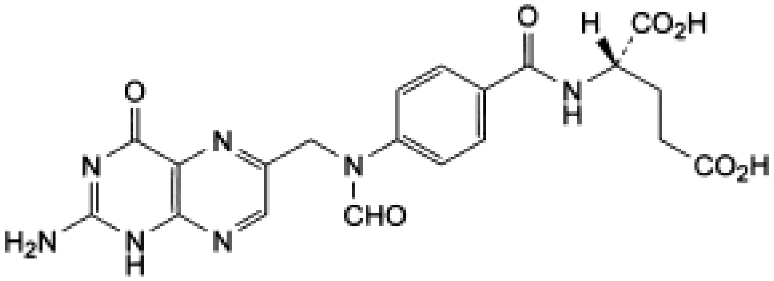


A. (2*S*)-2[(4-aminobenzoyl)amino]pentanedioic acid,

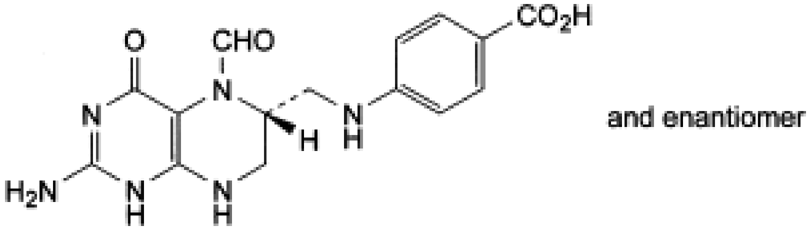


B. (2*S*)-2-[[4-[[[(6*RS*)-2-amino-5-formyl-4-oxo-1,4,5,6,7,8-hexahydropteridin-6-yl]methyl] formylamino]benzoyl]amino]pentanedioic acid (5,10-diformyltetrahydrofolic acid),

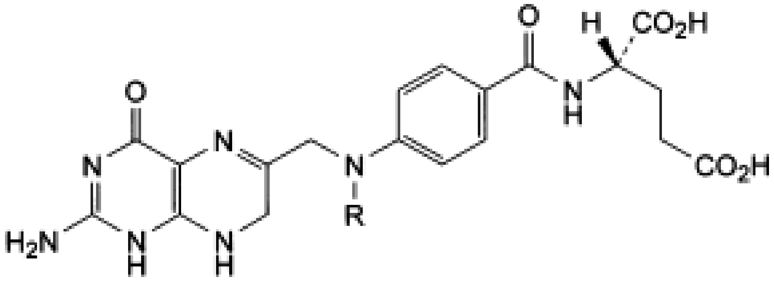
C. folic acid,



D. (2*S*)-2-[[4-[[(2-amino-4-oxo-1,4-dihydropteridin-6-yl)methyl]formylamino]benzoyl]amino] pentanedioic acid (10-formylfolic acid),



E. 4-[[[(6*RS*)-2-amino-5-formyl-4-oxo-1,4,5,6,7,8-hexahydropteridin-6-yl]methyl]amino] benzoic acid (5-formyltetrahydropteroic acid),



F. R = CHO: (2*S*)-2-[[4-[[(2-amino-4-oxo-1,4,7,8-tetrahydropteridin-6-yl)methyl]formylamino] benzoyl]amino]pentanedioic acid (10-formyldihydrofolic acid),

G. R = H: (2*S*)-2-[[4-[[(2-amino-4-oxo-1,4,7,8-tetrahydropteridin-6-yl)methyl]amino]benzoyl] amino]pentanedioic acid (dihydrofolic acid).

Ph Eur

DEFINITION

Mixture in variable proportions, of calcium di(D-*glycero*-D-*gulo*-heptonate) and calcium di(D-*glycero*-D-*ido*-heptonate).

Content

98.0 per cent to 102.0 per cent of calcium 2,3,4,5,6,7-hexahydroxyheptanoate (dried substance).

CHARACTERS

Appearance

White or very slightly yellow, amorphous powder, hygroscopic.

Solubility

Very soluble in water, practically insoluble in acetone and in ethanol (96 per cent).

IDENTIFICATION

A. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 20 mg of the substance to be examined in 1 ml of *water R* .

Reference solution (a) Dissolve 20 mg of *calcium glucoheptonate CRS* in 1 ml of *water R.*

Reference solution (b) Dissolve 10 mg of *calcium gluconate CRS* in 0.5 ml of the test solution and dilute to 1 ml with *water R* .

Plate *cellulose for chromatography R1* as the coating substance.

Mobile phase A freshly prepared mixture of 20 volumes of *anhydrous formic acid R* , 20 volumes of *water R* , 30 volumes of *acetone R* and 30 volumes of *butanol R* .

Application 10 µl as bands of 20 mm by 2 mm.

Development In a tank previously allowed to saturate for 10 min, over a path of 12 cm.

Drying In air.

Detection Spray with *0.02 M potassium permanganate* .

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

B. 0.2 ml of (see Tests) gives reaction (b) of calcium *(2.3.1)* .

TESTS

Solution S

Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution.

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

pH *(2.2.3)*

6.0 to 8.0 for solution S.

Reducing sugars

Maximum 1 per cent, expressed as glucose.

Dissolve 1.0 g in 5 ml of *water R* with the aid of gentle heat. Cool and add 20 ml of *cupri-citric solution R* and a few glass beads. Heat so that boiling begins after 4 min and maintain boiling for 3 min. Cool rapidly and add 100 ml of a 2.4 per cent *V/V* solution of *glacial acetic acid R* and 20.0 ml of *0.025 M iodine* . With continuous shaking, add 25 ml of a mixture of 6 volumes of *hydrochloric acid R* and 94 volumes of *water R* until the precipitate dissolves, titrate the excess of iodine with *0.05 M sodium thiosulphate* using *1 ml of starch solution R* added towards the end of the titration, as indicator. Not less than 12.6 ml of *0.05 M sodium thiosulphate* is required.

Cyanide

Dissolve 5.0 g in 50 ml of *water R* and add 2.0 g of *tartaric acid R*. Place this solution in a distillation apparatus (2.2.11). The plain bend adapter attached to the end of the condenser has a vertical part that is long enough to extend to 1 cm from the bottom of a 50 ml test-tube used as a receiver. Place 10 ml of *water R* and 2 ml of *0.1 M sodium hydroxide* into the receiver. Distil, collect 25 ml of distillate and dilute to 50 ml with *water R*. To 25 ml of this solution add 25 mg of *ferrous sulphate R* and boil for a short time. After cooling to about 70 °C add 10 ml of *hydrochloric acid R1*. After 30 min, filter the solution and wash the filter. A yellow spot appears on the filter; there is no blue or green spot.

Chlorides ***(2.4.4)***

Maximum 100 ppm.

To 5 ml of solution S, add 10 ml of *water R*.

Sulphates ***(2.4.13)***

Maximum 100 ppm, determined on solution S.

Iron ***(2.4.9)***

Maximum 40 ppm.

Dilute 2.5 ml of to 10 ml with *water R.*

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

Dissolve 2.0 g in 10 ml of *buffer solution pH 3.5 R* and dilute to 20 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Maximum 5.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

Bacterial endotoxins ***(2.6.14)***

Less than 167 IU/g, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Dissolve 0.800 g in a mixture of 150 ml of *water R* and 2 ml of *3 M hydrochloric acid R*. While stirring, add 12.5 ml of *0.1 M sodium edetate*, 15 ml of *1 M sodium hydroxide* and 0.3 g of *hydroxynaphthol blue*, *sodium salt R*. Titrate with *0.1 M sodium edetate* until the colour changes from violet to pure blue.

1 ml of *0.1 M sodium edetate* is equivalent to 49.04 mg of $C_{14}H_{26C}aO_{16}$.

STORAGE

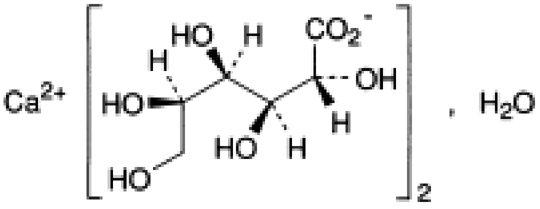
In an airtight container . If the substance is sterile, store in a sterile, airtight, tamper-proof container .

Ph Eur

Calcium Gluconate for Injection

General Notices

(Ph Eur monograph 0979)



$C_{12}H_{22}CaO_{14},H_2O$ 448.4 *18016-24-5*

Action and use

Used in treatment of calcium deficiency.

Preparation

Calcium Gluconate Injection

Ph Eur

DEFINITION

Calcium D-gluconate monohydrate.

Content

99.0 per cent to 101.0 per cent of $C_{12}H_{22}CaO_{14},H_{2O}$.

CHARACTERS

Appearance

White or almost white, crystalline or granular powder.

Solubility

Sparingly soluble in water, freely soluble in boiling water.

IDENTIFICATION

A. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 20 mg of the substance to be examined in 1 ml of *water R* , heating if necessary in a water-bath at 60 °C.

Reference solution Dissolve 20 mg of *calcium gluconate CRS* in 1 ml of *water R,* heating if necessary in a water-bath at 60 °C.

Plate *TLC silica gel G plate R.*

Mobile phase *concentrated ammonia R, ethyl acetate R, water R, ethanol (96 per cent) R* (10:10:30:50 *V/V/V/V*).

Application 5 µl.

Development Over a path of 10 cm.

Drying At 100 °C for 20 min and allow to cool.

Detection Spray with a 50 g/l solution of *potassium dichromate R* in a 40 per cent *m/m* solution of *sulphuric acid R.*

Results After 5 min, the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

B. About 20 mg gives reaction (b) of calcium *(2.3.1)* .

TESTS

Solution S

To 10.0 g add 90 ml of boiling *distilled water R* and boil with stirring, for not more than 10 s, until completely dissolved, then dilute to 100.0 ml with the same solvent.

Appearance of solution

At 60 °C, solution S is not more intensely coloured than reference solution B_7 *(2.2.2, Method II)*. After cooling to 20 °C, it is not more opalescent than reference suspension II *(2.2.1)* .

pH ***(2.2.3)***

6.4 to 8.3.

Dissolve 1.0 g in 20 ml of *carbon dioxide-free water R* , heating on a water-bath.

Organic impurities and boric acid

Introduce 0.5 g into a porcelain dish previously rinsed with *sulphuric acid R* and placed in a bath of iced water. Add 2 ml of cooled *sulphuric acid R* and mix. No yellow or brown colour develops. Add 1 ml of *chromotrope II B solution R* . A violet colour develops and does not become dark blue. The solution is not more intensely coloured than that of a mixture of 1 ml of *chromotrope II B solution R* and 2 ml of cooled *sulphuric acid R* .

Oxalates

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 1.00 g of the substance to be examined in *water for chromatography R* and dilute to 100.0 ml with the same solvent.

Reference solution Dissolve 1.00 g of the substance to be examined in *water for chromatography R,* add 0.5 ml of a 0.152 g/l solution of *sodium oxalate R* in water for *chromatography R* and dilute to 100.0 ml with the same solvent.

Guard column:
- *size*: *l* = 30 mm, Ø = 4 mm;
- *stationary phase*: suitable strong anion exchange resin (30-50 µm).

Columns 1 and 2:
- *size*: *l* = 0.25 m, Ø = 4 mm;
- *stationary phase*: suitable strong anion exchange resin (30-50 µm).

Anion-suppresser column Connected in series with the guard and analytical columns and equipped with a micromembrane that separates the mobile phase from the suppressor regeneration solution, flowing countercurrent to the mobile phase.

Mobile phase Dissolve 0.212 g of *anhydrous sodium carbonate R* and 63 mg of *sodium hydrogen carbonate R* in *water for chromatography R* and dilute to 1000.0 ml with the same solvent.

Flow rate of the mobile phase 2 ml/min.

Suppressor regeneration solution 1.23 g/l solution of *sulphuric acid R* in *water for chromatography R* .

Flow rate of the suppressor regeneration solution 4 ml/min.

Detection Conductance.

Injection 50 µl.

System suitability Reference solution:

- *repeatability*: maximum relative standard deviation of the area of the peak due to oxalate of 2.0 per cent after 5 injections.

Inject 50 µl of each solution 3 times. Calculate the content of oxalates in parts per million using the following expression:

$$\frac{S_T \times 50}{S_R - S_T}$$

S_T = area of the peak due to oxalate in the chromatogram obtained with the test solution,

S_R = area of the peak due to oxalate in the chromatogram obtained with the reference solution.

Limit:
- *oxalates*: maximum 100 ppm.

Sucrose and reducing sugars

Dissolve 0.5 g in a mixture of 2 ml of *hydrochloric acid R1* and 10 ml of *water R*. Boil for 5 min, allow to cool, add 10 ml of *sodium carbonate solution R* and allow to stand for 10 min. Dilute to 25 ml with *water R* and filter. To 5 ml of the filtrate add 2 ml of *cupri-tartaric solution R* and boil for 1 min. Allow to stand for 2 min. No red precipitate is formed.

Chlorides ***(2.4.4)***

Maximum 50 ppm.

To 10 ml of previously filtered solution S add 5 ml of *water R.*

Phosphates ***(2.4.11)***

Maximum 100 ppm.

Dilute 1 ml of solution S to 100 ml with *water R*.

Sulphates ***(2.4.13)***

Maximum 50 ppm, determined on previously filtered solution S.

Prepare the standard using a mixture of 7.5 ml of *sulphate standard solution (10 ppm SO4) R* and 7.5 ml of *distilled water R*.

Iron

Maximum 5.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Introduce 2.0 g into a 100 ml polytetrafluoroethylene beaker and add 5 ml of *nitric acid R*. Boil, evaporating almost to dryness. Add 1 ml of *strong hydrogen peroxide solution R* and evaporate again almost to dryness. Repeat the hydrogen peroxide treatment until a clear solution is obtained. Using 2 ml of *nitric acid R*, transfer the solution into a 25 ml volumetric flask. Dilute to 25.0 ml with *dilute hydrochloric acid R*. In the same manner, prepare a compensation solution using 0.65 g of *calcium chloride R1* instead of the substance to be examined.

Reference solutions Prepare the reference solutions from *iron solution (20 ppm Fe) R* diluted with *dilute hydrochloric acid R.*

Source Iron hollow-cathode lamp.

Wavelength 248.3 nm.

Atomisation device Air-acetylene flame.

Carry out a basic correction using a deuterium lamp.

Magnesium and alkali metals

Maximum 0.4 per cent.

To 0.50 g add a mixture of 1.0 ml of *dilute acetic acid R* and 10.0 ml of *water R* and rapidly boil, whilst shaking, until completely dissolved. To the boiling solution add 5.0 ml of *ammonium oxalate solution R* and allow to stand for at least 6 h. Filter through a sintered-glass filter (1.6) *(2.1.2)* into a porcelain crucible. Carefully evaporate the filtrate to dryness and ignite. The residue weighs not more than 2 mg.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

Bacterial endotoxins *(2.6.14)*

Less than 167 IU/g.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 102 micro-organisms per gram, determined by plate count. It complies with the tests for *Escherichia coli*, *Pseudomonas aeruginosa* and *Staphylococcus aureus (2.6.13)*.

ASSAY

Dissolve 0.350 g in 20 ml of hot *water R*, allow to cool and dilute to 300 ml with *water R*. Carry out the complexometric titration of calcium *(2.5.11)*. Use 50 mg of *calconecarboxylic acid triturate R.*

1 ml of *0.1 M sodium edetate* is equivalent to 44.84 mg of $C_{12}H_{22}CaO_{14},H_{2O}$.

Used in treatment of calcium deficiency.

Preparations

Calcium Gluconate Tablets
Effervescent Calcium Gluconate Tablets

Ph Eur

DEFINITION

Calcium D-gluconate monohydrate.

Content

98.5 per cent to 102.0 per cent of $C_{12}H_{22}CaO_{14},H_2O$.

CHARACTERS

Appearance

White or almost white, crystalline or granular powder.

Solubility

Sparingly soluble in water, freely soluble in boiling water.

IDENTIFICATION

A. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 20 mg of the substance to be examined in 1 ml of *water R* , heating if necessary in a water-bath at 60 °C.

Reference solution Dissolve 20 mg of *calcium gluconate CRS* in 1 ml of *water R* , heating if necessary in a water-bath at 60 °C.

Plate *TLC silica gel G plate R* .

Mobile phase *ethyl acetate R, concentrated ammonia R, water R, ethanol (96 per cent) R* (10:10:30:50 *V/V/V/V*).

Application 5 µl.

Development Over a path of 10 cm.

Drying At 100 °C for 20 min. Allow to cool.

Detection Spray with a 50 g/l solution of *potassium dichromate R* in a 40 per cent *m/m* solution of *sulphuric acid R.*

Results After 5 min, the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

B. Solution S (see Tests) gives the reactions of calcium *(2.3.1)* .

TESTS

Solution S

Dissolve 1.0 g in *water R* heated to 60 °C and dilute to 50 ml with the same solvent.

Appearance of solution

At 60 °C, solution S is not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*. After cooling, it is not more opalescent than reference suspension II *(2.2.1)* .

Organic impurities and boric acid

Introduce 0.5 g into a porcelain dish previously rinsed with *sulphuric acid R* and placed in a bath of iced water. Add 2 ml of cooled *sulphuric acid R* and mix. No yellow or brown colour develops. Add *1 ml of chromotrope II B solution R* . A violet colour develops and does not become dark blue. The solution is not more intensely coloured than that of a mixture of *1 ml of chromotrope II B solution R* and 2 ml of cooled *sulphuric acid R.*

Sucrose and reducing sugars

Dissolve 0.5 g in a mixture of 2 ml of *hydrochloric acid R1* and 10 ml of *water R* . Boil for 5 min, allow to cool, add 10 ml of *sodium carbonate solution R* and allow to stand. Dilute to 25 ml with *water R* and filter. To 5 ml of the filtrate add 2 ml of *cupri-tartaric solution R* and boil for 1 min. Allow to stand for 2 min. No red precipitate is formed.

Chlorides *(2.4.4)*

Maximum 200 ppm.

Dilute 12.5 ml of solution S to 15 ml with *water R.*

Sulphates ***(2.4.13)***

Maximum 100 ppm.

Dissolve 10.0 g with heating in a mixture of 10 ml of *acetic acid R* and 90 ml of *distilled water R .*

Magnesium and alkali metals

Maximum 0.4 per cent.

Dissolve 1.00 g in 100 ml of *boiling water R* , add 10 ml *of ammonium chloride solution R* , 1 ml of *ammonia R* and, dropwise, 50 ml of hot *ammonium oxalate solution R* . Allow to stand for 4 h, dilute to 200 ml with *water R* and filter. Evaporate 100 ml of the filtrate to dryness and ignite. The residue weighs a maximum of 2 mg.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

2.0 g complies with test D. Heat the substance to be examined gradually and with care until it is almost completely transformed into a white mass and then ignite. Prepare the reference solution using 2 ml *of lead standard solution (10 ppm Pb) R.*

Microbial contamination

Total viable aerobic count (*2.6.12*) not more than 10^3 micro-organisms per gram, determined by plate count.

ASSAY

Dissolve 0.8000 g in 20 ml of hot *water R* , allow to cool and dilute to 300 ml with *water R* . Carry out the complexometric titration of calcium *(2.5.11)* .

1 ml of *0.1 M sodium edetate* is equivalent to 44.84 mg of $C_{12}H_{22}CaO_{14},H_{2O}$.

Ph Eur

Calcium Glycerophosphate

General Notices

(Ph Eur monograph 0980)

$C_3H_7CaO_6P$ 210.1 *27214-00-2*

Action and use

Excipient.

Ph Eur

DEFINITION

Mixture in variable proportions of the calcium salt of (*RS*)-2,3-dihydroxypropyl phosphate and of 2-hydroxy-1-(hydroxymethyl)ethyl phosphate which may be hydrated.

Content

18.6 per cent to 19.4 per cent of Ca (dried substance).

CHARACTERS

Appearance

White or almost white powder, hygroscopic.

Solubility

Sparingly soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Mix 1 g with *1 g of potassium hydrogen sulphate R* in a test tube fitted with a glass tube. Heat strongly and direct the white vapour towards a piece of filter paper impregnated with a freshly prepared 10 g/l solution of *sodium nitroprusside R* . The filter paper develops a blue colour in contact with *piperidine R.*

B. Ignite 0.1 g in a crucible. Take up the residue with 5 ml of *nitric acid R* and heat on a water-bath for 1 min. Filter. The filtrate gives reaction (b) of phosphates *(2.3.1)*.

C. It gives reaction (b) of calcium *(2.3.1)* .

TESTS

Solution S

Dissolve 1.5 g at room temperature in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 150 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension III *(2.2.1)* .

Acidity or alkalinity

To 100 ml of solution S add *0.1 ml of phenolphthalein solution R* . Not more than 1.5 ml of *0.1 M hydrochloric acid* or 0.5 ml *of 0.1 M sodium hydroxide* is required to change the colour of the indicator.

Citric acid

Shake 5.0 g with 20 ml of *carbon dioxide-free water R* and filter. To the filtrate add 0.15 ml of *sulphuric acid R* and filter again. To the filtrate add 5 ml of *mercuric sulphate solution R* and heat to boiling. Add 0.5 ml of a 3.2 g/l solution of *potassium permanganate R* and again heat to boiling. No precipitate is formed.

Glycerol and ethanol (96 per cent)-soluble substances

Maximum 0.5 per cent.

Shake 1.000 g with 25 ml of *ethanol (96 per cent) R* for 1 min. Filter. Evaporate the filtrate on a water-bath and dry the residue at 70 °C for 1 h. The residue weighs a maximum of 5 mg.

Chlorides ***(2.4.4)***

Maximum 500 ppm.

Dissolve 0.1 g in a mixture of 2 ml of *acetic acid R* and 8 ml of *water R* and dilute to 15 ml with *water R.*

Phosphates ***(2.4.11)***

Maximum 400 ppm.

Dilute 2.5 ml of solution S to 100 ml with *water R.*

Sulphates ***(2.4.13)***

Maximum 0.1 per cent, determined on solution S.

Arsenic ***(2.4.2, Method A)***

Maximum 3 ppm.

Dissolve 0.33 g in *water R* and dilute to 25 ml with the same solvent.

Iron ***(2.4.9)***

Maximum 50 ppm, detemined on 0.20 g.

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

Dissolve 2.0 g in 10 ml of *buffer solution pH 3.5 R* and dilute to 20 ml with *water R* . 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R* .

Loss on drying ***(2.2.32)***

Maximum 12.0 per cent, determined on 1.000 g by drying in an oven at 150 °C for 4 h.

ASSAY

Dissolve 0.200 g in *water R.* Carry out the complexometric titration of calcium *(2.5.11)* .

1 ml of *0.1 M sodium edetate* is equivalent to 4.008 mg of Ca.

Ph Eur

Calcium Hydrogen Phosphate

General Notices

Dibasic Calcium Phosphate

(Calcium Hydrogen Phosphate Dihydrate, Ph Eur monograph 0116)

$CaHPO_4,2H_2O$ 172.1 *7789-77-7*

Ph Eur

DEFINITION

Content

98.0 per cent to 105.0 per cent.

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in cold water and in ethanol (96 per cent). It dissolves in dilute hydrochloric acid and in dilute nitric acid.

IDENTIFICATION

A. Dissolve with heating 0.1 g in 10 ml of *dilute hydrochloric acid R*. Add 2.5 ml of *dilute ammonia R1*, shake, and add 5 ml of a 35 g/l solution of *ammonium oxalate R*. A white precipitate is produced.

B. Dissolve 0.1 g in 5 ml of *dilute nitric acid R*, add 2 ml of *ammonium molybdate solution R* and heat at 70 °C for 2 min. A yellow precipitate is produced.

C. It complies with the limits of the assay.

TESTS

Solution S

Dissolve 2.5 g in 20 ml of *dilute hydrochloric acid R*, filter if necessary and add *dilute ammonia R1* until a precipitate is formed. Add just sufficient *dilute hydrochloric acid R* to dissolve the precipitate and dilute to 50 ml with *distilled water R.*

Acid-insoluble substances

Maximum 0.2 per cent.

Dissolve 5.0 g in 40 ml of *water R,* add 10 ml of *hydrochloric acid R* and heat to boiling for 5 min. Cool, then collect the insoluble substances using ashless filter paper. Wash with *water R* until turbidity is no longer produced when *silver nitrate solution R2* is added to the filtrate. Ignite at 600 ± 50 °C. The residue weighs not more than 10 mg.

Carbonates

Shake 0.5 g with 5 ml of *carbon dioxide-free water R* and add 1 ml of *hydrochloric acid R* . No effervescence is produced.

Chlorides

Maximum 0.25 per cent.

Test solution Dissolve 0.20 g in a mixture of 20 ml of *water R* and 13 ml of *dilute nitric acid R* , dilute to 100 ml with *water R* and filter if necessary. Use 50 ml of this solution.

Reference solution To 0.70 ml of *0.01 M hydrochloric acid*, add 6 ml of *dilute nitric acid R* and dilute to 50 ml with *water R* .

Add 1 ml of *silver nitrate solution R2* to the test solution and to the reference solution and mix. After standing for 5 min protected from light, any opalescence in the test solution is not more intense than that in the reference solution.

Fluorides

Maximum 100 ppm.

Potentiometry *(2.2.36, Method II)*.

Chelating solution Dissolve 45 g of *cyclohexylenedinitrilotetra-acetic acid R* in 75 ml of *sodium hydroxide solution R* and dilute to 250 ml with *water R* .

Test solution Dissolve 1.000 g in 4 ml of *hydrochloric acid R1,* add 20 ml of chelating solution, 2.7 ml of *glacial acetic acid R* and 2.8 g of *sodium chloride R* , adjust to pH 5-6 with *sodium hydroxide solution R* and dilute to 50.0 ml with *water R* .

Reference solution Dissolve 4.42 g of *sodium fluoride R* , previously dried at 300 °C for 12 h, in *water R* and dilute to 1000.0 ml with the same solvent. Dilute 50.0 ml of this solution to 500.0 ml with *total-ionic-strength-adjustment buffer R* (200 ppm F).

Indicator electrode Fluoride-selective.

Reference electrode Silver-silver chloride.

Carry out the measurement on 20.0 ml of the test solution. Add at least 3 times 0.10 ml of the reference solution and carry out the measurement after each addition. Calculate the concentration of fluorides using the calibration curve.

Sulphates

Maximum 0.5 per cent.

Test solution Dissolve 0.5 g in a mixture of 5 ml of *water R* and 5 ml of *dilute hydrochloric acid R* and dilute to 100 ml with *water R*. Filter if necessary. To 20 ml of this solution, add 1 ml of *dilute hydrochloric acid R* and dilute to 50 ml with *water R*.

Reference solution To 1.0 ml of *0.005 M sulphuric acid*, add 1 ml of *dilute hydrochloric acid R* and dilute to 50 ml with *water R*. Filter if necessary.

To the test solution and to the reference solution, add 2 ml of a 120 g/l solution of *barium chloride R* and allow to stand for 10 min. Any opalescence in the test solution is not more intense than that in the reference solution.

Arsenic ***(2.4.2, Method A)***

Maximum 10 ppm, determined on 2 ml of solution S.

Barium

To 0.5 g, add 10 ml of *water R* and heat to boiling. While stirring, add 1 ml of *hydrochloric acid R* dropwise. Allow to cool and filter if necessary. Add 2 ml of a 10 g/l solution of *dipotassium sulphate R* and allow to stand for 10 min. No turbidity is produced.

Iron ***(2.4.9)***

Maximum 400 ppm.

Dilute 0.5 ml of solution S to 10 ml with *water R*.

Heavy metals ***(2.4.8)***

Maximum 40 ppm.

Dilute 10 ml of solution S to 20 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on ignition

24.5 per cent to 26.5 per cent, determined on 1.000 g by ignition to constant mass at 800-825 °C.

ASSAY

Dissolve 0.4 g in 12 ml of *dilute hydrochloric acid R* and dilute to 200 ml with *water R*. To 20.0 ml of this solution add 25.0 ml of *0.02 M sodium edetate*, 50 ml of *water R*, 5 ml of *ammonium chloride buffer solution pH 10.7 R* and about 25 mg of *mordant black 11 triturate R*. Titrate the excess of sodium edetate with *0.02 M zinc sulphate*. Carry out a blank titration.

1 ml of *0.02 M sodium edetate* is equivalent to 3.44 mg of $CaHPO_4,2H_2O$.

Practically insoluble in water.

IDENTIFICATION

A. To 0.80 g in a mortar, add 10 ml of *water R* and 0.5 ml of *phenolphthalein solution R* and mix. The suspension turns red. On addition of 17.5 ml of *1 M hydrochloric acid*, the suspension becomes colourless without effervescing. The red colour occurs again when the mixture is triturated for 1 min. On addition of a further 6 ml of *1 M hydrochloric acid* and triturating, the solution becomes colourless.

B. Dissolve about 0.1 g in *dilute hydrochloric acid R* and dilute to 10 ml with *water R*. 5 ml of the solution give reaction (b) of calcium *(2.3.1)*.

TESTS

Matter insoluble in hydrochloric acid

Maximum 0.5 per cent.

Dissolve 2.0 g in 30 ml of *hydrochloric acid R*. Boil the solution and filter. Wash the residue with hot *water R*. The residue weighs a maximum of 10 mg.

Carbonates

Maximum 5.0 per cent of $CaCO_3$.

Add 5.0 ml of *1 M hydrochloric acid* to the titrated solution obtained under Assay and titrate with *1 M sodium hydroxide* using 0.5 ml of *methyl orange solution R* as indicator.

1 ml of *1 M hydrochloric acid* is equivalent to 50.05 mg of $CaCO_3$.

Chlorides ***(2.4.4)***

Maximum 330 ppm.

Dissolve 0.30 g in a mixture of 2 ml of *nitric acid R* and 10 ml of *water R* and dilute to 30 ml with *water R*.

Sulphates ***(2.4.13)***

Maximum 0.4 per cent.

Dissolve 0.15 g in a mixture of 5 ml of *dilute hydrochloric acid R* and 10 ml of *distilled water R* and dilute to 60 ml with *distilled water R.*

Arsenic ***(2.4.2, Method A)***

Maximum 4 ppm.

Dissolve 0.50 g in 5 ml of *brominated hydrochloric acid R* and dilute to 50 ml with *water R*. Use 25 ml of this solution.

Magnesium and alkali metals

Maximum 4.0 per cent calculated as sulphates.

Dissolve 1.0 g in a mixture of 10 ml of *hydrochloric acid R* and 40 ml of *water R*. Boil and add 50 ml of a 63 g/l solution of *oxalic acid R*. Neutralise with *ammonia R* and dilute to 200 ml with *water R*. Allow to stand for 1 h and filter through a suitable filter. To 100 ml of the filtrate, add 0.5 ml of *sulphuric acid R*. Cautiously evaporate to dryness and ignite. The residue weighs a maximum of 20 mg.

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

Dissolve 1.0 g in 10 ml of *hydrochloric acid R1* and evaporate to dryness on a water-bath. Dissolve the residue in 20 ml of *water R* and filter. 12 ml of the filtrate complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

ASSAY

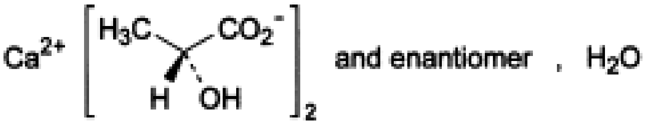
To 1.500 g in a mortar, add 20-30 ml of *water R* and 0.5 ml of *phenolphthalein solution R*. Titrate with *1 M hydrochloric acid* by triturating the substance until the red colour disappears. The final solution is used in the tests for carbonates.

1 ml of *1 M hydrochloric acid* is equivalent to 37.05 mg of $Ca(OH)_2$.

Calcium Lactate Monohydrate

General Notices

(Ph Eur monograph 2117)



$C_6H_{10}CaO_6,H_2O$ 236.0 *41372-22-9*

Action and use

Used in treatment of calcium deficiency.

Ph Eur

DEFINITION

Calcium bis(2-hydroxypropanoate) or mixture of calcium (2*R*)-, (2*S*)- and (2*RS*)-2-hydroxypropanoates monohydrates.

Content

98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline or granular powder.

Solubility

Soluble in water, freely soluble in boiling water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. It complies with the test for loss on drying (see Tests).

B. It gives the reaction of lactates *(2.3.1)* .

C. It gives reaction (b) of calcium *(2.3.1)* .

TESTS

Solution S

Dissolve 5.4 g (equivalent to 5.0 g of the dried substance) with heating in *carbon dioxide-free water R* prepared from *distilled water R*, allow to cool and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II *(2.2.1)* and not more intensely coloured than reference solution BY_6 *(2.2.2, Method II).*

Acidity or alkalinity

To 10 ml of solution S add 0.1 ml of *phenolphthalein solution R* and 0.5 ml of *0.01 M hydrochloric acid*. The solution is colourless. Not more than 2.0 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to pink.

Chlorides *(2.4.4)*

Maximum 200 ppm.

Dilute 5 ml of solution S to 15 ml with *water R*.

Sulphates *(2.4.13)*

Maximum 400 ppm.

Dilute 7.5 ml of solution S to 15 ml with *distilled water R*.

Barium

To 10 ml of solution S add 1 ml of *calcium sulphate solution R*. Allow to stand for 15 min. Any opalescence in the solution is not more intense than that in a mixture of 1 ml of *distilled water R* and 10 ml of solution S.

Iron *(2.4.9)*

Maximum 50 ppm.

Dilute 4 ml of solution S to 10 ml with *water R*.

Magnesium and alkali salts

Maximum 1 per cent.

To 20 ml of solution S add 20 ml of *water R*, 2 g of *ammonium chloride R* and 2 ml of *dilute ammonia R1*. Heat to boiling and rapidly add 40 ml of hot *ammonium oxalate solution R.* Allow to stand for 4 h, dilute to 100.0 ml with *water R* and filter. To 50.0 ml of the filtrate add 0.5 ml of *sulphuric acid R*. Evaporate to dryness and ignite the residue to constant mass at 600 ± 50 °C. The residue weighs a maximum of 5 mg.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

Dissolve a quantity equivalent to 2.0 g of the dried substance in *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R* .

Loss on drying ***(2.2.32)***

5.0 per cent to 8.0 per cent, determined on 0.500 g by drying in an oven at 125 °C.

ASSAY

Dissolve a quantity equivalent to 0.200 g of the dried substance in *water R* and dilute to 300 ml with the same solvent. Carry out the complexometric titration of calcium *(2.5.11)* .

1 ml of 0.*1 M sodium edetate* is equivalent to 21.82 mg of $C_6H_{10}CaO_6$.

Ph Eur

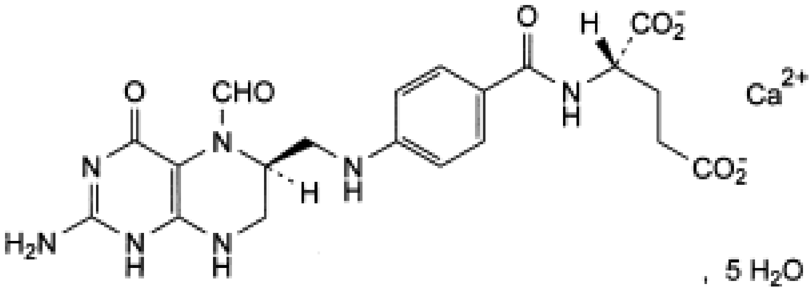
Calcium Levofolinate Pentahydrate

General Notices

(Ph Eur monograph 1606)



$C_{20}H_{21}CaN_7O_7,5H_2O$ 511.5 *80433-71-2*
(*anhydrous*)

Action and use

Antidote to folic acid antagonists.

Ph Eur

DEFINITION

Calcium (2*S*)-2-[[4-[[[(6*S*)-2-amino-5-formyl-4-oxo-1,4,5,6,7,8-hexahydropteridin-6-yl]methyl] amino]benzoyl]amino]pentanedioate pentahydrate.

Content:

- *calcium levofolinate* ($C_{20}H_{21}CaN_7O_7$; M_r 511.5): 97.0 per cent to 102.0 per cent (anhydrous substance);
- *calcium* (Ca; A_r 40.08): 7.54 per cent to 8.14 per cent (anhydrous substance).

CHARACTERS

Appearance

White or light yellow, amorphous or crystalline powder, hygroscopic.

Solubility

Slightly soluble in water, practically insoluble in acetone and in ethanol (96 per cent).

IDENTIFICATION

First identification *A, B, D.*

Second identification *A, C, D.*

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry *(2.2.24)* .

Preparation Discs.

Comparison *calcium folinate CRS.*

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in the minimum quantity of *water R* and add dropwise sufficient *acetone R* to produce a precipitate. Allow to stand for 15 min, collect the precipitate by centrifugation, wash the precipitate twice with a minimum quantity of *acetone R* and dry. Record new spectra using the residues.

C. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 15 mg of the substance to be examined in a 3 per cent *V/V* solution of *ammonia R* and dilute to 5 ml with the same solvent.

Reference solution Dissolve 15 mg of *calcium folinate CRS* in a 3 per cent *V/V* solution of *ammonia R* and dilute to 5 ml with the same solvent.

Plate *cellulose for chromatography* F_{254} *R* as the coating substance.

Mobile phase the lower layer of a mixture of 1 volume of *isoamyl alcohol R* and 10 volumes of a 50 g/l solution of *citric acid R* previously adjusted to pH 8 with *ammonia R* .

Application 5 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. It gives reaction (b) of calcium *(2.3.1)* .

Carry out the tests and the assay as rapidly as possible, protected from bright light.

TESTS

Solution S

Dissolve 0.40 g in *carbon dioxide-free water R* , heating at 40 °C if necessary, and dilute to 50.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and its absorbance *(2.2.25)* at 420 nm has a maximum of 0.25.

pH *(2.2.3)*

7.5 to 8.5 for solution S.

Specific optical rotation *(2.2.7)*

- 10 to - 15 (anhydrous substance), measured at 25 °C.

Dissolve 0.200 g in *tris(hydroxymethyl)aminomethane solution R* previously adjusted to pH 8.1 with *sodium hydroxide solution R* or *hydrochloric acid R1* and dilute to 20.0 ml with the same solvent.

Acetone and ethanol

Head-space gas chromatography *(2.2.28)* : use the standard additions method.

Test solution Dissolve 0.25 g of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution Dissolve 0.125 g of *acetone R* and 0.750 g of *anhydrous ethanol R* in *water R* and dilute to 1000.0 ml with *water R.*

Column:

— *material:* fused silica;

— *size:* *l* = 10 m, Ø = 0.32 mm;

— *stationary phase: styrene-divinylbenzene copolymer R* .

Carrier gas *nitrogen for chromatography R.*

Flow rate 4 ml/min.

Static head-space conditions which may be used:

— *equilibration temperature*: 80 °C;

— *equilibration time*: 20 min;

— *pressurisation time*: 30 s.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 14	80 → 220
Injection port		110
Detector		270

Detection Flame ionisation.

Injection At least 3 times.

Limits:

— *acetone* : maximum 0.5 per cent,

— *ethanol* : maximum 3.0 per cent.

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 10.0 mg of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve 10.0 mg of *calcium folinate CRS* in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 100.0 ml with *water R* .

Reference solution (c) Dissolve 10.0 mg of *formylfolic acid CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with *water R* .

Reference solution (d) Dilute 1.0 ml of reference solution (b) to 20.0 ml with *water R* .

Reference solution (e) Dilute 5.0 ml of reference solution (c) to 10.0 ml with reference solution (b).

Column:

— *size*: *l* = 0.25 m, Ø = 4 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm);

— *temperature*: 40 °C.

Mobile phase Mix 220 ml of *methanol R* and 780 ml of a solution containing 2.0 ml of *tetrabutylammonium hydroxide solution (400 g/l) R* and 2.2 g of *disodium hydrogen phosphate R* previously adjusted to pH 7.8 with *phosphoric acid R* . If necessary adjust the concentration of *methanol R* to achieve the prescribed resolution.

Flow rate 1 ml/min.

Detection Spectrophotometer at 280 nm.

Injection 10 µl.

Run time 2.5 times the retention time of the principal peak in the chromatogram obtained with the test solution.

System suitability Reference solution (e):

— *resolution*: minimum of 2.2 between the peaks due to folinate and to impurity D.

Limits:

— *impurity D*: not more than 0.8 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.8 per cent);

— *any other impurity*: not more than 0.8 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.8 per cent);

— *sum of other impurities*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent);

— *disregard limit*: area of the principal peak in the chromatogram obtained with reference solution (d) (0.05 per cent).

Impurity H

Liquid chromatography *(2.2.29)* : use the normalisation procedure.

Test solution Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 100.0 ml with the same solvent.

Reference solution (a) Dissolve 10.0 mg of *calcium folinate CRS* in *water R* and dilute to 20.0 ml with the same solvent.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 100.0 ml with *water R.*

Column:
— *size*: *l* = 0.15 m, Ø = 4 mm;

— *stationary phase: human albumin coated silica gel for chromatography R* (5 µm);

— *temperature:* 40 °C.

Mobile phase Dissolve 9.72 g of *sodium dihydrogen phosphate R* in 890 ml of *water R* and adjust to pH 5.0 with *sodium hydroxide solution R* ; add 100 ml of *2-propanol R* and 10 ml of *acetonitrile R.*

Flow rate 1 ml/min.

Detection Spectrophotometer at 286 nm.

Injection 10 µl.

Retention times Levofolinate = about 9 min; impurity H = about 19 min.

System suitability:
— *resolution*: minimum of 5.0 between the peaks due to levofolinate and to impurity H in the chromatogram obtained with reference solution (a). The sum of the areas of the 2 peaks is 100 per cent. The peak area of impurity H is 48 per cent to 52 per cent. In the chromatogram obtained with reference solution (b) 2 clearly visible peaks are obtained.

Limit:
— *impurity H*: maximum 0.5 per cent.

Chlorides

Maximum 0.5 per cent.

Dissolve 0.300 g in 50 ml of *water R* heating at 40 °C if necessary. Add 10 ml of *2 M nitric acid* and titrate with 0.*005 M silver nitrate* determining the end-point potentiometrically *(2.2.20)* .

1 ml of *0.005 M silver nitrate* is equivalent to 0.177 mg of Cl.

Platinum

Maximum 10.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method II).*

Test solution Dissolve 1.0 g in *water R* and dilute to 100.0 ml with the same solvent.

Reference solutions Prepare the reference solutions using *platinum standard solution (30 ppm Pt) R*, diluted as necessary with a mixture of 1 volume of *nitric acid R* and 99 volumes of *water R.*

Source Platinum hollow-cathode lamp.

Wavelength 265.9 nm.

Heavy metals *(2.4.8)*

Maximum 50 ppm.

1.0 g complies with test F. Prepare the reference solution using 5 ml of *lead standard solution (10 ppm Pb) R.*

Water *(2.5.12)*

10.0 per cent to 17.0 per cent, determined on 0.200 g (ground to a very fine powder). Stir the substance to be examined in the titration solvent for about 15 min before titrating and use *iodosulphurous reagent R* as titrant.

Bacterial endotoxins *(2.6.14)*

Less than 0.5 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Calcium

Dissolve 0.400 g in 150 ml of *water R* and dilute to 300 ml with the same solvent. Carry out the complexometric titration of calcium *(2.5.11)* .

1 ml of *0.1 M sodium edetate* is equivalent to 4.008 mg of Ca.

Calcium folinate

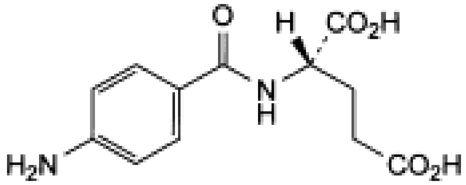
Liquid chromatography *(2.2.29)* as described in the test for related substances.

Calculate the percentage content of $C_{20}H2_{1}CaN_{7}O_{7}$ from the areas of the peaks in the chromatograms obtained with the test solution and reference solution (a) and the declared content of *calcium folinate CRS* .

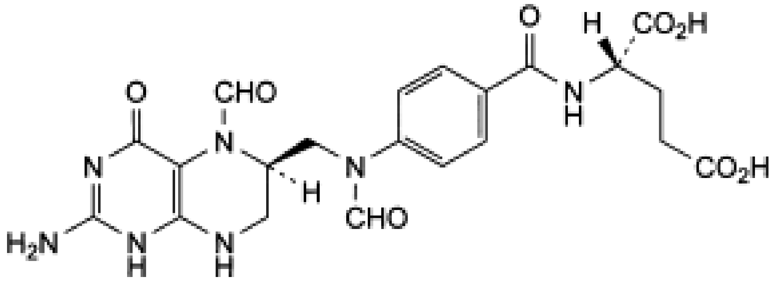
STORAGE

In an airtight container, protected from light. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

IMPURITIES



A. (2*S*)-2-[(4-aminobenzoyl)amino]pentanedioic acid,



B. (2*S*)-2-[[4-[[[(6*R*)-2-amino-5-formyl-4-oxo-1,4,5,6,7,8-hexahydropteridin-6-yl]methyl]

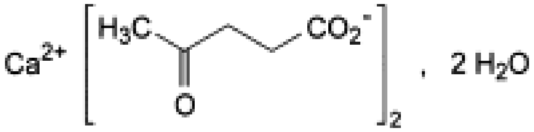
Calcium Levulinate Dihydrate

General Notices

(Ph Eur monograph 1296)



$C_{10}H_{14}CaO_6,2H_2O$ 306.3 *5743-49-7*

Action and use

Source of calcium.

Ph Eur

DEFINITION

Calcium di(4-oxopentanoate) dihydrate.

Content

98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water, very slightly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

First identification *A, D, E.*

Second identification *B, C, D, E.*

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *calcium levulinate dihydrate CRS.*

B. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 60 mg of the substance to be examined in *water R* and dilute to 1 ml with the same solvent.

Reference solution Dissolve 60 mg of *calcium levulinate dihydrate CRS* in *water R* and dilute to 1 ml with the same solvent.

Plate *TLC silica gel plate R* .

Mobile phase *concentrated ammonia R, ethyl acetate R, water R, ethanol (96 per cent) R* (10:10:30:50 *V/V/V/V*).

Application 10 µl.

Development Over a path of 10 cm.

Drying At 100-105 °C for 20 min and allow to cool.

Detection Spray with a 30 g/l solution of *potassium permanganate R* . Dry in a current of warm air for about 5 min or until the spots become yellow. Examine in daylight.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. To 1 ml of solution S (see Tests), add 20 ml of a 2.5 g/l solution of *dinitrophenylhydrazine R* in *dilute hydrochloric acid R* . Allow to stand for 15 min. Filter, wash the precipitate with *water R.* Dry the precipitate in an oven at 100-105 °C. The melting point *(2.2.14)* is 203 °C to 210 °C.

D. It gives reaction (b) of calcium *(2.3.1)* .

E. Loss on drying (see Tests).

TESTS

Solution S

Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

pH *(2.2.3)*

6.8 to 7.8 for solution S.

Oxidisable substances

To 1 ml of solution S, add 10 ml of *water R* , 1 ml of *dilute sulphuric acid R* and 0.25 ml of a 3.0 g/l solution of *potassium permanganate R* . Mix. After 5 min, the violet colour of the mixture is still visible.

Sucrose and reducing sugars

To 5 ml of solution S add 2 ml of *hydrochloric acid R1* and dilute to 10 ml with *water R*. Heat to boiling for 5 min and allow to cool. Add 10 ml of *sodium carbonate solution R*. Allow to stand for 5 min, dilute to 25 ml with *water R* and filter. To 5 ml of the filtrate add 2 ml of *cupri-tartaric solution R* and heat to boiling for 1 min. No red precipitate is formed.

Chlorides *(2.4.4)*

Maximum 50 ppm.

Dilute 10 ml of solution S to 15 ml with *water R*.

Sulphates *(2.4.13)*

Maximum 200 ppm.

Dilute 7.5 ml of solution S to 15 ml with *distilled water R*.

Magnesium and alkali metals

Maximum 1.0 per cent.

To 10 ml of solution S, add 80 ml of *water R*, 10 ml of *ammonium chloride solution R* and 1 ml of *ammonia R*. Heat to boiling. To the boiling solution, add dropwise 50 ml of warm *ammonium oxalate solution R*. Allow to stand for 4 h, then dilute to 200 ml with *water R* and filter. To 100 ml of the filtrate, add 0.5 ml of *sulphuric acid R*. Evaporate to dryness on a water-bath and ignite to constant mass at 600 ± 50 °C. The residue weighs a maximum of 5.0 mg.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

Loss on drying *(2.2.32)*

11.0 per cent to 12.5 per cent, determined on 0.200 g by drying at 105 °C.

Pyrogens *(2.6.8)*

If intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of pyrogens, it complies with the test for pyrogens. Inject per kilogram of the rabbit's mass 4 ml of a solution containing per millilitre 50 mg of the substance to be examined.

ASSAY

Dissolve 0.240 g in 50 ml of *water R*. Carry out the complexometric titration of calcium *(2.5.11)*.

1 ml of *0.1 M sodium edetate* is equivalent to 27.03 mg of $C_{10}H_{14}CaO_6$.

STORAGE

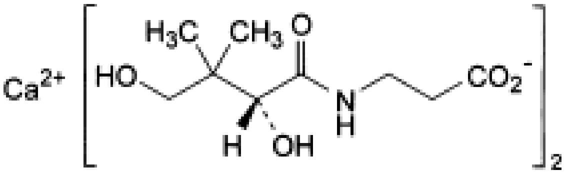
Protected from light.

Ph Eur

Calcium Pantothenate

General Notices

(Ph Eur monograph 0470)



$C_{18}H_{32}CaN_2O_{10}$ 476.5 *137-08-6*

Action and use

Component of vitamin B.

Ph Eur

DEFINITION

Calcium pantothenate contains not less than 98.0 per cent and not more than the equivalent of 101.0 per cent of calcium bis[3-[[(2*R*)-2,4-dihydroxy-3,3-dimethylbutanoyl]amino] propanoate], calculated with reference to the dried substance.

CHARACTERS

A. white or almost white powder, slightly hygroscopic, freely soluble in water, slightly soluble in alcohol.

IDENTIFICATION

A. It complies with the test for specific optical rotation (see Tests).

B. Examine the chromatograms obtained in the test for 3-aminopropionic acid. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. To 1 ml of solution S (see Tests) add 1 ml of *dilute sodium hydroxide solution R* and 0.1 ml of *copper sulphate solution R* . A blue colour develops.

D. It gives reaction (a) of calcium *(2.3.1)* .

TESTS

Solution S

Dissolve 2.50 g in *carbon dioxide-free water R* and dilute to 50.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH ***(2.2.3)***

The pH of solution S is 6.8 to 8.0.

Specific optical rotation ***(2.2.7)***

+ 25.5 to + 27.5, determined on solution S and calculated with reference to the dried substance.

3-Aminopropionic acid

Examine by thin-layer chromatography *(2.2.27)* , using *silica gel G R* as the coating substance.

Test solution (a) Dissolve 0.2 g of the substance to be examined in *water R* and dilute to 5 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with *water R* .

Reference solution (a) Dissolve 20 mg of *calcium pantothenate CRS* in *water R* and dilute to 5 ml with the same solvent.

Reference solution (b) Dissolve 10 mg of *3-aminopropionic acid R* in *water R* and dilute to 50 ml with the same solvent.

Apply separately to the plate 5 µl of each solution. Develop over a path of 12 cm using a mixture of 35 volumes of *water R* and 65 volumes of *ethanol R* . Dry the plate in a current of air and spray with *ninhydrin solution R1* . Heat at 110 °C for 10 min. Any spot corresponding to 3-aminopropionic acid in the chromatogram obtained with test solution (a) is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

Chlorides ***(2.4.4)***

5 ml of solution S diluted to 15 ml with *water R* complies with the limit test for chlorides (200 ppm).

Heavy metals ***(2.4.8)***

12 ml of solution S complies with limit test A for heavy metals (20 ppm). Prepare the standard using *lead standard solution (1 ppm Pb) R* .

Loss on drying ***(2.2.32)***

Not more than 3.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

Dissolve 0.180 g in 50 ml of *anhydrous acetic acid R* . Titrate with *0.1 M perchloric acid* determining the end-point potentiometrically *(2.2.20)* .

1 ml of *0.1 M perchloric acid* is equivalent to 23.83 mg of $C_{18}H_{32}CaN_2O_{10}$.

STORAGE

Store in an airtight container .

Ph Eur

Calcium Phosphate

General Notices

Tribasic Calcium Phosphate

(Ph Eur monograph 1052)

Action and use

Excipient.

Preparation

Calcium and Ergocalciferol Tablets

Calcium Phosphate for Homoeopathic Preparations

Ph Eur

DEFINITION

Mixture of calcium phosphates.

Content

35.0 per cent to 40.0 per cent of Ca (A_r 40.08).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water. It dissolves in dilute hydrochloric acid and in dilute nitric acid.

IDENTIFICATION

A. Dissolve 0.1 g in 5 ml of a 25 per cent *V/V* solution of *nitric acid R* . The solution gives reaction (b) of phosphates *(2.3.1)* .

B. It gives reaction (b) of calcium *(2.3.1)* . Filter before adding *potassium ferrocyanide solution R.*

C. It complies with the limits of the assay.

TESTS

Solution S

Dissolve 2.50 g in 20 ml of *dilute hydrochloric acid R*. If the solution is not clear, filter it. Add *dilute ammonia R1* dropwise until a precipitate is formed. Dissolve the precipitate by adding *dilute hydrochloric acid R* and dilute to 50 ml with *distilled water R.*

Chlorides *(2.4.4)*

Maximum 0.15 per cent.

Dissolve 0.22 g in a mixture of 1 ml of *nitric acid R* and 10 ml of *water R* and dilute to 100 ml with *water R*.

Fluorides

Maximum 75 ppm.

Potentiometry *(2.2.36, Method II)*.

Test solution Dissolve 0.250 g in *0.1 M hydrochloric acid*, add 5.0 ml of *fluoride standard solution (1 ppm F) R* and dilute to 50.0 ml with *0.1 M hydrochloric acid*. To 20.0 ml of this solution add 20.0 ml of *total-ionic-strength-adjustment buffer R* and 3 ml of an 82 g/l solution of *anhydrous sodium acetate R*. Adjust to pH 5.2 with *ammonia R* and dilute to 50.0 ml with *distilled water R.*

Reference solution *Fluoride standard solution (10 ppm F) R.*

Indicator electrode Fluoride-selective.

Reference electrode Silver-silver chloride.

Carry out the measurements on the test solution, then add at least 3 quantities, each of 0.5 ml, of the reference solution, carrying out a measurement after each addition. Calculate the concentration of fluorides using the calibration curve, taking into account the addition of fluoride to the test solution.

Sulphates *(2.4.13)*

Maximum 0.5 per cent.

Dilute 1 ml of solution S to 25 ml with *distilled water R.*

Arsenic *(2.4.2, Method A)*

Maximum 4 ppm, determined on 5 ml of solution S.

Iron *(2.4.9)*

Maximum 400 ppm.

Dilute 0.5 ml of solution S to 10 ml with *water R*.

Heavy metals *(2.4.8)*

Maximum 30 ppm.

Dilute 13 ml of solution S to 20 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Acid-insoluble matter

Maximum 0.2 per cent.

Dissolve 5.0 g in a mixture of 10 ml of *hydrochloric acid R* and 30 ml of *water R*. Filter, wash the residue with *water R* and dry to constant mass at 100-105 °C. The residue weighs a maximum of 10 mg.

Loss on ignition

Maximum 8.0 per cent, determined on 1.000 g by ignition at 800 ± 50 °C for 30 min.

ASSAY

Dissolve 0.200 g in a mixture of 1 ml of *hydrochloric acid R1* and 5 ml of *water R*. Add 25.0 ml of *0.1 M sodium edetate* and dilute to 200 ml with *water R*. Adjust to about pH 10 with *concentrated ammonia R*. Add 10 ml of *ammonium chloride buffer solution pH 10.0 R* and a few milligrams of *mordant black 11 triturate R*. Titrate the excess sodium edetate with *0.1 M zinc sulphate* until the colour changes from blue to violet.

1 ml of *0.1 M sodium edetate* is equivalent to 4.008 mg of Ca.

Ph Eur

Calcium Polystyrene Sulphonate

General Notices

Action and use

Used in the treatment of hyperkalaemia.

DEFINITION

Calcium Polystyrene Sulphonate is a cation-exchange resin prepared in the calcium form containing not less than 6.5% w/w and not more than 9.5% w/w of calcium, calculated with reference to the dried substance. Each g exchanges not less than 1.3 mEq and not more than 2.0 mEq of potassium, calculated with reference to the dried substance.

CHARACTERISTICS

A cream to light brown, fine powder.

Practically insoluble in *water* and in *ethanol (96%).*

IDENTIFICATION

A. The *infrared absorption spectrum,* Appendix II A, is concordant with the *reference spectrum* of calcium polystyrene sulphonate *(RS 037)* .

B. Yields reaction C characteristic of *calcium salts* , Appendix VI.

TESTS

Particle size

Not more than 1% w/w is retained on a 150-µm sieve, Appendix XVII B. Use 20 g and sieve for 5 minutes.

Potassium

Not more than 0.1% of K when determined by *atomic emission spectrophotometry* , Appendix II D, measuring at 766.5 nm and using a solution prepared in the following manner. To 1.1 g of the substance being examined add 5 ml of *hydrochloric acid* , heat to boiling, cool and add 10 ml of *water*. Filter, wash the filter and residue with *water* and dilute the filtrate and washings to 25 ml with *water*. Use *potassium standard solution (100 ppm K)* , suitably diluted with *water*, to prepare the standard solutions.

Sodium

Not more than 0.1% of Na when determined by *atomic emission spectrophotometry* , Appendix II D, measuring at 589.0 nm and using a solution prepared in the following manner.

To 1.1 g of the substance being examined add 5 ml of *hydrochloric acid*, heat to boiling, cool and add 10 ml of *water*. Filter, wash the filter and residue with *water* and dilute the filtrate and washings to 25 ml with *water*. Use *sodium solution (200 ppm Na)*, suitably diluted with *water*, to prepare the standard solutions.

Arsenic

1 g complies with the *limit test for arsenic*, Appendix VII (1 ppm).

Heavy metals

Heat 4 g until charred, cool, add 4 ml of *lead-free nitric acid* and 0.5 ml of *sulphuric acid* drop wise and heat cautiously until white fumes are no longer evolved. Ignite in a muffle furnace at 500° to 600° until a white residue is obtained. Cool, add 4 ml of *hydrochloric acid* and dilute to 20 ml. The resulting solution complies with *limit test A for heavy metals*, Appendix VII. Use 2 ml of *lead standard solution (10 ppm Pb)* to prepare the standard (10 ppm).

Styrene

Carry out the method for *liquid chromatography*, Appendix III D, using the following solutions. For solution (1) shake 10 g of the substance being examined with 10 ml of *acetone* for 30 minutes, centrifuge and use the supernatant liquid. Solution (2) contains 0.0001% w/v of *styrene* in *acetone*.

The chromatographic procedure may be carried out using (a) a stainless steel column (30 cm × 4 mm) packed with *octadecylsilyl silica gel for chromatography* (µBondapak C18 is suitable), (b) a mixture of equal volumes of *acetonitrile* and *water* as the mobile phase with a flow rate of 2 ml per minute and (c) a detection wavelength of 254 nm.

Inject separately 20 µl of each solution. The area of the peak corresponding to styrene in the chromatogram obtained with solution (1) is not greater than the area of the principal peak in the chromatogram obtained with solution (2) (1 ppm).

Potassium exchange capacity

To 3 g of the substance being examined in a dry 250 ml glass-stoppered flask add 100 ml of a solution containing 0.7455% w/v of *potassium chloride* and 0.4401% w/v of *potassium hydrogen carbonate* in *water* (solution A), stopper and shake for 15 minutes. Filter and dilute 2 ml of the filtrate to 1000 ml with *water*. Determine the concentration of unbound potassium in this solution by *atomic emission spectrophotometry*, Appendix II D, measuring at 766.5 nm and using solution A suitably diluted with *water*, to prepare the standard solutions. Calculate the potassium exchange capacity of the substance being examined in milliequivalents taking the concentration of potassium in solution A as 144 milliequivalents of K per litre.

Loss on drying

When dried at 70° at a pressure not exceeding 0.7 kPa for 16 hours, loses not more than 8.0% of its weight. Use 2 g.

Microbial contamination

Carry out a quantitative evaluation for Enterobacteria and certain other Gram-negative bacteria, Appendix XVI B1. 0.01 g of the substance being examined gives a negative result, Table I (most probable number of bacteria per gram fewer than 10^2).

ASSAY

For calcium

Carefully heat 1 g in a platinum crucible until a white ash is obtained and dissolve in 10 ml of *2 M hydrochloric acid* with the aid of heat. Transfer the resulting solution to a conical flask using 20 ml of *water*. Add 50 ml of *0.05 M disodium edetate VS*, 20 ml of *ammonia buffer pH 10.9* and titrate the excess of disodium edetate with *0.02 M zinc sulphate VS*, using a 0.5% w/v solution of *mordant black 11* in *ethanol (96%)* as indicator to a red purple end point. Each ml of *0.05 M disodium edetate VS* is equivalent to 2.004 mg of Ca.

STORAGE

Calcium Polystyrene Sulphonate should be kept in an airtight container.

Calcium Stearate

General Notices

(Ph Eur monograph 0882)

1592-23-0

Action and use

Excipient.

Ph Eur

DEFINITION

Mixture of calcium salts of different fatty acids consisting mainly of stearic (octadecanoic) acid [$(C_{17}H_{35}COO)_2Ca$; *M* r 607] and palmitic (hexadecanoic) acid [$(C_{15}H_{31}COO)_2Ca$; *M* r 550.9] with minor proportions of other fatty acids.

Content:

- — *calcium*: 6.4 per cent to 7.4 per cent (A_r 40.08) (dried substance),
- — *stearic acid in the fatty acid fraction*: minimum 40.0 per cent,
- — *sum of stearic acid and palmitic acid in the fatty acid fraction*: minimum 90.0 per cent.

CHARACTERS

Appearance

Fine, white or almost white, crystalline powder.

Solubility

Practically insoluble in water and in ethanol (96 per cent).

IDENTIFICATION

First identification C, D.

Second identification A, B, D.

A. Freezing point *(2.2.18)*

Minimum 53 °C, for the residue obtained in the preparation of solution S (see Tests).

B. Acid value *(2.5.1)*

195 to 210.

Dissolve 0.200 g of the residue obtained in the preparation of solution S in 25 ml of the prescribed mixture of solvents.

C. Examine the chromatograms obtained in the test for fatty acid composition.

Results The retention times of the principal peaks in the chromatogram obtained with the test solution are approximately the same as those of the principal peaks in the chromatogram obtained with the reference solution.

D. Neutralise 5 ml of solution S to *red litmus paper R* using *strong sodium hydroxide solution R .* The solution gives reaction (b) of calcium *(2.3.1)* .

TESTS

Solution S

To 5.0 g add 50 ml of *peroxide-free ether R* , 20 ml of *dilute nitric acid R* and 20 ml of *distilled water R* . Boil under a reflux condenser until dissolution is complete. Allow to cool. In a separating funnel, separate the aqueous layer and shake the ether layer with 2 quantities, each of 5 ml, of *distilled water R* . Combine the aqueous layers, wash with 15 ml of *peroxide-free ether R* and dilute the aqueous layer to 50 ml with *distilled water R* (solution S). Evaporate the ether layer to dryness and dry the residue at 100-105 °C. Keep the residue for identification tests A and B.

Acidity or alkalinity

To 1.0 g add 20 ml of *carbon dioxide-free water R* and boil for 1 min with continuous shaking. Cool and filter. To 10 ml of the filtrate add 0.05 ml of *bromothymol blue solution R1* . Not more than 0.5 ml of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Chlorides ***(2.4.4)***

Maximum 0.1 per cent.

Dilute 0.5 ml of solution S to 15 ml with *water R.*

Sulphates ***(2.4.13)***

Maximum 0.3 per cent.

Dilute 0.5 ml of solution S to 15 ml with *distilled water R* .

Cadmium

Maximum 3.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method II)*.

Test solution Place 50.0 mg in a polytetrafluoroethylene digestion bomb and add 0.5 ml of a mixture of 1 volume of *hydrochloric acid R* and 5 volumes of *cadmium- and lead-free nitric acid R* . Allow to digest at 170 °C for 5 h. Allow to cool. Dissolve the residue in *water R* and dilute to 5.0 ml with the same solvent.

Reference solutions Prepare the reference solutions using *cadmium standard solution (10 ppm Cd) R* , diluted if necessary with a 1 per cent *V/V* solution of *hydrochloric acid R* .

Source Cadmium hollow-cathode lamp.

Wavelength 228.8 nm.

Atomisation device Graphite furnace.

Lead

Maximum 10.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method II)*.

Test solution Use the solution described in the test for cadmium.

Reference solutions Prepare the reference solutions using *lead standard solution (10 ppm Pb) R* , diluted if necessary with *water R.*

Source Lead hollow-cathode lamp.

Wavelength 283.3 nm; 217.0 nm may be used depending on the apparatus.

Atomisation device Graphite furnace.

Nickel

Maximum 5.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method II)*.

Test solution Use the solution described in the test for cadmium.

Reference solutions Prepare the reference solutions using *nickel standard solution (10 ppm Ni) R* , diluted if necessary with *water R* .

Source Nickel hollow-cathode lamp.

Wavelength 232.0 nm.

Atomisation device Graphite furnace.

Loss on drying *(2.2.32)*

Maximum 6.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^3 micro-organisms per gram, determined by plate count. It complies with the test for *Escherichia coli (2.6.13)* .

ASSAY

Calcium

To 0.500 g in a 250 ml conical flask add 50 ml of a mixture of equal volumes of *butanol R* and *anhydrous ethanol R*, 5 ml of *concentrated ammonia R*, 3 ml of *ammonium chloride buffer solution pH 10.0 R*, 30.0 ml of *0.1 M sodium edetate* and 15 mg of *mordant black 11 triturate R*. Heat to 45-50 °C until the solution is clear. Cool and titrate with *0.1 M zinc sulphate* until the colour changes from blue to violet. Carry out a blank titration.

1 ml of *0.1 M sodium edetate* is equivalent to 4.008 mg of Ca.

Composition of fatty acids

Gas chromatography *(2.2.28)*: use the normalisation procedure.

Test solution In a conical flask fitted with a reflux condenser, dissolve 0.10 g of the substance to be examined in 5 ml of *boron trifluoride-methanol solution R*. Boil under a reflux condenser for 10 min. Add 4 ml of *heptane R* through the condenser. Boil under a reflux condenser for 10 min. Allow to cool. Add 20 ml of a *saturated sodium chloride solution R*. Shake and allow the layers to separate. Remove about 2 ml of the organic layer and dry over 0.2 g of *anhydrous sodium sulphate R*. Dilute 1.0 ml of the solution to 10.0 ml with *heptane R.*

Reference solution Prepare the reference solution in the same manner as the test solution using 50.0 mg of *palmitic acid CRS* and 50.0 mg of *stearic acid CRS* instead of calcium stearate.

Column:

— *material: fused silica*,

— *size*: *l* = 30 m, Ø = 0.32 mm,

— *stationary phase: macrogol 20 000 R* (film thickness 0.5 µm).

Carrier gas *helium for chromatography R*.

Flow rate 2.4 ml/min.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 2	70
	2 - 36	70 → 240
	36 - 41	240
Injection port		220
Detector		260

Detection Flame ionisation.

Injection: 1 µl.

Relative retention With reference to methyl stearate: methyl palmitate = about 0.88.

System suitability Reference solution:

— *resolution*: minimum 5.0 between the peaks due to methyl stearate and methyl palmitate.

Calculate the content of palmitic acid and stearic acid. Disregard the peak due to the solvent.

Ph Eur

Calcium Sulphate Dihydrate

General Notices

(Ph Eur monograph 0982)

$CaSO_4,2H_2O$ 172.2 *10101-41-4*

Action and use

Excipient.

Ph Eur

DEFINITION

Content

98.0 per cent to 102.0 per cent of $CaSO_4,2H_2O$.

CHARACTERS

Appearance

White or almost white fine powder.

Solubility

Very slightly soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Loss on ignition (see Tests).

B. Solution S (see Tests) gives reaction (a) of sulphates *(2.3.1)* .

C. Solution S gives reaction (a) of calcium *(2.3.1)* .

TESTS

Solution S

Dissolve 1.0 g in 50 ml of a 10 per cent *V/V* solution of *hydrochloric acid R* by heating at 50 °C for 5 min. Allow to cool.

Acidity or alkalinity

Shake 1.5 g with 15 ml of *carbon dioxide-free water R* for 5 min. Allow to stand for 5 min and filter. To 10 ml of the filtrate add 0.1 ml of *phenolphthalein solution R* and 0.25 ml of *0.01 M sodium hydroxide*. The solution is red. Add 0.30 ml of *0.01 M hydrochloric acid*. The solution is colourless. Add 0.2 ml of *methyl red solution R*. The solution is reddish-orange.

Chlorides ***(2.4.4)***

Maximum 300 ppm.

Shake 0.5 g with 15 ml of *water R* for 5 min. Allow to stand for 15 min and filter. Dilute 5 ml of the filtrate to 15 ml with *water R.*

Arsenic ***(2.4.2, Method A)***

Maximum 10 ppm, determined on 5 ml of solution S.

Iron ***(2.4.9)***

Maximum 100 ppm.

To 0.25 g add a mixture of 5 ml of *hydrochloric acid R* and 20 ml of *water R*. Heat to boiling, cool and filter.

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

To 2.5 g add a mixture of 2 ml of *hydrochloric acid R* and 15 ml of *water R*. Heat to boiling. Cool and then add 0.5 ml of *phenolphthalein solution R*. Cautiously add *concentrated ammonia R* until the colour changes to pink. Add 0.5 ml of *glacial acetic acid R* and dilute to 25 ml with *water R*. Filter. 12 ml of the filtrate complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R.*

Loss on ignition

18.0 per cent to 22.0 per cent, determined on 1.000 g by ignition to constant mass at 800 ± 50 °C.

ASSAY

Dissolve 0.150 g in 120 ml of *water R*. Carry out the complexometric titration of calcium *(2.5.11)*.

1 ml of *0.1 M sodium edetate* is equivalent to 17.22 mg of $CaSO_4,2H_2O$.

Ph Eur

Caprylocaproyl Macrogolglycerides

General Notices

(Ph Eur monograph 1184)

Action and use

Excipient.

Ph Eur

DEFINITION

Mixtures of monoesters, diesters and triesters of glycerol and monoesters and diesters of macrogols with a mean relative molecular mass between 200 and 400.

They are obtained by partial alcoholysis of medium-chain triglycerides using macrogol or by esterification of glycerol and macrogol with caprylic (octanoic) acid and capric (decanoic) acid or a mixture of glycerol esters and condensates of ethylene oxide with caprylic acid and capric acid. They may contain free macrogols.

CHARACTERS

Appearance

Pale-yellow, oily liquid.

Solubility

Dispersible in hot water, freely soluble in methylene chloride.

Density

About 1.0 at 20 °C.

Refractive index

About 1.4 at 20 °C.

IDENTIFICATION

A. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 1.0 g of the substance to be examined in *methylene chloride R* and dilute to 20 ml with the same solvent.

Plate *TLC silica gel plate R* .

Mobile phase *hexane R*, *ether R* (30:70 *V/V*).

Application 50 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Spray with a 0.1 g/l solution of *rhodamine B R* in *ethanol (96 per cent) R* and examine in ultraviolet light at 365 nm.

Results The chromatogram shows a spot due to triglycerides with an R_F value of about 0.9 (R_{st} 1) and spots due to 1,3-diglycerides (R_{st} 0.7), to 1,2-diglycerides (R_{st} 0.6), to monoglycerides (R_{st} 0.1) and to esters of macrogol (R_{st} 0).

B. Hydroxyl value (see Tests).

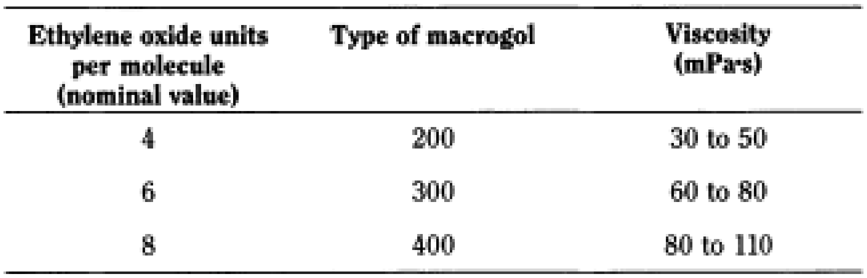
C. Saponification value (see Tests).

D. Composition of fatty acids (see Tests).

TESTS

Viscosity ***(2.2.9)***

Carry out the determination at 20 ± 0.5 °C.



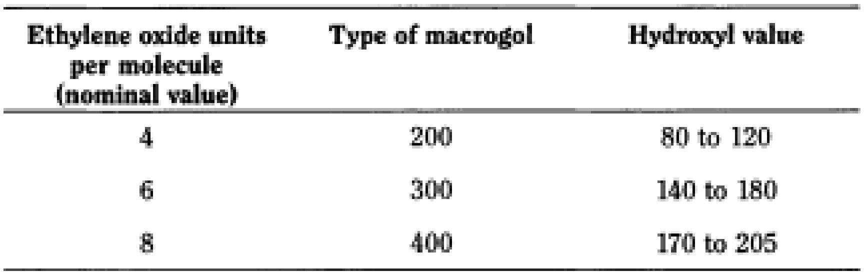
Ethylene oxide units per molecule (nominal value)	Type of macrogol	Viscosity (mPa·s)
4	200	30 to 50
6	300	60 to 80
8	400	80 to 110

Acid value ***(2.5.1)***

Maximum 2.0, determined on 2.0 g.

Hydroxyl value ***(2.5.3, Method A)***

Use 1.0 g.



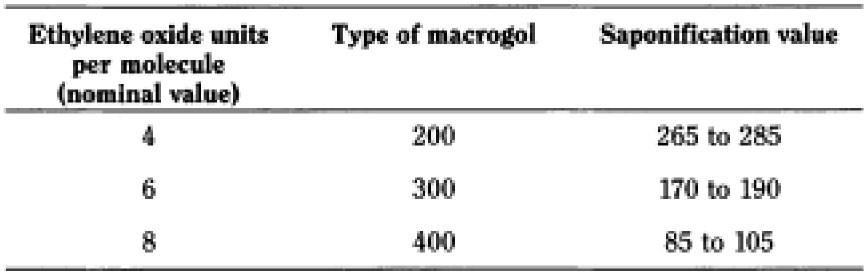
Ethylene oxide units per molecule (nominal value)	Type of macrogol	Hydroxyl value
4	200	80 to 120
6	300	140 to 180
8	400	170 to 205

Peroxide value ***(2.5.5, Method A)***

Maximum 6.0, determined on 2.0 g.

Saponification value ***(2.5.6)***

Use 2.0 g.



Ethylene oxide units per molecule (nominal value)	Type of macrogol	Saponification value
4	200	265 to 285
6	300	170 to 190
8	400	85 to 105

Alkaline impurities

Introduce 5.0 g into a test-tube and carefully add a mixture, neutralised if necessary with *0.01 M hydrochloric acid* or with *0.01 M sodium hydroxide*, of 0.05 ml of a 0.4 g/l solution of *bromophenol blue R* in *ethanol (96 per cent) R*, 0.3 ml of *water R* and 10 ml of *ethanol (96 per cent) R*. Shake and allow to stand. Not more than 1.0 ml of *0.01 M hydrochloric acid* is required to change the colour of the upper layer to yellow.

Free glycerol

Maximum 5.0 per cent.

Dissolve 1.20 g in 25.0 ml of *methylene chloride R*. Heat if necessary. After cooling, add 100 ml of *water R*. Shake and add 25.0 ml of *periodic acetic acid solution R*. Shake and allow to stand for 30 min. Add 40 ml of a 75 g/l solution of *potassium iodide R*. Allow to stand for 1 min. Add 1 ml of *starch solution R.* Titrate the iodine with *0.1 M sodium thiosulphate*. Carry out a blank titration.

1 ml of *0.1 M sodium thiosulphate* is equivalent to 2.3 mg of glycerol.

Composition of fatty acids ***(2.4.22, Method A).***

Composition of the fatty-acid fraction of the substance:

— *caproic acid* : maximum 2.0 per cent;

— *caprylic acid* : 50.0 per cent to 80.0 per cent;

— *capric acid*: 20.0 per cent to 50.0 per cent;

— *lauric acid* : maximum 3.0 per cent;

— *myristic acid* : maximum 1.0 per cent.

Ethylene oxide and dioxan ***(2.4.25)***

Maximum 1 ppm of ethylene oxide and maximum 10 ppm of dioxan.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Water *(2.5.12)*

Maximum 1.0 per cent, determined on 1.0 g. Use a mixture of 30 volumes of *anhydrous methanol R* and 70 volumes of *methylene chloride R* as solvent.

Total ash *(2.4.16)*

Maximum 0.1 per cent.

LABELLING

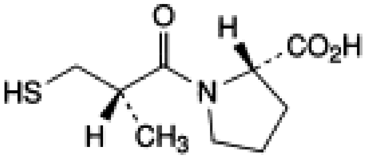
The label states the type of macrogol used (mean relative molecular mass) or the number of ethylene oxide units per molecule (nominal value).

Ph Eur

Captopril

General Notices

(Ph Eur monograph 1079)



$C_9H_{15}NO_3S$ 217.3 *62571-86-2*

Action and use

Angiotensin converting enzyme inhibitor.

Preparations

Captopril Oral Solution

Captopril Tablets

Ph Eur

DEFINITION

(2*S*)-1-[(2*S*)-2-Methyl-3-sulphanylpropanoyl]pyrrolidine-2-carboxylic acid.

Content

98.0 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water, in methylene chloride and in methanol. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *captopril CRS.*

TESTS

Solution S

Dissolve 0.5 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

2.0 to 2.6 for solution S.

Specific optical rotation *(2.2.7)*

- 127 to - 132 (dried substance).

Dissolve 0.250 g in *anhydrous ethanol R* and dilute to 25.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dilute 2.0 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (b) Dissolve 10 mg of the substance to be examined in the mobile phase, add 0.25 ml of *0.05 M iodine* and dilute to 100.0 ml with the mobile phase. Dilute 10.0 ml of the solution to 100.0 ml with the mobile phase.

Column:

— *size*: *l* = 0.125 m, Ø = 4 mm,

— *stationary phase: octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *phosphoric acid R, methanol R, water R* (0.05:50:50 *V/V/V*).

Flow rate 1 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 20 µl.

Run time 3 times the retention time of captopril.

System suitability Reference solution (b):

— the chromatogram shows 3 peaks,

— *resolution*: minimum 2.0 between the last 2 eluting principal peaks.

Limits:

- — *any impurity*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent),
- — *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (2.0 per cent),
- — *disregard limit:* 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent). Disregard any peak with a retention time less than 1.4 min.

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

1.0 g complies with limit test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Maximum 1.0 per cent, determined on 1.000 g by drying under high vacuum at 60 °C for 3 h.

Sulphated ash ***(2.4.14)***

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

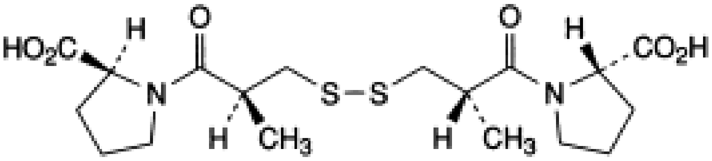
Dissolve 0.150 g in 30 ml of *water R* . Titrate with *0.05 M iodine* , determining the end-point potentiometrically *(2.2.20)* . Use a combined platinum electrode.

1 ml of *0.05 M iodine* is equivalent to 21.73 mg of $C_9H_{15}NO_3S$.

STORAGE

In an airtight container .

IMPURITIES



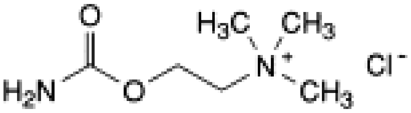
A. (2*S*,2′*S*)-1,1′-[disulphanediylbis[(2*S*)-2-methyl-1-oxopropane-3,1-diyl]-bis[pyrrolidine-2-carboxylic] acid (captopril-disulphide).

Ph Eur

Carbachol

General Notices

(Ph Eur monograph 1971)



$C_6H_{15}ClN_2O_2$ 182.7 *51-83-2*

Action and use

Cholinoceptor agonist.

Ph Eur

DEFINITION

2-(Carbamoyloxy)-*N,N,N*-trimethylethanaminium chloride.

Content

99.0 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline, hygroscopic powder.

Solubility

Very soluble in water, sparingly soluble in alcohol, practically insoluble in acetone.

IDENTIFICATION

First identification A, C.

Second identification B, C.

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison carbachol CRS.

B. Examine the chromatograms obtained in the test for related substances.

Results The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. 0.5 ml of solution S (see Tests) gives reaction (a) of chlorides *(2.3.1)* .

TESTS

Solution S

Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II).*

Acidity or alkalinity

To 2.0 ml of solution S, add 0.05 ml of *methyl red mixed solution R* . Not more than 0.2 ml of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Related substances

Thin-layer chromatography *(2.2.27)* .

Prepare the solutions immediately before use.

Test solution (a) Dissolve 0.20 g of the substance to be examined in *methanol R* and dilute to 5.0 ml with the same solvent.

Test solution (b) Dilute 2.0 ml of test solution (a) to 20.0 ml with *methanol R* .

Reference solution (a) Dissolve 20 mg of *carbachol CRS* in *methanol R* and dilute to 5.0 ml with the same solvent.

Reference solution (b) Dissolve 8 mg of *choline chloride R* and 8 mg of *acetylcholine chloride CRS* in *methanol R* and dilute to 10.0 ml with the same solvent. Dilute 5.0 ml to 10.0 ml with *methanol R* .

Plate *cellulose for chromatography R* as the coating substance.

Mobile phase *water R, methanol R* (10:90 *V/V*).

Application 10 µl.

Development Over 2/3 of the plate.

Detection Spray with *potassium iodobismuthate solution R3* .

System suitability The chromatogram obtained with reference solution (b) shows 2 clearly separated spots.

Limits In the chromatogram obtained with test solution (a):

— *any impurity*: any spot, apart from the principal spot, is not more intense than one or other of the 2 principal spots in the chromatogram obtained with reference solution (b) (1 per cent). Compare the spots with the spot of the most appropriate colour in the chromatogram obtained with reference solution (b).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

12 ml of solution S complies with limit test A. Prepare the standard using *lead standard solution (2 ppm Pb) R* .

Loss on drying *(2.2.32)*

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g of the residue obtained in the test for loss on drying.

ASSAY

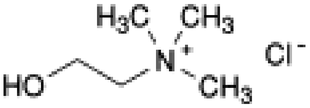
Dissolve 0.150 g in a mixture of 10 ml of *anhydrous acetic acid R* and 40 ml of *acetic anhydride R* . Titrate with *0.1 M perchloric acid* . Determine the end-point potentiometrically *(2.2.20)* .

1 ml of *0.1 M perchloric acid* is equivalent to 18.27 mg of $C_6H_{15}ClN_2O_2$.

STORAGE

In an airtight container , protected from light.

IMPURITIES



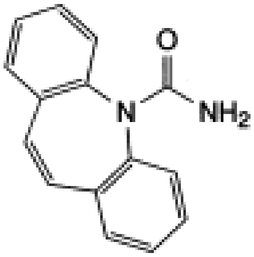
A. 2-hydroxy-*N,N,N*-trimethylethanaminium chloride (choline chloride).

Ph Eur

Carbamazepine

General Notices

(Ph Eur monograph 0543)



$C_{15}H_{12}N_2O$ 236.3 *298-46-4*

Action and use

Antiepileptic.

Preparation

Carbamazepine Tablets

Ph Eur

DEFINITION

5*H*-Dibenzo[*b*,*f*]azepine-5-carboxamide.

Content

98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Very slightly soluble in water, freely soluble in methylene chloride, sparingly soluble in acetone and in ethanol (96 per cent).

It shows polymorphism (*5.9*). The acceptable crystalline form corresponds to *carbamazepine CRS.*

IDENTIFICATION

A. Melting point *(2.2.14)* : 189 °C to 193 °C.

B. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *carbamazepine CRS.*

Preparation Examine the substances as discs without prior treatment.

TESTS

Acidity or alkalinity

To 1.0 g add 20 ml of *carbon dioxide-free water R* , shake for 15 min and filter. To 10 ml of the filtrate add 0.05 ml *of phenolphthalein solution R1* and 0.5 ml of *0.01 M sodium hydroxide* ; the solution is red. Add 1.0 ml of *0.01 M hydrochloric acid* ; the solution is colourless. Add 0.15 ml of *methyl red solution R* ; the solution is red.

Related substances

Liquid chromatography *(2.2.29)* .

Test solution (a) Dissolve 60.0 mg of the substance to be examined in *methanol R2* and dilute to 20.0 ml with the same solvent. Sonicate. Dilute 10.0 ml of this solution to 20.0 ml with *water R.*

Test solution (b) Dilute 10.0 ml of test solution (a) to 50.0 ml with a mixture of equal volumes of *methanol R2* and *water R.*

Reference solution (a) Dissolve 7.5 mg of *carbamazepine CRS* , 7.5 mg of *carbamazepine impurity A CRS* and 7.5 mg of *iminodibenzyl R* (impurity E) in *methanol R2* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of this solution to 50.0 ml with a mixture of equal volumes of *methanol R2* and *water R* .

Reference solution (b) Dissolve 60.0 mg of *carbamazepine CRS* in *methanol R2* and dilute to 20.0 ml with the same solvent. Sonicate. Dilute 5.0 ml of this solution to 50.0 ml with a mixture of equal volumes of *methanol R2* and *water R.*

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: nitrile silica gel for *chromatography R1* (10 µm).

Mobile phase *tetrahydrofuran R, methanol R2, water R* (3:12:85 *V/V/V*); to 1000 ml of this solution add 0.2 ml of *anhydrous formic acid R* and 0.5 ml of *triethylamine R* .

Flow rate 2.0 ml/min.

Detection A spectrophotometer at 230 nm.

Injection 20 µl of test solution (a) and reference solution (a).

Run time 6 times the retention time of carbamazepine.

Relative retention With reference to carbamazepine (retention time = about 10 min): impurity A = about 0.9; impurity E = about 5.1.

System suitability:

— *resolution*: minimum 1.7 between the peaks due to carbamazepine and impurity A in the chromatogram obtained with reference solution (a).

Limits:

— *impurities A, E*: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *unspecified impurities*: not more than the area of the peak due to carbamazepine in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than 5 times the area of the peak due to carbamazepine in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *disregard limit*: 0.5 times the area of the peak due to carbamazepine in the chromatogram obtained with reference solution (a) (0.05 per cent).

Chlorides ***(2.4.4)***

Maximum 140 ppm.

Suspend 0.715 g in 20 ml of *water R* and boil for 10 min. Cool and dilute to 20 ml with *water R* . Filter through a membrane filter (nominal pore size: 0.8 µm). Dilute 10 ml of the filtrate to 15 ml with *water R* . This solution complies with the limit test for chlorides.

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2h.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances.

Injection Test solution (b) and reference solution (b).

System suitability:

— *repeatability*: reference solution (b).

Calculate the percentage content *m/m* of dried substance.

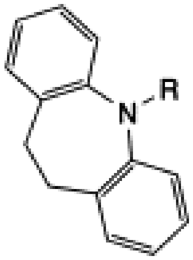
STORAGE

In an airtight container .

IMPURITIES

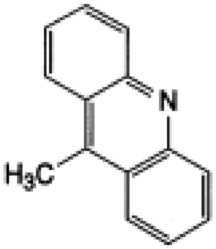
Specified impurities *A, E.*

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*) : *B, C, D, F.*

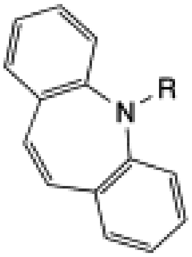


A. R = CO-NH_2: 10,11-dihydro-5*H*-dibenzo[*b*,*f*]azepine-5-carboxamide (10,11-dihydrocarbamazepine),

E. R = H: 10,11-dihydro-5*H*-dibenzo[*b*,*f*]azepine (iminodibenzyl),



B. 9-methylacridine,



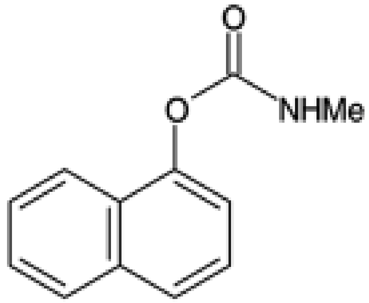
C. R = CO-NH-CO-NH_2: (5*H*-dibenzo[*b*,*f*]azepin-5-ylcarbonyl)urea (*N*-carbamoylcarbamazepine),

D. R = H: 5*H*-dibenzo[*b*,*f*]azepine (iminostilbene),

F. R = CO-Cl: 5*H*-dibenzo[*b*,*f*]azepine-5-carbonyl chloride (5-chlorocarbonyliminostilbene).

Carbaryl

General Notices



$C_{12}H_{11}NO_2$ 201.2 *63-25-2*

Action and use

Insecticide.

Preparation

Carbaryl Lotion

DEFINITION

Carbaryl is 1-naphthyl methylcarbamate. It contains not less than 98.0% and not more than 102.0% of $C_{12}H_{11}NO_2$, calculated with reference to the dried substance.

CHARACTERISTICS

A white to off-white or light grey powder, which darkens on exposure to light. It melts at about 142°.

Very slightly soluble in *water*; soluble in *acetone* and in *ethanol (96%)* .

IDENTIFICATION

The *infrared absorption spectrum* , Appendix II A, is concordant with the *reference spectrum* of carbaryl *(RS 039)* .

TESTS

1-Naphthol

Carry out the method for *liquid chromatography*, Appendix III D, using the following solutions. Solution (1) contains 0.1% w/v of the substance being examined in *acetonitrile*. Solution (2) contains 0.001% w/v of *1-naphthol* in a 75% v/v solution of *acetonitrile* in *water*. Solution (3) contains 0.005% w/v of the substance being examined and 0.005% w/v of *1-naphthol* in the mobile phase.

The chromatographic conditions described under Assay may be used.

The test is not valid unless, in the chromatogram obtained with solution (3), the *resolution factor* between the two principal peaks is at least 2.0.

In the chromatogram obtained with solution (1) the area of any peak corresponding to 1-naphthol is not greater than the area of the principal peak in the chromatogram obtained with solution (2) (1%).

Loss on drying

When dried to constant weight over *phosphorus pentoxide* at a pressure not exceeding 0.7 kPa, loses not more than 0.5% of its weight. Use 1 g.

ASSAY

Carry out the method for *liquid chromatography*, Appendix III D, using the following solutions. Solution (1) contains 0.005% w/v of the substance being examined in *methanol*. Solution (2) contains 0.005% w/v of *carbaryl BPCRS* in *methanol*. Solution (3) contains 0.005% w/v of the substance being examined and 0.005% w/v of *1-naphthol* in the mobile phase.

The chromatographic procedure may be carried out using (a) a stainless steel column (10 cm × 4.6 mm) packed with *end-capped octadecylsilyl silica gel for chromatography* (5 µm) (Spherisorb ODS 2 is suitable), (b) a mixture of 1 volume of *glacial acetic acid*, 25 volumes of *acetonitrile* and 75 volumes of *water* as the mobile phase with a flow rate of 2.5 ml per minute and (c) a detection wavelength of 280 nm.

Inject 20 µl of each solution. The test is not valid unless in the chromatogram obtained with solution (3) the *resolution factor* between the two principal peaks is at least 2.0.

Calculate the content of $C_{12}H_{11}NO_2$ using the declared content of $C_{12}H_{11}NO_2$ in *carbaryl BPCRS*.

STORAGE

Carbaryl should be protected from light.

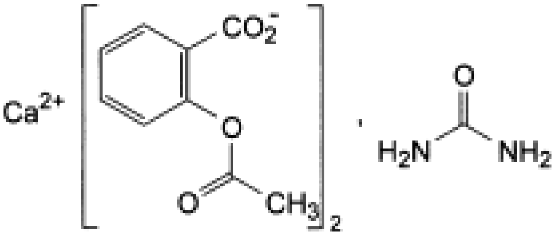
IMPURITIES

A. 1-naphthol

Carbasalate Calcium

General Notices

(Ph Eur monograph 1185)



$C_{19}H_{18}CaN_2O_9$ 458.4 *5749-67-7*

Action and use

Salicylate; non-selective cyclo-oxygenase inhibitor; antipyretic; analgesic; anti-inflammatory.

Ph Eur

DEFINITION

Equimolecular compound of calcium di[2-(acetyloxy)benzoate] and urea.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water and in dimethylformamide, practically insoluble in acetone and in anhydrous methanol.

Protect the substance from moisture during handling. Examination in aqueous solutions has to be performed immediately after preparation.

IDENTIFICATION

First identification *B, E.*

Second identification *A, C, D, E.*

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

Test solution Dissolve 0.250 g in *water R* and dilute to 100.0 ml with the same solvent. To 1.0 ml of the solution add 75 ml of *water R* and 5 ml of *dilute hydrochloric acid R*, mix and dilute to 100.0 ml with *water R*. Examine immediately.

Spectral range 220-350 nm.

Absorption maxima At 228 nm and 276 nm.

Specific absorbances at the absorption maxima:
— at 228 nm: 363 to 379,

— at 276 nm: 49 to 53.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *Ph. Eur. reference spectrum of carbasalate calcium.*

C. Dissolve 0.1 g in 10 ml of *water R*, boil for 2 min and cool. The solution gives reaction (a) of salicylates *(2.3.1)*.

D. Heat 0.2 g with 0.2 g of *sodium hydroxide R*; a yellow or yellowish-brown colour is produced and the vapour turns *red litmus paper* R blue.

E. It gives reaction (a) of calcium *(2.3.1)*.

TESTS

Appearance of solution

The solution is not more opalescent than reference suspension II (*2.2.1)* and is colourless *(2.2.2, Method II)*.

Dissolve 2.5 g in 50 ml of *water R.*

Related substances

Maximum 0.1 per cent, expressed as acetylsalicylsalicylic acid.

In a 100 ml volumetric flask, dissolve 0.150 g in 10 ml of *0.1 M tetrabutylammonium hydroxide in 2-propanol*. Allow to stand for 10 min shaking occasionally. Add 8.0 ml of *0.1 M hydrochloric acid* and 20.0 ml of a 19 g/l solution of *disodium tetraborate R* and mix. While swirling continuously, add 2.0 ml of a 10 g/l solution of *aminopyrazolone R* and 2.0 ml of a 10 g/l solution of *potassium ferricyanide R*. Allow to stand for 2 min, dilute to 100.0 ml with *water R ,* mix and allow to stand for 20 min. Measure the absorbance *(2.2.25)* of the solution at the absorption maximum at 505 nm using *water R* as the compensation liquid. The absorbance is not greater than 0.125.

Impurity C

Maximum 0.5 per cent.

In a 100 ml volumetric flask, dissolve 0.200 g in 80 ml of *water R* and add 10 ml of a 10 g/l solution of *ferric nitrate R* in a 80 g/l solution of *dilute nitric acid R* . Dilute to 100.0 ml with *water R* . Immediately after preparation, measure the absorbance *(2.2.25)* of the solution at the absorption maximum of 525 nm using *water R* as the compensation liquid. The absorbance is not greater than 0.115.

Sodium

Maximum 0.10 per cent.

Atomic emission spectrometry *(2.2.22, Method I)*.

Test solution Dissolve 1.0 g in 500.0 ml of *water R* .

Heavy metals *(2.4.8)*

Maximum 10 ppm.

Dissolve 2.0 g in 8 ml of *water R* with heating, cool and add 12 ml of *acetone R* . 12 ml of the solution complies with test B. Prepare the reference solution using 10 ml of *lead standard solution (1 ppm Pb) R* .

Water *(2.5.12)*

Maximum 0.1 per cent, determined on 1.000 g. Use a mixture of 15 ml of *anhydrous methanol R* and 15 ml of *dimethylformamide R* as the solvent.

ASSAY

In a flask with a ground-glass stopper, dissolve 0.400 g in 25 ml of *water R.* Add 25.0 ml of *0.1 M sodium hydroxide* . Close the flask and allow to stand for 2 h. Titrate the excess of alkali with *0.1 M hydrochloric acid* , using 0.2 ml of *phenolphthalein solution R* . Carry out a blank titration.

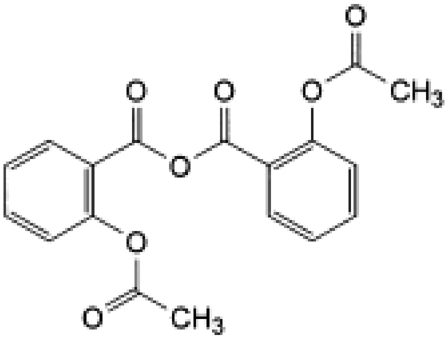
1 ml of *0.1 M sodium hydroxide* is equivalent to 22.92 mg of $C_{19}H_{18}CaN_2O_9$.

STORAGE

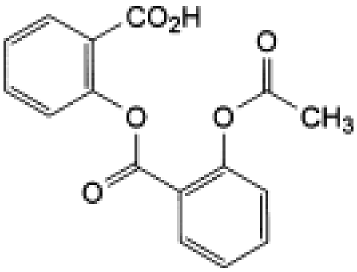
In an airtight container .

IMPURITIES

Specified impurities *A, B, C.*



A. 2-(acetyloxy)benzoic anhydride,



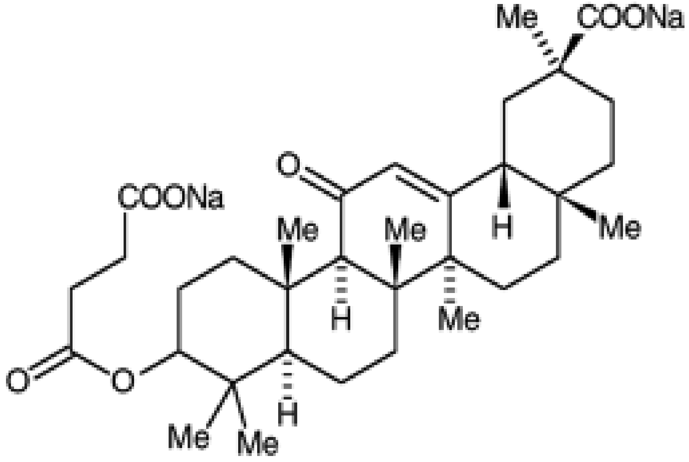
B. 2-[[2-(acetyloxy)benzoyl]oxy]benzoic acid (acetylsalicylsalicylic acid),

C. 2-hydroxybenzoic acid (salicylic acid).

Ph Eur

Carbenoxolone Sodium

General Notices



$C_{34}H_{48}Na_2O_7$ 614.7 *7421-40-1*

Action and use

Treatment of peptic ulcer.

DEFINITION

Carbenoxolone Sodium is disodium 3β-(3-carboxylatopropionyloxy)-11-oxo-olean-12-en-30-oate. It contains not less than 97.0% and not more than 103.0% of $C_{34}H_{48}Na_2O_7$, calculated with reference to the anhydrous substance.

CHARACTERISTICS

A white or pale cream powder; hygroscopic.

Freely soluble in *water*; sparingly soluble in *ethanol (96%)*; practically insoluble in *ether*.

IDENTIFICATION

A. Dissolve 0.1 g in 5 ml of *water* and make just acid with *2 M hydrochloric acid*, stir well and filter. Wash the residue with *water* until the washings are no longer acidic and dry to constant weight at 105°. The *infrared absorption spectrum* of the residue, Appendix II A, is concordant with the *reference spectrum* of carbenoxolone *(RS 041)*.

B. Yields the reactions characteristic of *sodium salts*, Appendix VI.

TESTS

Alkalinity

pH of a 10% w/v solution, 8.0 to 9.2, Appendix V L.

Specific optical rotation

In a 1% w/v solution in a mixture of equal volumes of *methanol* and *0.02 M sodium carbonate*, +132 to +140, calculated with reference to the anhydrous substance, Appendix V F.

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, using a silica gel F_{254} precoated plate (Merck silica gel 60 F_{254} plates are suitable) and a mixture of 60 volumes of *ethyl acetate*, 20 volumes of *methanol*, 11 volumes of *water* and 1 volume of *13.5 M ammonia* as the mobile phase. Apply separately to the plate 5 µl of each of two solutions of the substance being examined in *methanol* containing (1) 1.50% w/v and (2) 0.030% w/v. After removal of the plate, allow it to dry in air and examine under *ultraviolet light (254 nm)*. Spray with a 1.5% w/v solution of *vanillin* in *sulphuric acid (60%)* and heat at 105° for 10 to 15 minutes. By each method of visualisation, any *secondary spot* in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (2) (2%).

Water

Not more than 4.0% w/w, Appendix IX C. Use 0.6 g.

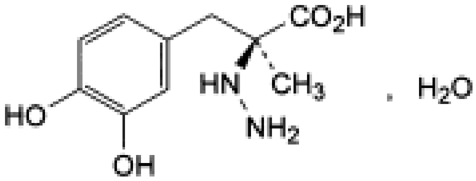
ASSAY

Dissolve 1 g in 30 ml of *water*, add 30 ml of *chloroform* and 15 ml of a mixture of 1 volume of 2M *hydrochloric acid* and 9 volumes of *water*, shake and allow to separate. Add the chloroform layer to 40 ml of a 20% w/v solution of *sodium chloride*, shake and allow to separate. Repeat the extraction with four 15 ml quantities of *chloroform*, combine the chloroform extracts and add sufficient *chloroform* to produce 100 ml. Evaporate 25 ml, dry the residue at 100° at a pressure of 2 kPa, dissolve in 10 ml of *dimethylformamide* and carry out Method II for *non-aqueous titration*, Appendix VIII A, using 0.1M *tetrabutylammonium hydroxide VS* as titrant and *thymol blue solution* as indicator. Each ml of 0.1M *tetrabutylammonium hydroxide VS* is equivalent to 30.73 mg of $C_{34}H_{48}Na_2O_7$.

Carbidopa

General Notices

(Ph Eur monograph 0755)



$C_{10}H_{14}N_2O_4,H_2O$ 244.2 *38821-49-7*

Action and use

Dopa decarboxylase inhibitor.

Preparation

Co-careldopa Tablets

Ph Eur

DEFINITION

(2*S*)-3-(3,4-Dihydroxyphenyl)-2-hydrazino-2-methylpropanoic acid monohydrate.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or yellowish-white powder.

Solubility

Slightly soluble in water, very slightly soluble in ethanol (96 per cent), practically insoluble in methylene chloride. It dissolves in dilute solutions of mineral acids.

IDENTIFICATION

First identification *A, C.*

Second identification *A, B, D, E.*

A. Specific optical rotation (see Tests).

B. Ultraviolet and visible absorption spectrophotometry *(2.2.25)* .

Test solution Dissolve 50.0 mg in a 8.5 g/l solution of *hydrochloric acid R* in *methanol R* and dilute to 100.0 ml with the same solution. Dilute 10.0 ml of this solution to 100.0 ml with a 8.5 g/l solution of *hydrochloric acid R* in *methanol R* .

Spectral range 230-350 nm.

Absorption maximum At 283 nm.

Specific absorbance at the absorption maximum 135 to 150 (dried substance).

C. Infrared absorption spectrophotometry *(2.2.24)* .

Preparation Discs.

Comparison *carbidopa CRS.*

D. Shake vigorously about 5 mg with 10 ml of *water R* for 1 min and add 0.3 ml of *ferric chloride solution R2* . An intense green colour is produced, which quickly turns to reddish-brown.

E. Suspend about 20 mg in 5 ml of *water R* and add 5 ml of *cupri-tartaric solution R* . On heating, the colour of the solution changes to dark brown and a red precipitate is formed.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution BY_6 or B_6 *(2.2.2, Method II)*.

Dissolve 0.25 g in 25 ml of *1 M hydrochloric ac*id.

Specific optical rotation *(2.2.7)*

- 22.5 to - 26.5 (dried substance).

With the aid of an ultrasonic bath, dissolve completely 0.250 g in *aluminium chloride solution R* and dilute to 25.0 ml with the same solution.

Hydrazine

Thin-layer chromatography *(2.2.27)* .

Test solution (a) Dissolve 0.50 g in *dilute hydrochloric acid R* and dilute to 2.0 ml with the same acid.

Test solution (b) Place 25 g of *strongly basic anion exchange resin R* into each of 2 conical flasks with ground-glass stoppers. To each, add 150 ml of *carbon dioxide-free water R* and shake from time to time during 30 min. Decant the liquid from both flasks and repeat the process with further quantities, each of 150 ml, of *carbon dioxide-free water R.*

Take two 100 ml measuring cylinders 3.5-4.5 cm in internal diameter and label these A and B. Into cylinder A, transfer as completely as possible the resin from 1 conical flask using 60 ml of *carbon dioxide-free water R* ; into cylinder B, transfer the 2nd quantity of resin, this time using 20 ml of *carbon dioxide-free water R.*

Into each cylinder, insert a gas-inlet tube, the end of which has an internal diameter of 2-3 mm and which reaches almost to the bottom of the cylinder. Pass a rapid stream of *nitrogen for chromatography R* through each mixture so that homogeneous suspensions are formed. After 30 min, without interrupting the gas flow, add 1.0 ml of test solution (a) to cylinder A; after 1 min stop the gas flow into cylinder A and transfer the contents, through a moistened filter paper, into cylinder B. After 1 min, stop the gas flow to cylinder B and pour the solution immediately through a moistened filter paper into a freshly prepared mixture of 1 ml of a 200 g/l solution of *salicylaldehyde R* in *methanol R* and 20 ml of *phosphate buffer solution pH 5.5 R* in a conical flask; shake thoroughly for 1 min and heat in a water-bath at 60 °C for 15 min. The liquid becomes clear. Allow to cool, add 2.0 ml of *toluene R* and shake vigorously for 2 min. Transfer the mixture into a centrifuge tube and centrifuge.

Separate the toluene layer in a 100 ml separating funnel and shake vigorously with 2 quantities, each of 20 ml, of a 200 g/l solution of *sodium metabisulphite R* and finally with 2 quantities, each of 50 ml, of *water R* . Separate the toluene layer.

Reference solution (a) Dissolve 10 mg of *hydrazine sulphate R* in *dilute hydrochloric acid* R and dilute to 50 ml with the same acid. Dilute 1.0 ml of this solution to 10.0 ml with *dilute hydrochloric acid R* .

Reference solution (b) Prepare the solution at the same time and in the same manner as described for test solution (b) using 1.0 ml of reference solution (a) instead of 1.0 ml of test solution (a).

Plate *TLC silanised silica gel plate R* .

Mobile phase *water R, methanol R* (10:20 *V/V*).

Application 10 µl of test solution (b) and reference solution (b).

Development Over a path of 10 cm.

Drying In air.

Detection Examine in ultraviolet light at 365 nm.

Limit:

— *hydrazine*: any spot showing a yellow fluorescence is not more intense than the corresponding spot in the chromatogram obtained with reference solution (b) (20 ppm).

Methyldopa and methylcarbidopa

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 0.100 g of the substance to be examined in *0.1 M hydrochloric acid* and dilute to 10.0 ml with the same acid.

Reference solution (a) Dissolve the contents of a vial of *methylcarbidopa CRS* in *0.1 M hydrochloric acid* , add 1 mg of *methyldopa CRS* and dilute to 20.0 ml with the same acid.

Reference solution (b) Dissolve 5 mg of *carbidopa CRS* and 5 mg of *methyldopa CRS* in

0.1 M hydrochloric acid and dilute to 10.0 ml with the same acid.

Column:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *methanol R*, 14 g/l solution of *potassium dihydrogen phosphate R* (2:98 *V/V*) .

Flow rate 1 ml/min.

Detection Spectrophotometer at 282 nm.

Injection 20 µl.

System suitability Reference solution (b):

- *resolution*: minimum 4.0 between the peaks due to methyldopa and carbidopa.

Limits:

- *methyldopa and methylcarbidopa*: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.5 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

6.9 per cent to 7.9 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g with gentle heating in 75 ml of *anhydrous acetic acid R* . Titrate with *0.1 M perchloric acid* , determining the end-point potentiometrically *(2.2.20)* .

1 ml of *0.1 M perchloric acid* is equivalent to 22.62 mg of $C_{10}H_{14}N_2O_4$.

STORAGE

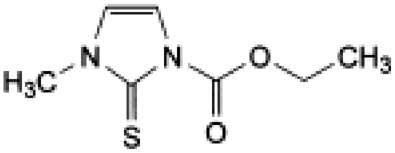
Protected from light.

Ph Eur

Carbimazole

General Notices

(Ph Eur monograph 0884)



$C_7H_{10}N_2O_2S$ 186.2 *22232-54-8*

Action and use

Thionamide antithyroid drug.

Preparation

Carbimazole Tablets

Ph Eur

DEFINITION

Ethyl 3-methyl-2-thioxo-2,3-dihydro-1*H*-imidazole-1-carboxylate.

Content

98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or yellowish-white, crystalline powder.

Solubility

Slightly soluble in water, soluble in acetone and in alcohol.

IDENTIFICATION

First identification B.

Second identification A, C, D.

A. Melting point (*2.2.14*): 122 °C to 125 °C.

B. Infrared absorption spectrophotometry *(2.2.24)* .

Preparation Discs.

Comparison *carbimazole CRS.*

C. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 10 mg of the substance to be examined in *methylene chloride R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 10 mg of *carbimazole CRS* in *methylene chloride R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel GF_{254} plate R*.

Mobile phase *acetone R, methylene chloride R* (20:80 *V/V*).

Application 10 µl.

Development Over a path of 15 cm.

Drying In air for 30 min.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. Dissolve about 10 mg in a mixture of 50 ml of *water R* and 0.05 ml of *dilute hydrochloric acid R* . Add 1 ml of *potassium iodobismuthate solution R* . A red precipitate is formed.

TESTS

Impurity A and other related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 5.0 mg of the substance to be examined in 10.0 ml of a mixture of 20 volumes of *acetonitrile R* and 80 volumes of *water R* . Use this solution within 5 min of preparation.

Reference solution (a) Dissolve 5 mg of *thiamazole R* and 0.10 g of *carbimazole CRS* in a mixture of 20 volumes of *acetonitrile R* and 80 volumes of *water R* and dilute to 100.0 ml with the same mixture of solvents. Dilute 1.0 ml of this solution to 10.0 ml with a mixture of 20 volumes of *acetonitrile R* and 80 volumes of *water R* .

Reference solution (b) Dissolve 5.0 mg of *thiamazole R* in a mixture of 20 volumes of *acetonitrile R* and 80 volumes of *water R* and dilute to 10.0 ml with the same mixture of solvents. Dilute 1.0 ml of this solution to 100.0 ml with a mixture of 20 volumes of *acetonitrile R* and 80 volumes of *water R.*

Column:

— *size*: *l* = 0.15 m, Ø = 3.9 mm,

— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *acetonitrile R, water R* (10:90 *V/V*).

Flow rate 1 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 10 µl.

Run time 1.5 times the retention time of carbimazole.

Retention time Carbimazole = about 6 min.

System suitability Reference solution (a):

— *resolution*: minimum 5.0 between the peaks due to impurity A and carbimazole.

Limits:

— *impurity A*: not more than half the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),

— *any other impurity*: not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in a desiccator over *diphosphorus pentoxide R* at a pressure not exceeding 0.7 kPa for 24 h.

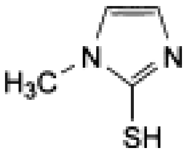
Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 50.0 mg in *water R* and dilute to 500.0 ml with the same solvent. To 10.0 ml add 10 ml of *dilute hydrochloric acid R* and dilute to 100.0 ml with *water R.* Measure the absorbance *(2.2.25)* at the maximum at 291 nm. Calculate the content of $C_7H_{10}N_2O_2S$ taking the specific absorbance to be 557.

IMPURITIES



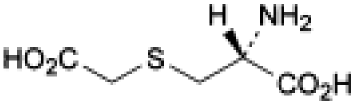
A. 1-methyl-1*H*-imidazole-2-thiol (thiamazole).

Ph Eur

Carbocisteine

General Notices

(Ph Eur monograph 0885)



$C_5H_9NO_4S$ 179.2 *2387-59-9*

Action and use

Mucolytic.

Ph Eur

DEFINITION

Carbocisteine contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (2*R*)-2-amino-3-[(carboxymethyl)sulphanyl]propanoic acid, calculated with reference to the dried substance.

CHARACTERS

A white or almost white crystalline powder, practically insoluble in water and in alcohol. It dissolves in dilute mineral acids and in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification *A, B.*

Second identification *A, C, D.*

A. It complies with the test for specific optical rotation (see Tests).

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *carbocisteine CRS* . Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for ninhydrin-positive substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve 0.1 g in 4.5 ml of *dilute sodium hydroxide solution R*. Heat on a water-bath for 10 min. Cool and add 1 ml of a 25 g/l solution of *sodium nitroprusside R*. A dark red colour is produced, which changes to brown and then to yellow within a few minutes.

TESTS

Solution S

Disperse 5.00 g in 20 ml of *water R* and add dropwise with shaking 2.5 ml of *strong sodium hydroxide solution R*. Adjust to pH 6.3 with *1 M sodium hydroxide* and dilute to 50.0 ml with *water R*.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

Shake 0.2 g with 20 ml of *carbon dioxide-free water R*. The pH of the suspension is 2.8 to 3.0.

Specific optical rotation *(2.2.7)*

- 32.5 to - 35.5, determined on solution S and calculated with reference to the dried substance.

Ninhydrin-positive substances

Examine by thin-layer chromatography *(2.2.27)*, using a suitable silica gel as the coating substance.

Test solution (a) Dissolve 0.10 g of the substance to be examined in *dilute ammonia R2* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 50 ml with *water R*.

Reference solution (a) Dissolve 10 mg of *carbocisteine CRS* in *dilute ammonia R2* and dilute to 50 ml with the same solvent.

Reference solution (b) Dilute 5 ml of test solution (b) to 20 ml with *water R*.

Reference solution (c) Dissolve 10 mg of *carbocisteine CRS* and 10 mg of *arginine hydrochloride CRS* in 5 ml of *dilute ammonia R2* and dilute to 25 ml with *water R*.

Apply separately to the plate 5 µl of each solution. Allow the plate to dry in air. Develop over a path of 15 cm using a mixture of 20 volumes of *glacial acetic acid R*, 20 volumes of *water R* and 60 volumes of *butanol R*. Dry the plate in a current of warm air. Spray with *ninhydrin solution R* and heat at 100 °C to 105 °C for 15 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated principal spots.

Chlorides *(2.4.4)*

Dissolve 33 mg in 5 ml of *dilute nitric acid R* and dilute to 15 ml with *water R*. The solution, without further addition of nitric acid, complies with the limit test for chlorides (0.15 per cent).

Sulphates ***(2.4.13)***

Dissolve 0.5 g in 5 ml of *dilute hydrochloric acid R* and dilute to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates (300 ppm).

Heavy metals ***(2.4.8)***

2.0 g complies with limit test D for heavy metals (10 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

Sulphated ash ***(2.4.14)***

Not more than 0.3 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 10 ml of *anhydrous formic acid R* with slight heating and shake until dissolution is complete. Add 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 17.92 mg of $C_5H_9NO_4S$.

STORAGE

Store protected from light.

Ph Eur

Carbomers

General Notices

(Ph Eur monograph 1299)

Action and use

Stabilizer in pharmaceutical products.

Preparation

Carbomer Eye Drops

Ph Eur

DEFINITION

High-molecular-mass polymers of acrylic acid cross-linked with polyalkenyl ethers of sugars or polyalcohols.

Content

56.0 per cent to 68.0 per cent of carboxylic acid ($-CO_2H$) groups (dried substance).

CHARACTERS

Appearance

White or almost white, fluffy, hygroscopic, powder.

Solubility

Swells in water and in other polar solvents after dispersion and neutralisation with sodium hydroxide solution.

IDENTIFICATION

First identification *A, E.*

Second identification *B, C, D, E.*

A. Infrared absorption spectrophotometry (*2.2.24*).

Main bands At 1710 ± 5 cm^{-1}, 1454 ± 5 cm^{-1}, 1414 ± 5 cm^{-1}, 1245 ± 5 cm^{-1}, 1172 ± 5 cm^{-1}, 1115 ± 5 cm^{-1} and 801 ± 5 cm^{-1}, with the strongest band at 1710 ± 5 cm^{-1}.

B. Adjust a 10 g/l dispersion to about pH 7.5 with *1 M sodium hydroxide* . A highly viscous gel is formed.

C. Add 2 ml of a 100 g/l solution of *calcium chloride R* with continuous stirring to 10 ml of the gel from identification test B. A white precipitate is immediately produced.

D. Add 0.5 ml of *thymol blue solution R* to 10 ml of a 10 g/l dispersion; an orange colour is produced. Add 0.5 ml of *cresol red solution R* to 10 ml of a 10 g/l dispersion. A yellow colour is produced.

E. It complies with the nominal apparent viscosity indicated on the label.

TESTS

Apparent viscosity

The nominal apparent viscosity is between 300 mPa·s and 115 000 mPa·s. For a product with a nominal apparent viscosity of 20 000 mPa·s or greater, the apparent viscosity is 70.0 per cent to 130.0 per cent of the value stated on the label; for a product with a nominal apparent viscosity of less than 20 000 mPa·s, the apparent viscosity is 50.0 per cent to 150.0 per cent of the value stated on the label.

Dry the substance to be examined *in vacuo* at 80 °C for 1 h. Carefully add 2.50 g of the previously dried substance to be examined to 500 ml of *water R* in a 1000 ml beaker while stirring continuously at 1000 ± 50 r/min, with the stirrer shaft set at an angle of 60° to one side of the beaker. Add the previously dried substance over a period of 45-90 s, at a uniform rate, ensuring that loose aggregates of powder are broken up, and continue stirring at 1000 ± 50 r/min for 15 min. Remove the stirrer and place the beaker containing the dispersion in a water-bath at 25 ± 0.2 °C for 30 min. Insert the stirrer to a depth necessary to ensure that air is not drawn into the dispersion and, while stirring at 300 ± 25 r/min, titrate with a glass-calomel electrode system to pH 7.3-7.8 by adding a 180 g/l solution of *sodium hydroxide R* below the surface, determining the end-point potentiometrically (*2.2.20*). The total volume of the 180 g/l solution of *sodium hydroxide R* used is about 6.2 ml. Allow 2-3 min before the final pH determination. If the final pH exceeds 7.8, discard the preparation and prepare another using a smaller amount of sodium hydroxide for titration. Return the neutralised preparation to the water-bath at 25 °C for 1 h, then perform the viscosity determination without delay to avoid slight viscosity changes that occur 75 min after neutralisation. Determine the viscosity (*2.2.10*) using a rotating viscometer with a spindle rotating at 20 r/min, using a spindle suitable for the expected apparent viscosity.

Free acrylic acid

Liquid chromatography (*2.2.29*).

Test solution Mix 0.125 g of the substance to be examined with a 25 g/l solution of *aluminium potassium sulphate R* and dilute to 25.0 ml with the same solution. Heat the suspension at 50 °C for 20 min with shaking. Then shake the suspension at room temperature for 60 min. Centrifuge and use the clear supernatant solution as the test solution.

Reference solution Dissolve 62.5 mg of *acrylic acid R* in a 25 g/l solution of *aluminium potassium sulphate R* and dilute to 100.0 ml with the same solution. Dilute 1.0 ml of this solution to 50.0 ml with a 25 g/l solution of *aluminium potassium sulphate R.*

Column:

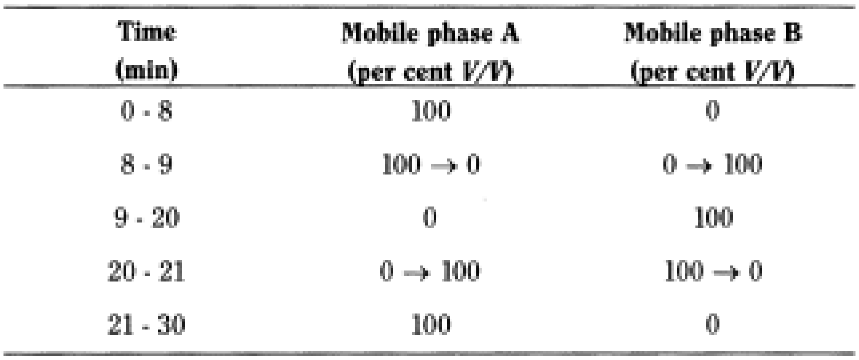
— *size*: *l* = 0.12 m, Ø = 4.6 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

— *mobile phase A*: 1.361 g/l solution of *potassium dihydrogen phosphate R*, adjusted to pH 2.5 using *dilute phosphoric acid R*;

— *mobile phase B*: 1.361 g/l solution of *potassium dihydrogen phosphate R*, *acetonitrile for chromatography R* (50:50 *V/V*);



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 8	100	0
8 - 9	100 → 0	0 → 100
9 - 20	0	100
20 - 21	0 → 100	100 → 0
21 - 30	100	0

Flow rate 1 ml/min.

Detection Spectrophotometer at 205 nm.

Injection 20 µl.

Retention time Acrylic acid = about 6.0 min.

Limit:

— *acrylic acid*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.25 per cent).

Benzene

Gas chromatography (*2.4.24, System A*).

Solution A Dissolve 0.100 g of *benzene R* in *dimethyl sulphoxide R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of the solution to 100.0 ml with *water R*. Dilute 1.0 ml of this solution to 100.0 ml with *water R.*

Test solution Weigh 50.0 mg of the substance to be examined into an injection vial and add 5.0 ml of *water R* and 1.0 ml of *dimethyl sulphoxide R.*

Reference solution Weigh 50.0 mg of the substance to be examined into an injection vial and add 4.0 ml of *water R*, 1.0 ml of *dimethyl sulphoxide R* and 1.0 ml of solution A.

Close the vials with a tight rubber membrane stopper coated with polytetrafluoroethylene and secure with an aluminium crimped cap. Shake to obtain a homogeneous dispersion.

Static head-space conditions that may be used:

— *equilibration temperature*: 80 °C;

— *equilibration time*: 60 min;

— *transfer line temperature*: 90 °C.

Injection 1 ml of the gaseous phase of the test solution and 1 ml of the gaseous phase of the reference solution; repeat these injections twice more.

System suitability:

— *repeatability*: maximum relative standard deviation of the differences in area between the analyte peaks obtained from the 3 replicate pair injections of the reference solution and the test solution is 15 per cent.

Limit:

— *benzene* : the mean area of the peak due to benzene in the chromatograms obtained with the test solution is not greater than 0.5 times the mean area of the peak due to benzene in the chromatograms obtained with the reference solution (2 ppm).

Heavy metals (*2.4.8*)

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying (*2.2.32*)

Maximum 3.0 per cent, determined on 1.000 g by drying *in vacuo* at 80 °C for 60 min.

Sulphated ash (*2.4.14*)

Maximum 4.0 per cent, determined on 1.0 g.

ASSAY

Slowly add 50 ml of *water R* to 0.120 g whilst stirring and heating at 60 °C for 15 min. Stop heating, add 150 ml of *water R* and continue stirring for 30 min. Add 2 g of *potassium chloride R* and titrate with *0.2 M sodium hydroxide* , determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.2 M sodium hydroxide* is equivalent to 9.0 mg of carboxylic acid (-CO_2H) groups.

STORAGE

In an airtight container.

LABELLING

The label states the nominal apparent viscosity.

Ph Eur

Carbon Dioxide

General Notices

(Ph Eur monograph 0375)

CO_2 44.01 *124-38-9*

Carbon Dioxide should be kept in approved metal cylinders which are painted grey and carry a label stating 'Carbon Dioxide'. In addition, 'Carbon Dioxide' or the symbol 'CO_2' should be stencilled in paint on the shoulder of the cylinder.

Ph Eur

DEFINITION

Content

Minimum 99.5 per cent *V/V* of CO_2 in the gaseous phase.

This monograph applies to carbon dioxide for medicinal use.

CHARACTERS

Appearance

Colourless gas.

Solubility

At 20 °C and at a pressure of 101 kPa, 1 volume dissolves in about 1 volume of water.

PRODUCTION

Examine the gaseous phase.

If the test is performed on a cylinder of gas, keep the cylinder of the substance to be examined at room temperature for not less than 6 h before carrying out the tests. Keep the cylinder in the vertical position with the outlet valve uppermost.

Carbon monoxide

Gas chromatography *(2.2.28)* .

Gas to be examined The substance to be examined.

Reference gas A mixture containing 5 ppm *V/V* of *carbon monoxide R* in *nitrogen R1.*

Column:

— *material*: stainless steel,

— *size*: l = 2 m, Ø = 4 mm,

— *stationary phase*: an appropriate molecular sieve for chromatography (0.5 nm).

Carrier gas *helium for chromatography R* .

Flow rate 60 ml/min.

Temperature:
— *column*: 50 °C,

— *injection port and detector*: 130 °C.

Detection Flame ionisation with methaniser.

Injection Loop injector.

Adjust the injected volumes and the operating conditions so that the height of the peak due to carbon monoxide in the chromatogram obtained with the reference gas is at least 35 per cent of the full scale of the recorder.

Limit:
— *carbon monoxide* : not more than the area of the corresponding peak in the chromatogram obtained with the reference gas (5 ppm *V/V*).

Figure 0375.-1.– *UV Fluorescence Analyser*

Nitrogen monoxide and nitrogen dioxide

Maximum 2 ppm *V/V* in total, determined using a chemiluminescence analyser *(2.5.26)* .

Gas to be examined The substance to be examined.

Reference gas (a) *Carbon dioxide R1.*

Reference gas (b) A mixture containing 2 ppm *V/V* of *nitrogen monoxide R* in *carbon dioxide R1* or in *nitrogen R1* .

Calibrate the apparatus and set the sensitivity using reference gases (a) and (b). Measure the content of nitrogen monoxide and nitrogen dioxide in the gas to be examined.

If nitrogen is used instead of carbon dioxide in reference gas (b), multiply the result obtained by the quenching correction factor in order to correct the quenching effect on the analyser response caused by the carbon dioxide matrix effect.

The quenching correction factor is determined by applying a known reference mixture of nitrogen monoxide in carbon dioxide and comparing the actual content with the content indicated by the analyser which has been calibrated with a NO/N_2 reference mixture.

$$\text{Quenching correction factor} = \frac{\text{actual nitrogen monoxide content}}{\text{indicated nitrogen monoxide content}}$$

Total sulphur

Maximum 1 ppm *V/V*, determined using an ultraviolet fluorescence analyser after oxidation of the sulphur compounds by heating at 1000 °C (Figure 0375.-1).

The apparatus consists of the following:

— a system generating ultraviolet radiation with a wavelength of 210 nm, made up of an ultraviolet lamp, a collimator, and a selective filter; the beam is blocked periodically by a chopper rotating at high speed,

— a reaction chamber through which flows the previously filtered gas to be examined,

— a system that detects radiation emitted at a wavelength of 350 nm, made up of a selective filter, a photomultiplier tube and an amplifier.

Gas to be examined The substance to be examined.

Reference gas (a) *Carbon dioxide R1.*

Reference gas (b) A mixture containing between 0.5 ppm *V/V* and 2 ppm *V/V* of *hydrogen sulphide R1* in *carbon dioxide R1* .

Calibrate the apparatus and set the sensitivity using reference gases (a) and (b). Pass the gas to be examined through a quartz oven heated to 1000 °C. *Oxygen R* is circulated in the oven at a tenth of the flow rate of the gas to be examined. Measure the sulphur dioxide content in the gaseous mixture leaving the oven.

Water

Maximum 67 ppm *V/V*, determined using an electrolytic hygrometer *(2.5.28)* .

ASSAY

Infrared analyser *(2.5.24)* .

Gas to be examined The substance to be examined. It must be filtered to avoid stray light phenomena.

Reference gas (a) *Carbon dioxide R1.*

Reference gas (b) A mixture containing 95.0 per cent *V/V* of *carbon dioxide R1* and 5.0 per cent *V/V* of *nitrogen R1* .

Calibrate the apparatus and set the sensitivity using reference gases (a) and (b). Measure the content of carbon dioxide in the gas to be examined.

IDENTIFICATION

First identification *A.*

Second identification *B, C.*

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *Ph. Eur. reference spectrum of carbon dioxide.*

B. Place a glowing splinter of wood in an atmosphere of the substance to be examined. It is extinguished.

C. Pass a stream of the substance to be examined through *barium hydroxide solution R* . A white precipitate is formed which dissolves with effervescence in *dilute acetic acid R* .

TESTS

Examine the gaseous phase.

If the test is performed on a cylinder of gas, keep the cylinder of the substance to be examined at room temperature for not less than 6 h before carrying out the tests. Keep the cylinder in the vertical position with the outlet valve uppermost.

Carbon monoxide

Maximum 5 ppm *V/V*, determined using a carbon monoxide detector tube *(2.1.6)*.

Hydrogen sulphide

Maximum 1 ppm *V/V*, determined using a hydrogen sulphide detector tube *(2.1.6)*.

Nitrogen monoxide and nitrogen dioxide

Maximum 2 ppm *V/V* in total, determined using a nitrogen monoxide and nitrogen dioxide detector tube *(2.1.6)*.

Sulphur dioxide

Maximum 2 ppm *V/V*, determined using a sulphur dioxide detector tube *(2.1.6)*.

Water vapour

Maximum 67 ppm *V/V*, determined using a water vapour detector tube *(2.1.6)*.

STORAGE

Store liquefied under pressure in suitable containers complying with the legal regulations.

IMPURITIES

A. nitrogen monoxide,

B. nitrogen dioxide,

C. carbon monoxide,

D. total sulphur,

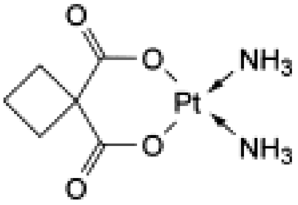
E. water.

Ph Eur

Carboplatin

General Notices

(Ph Eur monograph 1081)



$C_6H_{12}N_2O_4Pt$ 371.3   *41575-94-4*

Action and use

Platinum-containing cytotoxic.

Preparation

Carboplatin Injection

Ph Eur

DEFINITION

(*SP*-4-2)-Diammine[cyclobutan-1,1-dicarboxylato(2-)-*C*,*C′*]platin.

Content

98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

Colourless, crystalline powder.

Solubility

Sparingly soluble in water, very slightly soluble in acetone and in ethanol (96 per cent).

mp: about 200 °C, with decomposition.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *Ph. Eur. reference spectrum of carboplatin.*

TESTS

Solution S1

Dissolve 0.25 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Solution S2

Dissolve 1.0 g in *water R* , heating slightly if necessary, and dilute to 40 ml with the same solvent; filter if necessary.

Appearance of solution

Solution S1 is clear *(2.2.1)* and colourless (*2.2.2, Method II)*.

Impurity B and acidity

Maximum 0.5 per cent, calculated as impurity B.

To 10 ml of solution S1 add 0.1 ml of *phenolphthalein solution R1* . The solution is colourless. Not more than 0.7 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to pink.

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 20.0 mg of the substance to be examined in a mixture of equal volumes of *acetonitrile R and water R* , then dilute to 20.0 ml with the same mixture of solvents.

Reference solution Dilute 0.5 ml of the test solution to 200.0 ml with the mobile phase.

Column:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase: aminopropylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *water R, acetonitrile R* (13:87 *V/V*).

Flow rate 2 ml/min.

Detection Spectrophotometer at 230 nm.

Injection 10 µl.

Run time 2.5 times the retention time of carboplatin.

System suitability Test solution:

- *number of theoretical plates* : minimum 5000; if necessary, adjust the concentration of acetonitrile in the mobile phase;

— *mass distribution ratio* : minimum 4.0; if necessary, adjust the concentration of acetonitrile in the mobile phase;

— *symmetry factor* : maximum 2.0; if necessary, adjust the concentration of acetonitrile in the mobile phase.

Limits:

— *impurity A*: not more than the area of the principal peak in the chromatogram obtained with the reference solution (0.25 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with the reference solution (0.5 per cent);

— *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with the reference solution (0.05 per cent).

Chlorides ***(2.4.4)***

Maximum 100 ppm.

Dilute 10 ml of solution S2 to 15 ml with *water R* . Prepare the standard using 5 ml of *chloride standard solution (5 ppm Cl) R.*

Ammonium *(2.4.1, Method B)*

Maximum 100 ppm, determined on 0.20 g.

Prepare the standard using 0.2 ml of *ammonium standard solution (100 ppm* NH_4*) R*.

Silver

Maximum 10.0 ppm.

Atomic emission spectrometry *(2.2.22, Method I)*.

Test solution Dissolve 0.50 g in a 1 per cent *V/V* solution of *nitric acid R* and dilute to 50.0 ml with the same solution.

Reference solutions Prepare the reference solutions using *silver standard solution (5 ppm Ag) R* , diluting with a 1 per cent *V/V* solution of *nitric acid R.*

Wavelength 328.1 nm.

Soluble barium

Maximum 10.0 ppm.

Atomic emission spectrometry *(2.2.22, Method I*).

Test solution Use the solution described in the test for silver.

Reference solutions Prepare the reference solutions using *barium standard solution (50 ppm Ba) R* , diluting with a 1 per cent *V/V* solution of *nitric acid R.*

Wavelength 455.4 nm.

Heavy metals *(2.4.8*)

Maximum 20 ppm.

12 ml of solution S2 complies with test A. Prepare the reference solution using 5 ml of *lead standard solution (1 ppm Pb R)*.

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

Use the residue obtained in the test for loss on drying.

Ignite 0.200 g of the residue to constant mass at 800 ± 50 °C.

1 mg of the residue is equivalent to 1.903 mg of $C_6H_{12}N_2O_4Pt$.

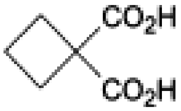
STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B.

A. cisplatin,



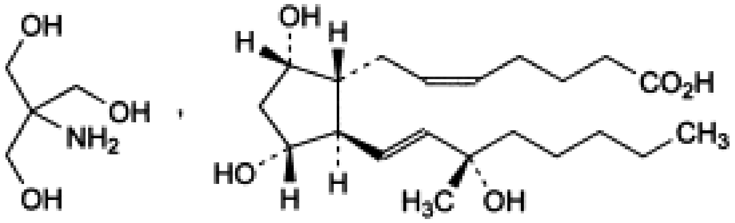
B. cyclobutane-1,1-dicarboxylic acid.

Ph Eur

Carboprost Trometamol

General Notices

(Ph Eur monograph 1712)



$C_{25}H_{47}NO_8$ 489.7 *58551-69-2*

Action and use

Prostaglandin ($PGF_{2\alpha}$) analogue.

Ph Eur

2-Amino-2-(hydroxymethyl)propane-1,3-diol (5*Z*)-7-[(1*R*,2*R*,3*R*,5*S*)-3,5-dihydroxy-2-[(1*E*,3*S*)-3-hydroxy-3-methyloct-1-enyl]cyclopentyl]hept-5-enoate ((15*S*)-15-methyl-PGF_2).

Content

94.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Soluble in water.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *Ph. Eur. reference spectrum of carboprost trometamol.*

TESTS

Specific optical rotation *(2.2.7)*

+ 18 to + 24 (anhydrous substance).

Dissolve 0.100 g in *ethanol (96 per cent) R* and dilute to 10.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29*).

Test solution Dissolve 15.0 mg of the substance to be examined in a mixture of 23 volumes of *acetonitrile R* and 77 volumes of *water for chromatography R* and dilute to 10.0 ml with the same mixture of solvents.

Reference solution (a) Dissolve 15.0 mg of *carboprost trometamol CRS* (containing impurity A) in a mixture of 23 volumes of *acetonitrile R* and 77 volumes of *water for chromatography R* and dilute to 10.0 ml with the same mixture of solvents.

Reference solution (b) Dilute 1.0 ml of reference solution (a) and 0.15 ml of *(15R)-15-methylprostaglandin F* $_{2\alpha}$ *R* (impurity B) to 100.0 ml with a mixture of 23 volumes of *acetonitrile R* and 77 volumes of *water for chromatography R .*

Reference solution (c) Dilute 2.0 ml of the test solution to 20.0 ml with a mixture of 23 volumes of *acetonitrile R* and 77 volumes of *water for chromatography R* . Dilute 2.0 ml of this solution to 20.0 ml with a mixture of 23 volumes of *acetonitrile R* and 77 volumes of *water for chromatography R.*

Column:

— *size*: *l* = 0.15 m, Ø = 4.6 mm,

— *stationary phase*: *octadecylsilyl silica gel for chromatography R1* (5 µm) with a pore size of 8-10 nm and a carbon loading of 12-19 per cent.

Mobile phase Mix 23 volumes of *acetonitrile R1* and 77 volumes of a 2.44 g/l solution of *sodium dihydrogen phosphate R* in *water for chromatography R* previously adjusted to pH 2.5 with *phosphoric acid R .*

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 200 nm.

Injection 20 µl.

Run time 1.3 times the retention time of carboprost.

Relative retention With reference to carboprost (retention time = about 80 min): impurity B = about 0.85; impurity A = about 0.9.

Identification of impurities Use the chromatogram obtained with reference solution (a) and the chromatogram supplied with *carboprost trometamol CRS* to identify the peak due to impurity A.

System suitability:

— *resolution:* minimum 3.4 between the peaks due to impurity B and carboprost in the chromatogram obtained with reference solution (b);

— *peak-to-valley ratio* : minimum 3.0, where H_p = height above the baseline of the peak due to impurity A and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity B in the chromatogram obtained with reference solution (a).

Limits:

— *impurity A*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (c) (3.0 per cent),

— *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent),

— *any other impurity*: for each impurity, not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent),

— *total*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (c) (4.0 per cent),

— *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Water *(2.5.32)*

Maximum 0.5 per cent, determined on 50 mg.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Mobile phase Mix 27 volumes of *acetonitrile R1* and 73 volumes of a 2.44 g/l solution of *sodium dihydrogen phosphate R* in *water for chromatography R* previously adjusted to pH 2.5 with *phosphoric acid R* .

Injection Test solution and reference solution (a).

Run time 1.2 times the retention time of carboprost.

Retention time Carboprost = about 29 min.

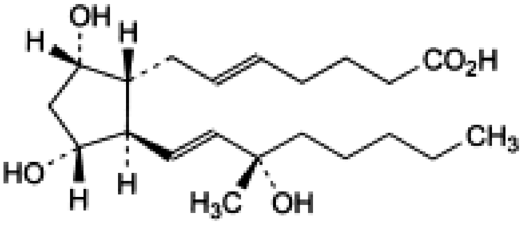
Calculate the percentage content of $C_{25}H_{47}NO_8$ using the declared content of *carboprost trometamol CRS* .

STORAGE

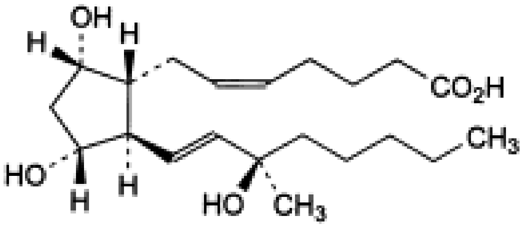
At a temperature below - 15 °C.

IMPURITIES

Specified impurities A, B.



A. (5*E*)-7-[(1*R*,2*R*,3*R*,5*S*)-3,5-dihydroxy-2-[(1*E*,3*S*)-3-hydroxy-3-methyloct-1-enyl] cyclopentyl]hept-5-enoic acid,



B. (5*Z*)-7-[(1*R*,2*R*,3*R*,5*S*)-3,5-dihydroxy-2-[(1*E*,3*R*)-3-hydroxy-3-methyloct-1-enyl] cyclopentyl]hept-5-enoic acid.

Test solution (a) Dissolve 0.20 g of the substance to be examined in *methylene chloride R* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with *methylene chloride R* .

Reference solution (a) Dissolve 5.0 mg *of meprobamate CRS* in *methylene chloride R* and dilute to 50 ml with the same solvent.

Reference solution (b) Dilute 1 ml of test solution (b) to 50 ml with *methylene chloride R.*

Reference solution (c) Dilute 5 ml of reference solution (b) to 10 ml with *methylene chloride R.*

Reference solution (d) Dissolve 20 mg of *carisoprodol CRS* in *methylene chloride R* and dilute to 10 ml with the same solvent.

Reference solution (e) Dissolve 10 mg of *carisoprodol impurity A CRS* in 5 ml of reference solution (d) and dilute to 50 ml with *methylene chloride R* .

Plate *TLC silica gel plate R* .

Mobile phase *acetone R, methylene chloride R* (20:80 *V/V*).

Application 5 µl.

Development Over a path of 15 cm.

Drying In air for 15 min.

Detection Spray with a solution prepared as follows: dissolve 5 g of *phosphomolybdic acid R* in a mixture of 50 ml of *glacial acetic acid R* and 10 ml of *sulphuric acid R* , and dilute to 100 ml with *glacial acetic acid R* . Heat the plate at 100-105 °C for 30 min.

System suitability:

— the chromatogram obtained with reference solution (c) shows 1 clearly visible spot,

— the chromatogram obtained with reference solution (e) shows 2 clearly separated spots.

Limits In the chromatogram obtained with test solution (a):

— *impurity D*: any spot due to impurity D is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.5 per cent),

— *any other impurity*: any spot, apart from the principal spot and any spot due to impurity D, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.2 per cent).

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

2.0 g complies with limit test C. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R* .

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g *in vacuo* at 60 °C for 3 h.

Sulphated ash ***(2.4.14)***

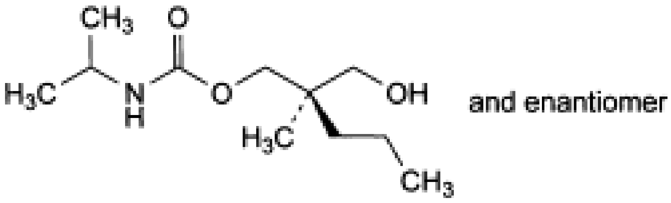
Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

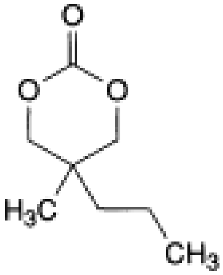
Dissolve 0.100 g in 15 ml of a 25 per cent *V/V* solution of *sulphuric acid R* and boil under a reflux condenser for 3 h. Cool, dissolve by cautiously adding 30 ml of *water R* , cool again and place in a steam-distillation apparatus. Add 40 ml of *strong sodium hydroxide solution R* and distil immediately by passing steam through the mixture. Collect the distillate into 40 ml of a 40 g/l solution of *boric acid R* until the total volume in the receiver reaches about 200 ml. Add 0.25 ml of *methyl red mixed solution R* . Titrate with *0.1 M hydrochloric acid* , until the colour changes from green to violet. Carry out a blank titration.

1 ml of *0.1 M hydrochloric acid* is equivalent to 13.02 mg of $C_{12}H_{24}N_2O_4$.

IMPURITIES



A. (2*RS*)-2-(hydroxymethyl)-2-methylpentyl (1-methylethyl)carbamate,



B. 5-methyl-5-propyl-1,3-dioxan-2-one,

D. meprobamate.

Ph Eur

Carmellose Calcium

General Notices

(Ph Eur monograph 0886)

9050-04-8

Action and use

Excipient in pharmaceutical products; bulk laxative.

Ph Eur

DEFINITION

Calcium salt of a partly *C*-carboxymethylated cellulose.

CHARACTERS

Appearance

White or yellowish-white powder, hygroscopic after drying.

Solubility

Practically insoluble in acetone, in alcohol and in toluene. It swells with water to form a suspension.

IDENTIFICATION

A. Shake 0.1 g thoroughly with 10 ml of *water R* . Add 2 ml of *dilute sodium hydroxide solution R* and allow to stand for 10 min (solution A). Dilute 1 ml of solution A to 5 ml with *water R* . To 0.05 ml add 0.5 ml of a 0.5 g/l solution of chromotropic acid, *sodium salt R* in a 75 per cent *m/m* solution of *sulphuric acid R* and heat on a water-bath for 10 min. A reddish-violet colour develops.

B. Shake 5 ml of solution A obtained in identification test A with 10 ml of *acetone R* . A white, flocculent precipitate is produced.

C. Shake 5 ml of solution A obtained in identification test A with 1 ml of *ferric chloride solution R1* . A brown, flocculent precipitate is formed.

D. Ignite 1 g and dissolve the residue in a mixture of 5 ml of *acetic acid R* and 10 ml of *water R* . Filter if necessary and boil the filtrate for a few minutes. Cool and neutralise with *dilute ammonia R1* . The solution gives reaction (a) of calcium *(2.3.1)* .

TESTS

Solution S

Shake 1.0 g with 50 ml of *distilled water R*, add 5 ml of *dilute sodium hydroxide solution R* and dilute to 100 ml with *distilled water R.*

Alkalinity

Shake 1.0 g thoroughly with 50 ml of *carbon dioxide-free water R* and add 0.05 ml of *phenolphthalein solution R*. No red colour develops.

Chlorides *(2.4.4)*

Maximum 0.36 per cent.

Heat 28 ml of solution S with 10 ml of *dilute nitric acid R* on a water-bath until a flocculent precipitate is produced. Cool, centrifuge and separate the supernatant liquid. Wash the precipitate with 3 quantities, each of 10 ml, of *water R,* centrifuging each time. Combine the supernatant liquid and the washings and dilute to 100 ml with *water R*. To 25 ml add 6 ml of *dilute nitric acid R* and dilute to 50 ml with *water R*. Dilute 10 ml of the solution to 15 ml with *water R.*

Sulphates *(2.4.13)*

Maximum 1 per cent.

Heat 20 ml of solution S with 1 ml of *hydrochloric acid R* on a water-bath until a flocculent precipitate is produced. Cool, centrifuge and separate the supernatant liquid. Wash the precipitate with 3 quantities, each of 10 ml, of *distilled water R*, centrifuging each time. Combine the supernatant liquid and the washings and dilute to 100 ml with *distilled water R*. To 25 ml add 1 ml of *dilute hydrochloric acid R* and dilute to 50 ml with *distilled water R*.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with limit test D. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 10.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Sulphated ash *(2.4.14)*

10.0 per cent to 20.0 per cent, determined on 1.0 g in a platinum crucible.

STORAGE

In an airtight container.

Ph Eur

Carmellose Sodium

General Notices

(Ph Eur monograph 0472)

9004-32-4

Action and use

Excipient; bulk laxative.

Preparation

Carmellose Sodium Eye Drops

Ph Eur

DEFINITION

Carmellose sodium (carboxymethylcellulose sodium) is the sodium salt of a partly *O*-carboxymethylated cellulose. It contains not less than 6.5 per cent and not more than 10.8 per cent of sodium (Na), calculated with reference to the dried substance.

CHARACTERS

A white or almost white, granular powder, hygroscopic after drying, practically insoluble in acetone, in ethanol and in toluene. It is easily dispersed in water giving colloidal solutions.

IDENTIFICATION

A. To 10 ml of solution S (see Tests) add 1 ml of *copper sulphate solution R* . A blue, cotton-like precipitate is formed.

B. Boil 5 ml of solution S for a few minutes. No precipitate is formed.

C. The solution prepared from the sulphated ash in the test for heavy metals gives the reactions of sodium *(2.3.1)* .

TESTS

Solution S

Sprinkle a quantity of the substance to be examined equivalent to 1.0 g of the dried substance onto 90 ml of *carbon dioxide-free water R* at 40 °C to 50 °C stirring vigorously. Continue stirring until a colloidal solution is obtained, cool and dilute to 100 ml with *carbon dioxide-free water R.*

Appearance of solution

Solution S is not more opalescent than reference suspension III (*2.2.1*) and not more intensely coloured than reference solution Y_6 (*2.2.2, Method II*).

pH ***(2.2.3)***

The pH of solution S is 6.0 to 8.0.

Apparent viscosity

While stirring, introduce a quantity of the substance to be examined equivalent to 2.00 g of the dried substance into 50 ml of *water R* heated to 90 °C. For a product of low viscosity, use if necessary, the quantity required to give the concentration indicated on the label. Allow to cool, dilute to 100.0 ml with *water R* and stir until dissolution is complete. Determine the viscosity *(2.2.10)* using a rotating viscometer at 20 °C and a shear rate of 10 s^{-1}. If it is impossible to obtain a shear rate of exactly 10 s^{-1}, use a shear rate slightly higher and a rate slightly lower and interpolate. The apparent viscosity is not less than 75 per cent and not more than 140 per cent of the value stated on the label.

Sodium glycollate

Place a quantity of the substance to be examined equivalent to 0.500 g of dried substance in a beaker. Add 5 ml of *acetic acid R* and 5 ml of *water R*. Stir until dissolution is complete (about 30 min). Add 80 ml of *acetone R* and 2 g of *sodium chloride R*. Filter through a fast filter paper impregnated with *acetone R* into a volumetric flask, rinse the beaker and filter with *acetone R* and dilute the filtrate to 100.0 ml with the same solvent. Allow to stand for 24 h without shaking. Use the clear supernatant liquid to prepare the test solution.

In a volumetric flask, dissolve 0.310 g of *glycollic acid R*, previously dried *in vacuo* over *diphosphorus pentoxide R*, in *water R* and dilute to 1000.0 ml with the same solvent. Place 5.0 ml of this solution in a volumetric flask, add 5 ml of *acetic acid R* and allow to stand for about 30 min. Add 80 ml of *acetone R* and 2 g of *sodium chloride R* and dilute to 100.0 ml with *acetone R*. Use this solution to prepare the reference solution.

Place 2.0 ml of each solution in a separate 25 ml volumetric flask. Heat on a water-bath to eliminate acetone. Cool to room temperature and add 5.0 ml of *2,7-dihydroxynaphthalene solution R* to each flask. Shake and add 15.0 ml of *2,7-dihydroxynaphthalene solution R*. Close the flasks with aluminium foil and heat on a water-bath for 20 min. Cool under running water and dilute to 25.0 ml with *sulphuric acid R.* Within 10 min, transfer 10.0 ml of each solution to a flat-bottomed tube. Examine the solutions viewing vertically. The test solution is not more intensely coloured than the reference solution (0.4 per cent).

Chlorides ***(2.4.4)***

Dilute 2 ml of solution S to 15 ml with *water R*. The solution complies with the limit test for chlorides (0.25 per cent).

Heavy metals ***(2.4.8)***

To the residue obtained in the determination of the sulphated ash, add 1 ml of *hydrochloric acid R* and evaporate on a water-bath. Take up the residue in 20 ml of *water R*. 12 ml of the solution complies with limit test A for heavy metals (20 ppm). Prepare the standard using *lead standard solution (1 ppm Pb) R.*

Loss on drying *(2.2.32)*

Not more than 10.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

20.0 per cent to 33.3 per cent, determined on 1.0 g using a mixture of equal volumes of *sulphuric acid R* and *water R* and calculated with reference to the dried substance. These limits correspond to a content of 6.5 per cent to 10.8 per cent of sodium (Na).

LABELLING

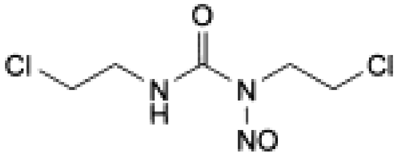
The label states the apparent viscosity in millipascal seconds for a 20 g/l solution; for a product of low viscosity, the label states the concentration of the solution to be used and the apparent viscosity in millipascal seconds.

Ph Eur

Carmustine

General Notices

(Ph Eur monograph 1187)



$C_5H_9Cl_2N_3O_2$ 214.1 *154-93-8*

Action and use

Cytotoxic alkylating agent.

Ph Eur

DEFINITION

Carmustine contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of 1,3-bis(2-chloroethyl)-1-nitrosourea, calculated with reference to the anhydrous substance.

CHARACTERS

A yellowish, granular powder, very slightly soluble in water, very soluble in methylene chloride, freely soluble in ethanol.

It melts at about 31 °C with decomposition.

IDENTIFICATION

Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the *Ph. Eur. reference spectrum of carmustine*. Examine the melted substances prepared as films.

TESTS

1,3-bis(2-chloroethyl)urea (impurity A)

Examine by thin-layer chromatography *(2.2.27)* , using a suitable silica gel as the coating substance.

Test solution Dissolve 0.10 g of the substance to be examined in *methylene chloride R* and dilute to 5 ml with the same solvent.

Reference solution (a) Dissolve 2 mg of *carmustine impurity A CRS* in *methylene chloride R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dilute 1 ml of the test solution to 10 ml with *methylene chloride R*. To 5 ml of this solution, add 5 ml of reference solution (a).

Apply separately to the plate 2 µl of each solution. Develop over a path of 10 cm using a mixture of 10 volumes of *methanol R* and 90 volumes of *methylene chloride R*. Allow the plate to dry in air. Spray with *diethylamine R* and heat at 125 °C for 10 min. Allow to cool and spray with *silver nitrate solution R2*. Expose to ultraviolet light at 365 nm until brown to black spots appear. Any spot corresponding to carmustine impurity A in the chromatogram obtained with the test solution is not more intense than the spot in the chromatogram obtained with reference solution (a) (1 per cent). The test is not valid unless the chromatogram obtained with reference solution (b) shows two clearly separated spots.

Water *(2.5.12)*

Not more than 1.0 per cent, determined on 0.50 g by the semi-micro determination of water.

ASSAY

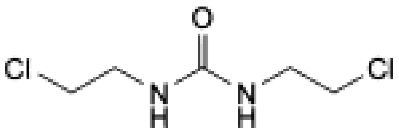
Dissolve 0.100 g in 30 ml of *ethanol R* and dilute to 100.0 ml with *water R*. Dilute 3.0 ml of the solution to 100.0 ml with *water R*. Measure the absorbance (*2.2.25*) at the maximum at 230 nm.

Calculate the content of $C_5H_9C_{l2}N_3O_2$ taking the specific absorbance to be 270.

STORAGE

Store in an airtight container, protected from light, at a temperature of 2 °C to 8 °C.

IMPURITIES



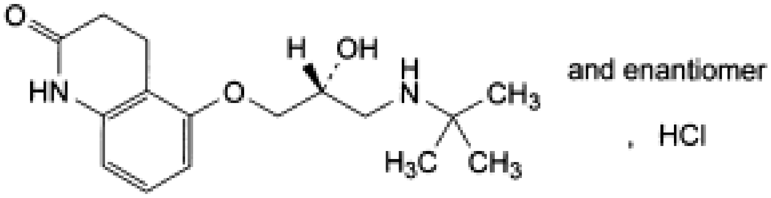
A. 1,3-bis(2-chloroethyl)urea.

Ph Eur

Carteolol Hydrochloride

General Notices

(Ph Eur monograph 1972)



$C_{15}H_{25}N_2O_3$,HCl 328.8 *51781-21-6*

Action and use

Beta-adrenoceptor antagonist.

Preparation

Carteolol Eye Drops

Ph Eur

DEFINITION

5-[(2*RS*)-3-[(1,1-Dimethylethyl)amino]-2-hydroxypropoxy]-3,4-dihydroquinolin-2(1*H*)-one hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white crystals or crystalline powder.

Solubility

Soluble in water, sparingly soluble in methanol, slightly soluble in alcohol, practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *Ph. Eur. reference spectrum of carteolol hydrochloride.*

B. It gives reaction (a) of chlorides *(2.3.1)* .

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Dissolve 0.300 g in *water R* and dilute to 10 ml with the same solvent.

pH *(2.2.3)*

5.0 to 6.0.

Dissolve 0.250 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 10.0 ml with the mobile phase.

Reference solution (c) Dissolve 10 mg of *carteolol for system suitability CRS* in the mobile phase and dilute to 5 ml with the mobile phase.

Reference solution (d) Dilute 5.0 ml of reference solution (b) to 10.0 ml with the mobile phase.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm,

— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 1 volume of *methanol R2* , 20 volumes of *acetonitrile R* and 79 volumes of a 2.82 g/l solution of *sodium hexanesulphonate R* .

Flow rate 1 ml/min.

Detection Spectrophotometer at 252 nm.

Injection 20 µl.

System suitability:

— the chromatogram obtained with reference solution (c) is similar to the chromatogram provided with *carteolol for system suitability CRS* ; the peaks due to impurity H and carteolol show base-line separation,

— *signal-to-noise ratio* : minimum 10 for the principal peak in the chromatogram obtained with reference solution (d),

— *number of theoretical plates* : minimum 6000, calculated for the principal peak in the chromatogram obtained with reference solution (a).

Limits Locate impurity H by comparison with the chromatogram provided with *carteolol for system suitability CRS,*

— *impurity H*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent),

— *any other impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),

— *total*: not more than half the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),

— *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.02 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

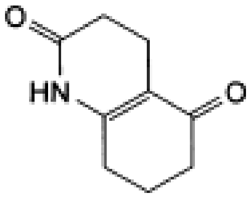
Dissolve 0.250 g in 60 ml of *alcohol R* . Add 5.0 ml of *0.01 M hydrochloric acid* . Carry out a potentiometric titration *(2.2.20)* , using *0.1 M sodium hydroxide* . Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 32.88 mg of $C_{16}H_{25}N_2O_3Cl$.

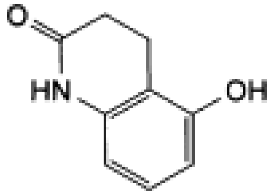
STORAGE

In an airtight container.

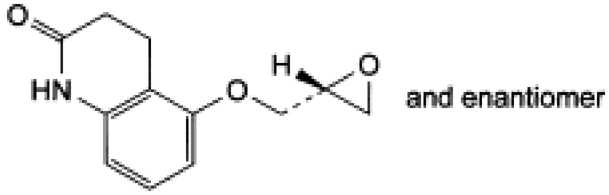
IMPURITIES



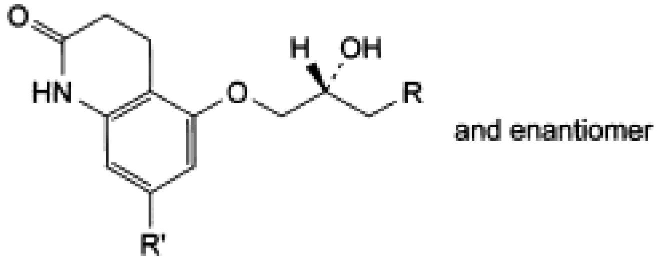
A. 4,6,7,8-tetrahydroquinoline-2,5(1*H*,3*H*)-dione,



B. 5-hydroxy-3,4-dihydroquinolin-2(1*H*)-one,



C. 5-[[(2*RS*)-oxiran-2-yl]methoxy]-3,4-dihydroquinolin-2(1*H*)-one,



D. R = Cl, R′ = H: 5-[(2*RS*)-3-chloro-2-hydroxypropoxy]-3,4-dihydroquinolin-2(1*H*)-one,

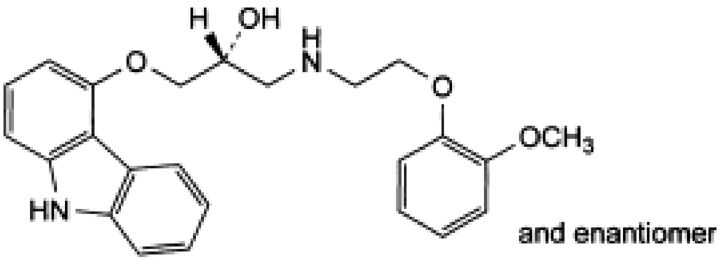
Ph Eur

Carvedilol

General Notices

(Ph Eur monograph 1745)



$C_{24}H_{26}N_2O_4$ 406.5 *72956-09-3*

Action and use

Beta-adrenoceptor antagonist; arteriolar vasodilator.

Ph Eur

DEFINITION

(2*RS*)-1-(9*H*-Carbazol-4-yloxy)-3-[[2-(2-methoxyphenoxy)ethyl]amino]propan-2-ol.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, slightly soluble in alcohol, practically insoluble in dilute acids.

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *Ph. Eur. reference spectrum of carvedilol*.

If the spectrum obtained shows differences, dissolve the substance to be examined in *2-propanol R* , evaporate to dryness and record a new spectrum using the residue.

TESTS

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve 5.0 mg of *carvedilol impurity C CRS* in 5.0 ml of the test solution and dilute to 100.0 ml with the mobile phase.

Reference solution (c) Dilute 1.0 ml of reference solution (b) to 100.0 ml with the mobile phase. Dilute 2.0 ml of this solution to 10.0 ml with the mobile phase.

Column:

— *size:* *l* = 0.125 m, Ø = 4.6 mm,

— *stationary phase: octylsilyl silica gel for chromatography R (5 µm),*

— *temperature*: 55 °C.

Mobile phase Dissolve 1.77 g of *potassium dihydrogen phosphate R* in *water R* and dilute to 650 ml with the same solvent; adjust to pH 2.0 with *phosphoric acid R* and add 350 ml of *acetonitrile R.*

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 240 nm.

Injection 20 µl.

Run time 8 times the retention time of carvedilol.

Relative retention With reference to carvedilol (retention time = about 4 min): impurity A = about 0.6; impurity C = about 3.5; impurity B = about 6.7.

System suitability Reference solution (b):

— *resolution*: minimum 17 between the peaks due to carvedilol and to impurity C.

Limits:

— *correction factor*: for the calculation of content, multiply the peak area of impurity A by 2,

— *impurity A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent),

— *impurity C*: not more than twice the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.02 per cent),

— *any other impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),

— *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),

— *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.01 per cent).

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

2.0 g complies with limit test C. Prepare the standard using 2.0 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.350 g in 60 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 40.65 mg of $C_{24}H_{26}N_2O_4$.

IMPURITIES

Ph Eur

DEFINITION

(6*R*,7*R*)-7-[[(2*R*)-2-Amino-2-phenylacetyl]amino]-3-methyl-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid monohydrate.

Semi-synthetic product derived from a fermentation product.

Content

95.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Sparingly soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison *cefalexin monohydrate CRS.*

TESTS

pH (*2.2.3*)

4.0 to 5.5.

Dissolve 50 mg in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Specific optical rotation (*2.2.7*)

+ 149 to + 158 (anhydrous substance).

Dissolve 0.125 g in *phthalate buffer solution pH 4.4 R* and dilute to 25.0 ml with the same solvent.

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 50.0 mg of the substance to be examined in mobile phase A and dilute to 50.0 ml with mobile phase A.

Reference solution (a) Dissolve 10.0 mg of *D-phenylglycine R* in mobile phase A and dilute to 10.0 ml with mobile phase A.

Reference solution (b) Dissolve 10.0 mg of *7-aminodesacetoxycephalosporanic acid CRS* in *phosphate buffer solution pH 7.0 R5* and dilute to 10.0 ml with mobile phase A.

Reference solution (c) Dilute 1.0 ml of reference solution (a) and 1.0 ml of reference solution (b) to 100.0 ml with mobile phase A.

Reference solution (d) Dissolve 10 mg of *dimethylformamide R* and 10 mg of *dimethylacetamide R* in mobile phase A and dilute to 10.0 ml with mobile phase A. Dilute 1.0 ml of this solution to 100.0 ml with mobile phase A.

Reference solution (e) Dilute 1.0 ml of reference solution (c) to 20.0 ml with mobile phase A.

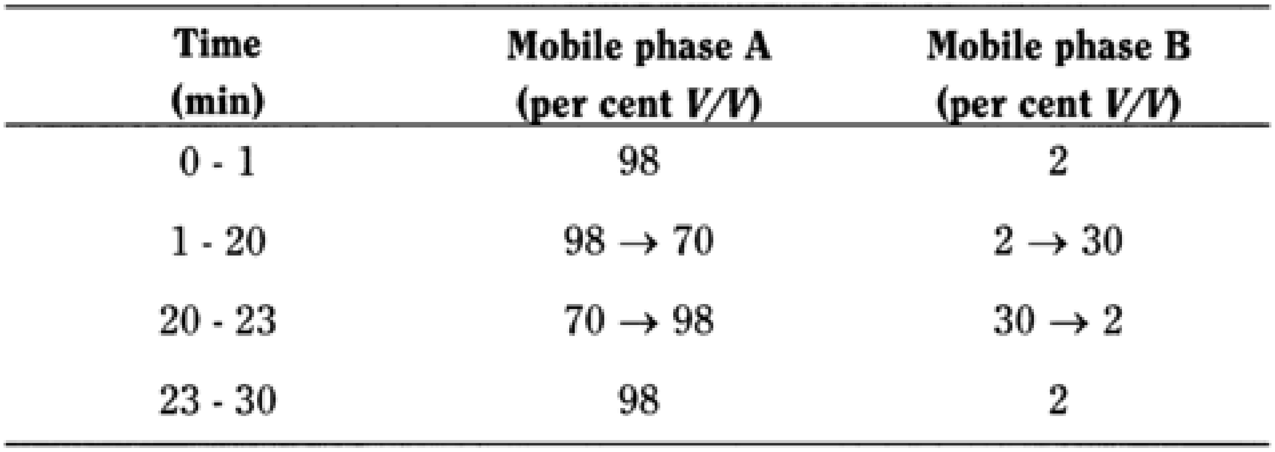
Reference solution (f) Dissolve 10 mg of *cefotaxime sodium CRS* in mobile phase A and dilute to 10.0 ml with mobile phase A. To 1.0 ml of this solution add 1.0 ml of the test solution and dilute to 100 ml with mobile phase A.

Column:

- *size: l* = 0.10 m, Ø = 4.6 mm;
- *stationary phase*: spherical *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

- *mobile phase A*: *phosphate buffer solution pH 5.0 R;*
- *mobile phase B*: *methanol R2;*



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 1	98	2
1 - 20	98 → 70	2 → 30
20 - 23	70 → 98	30 → 2
23 - 30	98	2

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 20 µl of the test solution and reference solutions (c), (d), (e) and (f).

System suitability:

- *resolution*: minimum 2.0 between the peaks due to impurities A and B in the chromatogram obtained with reference solution (c) and minimum 1.5 between the peaks due to cefalexin and cefotaxime in the chromatogram obtained with reference solution (f).

Limits:

- *impurity B*: not more than the area of the 2nd peak in the chromatogram obtained with reference solution (c) (1.0 per cent);
- *any other impurity*: not more than the area of the 1st peak in the chromatogram obtained with reference solution (c) (1.0 per cent);
- *total*: not more than 3 times the area of the 1st peak in the chromatogram obtained with reference solution (c) (3.0 per cent);
- *disregard limit*: the area of the 2nd peak in the chromatogram obtained with reference solution (e) (0.05 per cent); disregard any peaks due to dimethylformamide or dimethylacetamide.

***N,N*-Dimethylaniline (*2.4.26, Method B*)**

Maximum 20 ppm.

Water (*2.5.12*)

4.0 per cent to 8.0 per cent, determined on 0.300 g.

Sulphated ash (*2.4.14*)

Maximum 0.2 per cent, determined on 1.0 g.

DEFINITION

Sodium (6*R*,7*R*)-3-[(acetyloxy)methyl]-8-oxo-7-[(thiophen-2-ylacetyl)amino]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate.

Semi-synthetic product derived from a fermentation product.

Content

96.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Freely soluble in water, slightly soluble in anhydrous ethanol.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *cefalotin sodium CRS.*

B. It gives reaction (a) of sodium *(2.3.1)* .

TESTS

Solution S

Dissolve 2.50 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and its absorbance *(2.2.25)* at 450 nm is not greater than 0.20.

pH *(2.2.3)*

4.5 to 7.0 for solution S.

Specific optical rotation *(2.2.7)*

+ 124 to + 134 (anhydrous substance).

Dissolve 1.25 g in *water R* and dilute to 25.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*

Prepare the solutions immediately before use.

Test solution (a) Dissolve 75.0 mg of the substance to be examined in *water R* and dilute to 25.0 ml with the same solvent.

Test solution (b) Dilute 5.0 ml of test solution (a) to 50.0 ml with *water R* .

Reference solution (a) Dissolve 75.0 mg of *cefalotin sodium CRS* in *water R* and dilute to 25.0 ml with the same solvent. Dilute 5.0 ml of this solution to 50.0 ml with *water R.*

Reference solution (b) Dilute 1.0 ml of test solution (a) to 100.0 ml with *water R* .

Reference solution (c) Mix 1 ml of test solution (a), 1 ml of *hydrochloric acid R1* and 8 ml of *water R* . Heat at 60 °C for 12 min and cool to room temperature in iced water. Inject immediately.

Reference solution (d) Dissolve 5 mg of *cefalotin for impurity B identification CRS* in *water R* and dilute to 5 ml with the same solvent.

Column:

— *size:* l = 0.25 m, Ø = 4.6 mm;

— *stationary phase: end-capped octadecylsilyl silica gel for chromatography R* (5 µm);

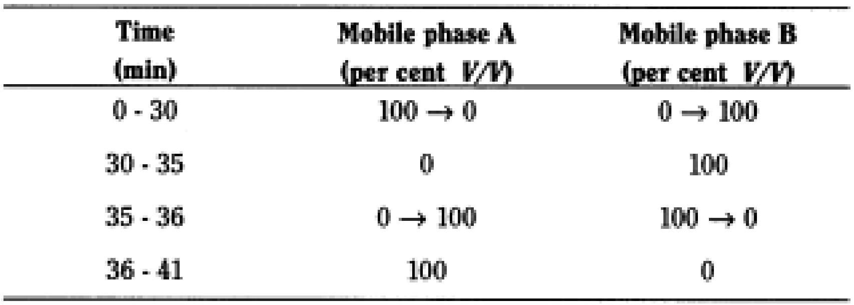
— *temperature*: 40 °C.

Mobile phase:

— *mobile phase A*: mix 3 volumes of *acetonitrile R1* and 97 volumes of a 1.742 g/l solution of *dipotassium hydrogen phosphate R* previously adjusted to pH 2.5 with *phosphoric acid*

R ;

— *mobile phase B:* mix 40 volumes of *acetonitrile R1* and 60 volumes of a 1.742 g/l solution of *dipotassium hydrogen phosphate R* previously adjusted to pH 2.5 with *phosphoric acid R* ;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 30	100 → 0	0 → 100
30 - 35	0	100
35 - 36	0 → 100	100 → 0
36 - 41	100	0

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 20 µl of test solution (a) and reference solutions (b), (c) and (d).

Relative retention With reference to cefalotin (retention time = about 26 min): impurity C = about 0.2; impurity B = about 0.7; impurity A = about 0.8; impurity D = about 0.9.

System suitability Reference solution (c):

— *resolution*: minimum 7.0 between the peaks due to impurity D and cefalotin.

Limits:

— *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

— *impurity D:* not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *any other impurity*: for each impurity, not more than 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);

— *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (3.0 per cent);

— *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

N*,*N*-Dimethylaniline *(2.4.26, Method B)

Maximum 20 ppm.

2-Ethylhexanoic acid *(2.4.28)*

Maximum 0.5 per cent.

Water *(2.5.12)*

Maximum 1.5 per cent, determined on 0.500 g.

Bacterial endotoxins *(2.6.14)*

Less than 0.13 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Mobile phase Mix 14 volumes of *acetonitrile R* and 86 volumes of a 6.967 g/l solution of *dipotassium hydrogen phosphate R* previously adjusted to pH 6.0 with *phosphoric acid R.*

Detection Spectrophotometer at 260 nm.

Injection 5 µl of test solution (b) and reference solution (a).

Run time 1.5 times the retention time of cefalotin (retention time = about 10 min).

Calculate the percentage content of $C_{16}H_{15}N_2NaO_6S_2$ using the chromatogram obtained with reference solution (a) and the declared content of *cefalotin sodium CRS.*

STORAGE

Protected from light. If the substance is sterile, store in a sterile, airtight, tamper-proof container .

IMPURITIES

Specified impurities *B, D.*

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*) : *A, C.*

DEFINITION

Mixture of sodium (6*R*,7*R*)-7-[[(2*R*)-2-(formyloxy)-2-phenylacetyl]amino]-3-[[(1-methyl-1*H*-tetrazol-5-yl)sulphanyl]methyl]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate and sodium (6*R*,7*R*)-7-[[(2*R*)-2-hydroxy-2-phenylacetyl]amino]-3-[[(1-methyl-1*H*-tetrazol-5-yl) sulphanyl]methyl]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate (cefamandole sodium), with sodium carbonate.

Semi-synthetic product derived from a fermentation product.

Content:

— *cefamandole nafate* ($C_{19}H_{17}N_6NaO_6S_2$): 93.0 per cent to 102.0 per cent (anhydrous and sodium carbonate-free substance), for the sum of the content of cefamandole nafate and cefamandole sodium expressed as cefamandole nafate;

— *cefamandole sodium* ($C_{18}H_{17}N_6NaO_5S_2$): maximum 10.0 per cent (anhydrous and sodium carbonate-free substance);

— *sodium carbonate* (Na_2CO_3): 4.8 per cent to 6.4 per cent.

CHARACTERS

Appearance

White or almost white powder.

Solubility

Freely soluble in water, sparingly soluble in methanol.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *cefamandole nafate CRS.*

B. It gives reaction (a) of sodium *(2.3.1)* .

TESTS

Solution S

Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and its absorbance *(2.2.25)* at 475 nm is not greater than 0.03.

pH

6.0 to 8.0 for solution S, measured after 30 min.

Specific optical rotation *(2.2.7)*

- 35.0 to - 45.0 (anhydrous and sodium carbonate-free substance).

Dissolve 1.00 g in *acetate buffer solution pH 4.7 R* and dilute to 10.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)* .

Prepare the solutions immediately before use.

Solvent mixture Mix 18 volumes of *acetonitrile R* and 75 volumes of a 10 per cent *V/V* solution of *triethylamine R* previously adjusted to pH 2.5 with *phosphoric acid R.*

Test solution Dissolve 0.100 g of the substance to be examined in the solvent mixture and dilute to 10.0 ml with the solvent mixture.

Reference solution (a) Dilute 1 ml of the test solution to 10 ml with the solvent mixture, then heat at 60 °C for 30 min.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the solvent mixture.

Column:

— *size: l* = 0.25 m, Ø = 4.6 mm;

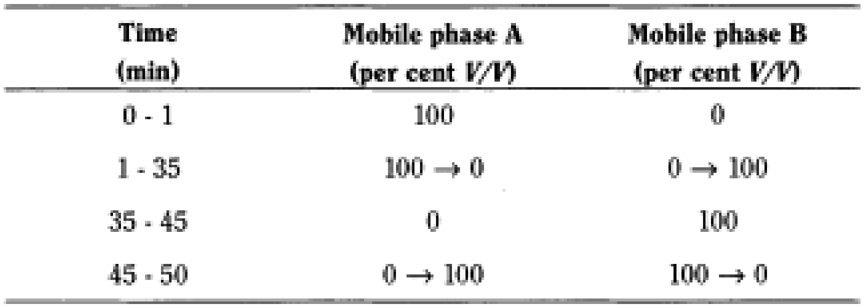
— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

— *triethylamine phosphate solution*: dissolve 2.0 g of *sodium pentanesulphonate R* in 350 ml of *water R,* add 40 ml of *triethylamine R*, adjust to pH 2.5 with *phosphoric acid R* and dilute to 700 ml with *water R*;

— *mobile phase A:* mix 1 volume of the triethylamine phosphate solution and 2 volumes of *water R;*

— *mobile phase B*: mix equal volumes of the triethylamine phosphate solution, *methanol R and acetonitrile R;*



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 1	100	0
1 - 35	100 → 0	0 → 100
35 - 45	0	100
45 - 50	0 → 100	100 → 0

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 20 µl loop injector.

Relative retention With reference to cefamandole nafate (retention time = about 24 min): cefamandole = about 0.8.

System suitability Reference solution (a):

— *resolution*: minimum 5.0 between the peaks due to cefamandole and cefamandole nafate.

Limits:

— *any impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

— *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (5.0 per cent);

— *disregard limit:* 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

2-Ethylhexanoic acid ***(2.4.28)***

Maximum 0.3 per cent *m/m*.

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Water *(2.5.12)*

Maximum 2.0 per cent, determined on 0.500 g.

Bacterial endotoxins *(2.6.14)*

Less than 0.15 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Cefamandole nafate

Liquid chromatography *(2.2.29)* .

Prepare the solutions immediately before use.

Test solution Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dissolve 50.0 mg of *cefamandole nafate CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 1 ml of the test solution to 10 ml with the mobile phase, then heat at 60 °C for 30 min.

Column:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 25 volumes of *acetonitrile R* and 75 volumes of a 10 per cent *V/V* solution of *triethylamine R* previously adjusted to pH 2.5 with *phosphoric acid R.*

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 20 µl loop injector.

System suitability:

- *resolution*: minimum 7.0 between the 2 principal peaks in the chromatogram obtained with reference solution (b);
- *repeatability*: maximum relative standard deviation of 0.8 per cent after a series of single injections of not less than 3 freshly prepared reference solutions (a).

Calculate the percentage content of cefamandole nafate ($C_{19}H_{17}N_6NaO_6S_2$) from the sum of the contents of cefamandole nafate and cefamandole sodium expressed as cefamandole nafate, using the declared content of *cefamandole nafate CRS* .

1 mg of cefamandole sodium is equivalent to 1.0578 mg of cefamandole nafate

Sodium carbonate

Dissolve 0.500 g in 50 ml of *water R*. Titrate with *0.1 M hydrochloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M hydrochloric acid* is equivalent to 5.3 mg of Na_2CO_3.

STORAGE

In an airtight container, protected from light. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

LABELLING

The label states that the substance contains sodium carbonate.

Mobile phase Mix 80 ml of *dimethylformamide R,* 4.0 ml of *glacial acetic acid R* and 20 ml of a 4.5 per cent (m/m) solution of *potassium hydroxide R* . Dilute to 2 litres with *water R* .

Flow rate 2.0 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 20 µl of the test solution and reference solutions (b), (c) and (d).

Run time Twice the retention time of cefapirin.

Relative retention With reference to cefapirin (retention time = about 13 min): impurity B = about 0.3; impurity C = about 0.5; impurity A = about 0.75.

System suitability Reference solution (d):

— *resolution:* minimum 2.0 between the peaks due to cefapirin and impurity A.

Limits:

— *any impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent), and not more than 1 such peak has an area greater than 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent),

— *total:* not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent),

— *disregard limit*: area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

N,N-Dimethylaniline ***(2.4.26, Method B)***

Maximum 20 ppm.

2-Ethylhexanoic acid ***(2.4.28)***

Maximum 0.5 per cent.

Water ***(2.5.12)***

Maximum 2.0 per cent, determined on 0.300 g.

Bacterial endotoxins ***(2.6.14)***

Less than 0.17 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

Injection Test solution and reference solution (a).

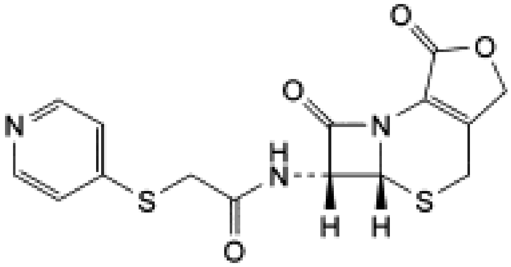
Calculate the percentage content of $C_{17}H_{16}N_3NaO_6S_2$.

STORAGE

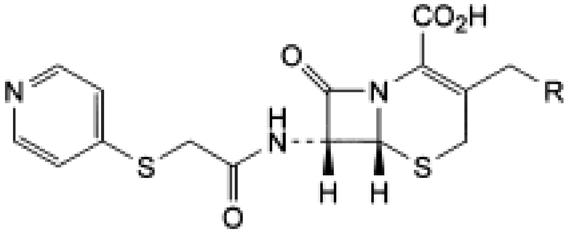
Protected from light. If the substance is sterile, store in a sterile, tamper-proof container.

IMPURITIES

Specified impurities *A, B, C.*



A. (5a*R*,6*R*)-6-[[[(pyridin-4-yl)sulphanyl]acetyl]amino]-5a,6-dihydro-3*H*,7*H*-azeto[2,1-*b*]furo[3,4-*d*][1,3]thiazine-1,7(4*H*)-dione (deacetylcefapirin lactone),



B. R = OH: (6*R*,7*R*)-3-(hydroxymethyl)-8-oxo-7-[[[(pyridin-4-yl)sulphanyl]acetyl]amino]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (deacetylcefapirin),

C. R = H: (6*R*,7*R*)-3-methyl-8-oxo-7-[[[(pyridin-4-yl)sulphanyl]acetyl]amino]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (deacetoxycefapirin).

$C_{18}H_{18}N_6O_5S_2,(C_3H_8O_2)_n$ 462.5 *64217-62-5*
(cefatrizine)

Action and use

Cephalosporin antibacterial.

Ph Eur

DEFINITION

Mixture of (6*R*,7*R*)-7-[[(2*R*)-2-amino-2-(4-hydroxyphenyl)acetyl]amino]-8-oxo-3-[[(1*H*-1,2,3-triazol-4-yl)sulphanyl]methyl]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid and propane-1,2-diol in molecular proportions of about 1:1.

Content: 95.0 per cent to 102.0 per cent of $C_{18}H_{18}N_6O_5S_2$ (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Slightly soluble in water, practically insoluble in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *cefatrizine propylene glycol CRS.*

B. Examine the chromatograms obtained in the test for propylene glycol.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (b).

TESTS

Specific optical rotation *(2.2.7)*

+ 63 to + 69 (anhydrous substance).

Dissolve 0.400 g in *1 M hydrochloric acid* and dilute to 20.0 ml with the same acid.

Propylene glycol

Gas chromatography *(2.2.28)* .

Solvent mixture

acetone R, water R (20:80 *V/V*).

Internal standard solution Dissolve 1.0 g of *dimethylacetamide R* in the solvent mixture and dilute to 50.0 ml with the solvent mixture.

Test solution Introduce 0.40 g of the substance to be examined into a ground-glass-stoppered test-tube. Add 3.0 ml of the internal standard solution, 1.0 ml of the solvent mixture and 2.0 ml of *hydrochloric acid R.* Seal the test-tube and shake.

Reference solution (a) Dissolve 2.0 g of *propylene glycol R* in the solvent mixture and dilute to 100.0 ml with the solvent mixture.

Reference solution (b) Introduce into a ground-glass-stoppered test-tube 1.0 ml of reference solution (a) and 1.0 ml of the internal standard solution.

Column:

— *material*: stainless steel;

— *size*: *l* = 2 m, Ø = 2 mm;

— *stationary phase: ethylvinylbenzene-divinylbenzene copolymer R* (150-180 µm).

Carrier gas *nitrogen for chromatography R.*

Flow rate 30 ml/min.

Temperature:

— *column*: 200 °C;

— *injection port and detector*: 250 °C.

Detection Flame ionisation.

Injection 1 µl of the test solution and reference solution (b).

Limit:

— *propylene glycol* : 13.0 per cent to 18.0 per cent.

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 60.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dissolve 60.0 mg of *cefatrizine propylene glycol CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (b) Dissolve 30.0 mg of *cefatrizine impurity A CRS in buffer solution pH 7.0 R* and dilute to 100.0 ml with the same buffer solution.

Reference solution (c) Dilute 0.6 ml of reference solution (a) to 100.0 ml with the mobile phase.

Reference solution (d) Dilute 1.0 ml of reference solution (b) to 100.0 ml with *buffer solution pH 7.0 R* .

Reference solution (e) To 1.0 ml of reference solution (a) add 1.0 ml of reference solution (b) and dilute to 10.0 ml with the mobile phase.

Column:

— *size*: *l* = 0.25 m, Ø = 4 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 5 volumes of *acetonitrile R* and 95 volumes of a 2.72 g/l solution of *potassium dihydrogen phosphate R in water R.*

Flow rate 2 ml/min.

Detection Spectrophotometer at 272 nm.

Injection 20 µl of the test solution and reference solutions (c), (d) and (e).

Run time At least twice the retention time of cefatrizine.

System suitability Reference solution (e):

— *resolution*: minimum 5.0 between the peaks due to cefatrizine and impurity A.

Limits:

— *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.5 per cent);

— *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.6 per cent);

— *sum of impurities* other than A: not more than 3.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (2.1 per cent);

— *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.03 per cent).

Water ***(2.5.12)***

Maximum 1.5 per cent, determined on 0.500 g.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Injection Test solution and reference solution (a).

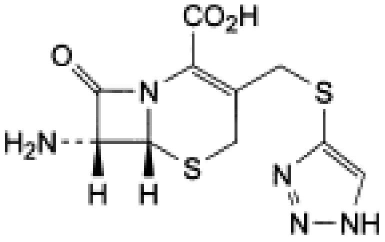
System suitability Reference solution (a):

— *repeatability*: maximum relative standard deviation of 1.0 per cent after 6 injections.

Calculate the percentage content of $C_{18}H_{18}N_6O_5S_2$ from the declared content of $C_{18}H_{18}N_6O_5S_2$ in *cefatrizine propylene glycol CRS* .

IMPURITIES

Specified impurities *A*



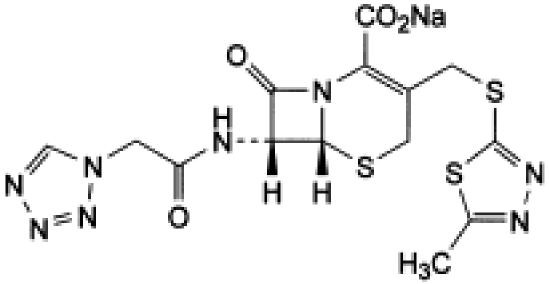
A. (6*R*,7*R*)-7-amino-8-oxo-3-[[(1*H*-1,2,3-triazol-4-yl)sulphanyl]methyl]-5-thia-1-azabicyclo [4.2.0]oct-2-ene-2-carboxylic acid (7-ACA triazole).

Ph Eur

Cefazolin Sodium

General Notices

(Ph Eur monograph 0988)



$C_{14}H_{13}N_8NaO_4S_3$ 476.5 *27164-46-1*

Action and use

Cephalosporin antibacterial.

Preparation

Cefazolin Injection

Ph Eur

DEFINITION

Sodium (6*R*,7*R*)-3-[[(5-methyl-1,3,4-thiadiazol-2-yl)sulphanyl]methyl]-8-oxo-7-[(1*H*-tetrazol-1-ylacetyl)amino]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate.

Semi-synthetic product derived from a fermentation product.

Content

95.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder, very hygroscopic.

Solubility

Freely soluble in water, very slightly soluble in ethanol (96 per cent).

It shows polymorphism *(5.9)* .

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Preparation Dissolve 0.150 g in 5 ml of *water R* , add 0.5 ml of *dilute acetic acid R* , swirl and allow to stand for 10 min in iced water. Filter the precipitate and rinse with 1-2 ml of *water R* . Dissolve in a mixture of 1 volume of *water R* and 9 volumes of *acetone R.* Evaporate the solvent almost to dryness, then dry in an oven at 60 °C for 30 min.

Comparison *cefazolin CRS.*

B. It gives reaction (a) of sodium *(2.3.1)* .

TESTS

Solution S

Dissolve 2.50 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and its absorbance *(2.2.25)* at 430 nm is not greater than 0.15.

pH *(2.2.3)*

4.0 to 6.0 for solution S.

Specific optical rotation *(2.2.7)*

- 15 to - 24 (anhydrous substance).

Dissolve 1.25 g in *water R* and dilute to 25.0 ml with the same solvent.

Absorbance *(2.2.25)*

Dissolve 0.100 g in *water R* and dilute to 100.0 ml with the same solvent. Dilute 2.0 ml of the solution to 100.0 ml with *sodium hydrogen carbonate solution R* . Examined between 220 nm and 350 nm, the solution shows an absorption maximum at 272 nm. The specific absorbance at the maximum is 260 to 300 (anhydrous substance).

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 50.0 mg of the substance to be examined in mobile phase A and dilute to 20.0 ml with the same mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with mobile phase A.

Reference solution (b) Dissolve 20 mg of the substance to be examined in 10 ml of a 2 g/l solution of *sodium hydroxide R* . Allow to stand for 15-30 min. Dilute 1.0 ml of the solution to 20 ml with mobile phase A.

Column:

— *size*: *l* = 0.125 m, Ø = 4.0 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography* R (3 µm);

— *temperature*: 45 °C.

Mobile phase:

— *mobile phase A:* solution containing 14.54 g/l of *disodium hydrogen phosphate R* and 3.53 g/l of *potassium dihydrogen phosphate R;*

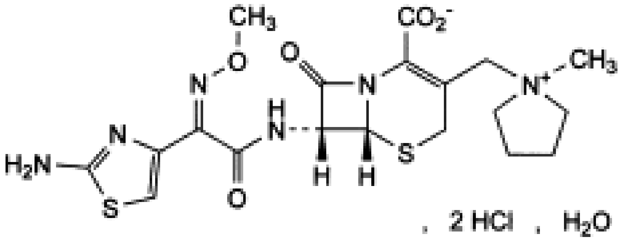
(Cefepime Dihydrochloride Monohydrate, Ph Eur monograph 2126)



$C_{19}H_{24}N_6O_5S_2,2HCl,H_2O$ 571.5 *123171-59-5*

Action and use

Cephalosporin antibacterial.

Ph Eur

DEFINITION

(6*R*,7*R*)-7-[[(2*Z*)-(2-Aminothiazol-4-yl)(methoxyimino)acetyl]amino]-3-[(1-methylpyrrolidinio) methyl]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate dihydrochloride monohydrate. Semi-synthetic product derived from a fermentation product.

Content

97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water and in methanol, practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *cefepime dihydrochloride monohydrate CRS .*

B. It gives reaction (a) of chlorides *(2.3.1)* .

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_3 *(2.2.2, Method II)*.

Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent.

Specific optical rotation *(2.2.7)*

+ 40 to + 45 (anhydrous substance).

Dissolve 0.250 g in *water R* and dilute to 25.0 ml with the same solvent.

Impurity G

Liquid chromatography *(2.2.29)* . *Prepare the solutions immediately before use.*

Test solution Dissolve 0.100 g of the substance to be examined in *0.01 M nitric acid* and dilute to 10.0 ml with the same acid.

Reference solution (a) Dilute 0.250 g of *N-methylpyrrolidine R* (impurity G) to 100.0 ml with *water R* . Dilute 2.0 ml of this solution to 100.0 ml with *0.01 M nitric acid* .

Reference solution (b) Dilute 0.250 g of *pyrrolidine R* to 100 ml with *0.01 M nitric acid* . Dilute 2 ml of the solution to 100 ml with *0.01 M nitric acid* . Mix 5 ml of this solution with 5 ml of reference solution (a).

Column:

— *size:* *l* = 0.05 m, Ø = 4.6 mm;

— *stationary phase*: *strong cation-exchange resin R* (5 µm).

Mobile phase Mix 1 volume of *acetonitrile R* and 100 volumes of *0.01 M nitric acid* ; filter through a 0.2 µm filter.

Flow rate 1 ml/min.

Detection Conductivity detector.

Injection 100 µl.

Run time 1.1 times the retention time of cefepime (retention time = about 50 min, eluting as a broadened peak).

System suitability:

— *symmetry factor* : maximum 2.5 for the peak due to impurity G in the chromatogram obtained with reference solution (a);

— *repeatability*: maximum relative standard deviation of 5.0 per cent after 6 injections of reference solution (a);

— *peak-to-valley ratio* : minimum 3 between the peaks due to pyrrolidine and impurity G in the chromatogram obtained with reference solution (b).

Calculate the percentage content of impurity G in the test solution using reference solution (a) .

Limit:
— *impurity G*: maximum 0.5 per cent.

Related substances

Liquid chromatography *(2.2.29)* . *Prepare the solutions immediately before use or keep refrigerated at 4-8 ‘C for not more than 12 h.*

Test solution Dissolve 70.0 mg of the substance to be examined in mobile phase A and dilute to 50.0 ml with mobile phase A. Sonicate for 30 s and stir for about 5 min.

Reference solution (a) Dissolve 70.0 mg of *cefepime dihydrochloride monohydrate CRS* in mobile phase A and dilute to 50.0 ml with mobile phase A. Sonicate for 30 s and stir for about 5 min.

Reference solution (b) Dilute 1.0 ml of the test solution to 10.0 ml with mobile phase A. Dilute 2.0 ml of this solution to 100.0 ml with mobile phase A.

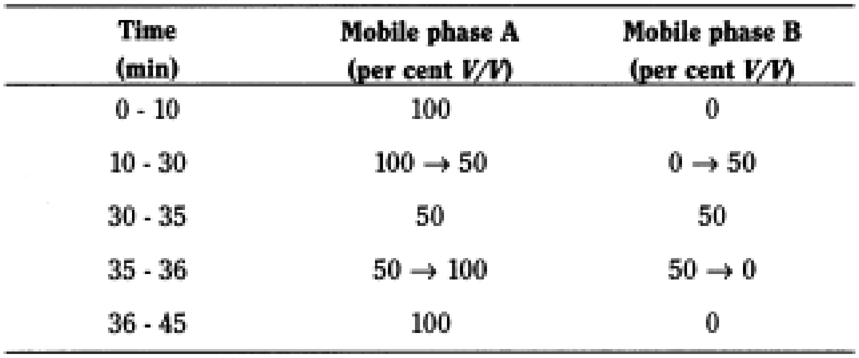
Reference solution (c) Dissolve 7 mg of *cefepime dihydrochloride monohydrate for system suitability CRS* (containing impurities A, B, E and F) in mobile phase A and dilute to 5 ml with mobile phase A.

Column:
— *size: l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:
— *mobile phase A*: mix 10 volumes of *acetonitrile R* and 90 volumes of a 0.68 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 5.0 with *0.5 M potassium hydroxide* ;

— *mobile phase B*: mix equal volumes of *acetonitrile R* and a 0.68 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 5.0 with *0.5 M potassium hydroxide* ;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 10	100	0
10 - 30	100 → 50	0 → 50
30 - 35	50	50
35 - 36	50 → 100	50 → 0
36 - 45	100	0

Flow rate 1 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 10 µl of the test solution and reference solutions (b) and (c).

Identification of impurities Use the chromatogram supplied with *cefepime dihydrochloride monohydrate for system suitability CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B, E and F.

Relative retention With reference to cefepime (retention time = about 7 min): impurity E = about 0.4; impurity F = about 0.8; impurity A = about 2.5; impurity B = about 4.1.

System suitability Reference solution (c):

— *resolution*: minimum 1.5 between the peaks due to impurity F and cefepime.

Limits:

— *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 1.4; impurity B = 1.4; impurity E = 1.8;

— *impurity A*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

— *impurities B, F*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

— *impurity E*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

— *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

— *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Water ***(2.5.12)***

3.0 per cent to 4.5 per cent, determined on 0.400 g.

Bacterial endotoxins ***(2.6.14)***

Less than 0.04 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Mobile phase Mobile phase A.

Injection Test solution and reference solution (a).

Run time 1.4 times the retention time of cefepime.

Calculate the percentage content of $C_{19}H_{26}Cl_2N_6O_5S_2$ from the declared content of *cefepime dihydrochloride monohydrate CRS* .

STORAGE

Protected from light. If the substance is sterile, store in a sterile, airtight, tamper-proof container .

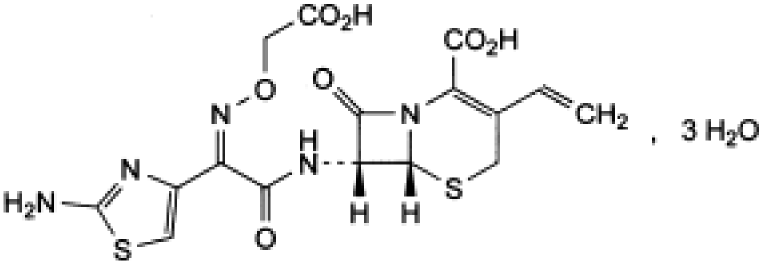
(Ph Eur monograph 1188



$C_{16}H_{15}N_5O_7S_2,3H_2O$ 507.5 *79350-37-1*

Action and use

Cephalosporin antibacterial.

Ph Eur

DEFINITION

(6*R*,7*R*)-7-[[(*Z*)-2-(2-Aminothiazol-4-yl)-2-[(carboxymethoxy)imino]acetyl]amino]-3-ethenyl-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid trihydrate.

Semi-synthetic product derived from a fermentation product.

Content

95.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, slightly hygroscopic powder.

Solubility

Slightly soluble in water, soluble in methanol, sparingly soluble in anhydrous ethanol, practically insoluble in ethyl acetate.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *cefixime CRS.*

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in *methanol R* , evaporate to dryness and record new spectra using the residues.

TESTS

pH *(2.2.3)*

2.6 to 4.1.

Suspend 0.5 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (a) Dissolve 25.0 mg of *cefixime CRS* in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 100.0 ml with the mobile phase.

Reference solution (c) Dissolve 10 mg of *cefixime CRS* in 10 ml of *water R* . Heat on a water-bath for 45 min and cool (in situ preparation of impurity D). Inject immediately.

Column:

— *size*: *l* = 0.125 m, Ø = 4 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm);

— *temperature*: 40 °C.

Mobile phase Mix 250 volumes of *acetonitrile R* and 750 volumes of a tetrabutylammonium hydroxide solution prepared as follows: dissolve 8.2 g of *tetrabutylammonium hydroxide R* in *water R* and dilute to 800 ml with the same solvent; adjust to pH 6.5 with *dilute phosphoric acid R* and dilute to 1000 ml with *water R* .

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 10 µl of the test solution and reference solutions (b) and (c).

Run time 3 times the retention time of cefixime.

System suitability Reference solution (c):

— *resolution*: minimum 2.0 between the peaks due to cefixime and impurity D; if necessary, adjust the concentration of acetonitrile in the mobile phase.

Limits:

— *any impurity*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (3 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

Ethanol ***(2.4.24)***

Head-space gas chromatography *(2.2.28)* : use the standard additions method.

Sample solution Dissolve 0.250 g of the substance to be examined in a mixture of 1 volume of *dimethylacetamide R* and 4 volumes of *water R* and dilute to 25.0 ml with the same mixture of solvents.

Limit:
— *ethanol* : maximum 1.0 per cent *m/m*.

Water ***(2.5.12)***

9.0 per cent to 12.0 per cent, determined on 0.200 g.

Sulphated ash ***(2.4.14)***

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Injection The test solution and reference solution (a).

System suitability Reference solution (a):

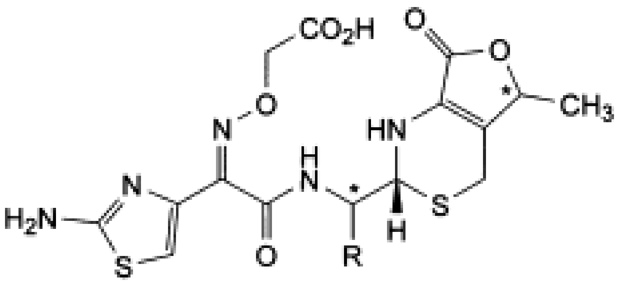
— *repeatability*: maximum relative standard deviation of 1.0 per cent after 6 injections.

Calculate the percentage content of $C_{16}H_{15}N_5O_7S_2$ from the declared content of *cefixime CRS* .

STORAGE

In an airtight container , protected from light.

IMPURITIES



A. R = CO_2H: 2-[[(*Z*)-2-(2-aminothiazol-4-yl)-2-[(carboxymethoxy)imino]acetyl]amino]-2-[(2R)-5-methyl-7-oxo-1,2,5,7-tetrahydro-4*H*-furo[3,4-*d*][1,3]thiazin-2-yl]acetic acid,

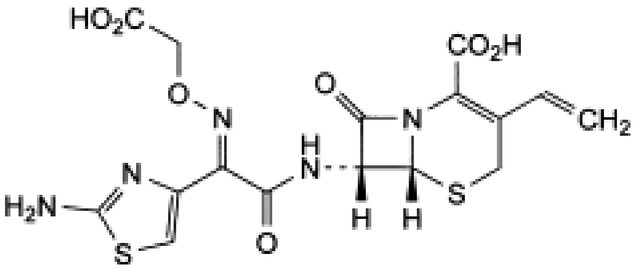
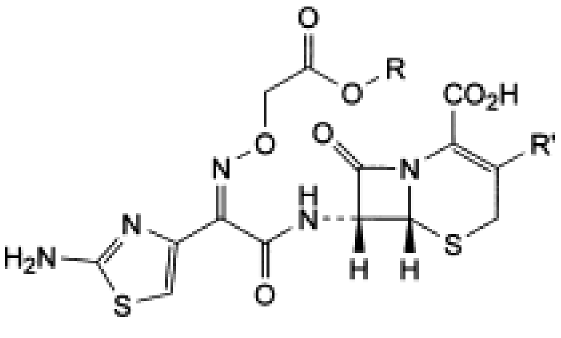
C. (6*R*,7*S*)-7-[[(*Z*)-2-(2-aminothiazol-4-yl)-2-[(carboxymethoxy)imino]acetyl]amino]-3-ethenyl-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (cefixime 7-epimer),



D. (6*R*,7*R*)-7-[[(*E*)-2-(2-aminothiazol-4-yl)-2-[(carboxymethoxy)imino]acetyl]amino]-3-ethenyl-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (cefixime *E*-isomer),



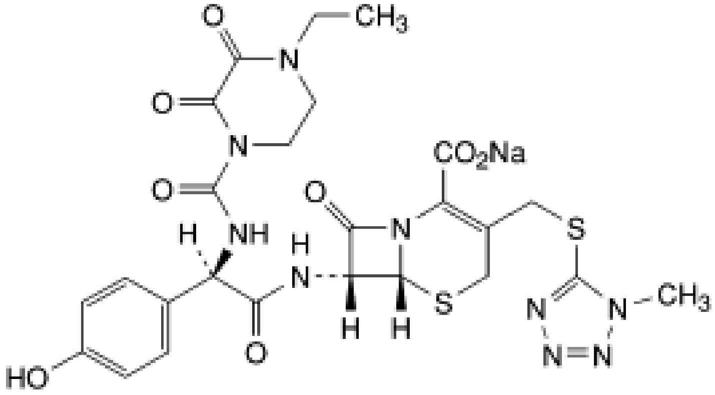
E. R = H, R′ = CH_3: (6*R*,7*R*)-7-[[(*Z*)-2-(2-aminothiazol-4-yl)-2-[(carboxymethoxy)imino]acetyl]amino]-3-methyl-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid,

F. R = C_2H_5, R′ = $CH=CH_2$: (6*R*,7*R*)-7-[[(Z)-2-(2-aminothiazol-4-yl)-2-[(2-ethoxy-2-oxoethoxy)imino]acetyl]amino]-3-ethenyl-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid.

Cefoperazone Sodium

General Notices

(Ph Eur monograph 1404)



$C_{25}H_{26}N_9NaO_8S_2$ 668 *62893-19-0*

Action and use

Cephalosporin antibacterial.

Ph Eur

DEFINITION

Sodium (6*R*,7*R*)-7-[[(2*R*)-2-[[(4-ethyl-2,3-dioxopiperazin-1-yl)carbonyl]amino]-2-(4-hydroxyphenyl)acetyl]amino]-3-[[(1-methyl-1*H*-tetrazol-5-yl)sulphanyl]methyl]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate.

Semi-synthetic product derived from a fermentation product.

Content

95.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or slightly yellow, hygroscopic powder.

Solubility

Freely soluble in water, soluble in methanol, slightly soluble in ethanol (96 per cent).

If crystalline, it shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Preparation Dissolve the substance to be examined in *methanol R* and evaporate to dryness. Examine the residue.

Comparison *Ph. Eur. reference spectrum of cefoperazone sodium.*

B. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with test solution (a) is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

C. It gives reaction (a) of sodium *(2.3.1)* .

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and its absorbance *(2.2.25)* at 430 nm is not greater than 0.15.

Dissolve 2.5 g in *water R* and dilute to 25.0 ml with the same solvent.

pH *(2.2.3)*

4.5 to 6.5.

Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)* . *Prepare the solutions immediately before use*.

Test solution (a) Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 250.0 ml with the mobile phase.

Test solution (b) Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (a) Dissolve 25.0 mg of *cefoperazone dihydrate CRS* in the mobile phase and dilute to 250.0 ml with the mobile phase.

Reference solution (b) Dilute 5.0 ml of reference solution (a) to 100.0 ml with the mobile phase.

Column:

— *size*: *l* = 0.15 m, Ø = 4.6 mm;

— *stationary phase: end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 884 volumes of *water R*, 110 volumes of *acetonitrile R*, 3.5 volumes of a 60 g/l solution of *acetic acid R* and 2.5 volumes of a triethylammonium acetate solution prepared as follows: dilute 14 ml of *triethylamine R* and 5.7 ml of *glacial acetic acid R* to 100 ml with *water R*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 20 µl of test solution (b) and reference solutions (a) and (b).

Run time 2.5 times the retention time of cefoperazone.

Retention time Cefoperazone = about 15 min.

System suitability Reference solution (a):

— *number of theoretical plates*: minimum 5000, calculated for the principal peak; if necessary, adjust the content of *acetonitrile R* in the mobile phase;

— *symmetry factor*: maximum 1.6 for the principal peak; if necessary, adjust the content of *acetonitrile R* in the mobile phase.

Limits:

— *any impurity*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent);

— *total*: 4.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (4.5 per cent);

— *disregard limit:* 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

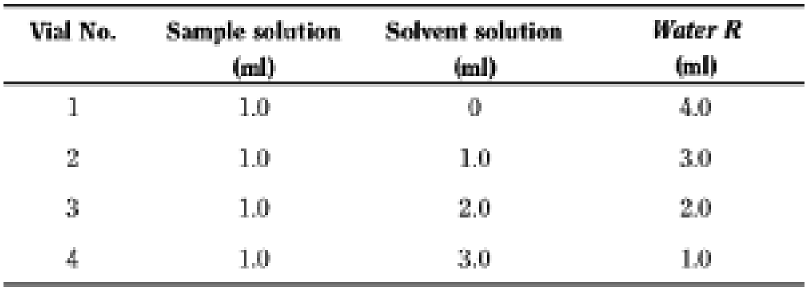
Acetone ***(2.4.24, System B)***

Maximum 2.0 per cent.

Sample solution Dissolve 0.500 g of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Solvent solution Dissolve 0.350 g of *acetone R* in *water R* and dilute to 100.0 ml with the same solvent. Dilute 10.0 ml of this solution to 100.0 ml with *water R*.

Prepare each of 4 injection vials as shown in the table below:



Vial No.	Sample solution (ml)	Solvent solution (ml)	*Water R* (ml)
1	1.0	0	4.0
2	1.0	1.0	3.0
3	1.0	2.0	2.0
4	1.0	3.0	1.0

Static head-space conditions which may be used:

— *equilibration time*: 15 min;

— *transfer-line temperature*: 110 °C.

Temperature:

— *Column*: 40 °C for 10 min.

Heavy metals ***(2.4.8)***

Maximum 5 ppm.

2.0 g complies with test C. Prepare the reference solution using 1 ml of *lead standard solution (10 ppm Pb) R.*

Water ***(2.5.12)***

Maximum 5.0 per cent, determined on 0.200 g.

Bacterial endotoxins ***(2.6.14)***

Less than 0.20 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Injection Test solution (a) and reference solution (a).

System suitability Reference solution (a):

— *repeatability*: maximum relative standard deviation of 1.0 per cent after 6 injections.

Calculate the percentage content of cefoperazone sodium by multiplying the percentage content of cefoperazone by 1.034.

STORAGE

In an airtight container, protected from light, at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

DEFINITION

Main component

(6*R*,7*R*)-7-[[(2*R*)-amino(cyclohexa-1,4-dienyl)acetyl]amino]-3-methyl-8-oxo-5-thia-1-

azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (cefradine).

Semi-synthetic product derived from a fermentation product.

Content:

— *cefradine:* minimum 90.0 per cent (anhydrous substance),

— *cefalexin*: maximum 5.0 per cent (anhydrous substance),

— *4′ ,5′ -dihydrocefradine*: maximum 2.0 per cent (anhydrous substance).

— *sum of the percentage contents of cefradine, cefalexin and 4′ ,5′ -dihydrocefradine*: 96.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or slightly yellow, hygroscopic powder.

Solubility

Sparingly soluble in water, practically insoluble in ethanol 96 per cent and in hexane.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)* .

Comparison cefradine CRS.

If the spectra obtained in the solid state show differences, dissolve 30 mg of the substance to be examined and of the reference substance separately in 10 ml of *methanol R,* evaporate to dryness at 40 °C at a pressure less than 2 kPa and record new spectra using the residues.

TESTS

Solution S

Dissolve 2.50 g in *sodium carbonate solution R* and dilute to 25.0 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II (*2.2.1*). Allow solution S to stand for 5 min. The absorbance of solution S measured at 450 nm (*2.2.25*) is not greater than 0.60.

pH *(2.2.3)*

3.5 to 6.0.

Dissolve 0.100 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Specific optical rotation *(2.2.7)*

+ 80.0 to + 90.0 (anhydrous substance).

Dissolve 0.250 g in *acetate buffer solution pH 4.6 R* and dilute to 25.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 0.300 g of the substance to be examined in mobile phase A and dilute to 50.0 ml with mobile phase A.

Reference solution (a) Dissolve 3.0 mg of *cyclohexa-1,4-dienylglycine CRS* (impurity B) in mobile phase A and dilute to 100.0 ml with mobile phase A.

Reference solution (b) Dissolve 3 mg of the substance to be examined and 3 mg of *cefalexin CRS* in mobile phase A and dilute to 25 ml with mobile phase A.

Reference solution (c) Dilute 1.0 ml of test solution to 100.0 ml with mobile phase A.

Reference solution (d) Dissolve the contents of a vial of *cefradine for peak identification CRS* (containing impurities A, C, D, E and G) in 1 ml of *water for chromatography R* .

Column:
- *size*: *l* = 0.15 m, Ø = 4.6 mm,

19 - 19.1	20 → 99.5	80 → 0.5
19.1 - 25	99.5	0.5

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 25 µl.

Identification of impurities Use the chromatogram obtained with reference solution (d) and the chromatogram supplied with *cefradine for peak identification CRS* to identify the peaks due to impurities A, C, D, E and G.

Relative retention With reference to cefradine (retention time = about 15 min): impurity A = about 0.27; impurity B = about 0.32; impurity C = about 0.53; impurity D = about 0.63; impurity E = about 0.80; impurity F = about 0.92; cefalexin = about 0.95; 4′,5′-dihydrocefradine = about 1.06; impurity G = about 1.32.

System suitability Reference solution (b):

— *resolution*: minimum 4.0 between the peaks due to cefalexin and cefradine.

Limits:

— *impurity B*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.25 per cent);

— *impurities A, C, D, E, F, G*: for each impurity, not more than 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.25 per cent);

— *any other impurity*: for each impurity, not more than 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.25 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (2.0 per cent);

— *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent); disregard the peaks due to cefalexin and 4′,5′-dihydrocefradine.

N,N*-Dimethylaniline *(2.4.26, Method B)

Maximum 20 ppm.

Water *(2.5.12)*

Maximum 6.0 per cent, determined on 0.300 g.

Sulphated ash *(2.4.14)*

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 50.0 mg of the substance to be examined in *phosphate buffer solution pH 5.0* R and dilute to 100.0 ml with the same solution.

Reference solution (a) Dissolve 50.0 mg of *cefradine CRS* (containing 4′,5′-dihydrocefradine) in *phosphate buffer solution pH 5.0 R* and dilute to 100.0 ml with the same solution.

Reference solution (b) Dissolve 5.0 mg of *cefalexin CRS* in *phosphate buffer solution pH 5.0 R* and dilute to 100.0 ml with the same solution.

Reference solution (c) Dilute 1 ml of reference solution (a) to 10 ml with *phosphate buffer solution pH 5.0 R*. Mix 5 ml of this solution with 5 ml of reference solution (b).

Column:

— *size*: *l* = 0.10 m, Ø = 4.6 mm,

— *stationary phase: octadecylsilyl silica gel for chromatography R (5 µm).*

Mobile phase *methanol R, phosphate buffer solution pH 5.0 R* (25:75 *V/V*).

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 5 µl.

Run time Twice the retention time of cefradine.

Relative retention With reference to cefradine (retention time = about 3 min): cefalexin = about 0.7; 4′,5′-dihydrocefradine = about 1.5.

System suitability Reference solution (c):

— *resolution*: minimum 4.0 between the peaks due to cefalexin and cefradine.

Calculate the percentage content of cefradine using the chromatogram obtained with reference solution (a) and the declared content of *cefradine CRS*. Calculate the percentage content of cefalexin using the chromatogram obtained with reference solution (b) and the declared content of *cefalexin CRS*. Calculate the percentage content of 4′,5′-dihydrocefradine using the chromatogram obtained with reference solution (b) and multiplying the area of the peak due to 4′,5′-dihydrocefradine by a correction factor of 1.6.

STORAGE

In an airtight container, protected from light, at a temperature of 2 °C to 8 °C.

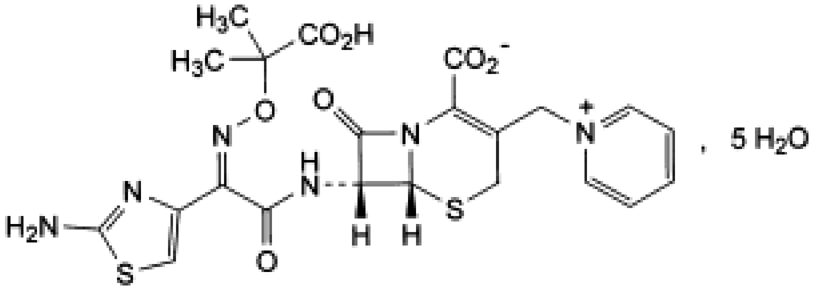
Ph Eur

Ceftazidime

General Notices

(Ph Eur monograph 1405)



$C_{22}H_{22}N_6O_7S_2,5H_2O$ 637 *72558-82-8*

Action and use

Cephalosporin antibacterial.

Ph Eur

DEFINITION

Ceftazidime is (6*R*,7*R*)-7-[[(*Z*)-2-(2-aminothiazol-4-yl)-2-[(1-carboxy-1-methylethoxy)imino]acetyl]amino]-8-oxo-3-[(1-pyridinio)methyl]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate pentahydrate. It contains not less than 95.0 per cent and not more than 102.0 per cent of $C_{22}H_{22}N_6O_7S_2$, calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white, crystalline powder, slightly soluble in water and in methanol, practically insoluble in acetone and in alcohol. It dissolves in acid and alkali solutions.

IDENTIFICATION

Examine by infrared absorption spectrophotometry *(2.2.24)* , comparing with the spectrum obtained with *ceftazidime CRS* .

TESTS

Solution S

Dissolve 0.25 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

The pH of solution S is 3.0 to 4.0.

Related substances

A. Examine by thin-layer chromatography *(2.2.27)*, using a *TLC silica gel* F_{254} *plate R*.

Test solution Dissolve 0.100 g of the substance to be examined in a 36 g/l solution of *disodium hydrogen phosphate R* and dilute to 2.0 ml with the same solution.

Reference solution Dilute 1 ml of the test solution to 200 ml with a 36 g/l solution of *disodium hydrogen phosphate R*.

Apply to the plate 2 µl of each solution. Develop over a path of 15 cm using a mixture of 6 volumes of *butanol R*, 26 volumes of *sodium acetate buffer solution pH 4.5 R*, 32 volumes of *butyl acetate R* and 32 volumes of *glacial acetic acid R*. Dry the plate in a current of warm air and examine in ultraviolet light at 254 nm. Any spot with an R_F value greater than that of the principal spot in the chromatogram obtained with the test solution is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

B. Examine by liquid chromatography *(2.2.29)*.

Test solution Dissolve 0.100 g of the substance to be examined in the mobile phase and dilute to 20.0 ml with the mobile phase. Dilute 5.0 ml of the solution to 20.0 ml with the mobile phase.

Reference solution (a) Dissolve 5.0 mg of *ceftazidime impurity A CRS* in the mobile phase and dilute to 20.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 20.0 ml with the mobile phase.

Reference solution (b) Dissolve 5 mg of *ceftazidime impurity A CRS* and 5 mg of *ceftazidime CRS* in the mobile phase and dilute to 20.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 20.0 ml with the mobile phase.

The chromatographic procedure may be carried out using:

— a stainless steel column 0.25 m long and 4.6 mm in internal diameter packed with *octadecylsilyl silica gel for chromatography R* (5 µm),

— as mobile phase at a flow rate of 1.3 ml/min a mixture of 7 volumes of *acetonitrile R* and 93 volumes of a 22.6 g/l solution of *ammonium dihydrogen phosphate R,* adjusted to pH 3.9 with a 10 per cent *V/V* solution of *phosphoric acid R*,

— as detector a spectrophotometer set at 255 nm,

maintaining the temperature of the column at 35 °C.

Inject 20 µl of reference solution (b). Adjust the sensitivity of the system so that the heights of the 2 peaks in the chromatogram obtained are at least 50 per cent of the full scale of the recorder. The test is not valid unless in the chromatogram obtained, the resolution between the peaks corresponding to ceftazidime and impurity A is at least 5.9. Inject 20 µl of the test solution and 20 µl of reference solution (a). Continue the chromatography of the test solution for 3 times the retention time of ceftazidime. In the chromatogram obtained with the test solution: the area of any peak, apart from the principal peak, is not greater than half the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent); the sum of the areas of all the peaks, apart from the principal peak, is not greater than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (2 per cent). Disregard any peak with an area less than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a).

Impurity F

Not more than 500 ppm, determined by liquid chromatography *(2.2.29)*

Prepare the solutions immediately before use.

Test solution Dissolve 0.500 g of the substance to be examined in a 10 per cent *V/V* solution of *phosphate buffer solution pH 7.0 R4* and dilute to 100.0 ml with the same solvent.

Reference solution (a) Dissolve 1.00 g of *pyridine R* in *water R* and dilute to 100.0 ml with the same solvent. Dilute 5.0 ml of the solution to 200.0 ml with *water R.* To 1.0 ml of the solution, add 10 ml of *phosphate buffer solution pH 7.0 R4* and dilute to 100.0 ml with *water R* .

Reference solution (b) Dilute 1.0 ml of the test solution to 200.0 ml with a 10 per cent *V/V* solution of *phosphate buffer solution pH 7.0 R4*. To 1.0 ml of the solution add 20 ml of reference solution (a) and dilute to 200 ml with a 10 per cent *V/V* solution of *phosphate buffer solution pH 7.0 R4*.

The chromatographic procedure may be carried out using:

— a stainless steel column 0.25 m long and 4.6 mm in internal diameter packed with *octadecylsilyl silica gel for chromatography R* (5 µm),

— as mobile phase at a flow rate of 1.0 ml/min a mixture of 8 volumes of a 28.8 g/l solution of *ammonium dihydrogen phosphate R* previously adjusted to pH 7.0 with *ammonia R* , 24 volumes of *acetonitrile R* and 68 volumes of *water R* ,

— as detector a spectrophotometer set at 255 nm,

Inject 20 µl of reference solution (b). The test is not valid unless in the chromatogram obtained, the resolution between the peaks due to ceftazidime and to impurity F is at least 7.0.

Inject 20 µl of reference solution (a). Adjust the sensitivity of the system so that the height of the principal peak in the chromatogram obtained is at least 50 per cent of the full scale of the recorder. Inject reference solution (a) 6 times. The test is not valid unless the relative standard deviation of the area of the principal peak is at most 1.0 per cent. Inject alternately 20 µl of the test solution and 20 µl of reference solution (a).

Water ***(2.5.12)***

13.0 per cent to 15.0 per cent, determined on 0.200 g by the semi-micro determination of water.

Bacterial endotoxins ***(2.6.14)***

Less than 0.10 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Examine by liquid chromatography *(2.2.29)* .

Test solution Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (a) Dissolve 25.0 mg of *ceftazidime CRS* in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (b) Dissolve 5 mg of *ceftazidime impurity A CRS* in 5.0 ml of reference solution (a).

The chromatographic procedure may be carried out using:

— a column 0.15 m long and 4.6 mm in internal diameter packed with *hexylsilyl silica gel for chromatography R* (5 µm),

— as mobile phase at a flow rate of 2 ml/min a mixture prepared as follows: dissolve 4.26 g of *disodium hydrogen phosphate R* and 2.73 g of *potassium dihydrogen phosphate R* in 980 ml of *water R* , then add 20 ml of *acetonitrile R* ,

— as detector a spectrophotometer set at 245 nm.

Inject 20 µl of reference solution (b). Adjust the sensitivity of the system so that the heights of the 2 principal peaks in the chromatogram obtained are at least 50 per cent of the full scale of the recorder. The test is not valid unless, in the chromatogram obtained, the resolution between the peaks corresponding to ceftazidime and impurity A is at least 1.0. Inject alternately the test solution and reference solution (a). Calculate the percentage content of ceftazidime.

STORAGE

Store in an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

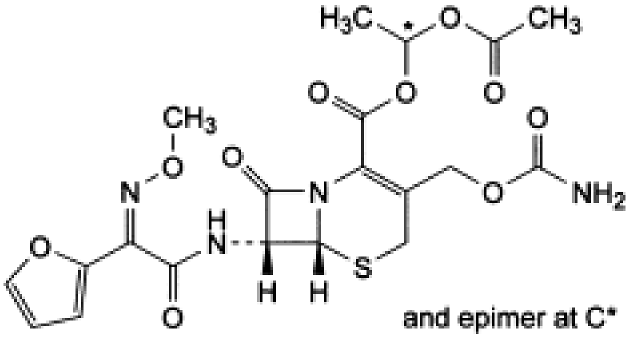
Cefuroxime Axetil

General Notices

(Ph Eur monograph 1300)



$C_{20}H_{22}N_4O_{10}S$ 510.5 *64544-07-6*

Action and use

Cephalosporin antibacterial.

Preparation

Cefuroxime Axetil Tablets

Ph Eur

DEFINITION

Mixture of the 2 diastereoisomers of (1*RS*)-1-(acetyloxy)ethyl (6*R*,7*R*)-3-[(carbamoyloxy) methyl]-7-[[(*Z*)-2-(furan-2-yl)-2-(methoxyimino)acetyl]amino]-8-oxo-5-thia-1-azabicyclo[4.2.0] oct-2-ene-2-carboxylate.

Semi-synthetic product derived from a fermentation product.

Content

96.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Slightly soluble in water, soluble in acetone, in ethyl acetate and in methanol, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *cefuroxime axetil CRS.*

B. Examine the chromatograms obtained in the assay.

Results The principal peaks in the chromatogram obtained with the test solution are similar in retention time and size to the peaks due to cefuroxime axetil diastereoisomers A and B in the chromatogram obtained with reference solution (d).

TESTS

Related substances

Liquid chromatography *(2.2.29)* : use the normalisation procedure. *Prepare the test solution and reference solution (d) immediately before use.*

Test solution Dissolve 10.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (b) In order to prepare *in situ* impurity A, heat 5 ml of the test solution at 60 °C for 1 h.

Reference solution (c) In order to prepare *in situ* impurity B, expose 5 ml of the test solution to ultraviolet light at 254 nm for 24 h.

Reference solution (d) Dissolve 10.0 mg of *cefuroxime axetil CRS* in the mobile phase and dilute to 50.0 ml with the mobile phase.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase: trimethylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *methanol R, 23 g/l solution of ammonium dihydrogen phosphate R* (38:62 *V/V*).

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 278 nm.

Injection 20 µl of the test solution and reference solutions (a), (b) and (c).

Identification of impurities Use the chromatogram obtained with reference solution (b) to identify the pair of peaks due to impurity A and use the chromatogram obtained with reference solution (c) to identify the pair of peaks due to impurity B.

Relative retention With reference to cefuroxime axetil diastereoisomer A: cefuroxime axetil diastereoisomer B = about 0.9, impurity A = about 1.2; impurity B = 1.7 and 2.1.

System suitability Reference solution (b):

— *resolution*: minimum 1.5 between the peaks due to cefuroxime axetil diastereoisomer A and impurity A.

Limits:

— *impurity A*: maximum 1.5 per cent for the sum of the pair of peaks;

— *impurity B*: maximum 1.0 per cent for the sum of the pair of peaks;

— *impurity E*: maximum 0.5 per cent;

— *any other impurity*: for each impurity, maximum 0.5 per cent;

— *total*: maximum 3.0 per cent;

— *disregard limit*: 0.05 times the area of the 2 principal peaks in the chromatogram obtained with reference solution (a) (0.05 per cent).

Diastereoisomer ratio

Liquid chromatography *(2.2.29)* as described in the test for related substances.

Limit Test solution:

— the ratio of the area of the peak due to cefuroxime axetil diastereoisomer A to the sum of the areas of the peaks due to cefuroxime axetil diastereoisomers A and B is between 0.48 and 0.55.

Acetone ***(2.4.24)***

Maximum 1.1 per cent.

Water ***(2.5.12)***

Maximum 1.5 per cent, determined on 0.400 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Injection Test solution and reference solution (d).

System suitability Reference solution (d):

— *resolution*: minimum 1.5 between the peaks due to cefuroxime axetil diastereoisomers A and B;

— *repeatability*: maximum relative standard deviation of 2.0 per cent for the sum of the peaks due to cefuroxime axetil diastereoisomers A and B after 6 injections.

Calculate the percentage content of $C_{20}H_{22}N_4O_{10}S$ from the sum of the areas of the 2 diastereoisomer peaks and the declared content of $C_{20}H_{22}N_4O_{10}S$ in *cefuroxime axetil CRS.*

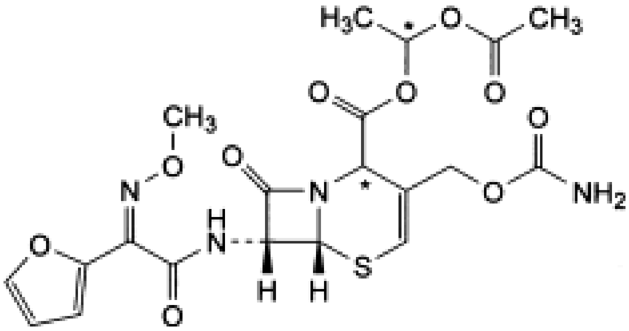
STORAGE

In an airtight container , protected from light.

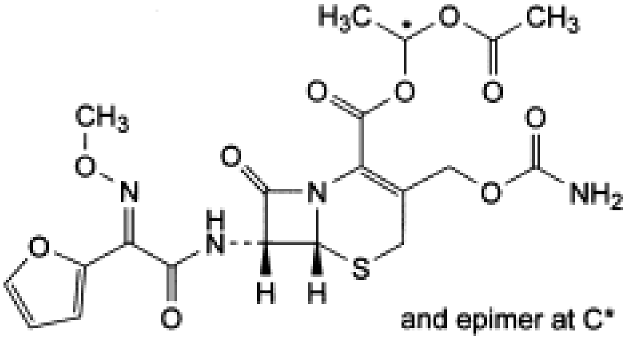
IMPURITIES

Specified impurities   A, B, E.

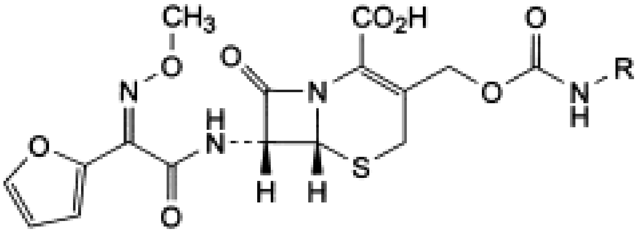
Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use) : C, D.*



A. 1-(acetyloxy)ethyl (6*R*,7*R*)-3-[(carbamoyloxy)methyl]-7-[[(*Z*)-2-(furan-2-yl)-2-(methoxyimino)acetyl]amino]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-3-ene-2-carboxylate (Δ^3-isomers),

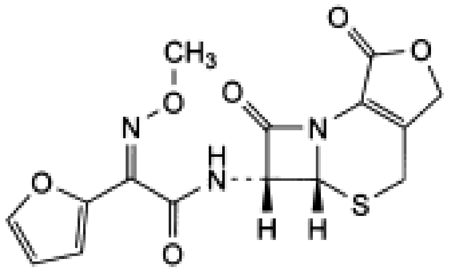


B. (1*RS*)-1-(acetyloxy)ethyl (6*R*,7*R*)-3-[(carbamoyloxy)methyl]-7-[[(*E*)-2-(furan-2-yl)-2-(methoxyimino)acetyl]amino]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate ((*E*)-isomers),



C. R = CO-CCl_3: (6*R*,7*R*)-7-[[(*Z*)-2-(furan-2-yl)-2-(methoxyimino)acetyl]amino]-8-oxo-3-[[[(trichloroacetyl)carbamoyl]oxy]methyl]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid,

D. R = H: cefuroxime.



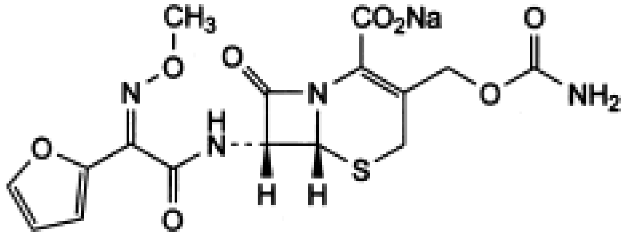
E. (5a*R*,6*R*)-6-[[(2*Z*)-2-(furan-2-yl)-2-(methoxyimino)acetyl]amino]-5a,6-dihydro-3*H*,7*H*-azeto[2,1-*b*]furo[3,4-*d*][1,3]thiazine-1,7(4*H*)-dione (descarbamoylcefuroxime lactone).

Ph Eur

Cefuroxime Sodium

General Notices

(Ph Eur monograph 0992)



$C_{16}H_{15}N_4NaO_8S$ 446.4 *56238-63-2*

Action and use

Cephalosporin antibacterial.

Preparation

Cefuroxime Injection

Ph Eur

DEFINITION

Sodium (6*R*,7*R*)-3-[(carbamoyloxy)methyl]-7-[[(*Z*)-(furan-2-yl)(methoxyimino)acetyl]amino]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate.

Semi-synthetic product derived from a fermentation product.

Content

96.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, slightly hygroscopic powder.

Solubility

Freely soluble in water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *cefuroxime sodium CRS.*

B. It gives reaction (a) of sodium *(2.3.1)* .

TESTS

Solution S

Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 20.0 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II *(2.2.1)* . The absorbance *(2.2.25)* of solution S measured at 450 nm is not greater than 0.25.

pH *(2.2.3)*

5.5 to 8.5.

Dilute 2 ml of solution S to 20 ml with *carbon dioxide-free water R* .

Specific optical rotation *(2.2.7)*

+ 59 to + 66 (anhydrous substance).

Dissolve 0.500 g in *acetate buffer solution pH 4.6 R* and dilute to 25.0 ml with the same buffer solution.

Related substances

Liquid chromatography *(2.2.29)* . *Prepare the solutions immediately before use or keep at 2-8 °C.*

Test solution (a) Dissolve 25.0 mg of the substance to be examined in *water R* and dilute to 25.0 ml with the same solvent.

Test solution (b) Dilute 5.0 ml of test solution (a) to 50.0 ml with *water R.*

Reference solution (a) Dissolve 25.0 mg of *cefuroxime sodium CRS* in *water R* and dilute to 25.0 ml with the same solvent. Dilute 5.0 ml to 50.0 ml with *water R* .

Reference solution (b) Place 20 ml of reference solution (a) in a water-bath at 80 °C for 15 min. Cool and inject immediately.

Reference solution (c) Dilute 1.0 ml of test solution (a) to 100.0 ml with *water R.*

Column:
- *size*: *l* = 0.125 m, Ø = 4.6 mm;
- *stationary phase: hexylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 1 volume of *acetonitrile R* and 99 volumes of an acetate buffer solution pH 3.4, prepared by dissolving 6.01 g of *glacial acetic acid R* and 0.68 g of *sodium acetate R* in *water R* and diluting to 1000 ml with the same solvent.

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 273 nm.

Injection 20 µl loop injector; inject test solution (a) and reference solutions (b) and (c).

Run time 4 times the retention time of cefuroxime.

System suitability Reference solution (b):

— *resolution*: minimum 2.0 between the peaks due to cefuroxime and impurity A.

Limits:

— *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent);

— *any other impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent);

— *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (c) (3.0 per cent);

— *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

N*,*N*-Dimethylaniline *(2.4.26, Method B)

Maximum 20 ppm.

2-Ethylhexanoic acid *(2.4.28)*

Maximum 0.5 per cent *m/m*.

Water *(2.5.12)*

Maximum 3.5 per cent, determined on 0.400 g.

Bacterial endotoxins *(2.6.14)*

Less than 0.10 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

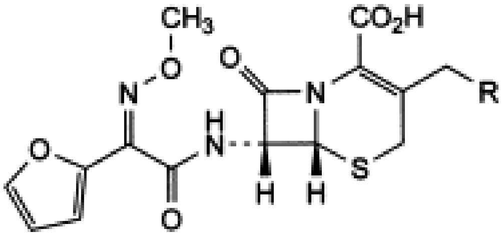
Injection Test solution (b) and reference solution (a).

Calculate the percentage content of cefuroxime sodium.

STORAGE

In an airtight container . If the substance is sterile, store in a sterile, airtight, tamper-proof container .

IMPURITIES

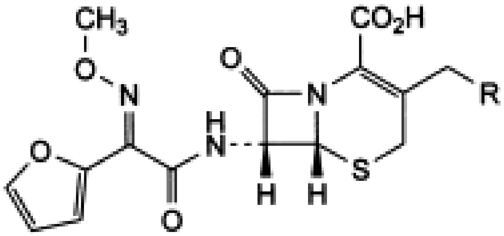


A. R = OH: (6*R*,7*R*)-7-[[(*Z*)-(furan-2-yl)(methoxyimino)acetyl]amino]-3-(hydroxymethyl)-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (descarbamoylcefuroxime),

B. R = O-CO-CH_3: (6*R*,7*R*)-3-[(acetyloxy)methyl]-7-[[(*Z*)-(furan-2-yl)(methoxyimino)acetyl] amino]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid,

C. R = H: (6*R*,7*R*)-7-[[(*Z*)-(furan-2-yl)(methoxyimino)acetyl]amino]-3-methyl-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid,

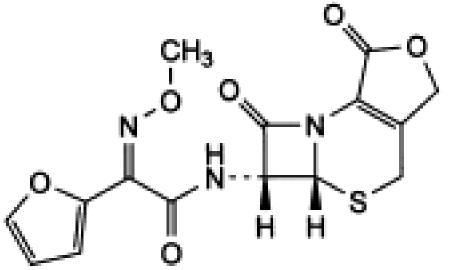
D. R = O-CO-NH-CO-CCl_3: (6*R*,7*R*)-7-[[(*Z*)-(furan-2-yl)(methoxyimino)acetyl]amino]-8-oxo-3-[[[(trichloroacetyl)carbamoyl]oxy]methyl]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid,



E. R = O-CO-NH_2: (6*R*,7*R*)-3-[(carbamoyloxy)methyl]-7-[[(*E*)-(furan-2-yl)(methoxyimino) acetyl]amino]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (*trans*-cefuroxime),

F. R = OH: (6*R*,7*R*)-7-[[(*E*)-(furan-2-yl)(methoxyimino)acetyl]amino]-3-(hydroxymethyl)-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid,

G. R = O-CO-CH_3: (6*R*,7*R*)-3-[(acetyloxy)methyl]-7-[[(*E*)-(furan-2-yl)(methoxyimino)acetyl] amino]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid,



H. (5a*R*,6*R*)-6-[[(*Z*)-(furan-2-yl)(methoxyimino)acetyl]amino]-5a,6-dihydro-3*H*,7*H*-azeto[2,1-*b*]furo[3,4-*d*][1,3]thiazine-1,7(4*H*)-dione,

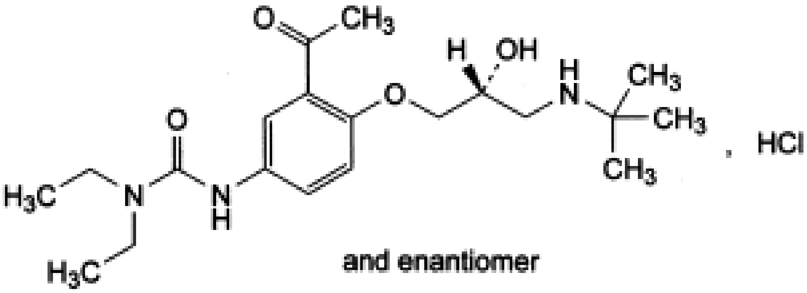
Ph Eur

Celiprolol Hydrochloride

General Notices

(Ph Eur monograph 1632)



$C_{20}H_{33}N_3O_4$,HCl *416.0* *57470-78-7*

Action and use

Beta-adrenoceptor antagonist.

Preparation

Celiprolol Hydrochloride Tablets

Ph Eur

DEFINITION

3-[3-Acetyl-4-[(2*RS*)-3-[(1,1-dimethylethyl)amino]-2-hydroxypropoxy]phenyl]-1,1-diethylurea hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or very slightly yellow, crystalline powder.

Solubility

Freely soluble in water and in methanol, soluble in ethanol (96 per cent), very slightly soluble in methylene chloride.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison celiprolol hydrochloride CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R* , evaporate to dryness and record new spectra using the residues.

B. It gives reaction (a) of chlorides *(2.3.1)* .

TESTS

Optical rotation *(2.2.7)*

- 0.10° to + 0.10°.

Dissolve 1.0 g in *water R* and dilute to 10.0 ml with the same solvent.

Related substances

Liquid chromatography (*2.2.29*) *. Prepare the solutions immediately before use.*

Test solution Dissolve 0.100 g of the substance to be examined in mobile phase A and dilute to 20.0 ml with mobile phase A.

Reference solution (a) Dissolve 2 mg of the substance to be examined and 2 mg of *acebutolol hydrochloride R* in mobile phase A and dilute to 50.0 ml with mobile phase A.

Reference solution (b) Dissolve 10 mg of the substance to be examined in 2 ml of mobile phase A and allow to stand for 24 h (for identification of impurity A).

Reference solution (c) Dilute 1.0 ml of the test solution to 100.0 ml with mobile phase A. Dilute 1.0 ml of this solution to 10.0 ml with mobile phase A.

Reference solution (d) Dissolve 10 mg of *celiprolol for peak identification CRS* in mobile phase A and dilute to 2 ml with mobile phase A.

Reference solution (e) This solution is only prepared if required (see below) and is used to determine the identity of impurity I which co-elutes with impurity H (the 2 impurities originate from different routes of synthesis). Dissolve the contents of a vial of *celiprolol impurity I CRS* in mobile phase A and dilute to 2.0 ml with mobile phase A.

Column:
— *size*: *l* = 0.15 m, Ø = 4.6 mm,

— *stationary phase: octylsilyl silica gel for chromatography R* (5 µm),

— *temperature*: 30 °C.

Mobile phase:
— *mobile phase A*: mix 91 ml of *tetrahydrofuran R,* 63 ml of *acetonitrile R1* , 0.6 ml of

pentafluoropropanoic acid R and 0.2 ml of *trifluoroacetic acid R* ; dilute to 1000 ml with water R;

— *mobile phase B: acetonitrile R1* ;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 50	100 → 80	0 → 20
50 - 51	80 → 100	20 → 0
51 - 65	100	0

Flow rate 1.4 ml/min.

Detection Spectrophotometer at 232 nm.

Injection 10 µl.

Identification of impurities Use the chromatogram supplied with *celiprolol for peak identification CRS* and the chromatogram obtained with reference solution (d) to identify the peaks due to impurities B, E and F.

Relative retention With reference to celiprolol (retention time = about 10 min): impurity A = about 0.3; impurity D = about 0.7; impurity G = about 1.2; impurity B = about 1.4; impurity F = about 1.6; impurity C = about 2.2; impurity H or I = about 2.5; impurity E = about 3.9.

System suitability Reference solution (a):

— *resolution*: minimum 4.0 between the peaks due to celiprolol and acebutolol.

Limits:

— *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 4.0; impurity B = 1.5; impurity E = 2.3; impurity F = 0.5; impurity I = 1.7;

— *any impurity*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent), and not more than 1 such peak has an area greater than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent);

— *total:* not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);

— if any of the above limits are exceeded and if a peak occurs with a relative retention of about 2.5 (impurity H or I), the identity of this peak has to be clarified by use of a UV spectrum recorded with a diode array detector; if this spectrum is different from the one obtained with reference solution (e), no correction factor is applied;

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

ASSAY

Dissolve 0.350 g under an atmosphere of nitrogen in 50 ml of *ethanol (96 per cent) R* and add 1.0 ml of *0.1 M hydrochloric acid* . Carry out a potentiometric titration *(2.2.20)* , using *0.1 M sodium hydroxide* . Read the volume added between the 2 points of inflexion.

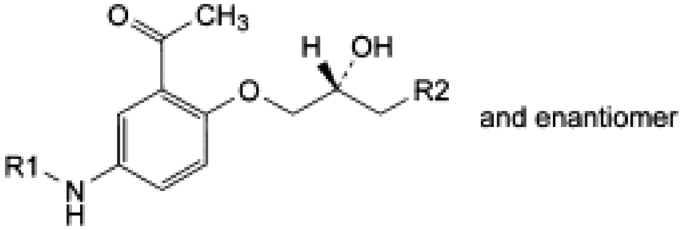
1 ml of *0.1 M sodium hydroxide* is equivalent to 41.60 mg of $C_{20}H_{34}ClN_3O_4$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C, D, E, F, G, H, I.

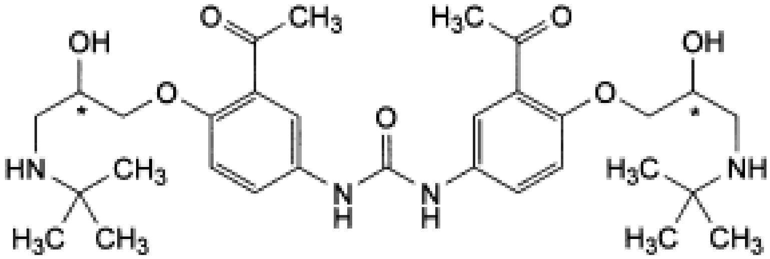


A. R1 = H, R2 = NH-C(CH_3)$_3$: 1-[5-amino-2-[(2*RS*)-3-[(1,1-dimethylethyl)amino]-2-hydroxypropoxy]phenyl]ethanone,

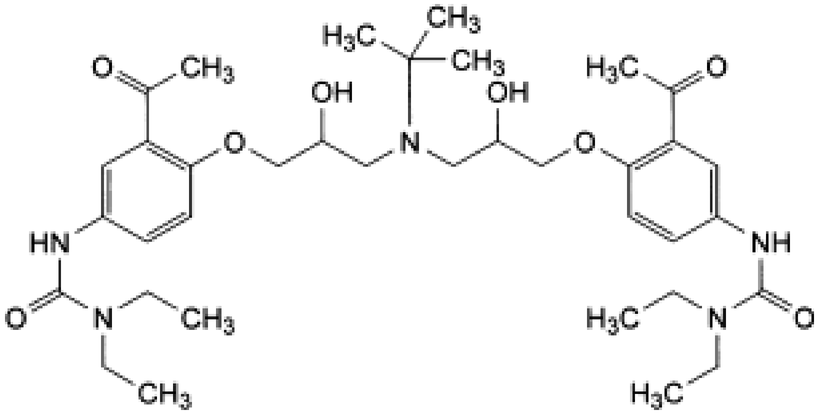
C. R1 = CO-NH-C(CH_3)$_3$, R2 = NH-C(CH_3)$_3$: 1-[3-acetyl-4-[(2*RS*)-3-[(1,1-dimethylethyl)amino]-2-hydroxypropoxy]phenyl]-3-(1,1-dimethylethyl)urea,

D. R1 = CO-N(C_2H_5)$_2$, R2 = N(C_2H_5)2: 3-[3-acetyl-4-[(2*RS*)-3-(diethylamino)-2-hydroxypropoxy]phenyl]-1,1-diethylurea,

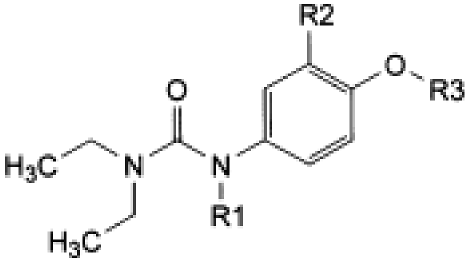
H. R1 = CO-N(C_2H_5)2, R2 = Br: 3-[3-acetyl-4-[(2*RS*)-3-bromo-2-hydroxypropoxy]phenyl]-1,1-diethylurea (bromhydrin compound),



B. 1,3-bis[3-acetyl-4-[3-[(1,1-dimethylethyl)amino]-2-hydroxypropoxy]phenyl]urea,

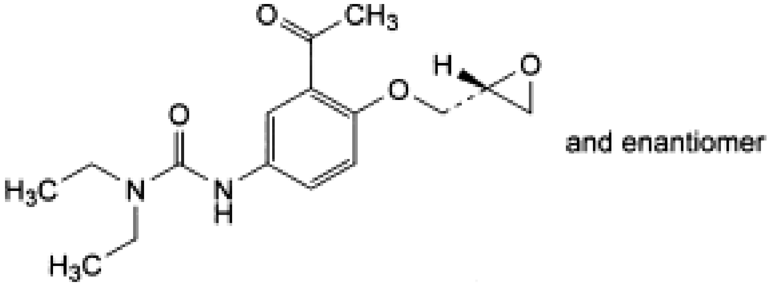


E. 1,1′-[[(1,1-dimethylethyl)imino]bis[(2-hydroxypropane-1,3-diyl)oxy(3-acetyl-1,4-phenylene)]]bis(3,3-diethylurea),



F. R1 = R3 = H, R2 = CO-CH_3: 3-(3-acetyl-4-hydroxyphenyl)-1,1-diethylurea,

I. R1 = CO-CH_3, R2 = H, R3 = C_2H_5: 1-acetyl-1-(4-ethoxyphenyl)-3,3-diethylurea,



G. 3-[3-acetyl-4-[[(*RS*)-oxiranyl]methoxy]phenyl]-1,1-diethylurea.

Ph Eur

Cellacefate

General Notices

(Cellulose Acetate Phthalate, Ph Eur monograph 0314)

Action and use

Enteric coating in pharmaceutical products.

Ph Eur

DEFINITION

Partly *O*-acetylated and *O*-phthalylated cellulose.

Content:

— phthaloyl groups ($C_8H_5O_3$, relative mass of the group 149.1): 30.0 per cent to 36.0 per cent (anhydrous and acid-free substance).

— acetyl groups (C_2H_3O, relative mass of the group 43.05): 21.5 per cent to 26.0 per cent (anhydrous and acid-free substance).

CHARACTERS

Appearance

White or almost white, free-flowing powder or colourless flakes, hygroscopic.

Solubility

Practically insoluble in water, freely soluble in acetone, soluble in diethylene glycol, practically insoluble in ethanol and in methylene chloride. It dissolves in dilute solutions of alkalis.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *Ph. Eur. reference spectrum of cellulose acetate phthalate.*

TESTS

Viscosity *(2.2.9)*

45 mPa·s to 90 mPa·s for the apparent viscosity determined at 25 °C.

Dissolve 15 g, calculated with reference to the anhydrous substance, in 85 g of a mixture of 1 part of *water R* and 249 parts of *acetone R* .

Free acid

Maximum 3.0 per cent, calculated as phthalic acid (anhydrous substance).

Shake 3.0 g for 2 h with 100 ml of a 50 per cent *V/V* solution of *methanol R* and filter. Wash the flask and the filter with 2 quantities, each of 10 ml, of a mixture of a 50 per cent *V/V* solution of *methanol R.* Combine the filtrate and washings, add *phenolphthalein solution R* and titrate with *0.1 M sodium hydroxide* until a faint pink colour is obtained. Carry out a blank titration.

1 ml of *0.1 M sodium hydroxide* is equivalent to 8.3 mg of free acid, calculated as phthalic acid.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

2.0 g complies with limit test C. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R* .

Water *(2.5.12)*

Maximum 5.0 per cent, determined on 0.500 g.

Carry out the test using a mixture of 2 volumes of *methylene chloride R* and 3 volumes of *ethanol R.*

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Phthaloyl groups

Dissolve 1.000 g in 50 ml of a mixture of 2 volumes of *acetone R* and 3 volumes of *alcohol R* . Add 0.1 ml of *phenolphthalein solution R* and titrate with *0.1 M sodium hydroxide* until a faint pink colour is obtained. Carry out a blank titration.

Calculate the percentage content of phthaloyl groups (*P*) from the expression:

$$\frac{14\,900n}{(100-a)(100-S)m} - \frac{179.5S}{(100-S)}$$

a = percentage content of water,

m = mass of the substance to be examined, in grams,

n = number of millilitres of 0.1 M sodium hydroxide used,

S = percentage content of free acid.

Acetyl groups

To 0.100 g add 25.0 ml of *0.1 M sodium hydroxide* and heat on a water-bath under a reflux condenser for 30 min. Cool, add 0.1 ml of *phenolphthalein solution R* and titrate with *0.1 M hydrochloric acid* until the colour is discharged. Carry out a blank titration.

Calculate the percentage content of acetyl groups from the expression:

$$\left[\frac{4300\,(n_2 - n_1)}{(100 - a)\,(100 - S)\,m} - \frac{51.8S}{(100 - S)}\right] - 0.578P$$

a = percentage content of water,

m = mass of the substance to be examined, in grams,

n_1 = number of millilitres of 0.1 M hydrochloric acid used in the test,

n_2 = number of millilitres of 0.1 M hydrochloric acid used in the blank titration,

P = percentage content of phthaloyl groups,

S = percentage content of free acid (see Tests).

STORAGE

In an airtight container.

Ph Eur

Cellulose Acetate Butyrate

General Notices

(Ph Eur monograph 1406)

Action and use

Excipient.

Ph Eur

DEFINITION

Partly or completely *O*-acetylated and *O*-butyrated cellulose.

Content:

- *acetyl groups* (C_2H_3O): 2.0 per cent to 30.0 per cent (dried substance); 90.0 per cent to 110.0 per cent of that stated on the label (dried substance);
- *butyryl groups* (C_4H_7O): 16.0 per cent to 53.0 per cent (dried substance); 90.0 per cent to 110.0 per cent of that stated on the label (dried substance).

CHARACTERS

Appearance

White, yellowish-white or greyish-white powder or granules, slightly hygroscopic.

Solubility

Practically insoluble in water, soluble in acetone, in formic acid and in a mixture of equal volumes of methanol and methylene chloride, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison Ph. Eur. reference spectrum of cellulose acetate butyrate.

The intensity of the bands may vary according to the degree of substitution.

B. It complies with the limits of the assay.

TESTS

Acidity

To 5.00 g in a 250 ml conical flask, add 150 ml of *carbon dioxide-free water R,* insert the stopper, swirl the suspension gently and allow to stand for 3 h. Filter, wash the flask and the filter with *carbon dioxide-free water R* . Combine the filtrate and washings. Add 0.1 ml of *phenolphthalein solution R1* . Not more than 3.0 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

1.0 g complies with test F. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Maximum 2.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

Total ash ***(2.4.16)***

Maximum 0.1 per cent.

ASSAY

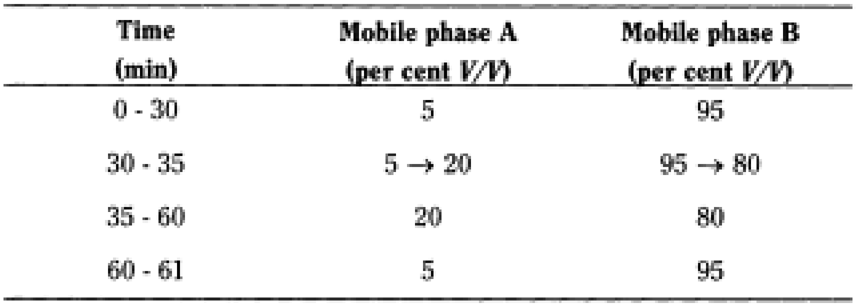
Liquid chromatography *(2.2.29).*

Test solution To 1.000 g of the substance to be examined in a 500 ml conical flask, add 100 ml of *acetone R* and 10 ml of *water R* . Close the flask and stir with a magnetic stirrer until dissolution is complete. Add 30.0 ml of *1 M sodium hydroxide* with constant stirring. Close the flask and stir with a magnetic stirrer for 30 min. Add 100 ml of hot *water R* at 80 °C, washing down the sides of the flask and stir for 2 min. Cool, centrifuge or filter the suspension and wash the residue with *water R* . Combine the filtrate and washings, adjust to pH 3 (*2.2.3*) with *dilute phosphoric acid R* and dilute to 500.0 ml with *water R* .

Reference solution Dissolve 0.200 g of *glacial acetic acid R* and 0.400 g of *butyric acid R* in *water R* , adjust to pH 3 *(2.2.3)* with *dilute phosphoric acid R* and dilute to 500.0 ml with *water R* .

Column:
- *dimensions:* l = 0.25 m, Ø = 4.6 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:
- *mobile phase A: methanol R;*
- *mobile phase B: phosphate buffer solution pH 3.0 R1*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 30	5	95
30 - 35	5 → 20	95 → 80
35 - 60	20	80
60 - 61	5	95

Flow rate 1.2 ml/min.

Detection Spectrophotometer at 210 nm.

Injection 20 µl.

Calculate the percentage content of acetic acid and butyric acid using the chromatograms obtained with the 2 solutions. To calculate the percentage content of acetyl (C_2H_3O) and of butyryl (C_4H_7O) groups, multiply the percentage content of acetic acid and butyric acid by 0.717 and 0.807, respectively.

STORAGE

In an airtight container.

LABELLING

The label states the nominal percentage content of acetyl and butyryl groups.

Ph Eur

Cellulose Acetate

General Notices

(Ph Eur monograph 0887)

Action and use

Excipient.

Ph Eur

DEFINITION

Partly or completely *O*-acetylated cellulose.

Content

29.0 per cent to 44.8 per cent of acetyl groups (C_2H_3O) (dried substance) and 90.0 per cent to 110.0 per cent of the acetyl content stated on the label (dried substance).

CHARACTERS

Appearance

White, yellowish-white or greyish-white powder or granules, hygroscopic.

Solubility

Practically insoluble in water, soluble in acetone, in formic acid and in a mixture of equal volumes of methanol and methylene chloride, practically insoluble in alcohol.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)* .

Comparison Ph. Eur. reference spectrum of cellulose acetate.

TESTS

Free acid

Maximum 0.1 per cent, calculated as acetic acid (dried substance).

To 5.00 g in a 250 ml conical flask, add 150 ml of *carbon dioxide-free water R* , insert the stopper, swirl the suspension gently and allow to stand for 3 h. Filter, wash the flask and the filter with *carbon dioxide-free water R* . Combine the filtrate and washings. Add 0.1 ml of *phenolphthalein solution R1* . Titrate with *0.01 M sodium hydroxide* until a faint pink colour is obtained.

1 ml of *0.01 M sodium hydroxide* is equivalent to 0.6005 mg of free acid, calculated as acetic acid.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

2.0 g complies with limit test D. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 5.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^3 micro-organisms per gram of which not more than 10^2 fungi per gram determined by plate count. It complies with the tests for *Escherichia coli* and *Salmonella (2.6.13).*

ASSAY

Cellulose acetate containing not more than 42.0 per cent of acetyl groups

To 2.000 g in a 500 ml conical flask add 100 ml of *acetone R* and 10 ml of *water R* . Close the flask and stir with a magnetic stirrer until dissolution is complete. Add 30.0 ml of *1 M sodium hydroxide* with constant stirring. Close the flask and stir with a magnetic stirrer for 30 min. Add 100 ml of *water R* at 80 °C, washing down the sides of the flask, stir for 2 min and cool to room temperature. Titrate with *0.5 M sulphuric acid ,* using 0.1 ml of *phenolphthalein solution R* as indicator. Carry out a blank titration.

Calculate the percentage content of acetyl groups from the expression:

$$\frac{4.305\,(n_2 - n_1)}{(100 - d) \times m} \times 100$$

d = loss on drying as a percentage,

m = mass of the substance to be examined, in grams,

n_1 = number of millilitres of *0.5 M sulphuric acid* used in the test,

n_2 = number of millilitres of *0.5 M sulphuric acid* used in the blank titration.

Cellulose acetate containing more than 42.0 per cent of acetyl groups

To 2.000 g in a 500 ml conical flask add 30 ml of *dimethyl sulphoxide R* and 100 ml of *acetone R.* Close the flask and stir with a magnetic stirrer for 16 h. Add 30.0 ml of *1 M sodium hydroxide* with constant stirring. Close the flask and stir with a magnetic stirrer for 6 min. Allow to stand without stirring for 60 min. Add 100 ml of *water R* at 80 °C, washing down the sides of the flask, stir for 2 min and cool to room temperature. Titrate with *0.5 M hydrochloric acid* , using 0.1 ml of *phenolphthalein solution R* . Add 0.5 ml *of 0.5 M hydrochloric acid* in excess, stir for 5 min and allow to stand for 30 min. Titrate with *0.5 M sodium hydroxide* , until a persistent pink colour is obtained, stirring with a magnetic stirrer. Calculate the net number of millimoles of *0.5 M sodium hydroxide* consumed, taking the mean of 2 blank titrations into consideration.

Calculate the percentage content of acetyl groups from the expression:

$$\frac{4.305 \times n}{(100 - d) \times m} \times 100$$

d = loss on drying as a percentage,

m = mass of the substance to be examined, in grams,

n = net number of millimoles of *0.5 M sodium hydroxide* ,

STORAGE

In an airtight container .

LABELLING

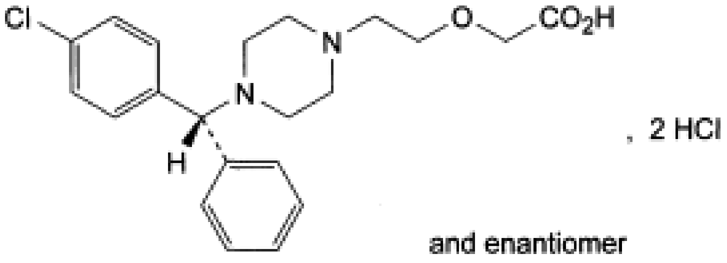
The label states the nominal percentage content of acetyl groups.

Ph Eur

Cetirizine Hydrochloride

General Notices

(Cetirizine Dihydrochloride, Ph Eur monograph 1084)



$C_{21}H_{25}ClN_2O_3,2HCl$ 461.8 *83881-52-1*

Action and use

Histamine H_1 receptor antagonist; antihistamine.

Ph Eur

DEFINITION

(*RS*)-2-[2-[4-[(4-Chlorophenyl)phenylmethyl]piperazin-1-yl]ethoxy]acetic acid dihydrochloride.

Content

99.0 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Freely soluble in water, practically insoluble in acetone and in methylene chloride.

IDENTIFICATION

First identification B, D.

Second identification *A, C, D.*

A. Ultraviolet and visible absorption spectrophotometry *(2.2.25)* .

Test solution Dissolve 20.0 mg in 50 ml of a 10.3 g/l solution of *hydrochloric acid R* and dilute to 100.0 ml with the same acid. Dilute 10.0 ml of this solution to 100.0 ml with a 10.3 g/l solution of *hydrochloric acid R* .

Spectral range 210-350 nm.

Absorption maximum At 231 nm.

Specific absorbance at the absorption maximum 359 to 381.

B. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *cetirizine dihydrochloride CRS.*

C. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 10 mg of the substance to be examined in *water R* and dilute to 5 ml with the same solvent.

Reference solution (a) Dissolve 10 mg of *cetirizine dihydrochloride CRS* in *water R* and dilute to 5 ml with the same solvent.

Reference solution (b) Dissolve 10 mg of *chlorphenamine maleate CRS* in *water R* and dilute to 5 ml with the same solvent. To 1 ml of the solution add 1 ml of reference solution (a).

Plate *TLC silica gel GF$_{254}$ plate R.*

Mobile phase *ammonia R, methanol R, methylene chloride R* (1:10:90 *V/V/V*).

Application 5 µl.

Development Over 2/3 of the plate.

Drying In a current of cold air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution (b):

— the chromatogram obtained shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. It gives reaction (a) of chlorides *(2.3.1)* .

TESTS

Solution S

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution BY_7 *(2.2.2, Method II)*.

pH *(2.2.3)*

1.2 to 1.8 for solution S.

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dissolve 2 mg of *cetirizine dihydrochloride CRS* and 2 mg of *cetirizine impurity A CRS* in the mobile phase and dilute to 10.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 2.0 ml of the test solution to 50.0 ml with the mobile phase. Dilute 5.0 ml of this solution to 100.0 ml with the mobile phase.

Column:
- *size: l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase: silica gel for chromatography R* (5 µm).

Mobile phase *dilute sulphuric acid R, water R, acetonitrile R* (0.4:6.6:93 *V/V/V*).

Flow rate 1 ml/min.

Detection Spectrophotometer at 230 nm.

Injection 20 µl.

Run time 3 times the retention time of cetirizine.

System suitability Reference solution (a):
- *resolution*: minimum 3 between the peaks due to cetirizine and impurity A;
- *symmetry factors*: maximum 2.0.

Limits:
- *impurities A, B, C, D, E, F*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *total*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.02 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in 70 ml of a mixture of 30 volumes of *water R* and 70 volumes of *acetone R* . Titrate with *0.1 M sodium hydroxide* to the 2nd point of inflexion. Determine the end-point potentiometrically *(2.2.20)* . Carry out a blank titration.

1 ml of *0.1 M sodium hydroxide* is equivalent to 15.39 mg of $C_{21}H_{27}C_{l3}N_2O_3$.

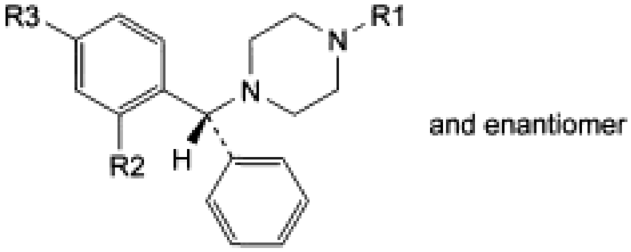
STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C, D, E, F.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): G*.



A. R1 = R2 = H, R3 = Cl: (*RS*)-1-[(4-chlorophenyl)phenylmethyl]piperazine,

Ph Eur

Cetostearyl Alcohol

General Notices

(Ph Eur monograph 0702)

Action and use

Excipient.

Ph Eur

DEFINITION

Mixture of solid aliphatic alcohols, mainly octadecan-1-ol (stearyl alcohol; $C_{18}H_{38}O$; M_r 270.5) and hexadecan-1-ol (cetyl alcohol; $C_{16}H_{34}O$; M_r 242.4), of animal or vegetable origin.

Content:

— *stearyl alcohol* : minimum 40.0 per cent,

— *sum of the contents of stearyl alcohol and cetyl alcohol* : minimum 90.0 per cent.

CHARACTERS

Appearance

White or pale yellow, wax-like mass, plates, flakes or granules.

Solubility

Practically insoluble in water, soluble in ethanol (96 per cent) and in light petroleum. When melted, it is miscible with fatty oils, with liquid paraffin and with melted wool fat.

IDENTIFICATION

Examine the chromatograms obtained in the assay.

Results The 2 principal peaks in the chromatogram obtained with the test solution are similar in retention time to the principal peaks in the chromatogram obtained with the reference solution.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution B_6

(2.2.2, Method II).

Dissolve 0.50 g in 20 ml of boiling *ethanol (96 per cent) R*. Allow to cool.

Maximum 5.0.

Iodine value ***(2.5.4, Method A)***

Maximum 1.0.

Saponification value ***(2.5.6)***

135 to 148, determined on 1.0 g.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

2.0 g complies with test D. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Water ***(2.5.12)***

Maximum 0.2 per cent, determined on 10.0 g.

Total ash ***(2.4.16)***

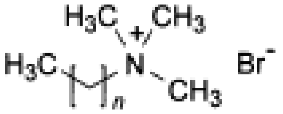
Maximum 0.2 per cent, determined on 2.0 g.

Ph Eur

Cetrimide

General Notices

(Ph Eur monograph 0378)



Action and use

Antiseptic.

Preparations

Cetrimide Cream

Cetrimide Emulsifying Ointment

Ph Eur

DEFINITION

Cetrimide consists of trimethyltetradecylammonium bromide and may contain smaller amounts of dodecyl- and hexadecyl-trimethylammonium bromides.

Content

96.0 per cent to 101.0 per cent of alkyltrimethylammonium bromides, calculated as $C_{17}H_{38}BrN$ (M_r 336.4) (dried substance).

CHARACTERS

Appearance

White or almost white, voluminous, free-flowing powder.

Solubility

Freely soluble in water and in alcohol.

IDENTIFICATION

A. Dissolve 0.25 g in *alcohol R* and dilute to 25.0 ml with the same solvent. At wavelengths from 260 nm to 280 nm, the absorbance *(2.2.25)* of the solution has a maximum of 0.05.

B. Dissolve about 5 mg in 5 ml of *buffer solution pH 8.0 R*. Add about 10 mg of *potassium ferricyanide R*. A yellow precipitate is formed. Prepare a blank in the same manner but omitting the substance to be examined: a yellow solution is observed but no precipitate is formed.

C. Solution S (see Tests) froths copiously when shaken.

D. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 0.10 g of the substance to be examined in *water R* and dilute to 5 ml with the same solvent.

Reference solution Dissolve 0.10 g of *trimethyltetradecylammonium bromide CRS* in *water R* and dilute to 5 ml with the same solvent.

Plate *TLC silica gel F_{254} silanised plate R.*

Mobile phase *acetone R*, 270 g/l solution of *sodium acetate R, methanol R* (20:35:45 *V/V/V*).

Application 1 µl.

Development Over a path of 12 cm.

Drying In a current of hot air.

Detection Allow to cool; expose the plate to iodine vapour and examine in daylight.

Result The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

E. It gives reaction (a) of bromides *(2.3.1)*.

TESTS

Solution S

Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Acidity or alkalinity

To 50 ml of solution S add 0.1 ml of *bromocresol purple solution R*. Not more than 0.1 ml of *0.1 M hydrochloric acid* or *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Amines and amine salts

Dissolve 5.0 g in 30 ml of a mixture of 1 volume of *1 M hydrochloric acid* and 99 volumes of *methanol R* and add 100 ml of *2-propanol R*. Pass a stream of *nitrogen R* slowly through the solution. Gradually add 15.0 ml of *0.1 M tetrabutylammonium hydroxide* and record the potentiometric titration curve *(2.2.20)*. If the curve shows 2 points of inflexion, the volume of titrant added between the 2 points is not greater than 2.0 ml.

Loss on drying *(2.2.32)*

Maximum 2.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

Sulphated ash *(2.4.14)*

Maximum 0.5 per cent, determined on 1.0 g.

ASSAY

Dissolve 2.000 g in *water R* and dilute to 100.0 ml with the same solvent. Transfer 25.0 ml of the solution to a separating funnel, add 25 ml of *chloroform R,* 10 ml of *0.1 M sodium hydroxide* and 10.0 ml of a freshly prepared 50 g/l solution of *potassium iodide R*. Shake, allow to separate and discard the chloroform layer. Shake the aqueous layer with 3 quantities, each of 10 ml, of *chloroform R* and discard the chloroform layers. Add 40 ml of *hydrochloric acid R*, allow to cool and titrate with *0.05 M potassium iodate* until the deep brown colour is almost discharged. Add 2 ml of *chloroform R* and continue the titration, shaking vigorously, until the colour of the chloroform layer no longer changes. Carry out a blank titration on a mixture of 10.0 ml of the freshly prepared 50 g/l solution of *potassium iodide R*, 20 ml of *water R* and 40 ml of *hydrochloric acid R.*

1 ml of *0.05 M potassium iodate* is equivalent to 33.64 mg of $C_{17}H_{38}B_rN$.

Ph Eur

Cetyl Alcohol

Calculate the percentage content of $C_{16}H_{34}O$.

Ph Eur

Cetyl Palmitate

General Notices

(Ph Eur monograph 1906)

Action and use

Excipient.

Ph Eur

DEFINITION

Mixture of C_{14}-C_{18} esters of lauric (dodecanoic), myristic (tetradecanoic), palmitic (hexadecanoic) and stearic (octadecanoic) acids ('Cetyl esters wax').

Content (expressed as hexadecyl hexadecanoate)

10.0 per cent to 20.0 per cent for Cetyl palmitate 15, 60.0 per cent to 70.0 per cent for Cetyl palmitate 65 and minimum 90.0 per cent for Cetyl palmitate 95.

CHARACTERS

Appearance

White or almost white, waxy plates, flakes or powder.

Solubility

Practically insoluble in water, soluble in boiling anhydrous ethanol and in methylene chloride, slightly soluble in light petroleum, practically insoluble in anhydrous ethanol.

mp

About 45 °C for Cetyl palmitate 15 and Cetyl palmitate 65 and about 52 °C for Cetyl palmitate 95.

IDENTIFICATION

A. It complies with the limits of the assay and the chromatogram obtained with the test solution shows the typical main peak(s).

B. Saponification value (see Tests).

TESTS

Appearance of solution

The solution is not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

Dissolve 4.0 g in *methylene chloride R* and dilute to 20 ml with the same solvent.

Acid value ***(2.5.1)***

Maximum 4.0.

Dissolve 10.0 g in 50 ml of the solvent mixture described by heating under reflux on a water-bath for 5 min.

Hydroxyl value ***(2.5.3, Method A)***

Maximum 20.0.

Iodine value ***(2.5.4, Method A)*****:**

Maximum 2.0.

Saponification value ***(2.5.6)***

105 to 120.

Heat under reflux for 2 h.

Alkaline impurities

Dissolve 2.0 g 'with gentle heating' in a mixture of 1.5 ml of *ethanol (96 per cent) R* and 3 ml of *toluene R*. Add 0.05 ml of a 0.4 g/l solution of *bromophenol blue R* in *ethanol (96 per cent) R*. Not more than 0.4 ml of *0.01 M hydrochloric acid* is required to change the colour of the solution to yellow.

Nickel ***(2.4.31)***

Maximum 1 ppm.

Water ***(2.5.12)***

Maximum 0.3 per cent, determined on 1.0 g using a mixture of equal volumes of *anhydrous methanol R* and *methylene chloride R* as solvent.

Total ash ***(2.4.16)***

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Gas chromatography *(2.2.28)*: use the normalisation procedure.

Test solution Dissolve 20.0 mg of the substance to be examined in *hexane R* and dilute to 20.0 ml with the same solvent.

Reference solution (a) Dissolve 20.0 mg of *cetyl palmitate 95 CRS* in *hexane R* and dilute to 20.0 ml with the same solvent.

Reference solution (b) Dissolve 20.0 mg of *cetyl palmitate 15 CR*S in *hexane R* and dilute to 20.0 ml with the same solvent.

Column:

— *material*: stainless steel;

— *size*: *l* = 10 m, Ø = 0.53 mm;

— *stationary phase*: *poly(dimethyl)siloxane R* (film thickness 2.65 µm).

Carrier gas *helium for chromatography R.*

Flow rate 6.5 ml/min.

Split ratio 1:10.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 10	100 → 300
	10 - 15	300
Injection port		350
Detector		350

Detection Flame ionisation.

Injection 1 µl.

Relative retention With reference to cetyl palmitate (retention time = about 9 min): cetyl alcohol = about 0.3; palmitic acid = about 0.4; lauric ester = about 0.8; myristic ester = about 0.9; stearic ester = about 1.1.

System suitability Reference solution (b):

— *resolution*: minimum of 1.5 between the peaks due to cetyl palmitate and cetyl stearate.

STORAGE

At a temperature not exceeding 25 °C.

LABELLING

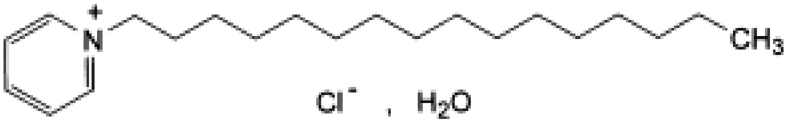
The label states the type of cetyl palmitate.

Ph Eur

Cetylpyridinium Chloride

General Notices

(Ph Eur monograph 0379)



$C_{21}H_{38}ClN,H_2O$ 358.0 *6004-24-6*

Action and use

Antiseptic.

Ph Eur

DEFINITION

Cetylpyridinium chloride contains not less than 96.0 per cent and not more than the equivalent of 101.0 per cent of 1-hexadecylpyridinium chloride, calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white powder, slightly soapy to the touch, soluble in water and in alcohol. An aqueous solution froths copiously when shaken.

IDENTIFICATION

First identification B, D.

Second identification A, C, D.

A. Dissolve 0.10 g in *water R* and dilute to 100.0 ml with the same solvent. Dilute 5.0 ml of this solution to 100.0 ml with *water R*. Examined between 240 nm and 300 nm *(2.2.25)*, the solution shows an absorption maximum at 259 nm and 2 shoulders at about 254 nm and at about 265 nm. The specific absorbance at the maximum is 126 to 134, calculated with reference to the anhydrous substance.

B. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *cetylpyridinium chloride CRS*. Examine the substances in the solid state.

C. To 5 ml of *dilute sodium hydroxide solution R* add 0.1 ml of *bromophenol blue solution R1* and 5 ml of *chloroform R* and shake. The chloroform layer is colourless. Add 0.1 ml of solution S (see Tests) and shake. The chloroform layer becomes blue.

D. Solution S gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II *(2.2.1)* and is colourless *(2.2.2, Method II)*.

Acidity

To 50 ml of solution S add 0.1 ml of *phenolphthalein solution R*. Not more than 2.5 ml of *0.02 M sodium hydroxide* is required to change the colour of the indicator.

Amines and amine salts

Dissolve 5.0 g with heating in 20 ml of a mixture of 3 volumes of *1 M hydrochloric acid* and 97 volumes of *methanol R* and add 100 ml of *2-propanol R*. Pass a stream of *nitrogen R* slowly through the solution. Gradually add 12.0 ml of *0.1 M tetrabutylammonium hydroxide* and record the potentiometric titration curve *(2.2.20)*. If the curve shows 2 points of inflexion, the volume of titrant added between the two points is not greater than 5.0 ml. If the curve shows no point of inflexion, the substance to be examined does not comply with the test. If the curve shows one point of inflexion, repeat the test but add 3.0 ml of a 25.0 g/l solution of *dimethyldecylamine R* in *2-propanol R* before the titration. If the titration curve after the addition of 12.0 ml of the titrant shows only one point of inflexion, the substance to be examined does not comply with the test.

Water *(2.5.12)*

4.5 per cent to 5.5 per cent, determined on 0.300 g by the semi-micro determination of water.

Sulphated ash *(2.4.14)*

Not more than 0.2 per cent, determined on 1.0 g.

ASSAY

Dissolve 2.00 g in *water R* and dilute to 100.0 ml with the same solvent. Transfer 25.0 ml of the solution to a separating funnel, add 25 ml of *chloroform R*, 10 ml of *0.1 M sodium hydroxide* and 10.0 ml of a freshly prepared 50 g/l solution of *potassium iodide R*. Shake well, allow to separate and discard the chloroform layer. Shake the aqueous layer with three quantities, each of 10 ml, of *chloroform R* and discard the chloroform layers. To the aqueous layer add 40 ml of *hydrochloric acid R,* allow to cool and titrate with *0.05 M potassium iodate* until the deep-brown colour is almost discharged. Add 2 ml of *chloroform R* and continue the titration, shaking vigorously, until the chloroform layer no longer changes colour. Carry out a blank titration on a mixture of 10.0 ml of the freshly prepared 50 g/l solution of *potassium iodide R*, 20 ml of *water R* and 40 ml of *hydrochloric acid R*.

1 ml of *0.05 M potassium iodate* is equivalent to 34.0 mg of $C_{21}H_{38}ClN$.

Ph Eur

Chalk

General Notices

Prepared Chalk
$CaCO_3$ 100.1

Action and use

Antacid.

DEFINITION

Chalk is a native form of calcium carbonate freed from most of its impurities by elutriation and dried. It contains not less than 97.0% and not more than 100.5% of $CaCO_3$, calculated with reference to the dried substance.

CHARACTERISTICS

Chalk absorbs water readily.

Practically insoluble in *water*; slightly soluble in *water* containing carbon dioxide.

Macroscopical White or greyish white, small friable masses, usually conical in form, or in powder; amorphous; earthy; soft to the touch.

Microscopical Consists of the calcareous shells and detritus of various foraminifera; the calcareous shells vary from about 35 to 100 µm in breadth and from about 50 to 180 µm in length; among the detritus are numerous small rings and discs about 5 to 10 µm in diameter.

IDENTIFICATION

A. A solution in 6M *acetic acid* yields reaction C characteristic of *calcium salts*, Appendix VI.

B. Yields reaction A characteristic of *carbonates*, Appendix VI.

TESTS

Acidity or alkalinity

1 g, boiled with 50 ml of *water* and filtered, yields a filtrate which is neutral to *bromothymol blue solution R3* or requires not more than 0.05 ml of 0.1M *hydrochloric acid VS* to make it so.

Aluminium, iron, phosphate and matter insoluble in hydrochloric acid

Dissolve 2 g in a mixture of 5 ml of *hydrochloric acid* and 75 ml of *water*, boil to remove carbon dioxide and make alkaline with 5M *ammonia* using *methyl red solution* as indicator. Boil for 1 minute, filter and wash the precipitate with a hot 2% w/v solution of *ammonium chloride*. Dissolve the precipitate as completely as possible by passing 20 ml of hot 2M *hydrochloric acid* through the filter and wash the filter with sufficient hot *water* to adjust the volume of the solution to 50 ml. Boil the solution and make alkaline with 5M *ammonia* using *methyl red solution* as indicator. Boil for 1 minute, filter through the same filter, wash the precipitate with a hot 2% w/v solution of *ammonium nitrate*, dry and ignite at a temperature not lower than 1000°. The residue weighs not more than 40 mg.

Arsenic

Dissolve 0.5 g in 5 ml of *brominated hydrochloric acid* and dilute to 50 ml with *water*. 25 ml of the resulting solution complies with the *limit test for arsenic*, Appendix VII (4 ppm).

Heavy metals

Dissolve 1.0 g in 10 ml of 2M *hydrochloric acid*, add 0.1 ml of *nitric acid* and boil to remove carbon dioxide. Cool, make alkaline with 5M *ammonia*, filter and wash the precipitate with *water*. Pass 5 ml of hot 2M *hydrochloric acid* through the filter, cool the filtrate, add 0.5 g of *ammonium thiocyanate* and extract with two 5 ml quantities of a mixture of equal volumes of *isoamyl alcohol* and *ether*. To the aqueous layer add 0.5 g of *citric acid* and dilute to 20 ml with *water*. 12 ml of the resulting solution complies with *limit test A for heavy metals*, Appendix VII. Use *lead standard solution (2 ppm Pb)* to prepare the standard (40 ppm).

Chloride

Dissolve 0.3 g in 2 ml of *nitric acid* and 10 ml of *water*, filter and dilute the filtrate to 30 ml with *water*. 15 ml of the resulting solution complies with the *limit test for chlorides*, Appendix VII (330 ppm).

Sulphate

Dissolve 0.25 g in 5.5 ml of 2M *hydrochloric acid*, dilute to 30 ml with *water* and filter. 15 ml of the resulting solution complies with the *limit test for sulphates*, Appendix VII (0.12%).

Loss on drying

When dried to constant weight at 105°, loses not more than 1.0% of its weight. Use 1 g.

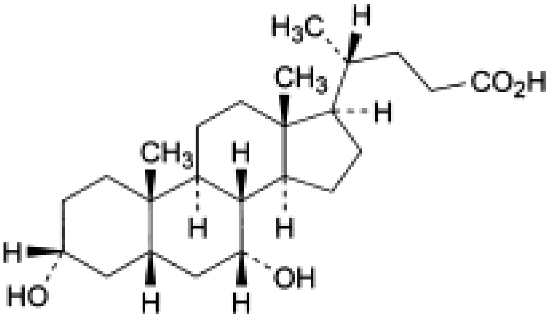
ASSAY

To 2 g in 100 ml of *water* add 50 ml of 1M *hydrochloric acid VS*, boil to remove carbon dioxide, cool and titrate the excess of acid with 1M *sodium hydroxide VS* using *methyl orange solution* as indicator. Each ml of 1M *hydrochloric acid VS* is equivalent to 50.04 mg of $CaCO_3$.

Chenodeoxycholic Acid

General Notices

(Ph Eur monograph 1189)



$C_{24}H_{40}O_4$ 392.6 *474-25-9*

Action and use

Bile acid; treatment of gallstones.

Ph Eur

DEFINITION

Chenodeoxycholic acid contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 3α,7α-dihydroxy-5β-cholan-24-oic acid, calculated with reference to the dried substance.

CHARACTERS

A white or almost white powder, very slightly soluble in water, freely soluble in alcohol, soluble in acetone, slightly soluble in methylene chloride.

IDENTIFICATION

First identification A.

Second identification B, C.

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *chenodeoxycholic acid CRS*. Examine the substances prepared as discs using *potassium bromide R*.

B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve about 10 mg in 1 ml of *sulphuric acid R*. Add 0.1 ml of *formaldehyde solution R* and allow to stand for 5 min. Add 5 ml of *water R.* The suspension obtained is greenish-blue.

TESTS

Specific optical rotation *(2.2.7)*

Dissolve 0.500 g in *methanol R* and dilute to 25.0 ml with the same solvent. The specific optical rotation is + 11.0 to + 13.0, calculated with reference to the dried substance.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using a suitable silica gel as the coating substance.

Test solution (a) Dissolve 0.40 g of the substance to be examined in a mixture of 1 volume of *water R* and 9 volumes of *acetone R* and dilute to 10 ml with the same mixture of solvents.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with a mixture of 1 volume of *water R* and 9 volumes of *acetone R*.

Reference solution (a) Dissolve 40 mg of *chenodeoxycholic acid CR*S in a mixture of 1 volume of *water R* and 9 volumes of *acetone R* and dilute to 10 ml with the same mixture of solvents.

Reference solution (b) Dissolve 20 mg of *lithocholic acid CRS* in a mixture of 1 volume of *water R* and 9 volumes of *acetone R* and dilute to 10 ml with the same mixture of solvents. Dilute 2 ml of the solution to 100 ml with a mixture of 1 volume of *water R* and 9 volumes of *acetone R.*

Reference solution (c) Dissolve 20 mg of *ursodeoxycholic acid CRS* in a mixture of 1 volume of *water R* and 9 volumes of *acetone R* and dilute to 50 ml with the same mixture of solvents.

Reference solution (d) Dissolve 20 mg of *cholic acid CRS* in a mixture of 1 volume of *water R* and 9 volumes of *acetone R* and dilute to 100 ml with the same mixture of solvents.

Reference solution (e) Dilute 0.5 ml of test solution (a) to 20 ml with a mixture of 1 volume of *water R* and 9 volumes of *acetone R*. Dilute 1 ml of the solution to 10 ml with a mixture of 1 volume of *water R* and 9 volumes of *acetone R.*

Reference solution (f) Dissolve 10 mg of *chenodeoxycholic acid CRS* in reference solution (c) and dilute to 25 ml with the same solution.

Apply separately to the plate 5 µl of each solution. Develop in an unsaturated tank over a path of 15 cm using a mixture of 1 volume of *glacial acetic acid R*, 30 volumes of *acetone R* and 60 volumes of *methylene chloride R*. Dry the plate at 120 °C for 10 min. Spray the plate immediately with a 47.6 g/l solution of *phosphomolybdic acid R* in a mixture of 1 volume of *sulphuric acid R* and 20 volumes of *glacial acetic acid R* and heat again at 120 °C until blue spots appear on a lighter background. In the chromatogram obtained with test solution (a): any spot corresponding to lithocholic acid is not more intense than the principal spot in the chromatogram obtained with reference solution (b) (0.1 per cent); any spot corresponding to ursodeoxycholic acid is not more intense than the principal spot in the chromatogram obtained with reference solution (c) (1 per cent); any spot corresponding to cholic acid is not more intense than the principal spot in the chromatogram obtained with reference solution (d) (0.5 per cent); any spot apart from the principal spot and any spots corresponding to lithocholic acid, ursodeoxycholic acid and cholic acid, is not more intense than the principal spot in the chromatogram obtained with reference solution (e) (0.25 per cent). The test is not valid unless the chromatogram obtained with reference solution (f) shows two clearly separated principal spots.

Heavy metals ***(2.4.8)***

1.0 g complies with limit test C for heavy metals (20 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying ***(2.2.32)***

Not more than 1.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

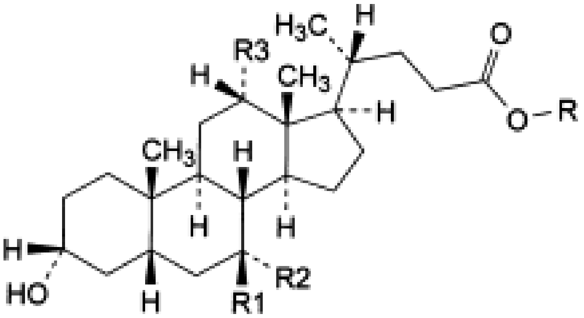
Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.350 g in 50 ml of *alcohol R,* previously neutralised to 0.2 ml of *phenolphthalein solution R*. Add 50 ml of *water* R and titrate with *0.1 M sodium hydroxide* until a pink colour is obtained.

1 ml of *0.1 M sodium hydroxide* is equivalent to 39.26 mg of $C_{24}H_{40}O4$.

IMPURITIES



A. R = H, R1 = OH, R2 = H, R3 = H: ursodeoxycholic acid,

B. R = H, R1 = H, R2 = OH, R3 = OH: 3α,7α,12α-trihydroxy-5β-cholan-24-oic acid (cholic acid),

C. R = H, R1 = H, R2 = H, R3 = H: 3α-hydroxy-5β-cholan-24-oic acid (lithocholic acid),

D. R = H, R1 = OH, R2 = H, R3 = OH: 3α,7β,12α-trihydroxy-5β-cholan-24-oic acid (ursocholic acid),

E. R = H, R1 = H, R2 = H, R3 = OH: 3α,12α-dihydroxy-5β-cholan-24-oic acid (deoxycholic acid),

F. R = H, R1+R2 = = O, R3 = H: 3α-hydroxy-7-oxo-5β-cholan-24-oic acid,

G. R = CH_3, R1 = OH, R2 = H, R3 = H: methyl 3α,7β-dihydroxy-5β-cholan-24-oate.

Ph Eur

Chitosan Hydrochloride

General Notices

(Ph Eur monograph 1774)

Ph Eur

DEFINITION

Chitosan hydrochloride is the chloride salt of an unbranched binary heteropolysaccharide consisting of the two units *N*-acetyl-D-glucosamine and D-glucosamine, obtained by partial deacetylation of chitin normally leading to a degree of deacetylation of 70.0 per cent to 95.0 per cent. Chitin is extracted from the shells of shrimp and crab.

PRODUCTION

The animals from which chitosan hydrochloride is derived must fulfil the requirements for the health of animals suitable for human consumption to the satisfaction of the competent authority. It must have been shown to what extent the method of production allows inactivation or removal of any contamination by viruses or other infectious agents.

CHARACTERS

Appearance

White or almost white fine powder.

Solubility

Sparingly soluble in water, practically insoluble in ethanol.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *chitosan hydrochloride CRS.*

B. It gives reaction (a) of chlorides *(2.3.1)*.

C. Dilute 50 ml of solution S (see Tests) to 250 ml with a 25 per cent *V/V* solution of *ammonia R*. A voluminous gelatinous mass is formed.

D. To 10 ml of solution S add 90 ml of *acetone R*. A voluminous gelatinous mass is formed.

TESTS

Solution S

Dissolve 1.0 g in 100 ml of *water R* and stir vigorously for 20 min with a mechanical stirrer.

Appearance of solution

Solution S is not more opalescent than reference suspension II *(2.2.1)* and not more intensely coloured than reference solution BY_5 *(2.2.2, Method II)*.

Matter insoluble in water

Maximum 0.5 per cent.

Add 2.00 g to 400.0 ml of *water R* while stirring until no further dissolution takes place. Transfer the solution to a 2 litre beaker, add 200 ml of *water R*. Boil the solution gently for 2 h, covering the beaker during the operation. Filter through a sintered-glass filter (40) *(2.1.2)* wash the residue with water and dry to constant weight in an oven at 100-105 °C. The residue weighs a maximum of 10 mg.

pH ***(2.2.3)***

4.0 to 6.0 for solution S.

Viscosity ***(2.2.10)***

80 per cent to 120 per cent of the value stated on the label, determined on solution S.

Determine the viscosity using a rotating viscometer at 20 °C with a spindle rotating at 20 r/min, using a suitable spindle for the range of the expected viscosity.

Degree of deacetylation

Test solution Dissolve 0.250 g in *water R* and dilute to 50.0 ml with the same solvent stirring vigorously. Dilute 1.0 ml of the solution to 100.0 ml with *water R*. Measure the absorbance *(2.2.25)* from 200 nm to 205 nm as the first derivative of the absorbance curve. Determine the pH of the solution.

Reference solutions Prepare solutions of 1.0 µg/ml, 5.0 µg/ml, 15.0 µg/ml and 35.0 µg/ml of *N-acetylglucosamine R* in *water R*. Measure the absorbance *(2.2.25)* from 200 nm to 205 nm of each solution as first derivative of the absorption curve. Make a standard curve by plotting the first derivative at 202 nm as a function of the concentration of *N*-acetylglucosamine, and calculate the slope of the curve by least squares linear regression. Use the standard curve to determine the equivalent amount of *N*-acetylglucosamine for the substance to be examined.

Calculate the degree of deacetylation (molar) using the expression:

$$\frac{100 \times M_1 \times (C_1 - C_2)}{(M_1 \times C_1) - [(M_1 - M_3) \times C_2]}$$

C_1 = concentration of chitosan hydrochloride in the test solution in micrograms per millilitre,

C_2 = concentration of *N*-acetylglucosamine in the test solution, as determined from the standard curve prepared using the reference solution in micrograms per millilitre,

M_1 = 203 (relative molecular mass of *N*-acetylglucosamine unit ($C_8H_{13}NO_5$) in polymer),

M_3 = relative molecular mass of chitosan hydrochloride.

M_3 is calculated from the pH in solution, assuming a pKa value of 6.8, using the following expressions:

$$M_3 = f \times M_2 + (1 - f) \times (M_2 + 36.5)$$

$$f = \frac{p}{1 + p}$$

$$p = 10^{(\text{pH} - \text{pKa})}$$

M_2 = 161 (relative molecular mass of deacetylated unit (glucosamine) ($C_6H_{11}NO_4$) in polymer).

Chlorides

10.0 per cent to 20.0 per cent.

Introduce 0.200 g into a 250 ml borosilicate flask fitted with a reflux condenser. Add 40 ml of a mixture of 1 volume of *nitric acid R* and 2 volumes of *water R*. Boil gently under a reflux condenser for 5 min. Cool and add 25 ml of *water R* through the condenser. Add 16.0 ml of *0.1 M silver nitrate*, shake vigorously and titrate with *0.1 M ammonium thiocyanate*, using 1 ml of ferric *ammonium sulphate solution R2* as indicator, and shaking vigorously towards the end-point. Carry out a blank titration.

1 ml of *0.1 M silver nitrate* is equivalent to 3.55 mg of Cl.

Heavy metals *(2.4.8)*

Maximum 40 ppm.

1.0 g complies with limit test F. Prepare the standard using 4 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 10 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 1.0 per cent, determined on 1.0 g.

STORAGE

At a temperature of 2-8 °C, protected from moisture and light.

LABELLING

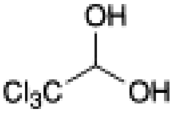
The label states the nominal viscosity in millipascal seconds for a 10 g/l solution in *water R.*

Ph Eur

Chloral Hydrate

General Notices

(Ph Eur monograph 0265)



$C_2H_3Cl_3O_2$ 165.4 *302-17-0*

Action and use

Hypnotic.

Ph Eur

DEFINITION

2,2,2-Trichloroethane-1,1-diol.

Content

98.5 per cent to 101.0 per cent.

CHARACTERS

Appearance

Colourless, transparent crystals.

Solubility

Very soluble in water, freely soluble in ethanol (96 per cent).

IDENTIFICATION

A. To 10 ml of solution S (see Tests) add 2 ml of *dilute sodium hydroxide solution R*. The mixture becomes cloudy and, when heated, gives off an odour of chloroform.

B. To 1 ml of solution S add 2 ml of *sodium sulphide solution R*. A yellow colour develops which quickly becomes reddish-brown. On standing for a short time, a red precipitate may be formed.

TESTS

Solution S

Dissolve 3.0 g in *carbon dioxide-free water R* and dilute to 30 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

3.5 to 5.5 for solution S.

Chloral alcoholate

Warm 1.0 g with 10 ml of *dilute sodium hydroxide solution R*, filter the supernatant solution and add *0.05 M iodine* dropwise until a yellow colour is obtained. Allow to stand for 1 h. No precipitate is formed.

Chlorides *(2.4.4)*

Maximum 100 ppm.

Dilute 5 ml of solution S to 15 ml with *water R*.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

10 ml of solution S diluted to 20 ml with *water R* complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Non-volatile residue

Maximum 0.1 per cent.

Evaporate 2.000 g on a water-bath. The residue weighs a maximum of 2 mg.

ASSAY

Dissolve 4.000 g in 10 ml of *water R* and add 40.0 ml of *1 M sodium hydroxide*. Allow to stand for exactly 2 min and titrate with *0.5 M sulphuric acid*, using 0.1 ml of *phenolphthalein solution R* as indicator. Titrate the neutralised solution with *0.1 M silver nitrate,* using 0.2 ml of *potassium chromate solution R* as indicator. Calculate the number of millilitres of *1 M sodium hydroxide* used by deducting from the volume of *1 M sodium hydroxide*, added at the beginning of the titration, the volume *of 0.5 M sulphuric acid* used in the 1st titration and two-fifteenths of the volume *of 0.1 M silver nitrate* used in the 2nd titration.

1 ml of *1 M sodium hydroxide* is equivalent to 0.1654 g of $C_2H_3C_{l3}O_2$.

STORAGE

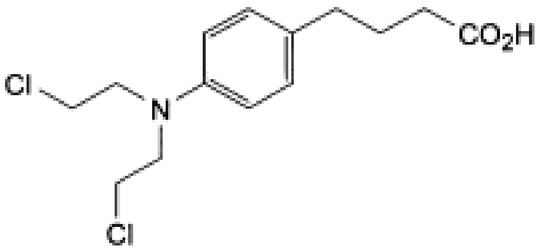
In an airtight container.

Ph Eur

Chlorambucil

General Notices

(Ph Eur monograph 0137)



$C_{14}H_{19}Cl_2NO_2$ 304.2 *305-03-3*

Action and use

Cytotoxic alkylating agent.

Preparation

Chlorambucil Tablets

Ph Eur

DEFINITION

Chlorambucil contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of 4-4-[di(2-chloroethyl)amino]phenylbutyric acid, calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white, crystalline powder, practically insoluble in water, freely soluble in acetone and in alcohol.

IDENTIFICATION

First identification A, B.

Second identification A, C, D.

A. Melting point *(2.2.14)*: 64 °C to 67 °C.

B. Examine by infrared absorption spectrophotometry *(2.2.24),* comparing with the spectrum obtained with *chlorambucil CRS*.

C. To 0.4 g add 10 ml of *dilute hydrochloric acid R*, mix and allow to stand for 30 min, shaking from time to time. Filter and wash the precipitate with 2 quantities, each of 10 ml, of *water R*. To 10 ml of the combined filtrate and washings add 0.5 ml of *potassium tetraiodomercurate solution R*. A pale-brown precipitate is formed. To another 10 ml of the combined filtrate and washings add 0.2 ml of *potassium permanganate solution R*. The colour of the latter is discharged immediately.

D. Dissolve 50 mg in 5 ml of *acetone R* and dilute to 10 ml with *water R*. Add 0.05 ml of *dilute nitric acid R* and 0.2 ml of *silver nitrate solution R2*. No opalescence is produced immediately. Heat the solution on a water-bath; an opalescence develops.

TESTS

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel* GF_{254} *R* as the coating substance. *Carry out all operations as rapidly as possible protected from light. Prepare the solutions immediately before use*.

Test solution Dissolve 0.2 g of the substance to be examined in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dilute 1 ml of the test solution to 50 ml with *acetone R*.

Reference solution (b) Dilute 25 ml of reference solution (a) to 100 ml with *acetone R.*

Apply separately to the plate 5 µl of each solution. Develop over a path of 10 cm using a mixture of 20 volumes of *methyl ethyl ketone R*, 20 volumes of *heptane R*, 25 volumes of *methanol R* and 40 volumes of *toluene R*. Examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (2.0 per cent) and at most 1 such spot is more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

Water *(2.5.12)*

Not more than 0.5 per cent, determined on 1.000 g by the semi-micro determination of water.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 10 ml of *acetone R* and add 10 ml of *water R.* Titrate with *0.1 M sodium hydroxide*, using 0.1 ml of *phenolphthalein solution R* as indicator.

1 ml of *0.1 M sodium hydroxide* is equivalent to 30.42 mg of $C_{14}H_{19}Cl_2NO_2$.

STORAGE

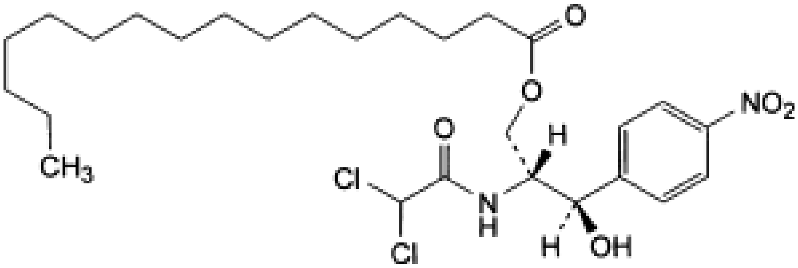
Store protected from light.

Ph Eur

Chloramphenicol Palmitate

General Notices

(Ph Eur monograph 0473)



$C_{27}H_{42}Cl_2N_2O_6$ 561.6 *530-43-8*

Action and use

Antibacterial.

Ph Eur

DEFINITION

Chloramphenicol palmitate contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of (2*R*,3*R*)-2-[(dichloroacetyl)amino]-3-hydroxy-3-(4-nitrophenyl) propyl hexadecanoate, calculated with reference to the dried substance.

Semi-synthetic product derived from a fermentation product.

CHARACTERS

A white or almost white, fine, unctuous powder, practically insoluble in water, freely soluble in acetone, sparingly soluble in ethanol (96 per cent), very slightly soluble in hexane.

It melts at 87 °C to 95 °C.

It shows polymorphism (*5.9*). The thermodynamically stable form has low bioavailability following oral administration.

IDENTIFICATION

A. Examine by thin-layer chromatography *(2.2.27)*, using *TLC silanised silica gel plate R*.

Test solution Dissolve 50 mg of the substance to be examined in a mixture of 1 ml of *1 M sodium hydroxide* and 5 ml of *acetone R* and allow to stand for 30 min. Add 1.1 ml of *1 M hydrochloric acid* and 3 ml of *acetone R.*

Reference solution (a) Dissolve 10 mg of *chloramphenicol CRS* in *acetone R* and dilute to 5

ml with the same solvent.

Reference solution (b) Dissolve 10 mg of *palmitic acid R* in *acetone R* and dilute to 5 ml with the same solvent.

Reference solution (c) Dissolve 10 mg of the substance to be examined in *acetone R* and dilute to 5 ml with the same solvent.

Apply to the plate 4 µl of each solution. Develop over a path of 15 cm using a mixture of 30 volumes of a 100 g/l solution of *ammonium acetate R* and 70 volumes of *ethanol (96 per cent) R*. Allow the plate to dry in air and spray with a solution containing 0.2 g/l of *dichlorofluorescein R* and 0.1 g/l of *rhodamine B R* in *ethanol (96 per cent) R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. The chromatogram obtained with the test solution shows 3 spots corresponding in position to the principal spots in the chromatograms obtained with reference solutions (a), (b) and (c).

B. Dissolve 0.2 g in 2 ml of *pyridine R,* add 2 ml of a 100 g/l solution of *potassium hydroxide R* and heat on a water-bath. A red colour is produced.

C. Dissolve about 10 mg in 5 ml of *ethanol (96 per cent) R* and add 4.5 ml of *dilute sulphuric acid R* and 50 mg of *zinc powder R*. Allow to stand for 10 min and if necessary decant the supernatant liquid or filter. Cool the solution in iced water and add 0.5 ml of *sodium nitrite solution R.* Allow to stand for 2 min and add 1 g of *urea R*, 2 ml of *strong sodium hydroxide solution R* and 1 ml of *β-naphthol solution R*. A red colour develops.

TESTS

Acidity

Dissolve 1.0 g in 5 ml of a mixture of equal volumes of *ethanol (96 per cent) R* and *ether R,* warming to 35 °C. Add 0.2 ml of *phenolphthalein solution R.* Not more than 0.4 ml of *0.1 M sodium hydroxide* is required to produce a pink colour persisting for 30 s.

Specific optical rotation *(2.2.7)*

Dissolve 1.25 g in *anhydrous ethanol R* and dilute to 25.0 ml with the same solvent. The specific optical rotation is + 22.5 to + 25.5.

Free chloramphenicol

Maximum 450 ppm. Dissolve 1.0 g, with gentle heating, in 80 ml of *xylene R*. Cool and shake with 3 quantities, each of 15 ml, of *water R*. Dilute the combined aqueous extracts to 50 ml with *water R* and shake with 10 ml of *toluene R*. Allow to separate and discard the toluene layer. Centrifuge a portion of the aqueous layer and measure the absorbance (A) (*2.2.25*) at the maximum at 278 nm using as the compensation liquid a blank solution having an absorbance not greater than 0.05.

Calculate the content of free chloramphenicol in parts per million from the expression:

$$\frac{A \times 10^4}{5.96}$$

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel GF_{254} R* as the coating substance.

Test solution Dissolve 0.1 g of the substance to be examined in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 20 mg of *chloramphenicol palmitate isomer CRS* in *acetone R* and dilute to 10 ml with the same solvent. Dilute 1 ml of this solution to 10 ml with *acetone R*.

Reference solution (b) Dissolve 20 mg of *chloramphenicol dipalmitate C*RS in *acetone R* and dilute to 10 ml with the same solvent. Dilute 1 ml of this solution to 10 ml with *acetone R*.

Reference solution (c) Dissolve 5 mg of *chloramphenicol CRS* in *acetone R* and dilute to 10 ml with the same solvent. Dilute 1 ml of this solution to 10 ml with *acetone R*.

Apply to the plate 10 µl of each solution. Develop over a path of 15 cm using a mixture of 10 volumes of *methanol R*, 40 volumes of *chloroform R* and 50 volumes of *cyclohexane R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. In the chromatogram obtained with the test solution, any spots due to chloramphenicol palmitate isomer and chloramphenicol dipalmitate are not more intense than the corresponding spots in the chromatograms obtained with reference solutions (a) and (b) respectively (2.0 per cent) and any spot, apart from the principal spot and the spots due to chloramphenicol palmitate isomer and chloramphenicol dipalmitate, is not more intense than the principal spot in the chromatogram obtained with reference solution (c) (0.5 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by heating at 80 °C over *diphosphorus pentoxide R* at a pressure not exceeding 0.1 kPa for 3 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 90.0 mg in *ethanol (96 per cent) R* and dilute to 100.0 ml with the same solvent. Dilute 10.0 ml of this solution to 250.0 ml with *ethanol (96 per cent) R*. Measure the absorbance *(2.2.25)* of the solution at the maximum at 271 nm.

Calculate the content of $C_{27}H_{42}Cl_2N_2O_6$taking the specific absorbance to be 178.

STORAGE

Protected from light.

$C_{15}H_{15}Cl_2N_2NaO_8$ 445.2 *982-57-0*

Action and use

Antibacterial.

Preparation

Chloramphenicol Sodium Succinate Injection

Ph Eur

DEFINITION

Mixture in variable proportions of sodium (2*R*,3*R*)-2-[(dichloroacetyl)amino]-3-hydroxy-3-(4-nitrophenyl)propyl butanedioate (3 isomer) and of sodium (1*R*,2*R*)-2-[(dichloroacetyl)amino]-3-hydroxy-1-(4-nitrophenyl)propyl butanedioate (1 isomer).

Semi-synthetic product derived from a fermentation product.

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or yellowish-white powder, hygroscopic.

Solubility

Very soluble in water, freely soluble in ethanol (96 per cent).

IDENTIFICATION

A. Thin-layer chromatography (*2.2.27*).

Test solution Dissolve 20 mg of the substance to be examined in 2 ml of *acetone R*.

Reference solution (a) Dissolve 20 mg of *chloramphenicol sodium succinate CRS* in 2 ml of *acetone R*.

Reference solution (b) Dissolve 20 mg of *chloramphenicol CRS* in 2 ml of *acetone R.*

Plate TLC silica gel GF_{254} plate R.

Mobile phase *dilute acetic acid R, methanol R, chloroform R* (1:14:85 *V/V/V*).

Application 2 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

Results The 2 principal spots in the chromatogram obtained with the test solution are similar in position and size to the 2 principal spots in the chromatogram obtained with reference solution (a); their positions are different from that of the principal spot in the chromatogram obtained with reference solution (b).

B. Dissolve about 10 mg in 1 ml of *ethanol (50 per cent V/V) R,* add 3 ml of a 10 g/l solution of *calcium chloride R* and 50 mg of *zinc powder R* and heat on a water-bath for 10 min. Filter the hot solution and allow to cool. Add 0.1 ml of *benzoyl chloride R* and shake for 1 min. Add 0.5 ml of *ferric chloride solution R1* and 2 ml of *chloroform R* and shake. The upper layer is light violet-red or purple.

C. Dissolve 50 mg in 1 ml of *pyridine R*. Add 0.5 ml of *dilute sodium hydroxide solution R* and 1.5 ml of *water R.* Heat in a water-bath for 3 min. A red colour develops. Add 2 ml of *nitric acid R* and cool under running water. Add 1 ml of *0.1 M silver nitrate*. A white precipitate is formed slowly.

D. It gives reaction (a) of sodium *(2.3.1)*.

TESTS

pH *(2.2.3)*

6.4 to 7.0.

Dissolve 2.50 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Specific optical rotation *(2.2.7)*

+ 5.0 to + 8.0 (anhydrous substance).

Dissolve 0.50 g in *water R* and dilute to 10.0 ml with the same solvent.

Chloramphenicol and chloramphenicol disodium disuccinate

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dissolve 10.0 mg of *chloramphenicol CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase (solution A). Dilute 5.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (b) Dissolve 10.0 mg of *chloramphenicol disodium disuccinate CR*S in the mobile phase and dilute to 100.0 ml with the mobile phase (solution B). Dilute 5.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (c) Dissolve 25 mg of the substance to be examined in the mobile phase, add 5 ml of solution A and 5 ml of solution B and dilute to 100 ml with the mobile phase.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase 20 g/l solution of *phosphoric acid R, methanol R, water R* (5:40:55 *V/V/V*).

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 275 nm.

Injection 20 µl.

System suitability Reference solution (c):

— the 2 peaks corresponding to those in the chromatograms obtained with reference solutions (a) and (b) are clearly separated from the peaks corresponding to the 2 principal peaks in the chromatogram obtained with the test solution; if necessary, adjust the methanol content of the mobile phase.

Limits:

— *chloramphenicol*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (2.0 per cent);

— *chloramphenicol disodium disuccinate*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent).

Water ***(2.5.12)***

Maximum 2.0 per cent, determined on 0.500 g.

Pyrogens ***(2.6.8)***

If intended for use in the manufacture of a parenteral dosage form without a further appropriate procedure for removal of pyrogens, it complies with the test for pyrogens. Inject per kilogram of the rabbit's mass 2.5 ml of a solution in *water for injections R* containing 2 mg of the substance to be examined per millilitre.

ASSAY

Dissolve 0.200 g in *water R* and dilute to 500.0 ml with the same solvent. Dilute 5.0 ml of this solution to 100.0 ml with *water R*. Measure the absorbance *(2.2.25)* at the absorption maximum at 276 nm.

Calculate the content of $C_{15}H_{15}Cl_2N_2NaO_8$, taking the specific absorbance to be 220.

STORAGE

In an airtight container, protected from light. If the substance is sterile, store in a sterile, airtight, tamper-proof container, protected from light.

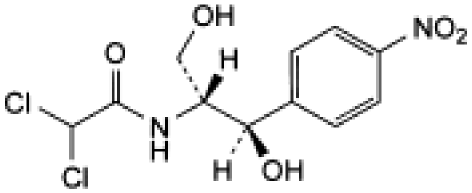
General Notices

(Ph Eur monograph 0071)



$C_{11}H_{12}Cl_2N_2O_5$ 323.1 *56-75-7*

Action and use

Antibacterial.

Preparations

Chloramphenicol Capsules

Chloramphenicol Ear Drops

Chloramphenicol Eye Drops

Chloramphenicol Eye Ointment

Ph Eur

DEFINITION

Chloramphenicol is 2,2-dichloro-*N*-[(1*R*,2*R*)-2-hydroxy-1-(hydroxymethyl)-2-(4-nitrophenyl) ethyl]acetamide, produced by the growth of certain strains of *Streptomyces venezuelae* in a suitable medium. It is normally prepared by synthesis. It contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of $C_{11}H_{12}C_{l2}N_2O_5$, calculated with reference to the dried substance.

CHARACTERS

A white, greyish-white or yellowish-white, fine, crystalline powder or fine crystals, needles or elongated plates, slightly soluble in water, freely soluble in alcohol and in propylene glycol.

A solution in ethanol is dextrorotatory and a solution in ethyl acetate is laevorotatory.

IDENTIFICATION

First identification *A, B.*

Second identification *A, C, D, E.*

A. Melting point (*2.2.14*): 149 °C to 153 °C.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *chloramphenicol CRS.*

C. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with 1 µl of the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 10 mg in 1 ml of *alcohol (50 per cent V/V) R*, add 3 ml of a 10 g/l solution of *calcium chloride R* and 50 mg of *zinc powder R and* heat on a water-bath for 10 min. Filter the hot solution and allow to cool. Add 0.1 ml of *benzoyl chloride R* and shake for 1 min. Add 0.5 ml of *ferric chloride solution R1* and 2 ml of *chloroform R* and shake. The aqueous layer is coloured light violet-red to purple.

E. To 50 mg in a porcelain crucible add 0.5 g of *anhydrous sodium carbonate R*. Heat over an open flame for 10 min. Allow to cool. Take up the residue with 5 ml of *dilute nitric acid R* and filter. To 1 ml of the filtrate add 1 ml of *water R*. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

Acidity or alkalinity

To 0.1 g add 20 ml of *carbon dioxide-free water R*, shake and add 0.1 ml of *bromothymol blue solution R1*. Not more than 0.1 ml of *0.02 M hydrochloric acid* or *0.02 M sodium hydroxide* is required to change the colour of the indicator.

Specific optical rotation *(2.2.7)*

Dissolve 1.50 g in *ethanol R* and dilute to 25.0 ml with the same solvent. The specific optical rotation is + 18.5 to + 20.5.

Related substances

Examine by thin-layer chromatography (*2.2.27*), using *silica gel* GF_{254} *R* as the coating substance.

Test solution Dissolve 0.10 g of the substance to be examined in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 0.10 g of *chloramphenicol CRS* in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dilute 0.5 ml of reference solution (a) to 100 ml with *acetone R*.

Apply separately to the plate 1 µl and 20 µl of the test solution, 1 µl of reference solution (a) and 20 µl of reference solution (b). Develop over a path of 15 cm using a mixture of 1 volume of *water R*, 10 volumes of *methanol R* and 90 volumes of *chloroform R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with 20 µl of the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

Chlorides *(2.4.4)*

To 1.00 g add 20 ml of *water R* and 10 ml of *nitric acid R* and shake for 5 min. Filter through a filter paper previously washed by filtering 5 ml portions of *water R* until 5 ml of filtrate no longer becomes opalescent on addition of 0.1 ml of *nitric acid R* and 0.1 ml of *silver nitrate solution R1*. 15 ml of the filtrate complies with the limit test for chlorides (100 ppm).

Loss on drying ***(2.2.32)***

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Not more than 0.1 per cent, determined on 2.0 g.

Pyrogens ***(2.6.8)***

If intended for use in the manufacture of a parenteral dosage form without a further appropriate procedure for the removal of pyrogens, it complies with the test for pyrogens. Inject per kilogram of the rabbit's mass 2.5 ml of a solution containing per millilitre 2 mg of the substance to be examined.

ASSAY

Dissolve 0.100 g in *water R* and dilute to 500.0 ml with the same solvent. Dilute 10.0 ml of this solution to 100.0 ml with *water R*. Measure the absorbance *(2.2.25)* at the maximum at 278 nm.

Calculate the content of $C_{11}H_{12}Cl_2N_2O_5$ taking the specific absorbance to be 297.

STORAGE

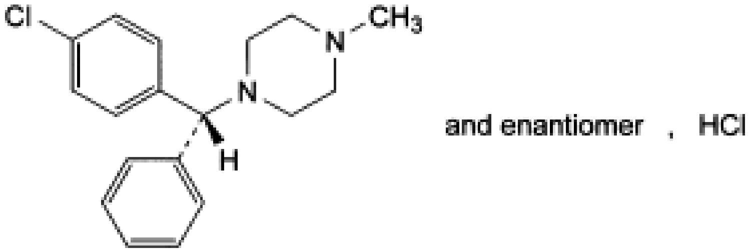
Store protected from light. If the substance is sterile, store in a sterile, airtight, tamper-proof container .

Ph Eur

Chlorcyclizine Hydrochloride

General Notices

(Ph Eur monograph 1086)



$C_{18}H_{21}ClN_2,HCl$ 337.3 *1620-21-9*

Action and use

Histamine H_1 receptor antagonist; antihistamine.

Ph Eur

DEFINITION

Chlorcyclizine hydrochloride contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of (*RS*)-1-[(4-chlorophenyl)phenylmethyl]-4-methylpiperazine hydrochloride, calculated with reference to the dried substance.

CHARACTERS

A.white or almost white, crystalline powder, freely soluble in water and in methylene chloride, soluble in alcohol.

IDENTIFICATION

First identification B, D.

Second identification A, C, D.

A. Dissolve 10.0 mg in a 5 g/l solution of *sulphuric acid R* and dilute to 100.0 ml with the same acid. Dilute 10.0 ml of the solution to 100.0 ml with a 5 g/l solution of *sulphuric acid R*. Examined between 215 nm and 300 nm *(2.2.25)*, the solution shows an absorption maximum at 231 nm. The specific absorbance at the maximum is 475 to 525, calculated with reference to the dried substance.

B. Examine by infrared absorption spectrophotometry *(2.2.24),* comparing with the spectrum obtained with *chlorcyclizine hydrochloride CRS*. Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for related substances (see Tests). The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Appearance of solution

Dissolve 0.5 g in *water R* and dilute to 10 ml with the same solvent. The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

Dissolve 0.10 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent. The pH of the solution is 5.0 to 6.0.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using a plate coated with a suitable silica gel.

Test solution (a) Dissolve 0.20 g of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 5 ml of test solution (a) to 100 ml with *methanol R*.

Reference solution (a) Dissolve 10 mg of *chlorcyclizine hydrochloride CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 5 mg of *methylpiperazine R* in *methanol R* and dilute to 50 ml with the same solvent.

Reference solution (c) Dilute 1 ml of test solution (b) to 25 ml with *methanol R*.

Reference solution (d) Dissolve 10 mg of *hydroxyzine hydrochloride CRS* and 10 mg of *chlorcyclizine hydrochloride CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Apply separately to the plate 10 µl of each solution and develop over a path of 15 cm using a mixture of 2 volumes of *concentrated ammonia R*, 13 volumes of *methanol R* and 85 volumes of *methylene chloride R*. Allow the plate to dry in air and expose it to iodine vapour for 10 min. In the chromatogram obtained with test solution (a): any spot corresponding to methylpiperazine is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent); any spot, apart from the principal spot and any spot corresponding to methylpiperazine, is not more intense than the spot in the chromatogram obtained with reference solution (c) (0.2 per cent). The test is not valid unless the chromatogram obtained with reference solution (d) shows two clearly separated spots.

Loss on drying *(2.2.32)*

Not more than 1.0 per cent, determined on 1.000 g by drying in an oven at 130 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in a mixture of 1 ml of *0.1 M hydrochloric acid* and 50 ml of *methanol R*.

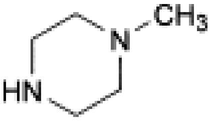
Carry out a potentiometric titration *(2.2.20)*, using *0.1 M sodium hydroxide*. Read the volume added between the two points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 33.73 mg of $C_{18}H_{22}Cl_2N_2$.

STORAGE

Store protected from light.

IMPURITIES



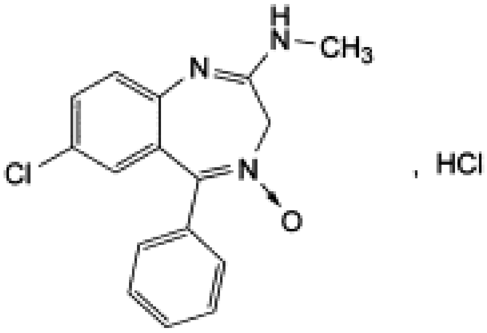
A. *N*-methylpiperazine.

Ph Eur

Chlordiazepoxide Hydrochloride

General Notices

(Ph Eur monograph 0474)



$C_{16}H_{14}ClN_3O,HCl$ 336.2 *438-41-5*

Action and use

Benzodiazepine.

Ph Eur

DEFINITION

7-Chloro-*N*-methyl-5-phenyl-3*H*-1,4-benzodiazepin-2-amine 4-oxide hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or slightly yellow, crystalline powder.

Solubility

Soluble in water, sparingly soluble in ethanol (96 per cent).

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison *chlordiazepoxide hydrochloride CRS*.

If the spectra obtained in the solid state show differences, dissolve 100 mg in 9 ml of *water R* and add 1 ml of *dilute sodium hydroxide solution R.* Extract with 10 ml of *methylene chloride R* in a separating funnel. Evaporate the organic layer and dry the residue obtained at 100-105 °C. Proceed in the same way with the reference substance. Record new spectra using the residues.

B. Dissolve 50 mg in 5 ml of *water R*, add 1 ml of *dilute ammonia R1*, mix, allow to stand for 5 min and filter. Acidify the filtrate with *dilute nitric acid R*. The solution gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution GY_6 *(2.2.2, Method II)*.

Dissolve 2.5 g in *water R* and dilute to 25 ml with the same solvent.

Related substances

Liquid chromatography (*2.2.29*). *Carry out the following operations protected from bright light and prepare the solutions immediately before use.*

Test solution Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 2.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve 5 mg of *chlordiazepoxide impurity A CRS* in the mobile phase, add 25.0 ml of the test solution and dilute to 100.0 ml with the mobile phase. Dilute 2.0 ml of this solution to 50.0 ml with the mobile phase.

Reference solution (c) Dissolve 4.0 mg of *aminochlorobenzophenone R* in the mobile phase and dilute to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Column:

— *size*: *l* = 0.15 m, Ø = 4.6 mm,

— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *acetonitrile R, water R* (50:50 *V/V*).

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 10 µl.

Run time 6 times the retention time of chlordiazepoxide.

Relative retention With reference to chlordiazepoxide (retention time = about 3.6 min): impurity A = about 0.7; impurity B = about 2.3; impurity C = about 3.9.

System suitability Reference solution (b):

— *resolution*: minimum 5.0 between the peaks due to impurity A and chlordiazepoxide.

Limits:

— *impurities A, B*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent),

— *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent),

— *any other impurity*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),

— *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),

— *disregard limit:* 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C for 4 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 50 ml of *water R*. Titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M silver nitrate* is equivalent to 33.62 mg of $C_{16}H_{15}Cl_2N_3O$.

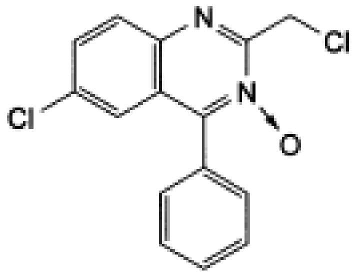
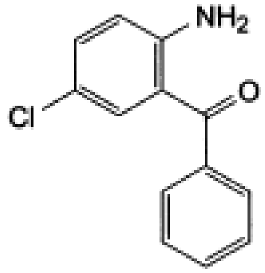
A. 7-chloro-5-phenyl-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one 4-oxide,



B. 6-chloro-2-(chloromethyl)-4-phenylquinazoline 3-oxide,



C. (2-amino-5-chlorophenyl)phenylmethanone (aminochlorobenzophenone).

Ph Eur

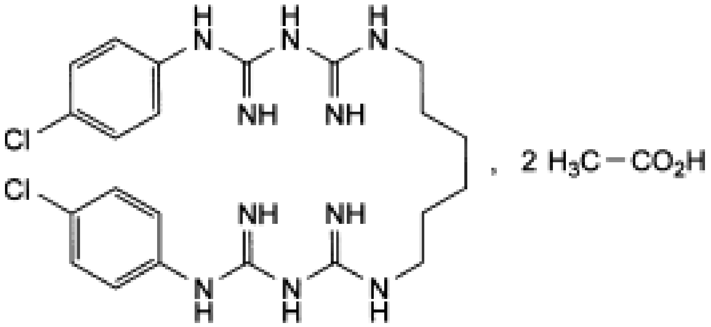
Chlorhexidine Acetate

General Notices

(Chlorhexidine Diacetate, Ph Eur monograph 0657)



$C_{22}H_{30}Cl_2N_{10},2C_2H_4O_2$ 625.6 *56-95-1*

Action and use

Antiseptic.

Preparation

Chlorhexidine Irrigation Solution

Ph Eur

DEFINITION

1,1′-(Hexane-1,6-diyl)bis[5-(4-chlorophenyl)biguanide] diacetate.

Content

98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, microcrystalline powder.

Solubility

Sparingly soluble in water, soluble in ethanol (96 per cent), slightly soluble in glycerol and in propylene glycol.

IDENTIFICATION

First identification A.

Second identification B, C, D.

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *chlorhexidine diacetate CRS.*

B. Dissolve about 5 mg in 5 ml of a warm 10 g/l solution of *cetrimide R* and add 1 ml of *strong sodium hydroxide solution R* and 1 ml of *bromine water R*. A deep red colour is produced.

C. Dissolve 0.3 g in 10 ml of a mixture of equal volumes of *hydrochloric acid R* and *water R*. Add 40 ml of *water R*, filter if necessary and cool in iced water. Make alkaline to *titan yellow paper R* by adding dropwise, and with stirring, *strong sodium hydroxide solution R* and add 1 ml in excess. Filter, wash the precipitate with *water R* until the washings are free from alkali and recrystallise from *ethanol (70 per cent V/V) R*. Dry at 100-105 °C. The residue melts (*2.2.14*) at 132 °C to 136 °C.

D. It gives reaction (a) of acetates (*2.3.1*).

TESTS

Chloroaniline

Maximum 500 ppm.

Dissolve 0.20 g in 25 ml of *water R* with shaking if necessary. Add 1 ml of *hydrochloric acid R* and dilute to 30 ml with *water R*. Add rapidly and with thorough mixing after each addition: 2.5 ml of *dilute hydrochloric acid R*, 0.35 ml of *sodium nitrite solution R*, 2 ml of a 50 g/l solution of *ammonium sulphamate R*, 5 ml of a 1.0 g/l solution of *naphthylethylenediamine dihydrochloride R* and 1 ml of *ethanol (96 per cent) R*, dilute to 50.0 ml with *water R* and allow to stand for 30 min. Any reddish-blue colour in the solution is not more intense than that in a standard prepared at the same time and in the same manner, using a mixture of 10.0 ml of a 0.010 g/l solution of *chloroaniline R* in *dilute hydrochloric acid R* and 20 ml of *dilute hydrochloric acid R* instead of the solution of the substance to be examined.

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 0.200 g of the substance to be examined in the mobile phase and dilute to 100 ml with the mobile phase.

Reference solution (a) Dissolve 15 mg of *chlorhexidine for performance test CRS* in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (b) Dilute 2.5 ml of the test solution to 100 ml with the mobile phase.

Reference solution (c) Dilute 2.0 ml of reference solution (b) to 10 ml with the mobile phase. Dilute 1.0 ml of this solution to 10 ml with the mobile phase.

Column:

— *size*: *l* = 0.2 m, Ø = 4 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Solution of 2.0 g of sodium *octanesulphonate R* in a mixture of 120 ml of *glacial acetic acid R,* 270 ml of *water R* and 730 ml of *methanol R.*

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 254 nm.

Equilibration With the mobile phase for at least 1 h.

Injection 10 µl.

Run time 6 times the retention time of chlorhexidine.

System suitability Reference solution (a):

— the chromatogram obtained is similar to the chromatogram supplied with *chlorhexidine for performance test CRS* in that the peaks due to impurity A and impurity B precede that due to chlorhexidine; if necessary, adjust the concentration of acetic acid in the mobile phase (increasing the concentration decreases the retention times).

Limits:

— *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (2.5 per cent);

— *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent); disregard any peak with a relative retention time with reference to chlorhexidine of 0.25 or less.

Loss on drying *(2.2.32)*

Maximum 3.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.15 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.140 g in 100 ml of *anhydrous acetic acid R* and titrate with *0.1 M perchloric acid*. Determine the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 15.64 mg of $C_{26}H_{38}Cl_2N_{10}O_4$.

IMPURITIES

Chlorhexidine Gluconate Gel

Chlorhexidine Irrigation Solution

Chlorhexidine Mouthwash

Lidocaine and Chlorhexidine Gel

Ph Eur

DEFINITION

Aqueous solution of 1,1′-(hexane-1,6-diyl)bis[5-(4-chlorophenyl)biguanide] di-D-gluconate.

Content

190 g/l to 210 g/l.

CHARACTERS

Appearance

Almost colourless or pale-yellowish liquid.

Solubility

Miscible with water, with not more than 3 parts of acetone and with not more than 5 parts of ethanol (96 per cent).

IDENTIFICATION

First identification A, B.

Second identification B, C, D.

A. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation To 1 ml add 40 ml of *water R*, cool in iced water, make alkaline to *titan yellow paper R* by adding dropwise, and with stirring, *strong sodium hydroxide solution R* and add 1 ml in excess. Filter, wash the precipitate with *water R* until the washings are free from alkali and recrystallise from *ethanol (70 per cent V/V) R*. Dry at 100-105 °C. Examine the residue.

Comparison *chlorhexidine CRS*.

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dilute 10.0 ml of the preparation to be examined to 50 ml with *water R*.

Reference solution Dissolve 25 mg of *calcium gluconate CRS* in 1 ml of *water R*.

Plate *TLC silica gel G plate R.*

Mobile phase *concentrated ammonia R, ethyl acetate R, water R, ethanol (96 per cent) R* (10:10:30:50 V/V/V/V).

Application 5 µl.

Development Over a path of 10 cm.

Drying At 100 °C for 20 min and allow to cool.

Detection Spray with a 50 g/l solution of *potassium dichromate R* in a 40 per cent *m/m* solution of *sulphuric acid R.*

Results After 5 min, the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. To 1 ml add 40 ml of *water R*, cool in iced water, make alkaline to *titan yellow paper R* by adding dropwise, and with stirring, *strong sodium hydroxide solution R* and add 1 ml in excess. Filter, wash the precipitate with *water R* until the washings are free from alkali and recrystallise from *ethanol (70 per cent V/V) R.* Dry at 100-105 °C. The residue melts *(2.2.14)* at 132 °C to 136 °C.

D. To 0.05 ml add 5 ml of a 10 g/l solution of *cetrimide R*, 1 ml of *strong sodium hydroxide solution R* and 1 ml of *bromine water R;* a deep red colour is produced.

TESTS

Relative density *(2.2.5)*

1.06 to 1.07.

pH *(2.2.3)*

5.5 to 7.0.

Dilute 5.0 ml to 100 ml with *carbon dioxide-free water R*.

Chloroaniline

Maximum 0.25 per cent, calculated with reference to chlorhexidine digluconate at a nominal concentration of 200 g/l.

Dilute 2.0 ml to 100 ml with *water R*. To 10 ml of this solution add 2.5 ml of *dilute hydrochloric acid R* and dilute to 20 ml with *water R*. Add rapidly and with thorough mixing after each addition: 0.35 ml of *sodium nitrite solution R*, 2 ml of a 50 g/l solution of *ammonium sulphamate R,* 5 ml of a 1 g/l solution of *naphthyle thylenediamine dihydrochloride R*, 1 ml of *ethanol (96 per cent) R*; dilute to 50.0 ml with *water R* and allow to stand for 30 min. Any reddish-blue colour in the solution is not more intense than that in a standard prepared at the same time and in the same manner using a mixture of 10.0 ml of a 0.010 g/l solution of *chloroaniline R* in *dilute hydrochloric acid R* and 10 ml of *water R* instead of the dilution of the preparation to be examined.

Related substances

Ph Eur

Chlorinated Lime

General Notices

Action and use

Disinfectant.

DEFINITION

Chlorinated Lime contains not less than 30.0% w/w of available chlorine, Cl.

CHARACTERISTICS

A dull white powder.

Partly soluble in *water* and in *ethanol (96%)*.

IDENTIFICATION

A. Evolves chlorine copiously on the addition of 2M *hydrochloric acid*.

B. When shaken with *water* and filtered, the filtrate yields reaction C characteristic of *calcium salts* and reaction A characteristic of *chlorides*, Appendix VI.

ASSAY

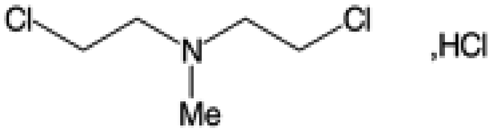
Triturate 4 g with successive small quantities of *water*, dilute to 1000 ml with *water* and shake thoroughly. Mix 100 ml of the resulting suspension with a solution containing 3 g of *potassium iodide* in 100 ml of *water*, acidify with 5 ml of 6M *acetic acid* and titrate the liberated iodine with 0.1M *sodium thiosulphate VS*. Each ml of 0.1M *sodium thiosulphate VS* is equivalent to 3.545 mg of available chlorine, Cl.

STORAGE

On exposure to air Chlorinated Lime becomes moist and gradually decomposes, carbon dioxide being absorbed and chlorine evolved.

Chlormethine Hydrochloride

General Notices



$C_5H_{11}Cl_2N,HCl$ 192.5   *55-86-7*

Action and use

Cytotoxic alkylating agent.

Preparation

Chlormethine Injection

DEFINITION

Chlormethine Hydrochloride is bis(2-chloroethyl)methylamine hydrochloride. It contains not less than 98.0% and not more than 101.0% of $C_5H_{11}Cl_2N,HCl$.

CHARACTERISTICS

A white or almost white crystalline powder or mass; hygroscopic; vesicant.

Very soluble in *water*.

IDENTIFICATION

A. Dissolve 50 mg in 5 ml of *water* and add 1 ml of 5M *sodium hydroxide*. Oily globules are produced which dissolve on warming.

B. Dissolve 50 mg in 5 ml of *water* and add 0.02 ml of *potassium tetraiodomercurate solution*. A cream precipitate is produced.

C. *Melting point*, about 108°, Appendix V A.

ASSAY

To 0.2 g add 15 ml of 1M *ethanolic potassium hydroxide* and 15 ml of *water* and boil under a reflux condenser for 2 hours. Evaporate the solution to half its volume on a water bath, dilute to 150 ml with *water*, add 3 ml of *nitric acid* and 50 ml of 0.1M *silver nitrate VS*, shake vigorously and filter. Wash the residue with *water* and titrate the excess of silver nitrate in the combined filtrate and washings with 0.1M *ammonium thiocyanate VS* using 1 ml of *ammonium iron(III) sulphate solution R2* as indicator. Each ml of 0.1M *silver nitrate VS* is equivalent to 6.418 mg of $C_5H_{11}Cl_2N,HCl$.

STORAGE

Chlormethine Hydrochloride should be stored at a temperature of 8° to 15°.

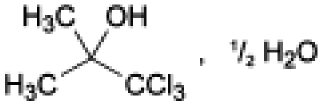
LABELLING

The label states that the contents of the container are strongly vesicant.

Chlorobutanol

General Notices

(Chlorobutanol Hemihydrate, Ph Eur monograph 0383)



$C_4H_7Cl_3O,½H_2O$ 186.5   *6001-64-5*

Action and use

Disinfectant preservative.

Ph Eur

DEFINITION

1,1,1-Trichloro-2-methylpropan-2-ol hemihydrate.

Content

98.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white crystalline powder or colourless crystals, sublimes readily.

Solubility

Slightly soluble in water, very soluble in ethanol (96 per cent), soluble in glycerol (85 per cent).

mp: about 78 °C (without previous drying).

IDENTIFICATION

A. Add about 20 mg to a mixture of 1 ml of *pyridine R* and 2 ml of *strong sodium hydroxide solution R.* Heat in a water-bath and shake. Allow to stand. The pyridine layer becomes red.

B. Add about 20 mg to 5 ml of *ammoniacal silver nitrate solution R* and warm slightly. A black precipitate is formed.

C. To about 20 mg add 3 ml of *1 M sodium hydroxide* and shake to dissolve. Add 5 ml of *water R* and then, slowly, 2 ml of *iodinated potassium iodide solution R*. A yellowish precipitate is formed.

D. Water (see Tests).

TESTS

Solution S

Dissolve 5 g in *ethanol (96 per cent) R* and dilute to 10 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II *(2.2.1)* and not more intensely coloured than reference solution BY_5 *(2.2.2, Method II)*.

Acidity

To 4 ml of solution S add 15 ml of *ethanol (96 per cent) R* and 0.1 ml of *bromothymol blue solution R1*. Not more than 1.0 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to blue.

Chlorides *(2.4.4)*

Maximum 100 ppm.

To 1 ml of solution S add 4 ml of *ethanol (96 per cent) R* and dilute to 15 ml with *water R*. When preparing the standard, replace the 5 ml of *water R* by 5 ml of *ethanol (96 per cent) R*.

Water *(2.5.12)*

4.5 per cent to 5.5 per cent, determined on 0.300 g.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in 20 ml of *ethanol (96 per cent) R*. Add 10 ml of *dilute sodium hydroxide solution R*, heat in a water-bath for 5 min and cool. Add 20 ml of *dilute nitric acid R*, 25.0 ml of *0.1 M silver nitrate* and 2 ml of *dibutyl phthalate R* and shake vigorously. Add 2 ml of *ferric ammonium sulphate solution R2* and titrate with *0.1 M ammonium thiocyanate* until an orange colour is obtained.

1 ml of *0.1 M silver nitrate* is equivalent to 5.92 mg of $C_4H_7Cl_3O$.

STORAGE

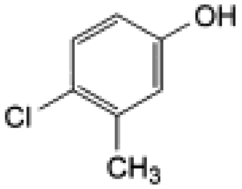
In an airtight container .

Ph Eur

Chlorocresol

General Notices

(Ph Eur monograph 0384)



C_7H_7ClO 142.6 *59-50-7*

Action and use

Antiseptic; antimicrobial preservative.

Ph Eur

DEFINITION

4-Chloro-3-methylphenol.

Content

98.0 per cent to 101.0 per cent.

CHARACTERS

Appearance

White or almost white, crystalline powder or compacted crystalline masses supplied as pellets or colourless or white crystals.

Solubility

Slightly soluble in water, very soluble in ethanol (96 per cent), freely soluble in fatty oils. It dissolves in solutions of alkali hydroxides.

IDENTIFICATION

A. Melting point *(2.2.14)*: 64 °C to 67 °C.

B. To 0.1 g add 0.2 ml of *benzoyl chloride R* and 0.5 ml of *dilute sodium hydroxide solution R*. Shake vigorously until a white, crystalline precipitate is formed. Add 5 ml of *water R* and filter. The precipitate, recrystallised from 5 ml of *methanol R* and dried at 70 °C, melts (*2.2.14*) at 85 °C to 88 °C.

C. To 5 ml of solution S (see Tests) add 0.1 ml of *ferric chloride solution R1*. A bluish colour is produced.

TESTS

Solution S

To 3.0 g, finely powdered, add 60 ml of *carbon dioxide-free water R*, shake for 2 min and filter.

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution BY_6 *(2.2.2, Method II)*.

Dissolve 1.25 g in *ethanol (96 per cent) R* and dilute to 25 ml with the same solvent.

Acidity

To 10 ml of solution S add 0.1 ml of *methyl red solution R*. The solution is orange or red. Not more than 0.2 ml of *0.01 M sodium hydroxide* is required to produce a pure yellow colour.

Related substances

Gas chromatography *(2.2.28)*: use the normalisation procedure.

Test solution Dissolve 1.0 g of the substance to be examined in *acetone R* and dilute to 100 ml with the same solvent.

Column:

— *material*: glass;

— *size*: *l* = 1.80 m, Ø = 3-4 mm;

— *stationary phase*: *silanised diatomaceous earth for gas chromatography R* impregnated with 3-5 per cent *m/m* of *polymethylphenylsiloxane R*.

Carrier gas *nitrogen for chromatography R.*

Flow rate 30 ml/min.

Temperature:

— *column*: 125 °C;

— *injection port*: 210 °C;

— *detector*: 230 °C.

Detection Flame ionisation.

Run time 3 times the retention time of chlorocresol.

Retention time Chlorocresol = about 8 min.

Limits:

— *total*: maximum 1 per cent;

— *disregard limit*: disregard the peak due to the solvent.

Non-volatile matter

Maximum 0.1 per cent.

Evaporate 2.0 g to dryness on a water-bath and dry the residue at 100-105 °C. The residue weighs not more than 2 mg.

ASSAY

In a ground-glass-stoppered flask, dissolve 70.0 mg in 30 ml of *glacial acetic acid R*. Add 25.0 ml of *0.0167 M potassium bromate*, 20 ml of a 150 g/l solution of *potassium bromide R* and 10 ml of *hydrochloric acid R*. Allow to stand protected from light for 15 min. Add 1 g of *potassium iodide R* and 100 ml of *water R.* Titrate with *0.1 M sodium thiosulphate*, shaking vigorously and using *1 ml of starch solution R*, added towards the end of the titration, as indicator. Carry out a blank titration.

1 ml of *0.0167 M potassium bromate* is equivalent to 3.565 mg of C_7H_7ClO.

STORAGE

Protected from light.

Ph Eur

Chloroform

General Notices

$CHCl_3$ 119.4 *67-66-3*

Action and use

General anaesthetic; antimicrobial preservative.

Preparations

Chloroform Spirit

Chloroform Water

Double-strength Chloroform Water

DEFINITION

Chloroform is trichloromethane to which either 1.0 to 2.0% of ethanol or 50 mg per litre of amylene has been added.

CHARACTERISTICS

A colourless, volatile liquid.

Slightly soluble in *water*; miscible with *absolute ethanol* , with *ether*, with fixed and volatile oils and with most organic solvents.

IDENTIFICATION

The *infrared absorption spectrum*, Appendix II A, of the substance being examined after washing with *water* and drying with *anhydrous sodium sulphate* is concordant with the *reference spectrum* of chloroform *(RS 053)*.

TESTS

Distillation range

Not more than 5.0% v/v distils below 60° and the remainder distils at 60° to 62°, Appendix V C.

Weight per ml

1.474 to 1.479 g, Appendix V G.

Acidity or alkalinity

Shake 10 ml with 20 ml of freshly boiled and cooled *water* for 3 minutes and allow to separate. To 5 ml of the aqueous layer add 0.1 ml of neutral *litmus solution*. The colour produced is the same as that produced on adding 0.1 ml of the neutral litmus solution to 5 ml of freshly boiled and cooled *water*.

Chloride

To 5 ml of the aqueous layer obtained in the test for Acidity or alkalinity add 5 ml of *water* and 0.2 ml of *silver nitrate solution*. The solution is *clear*, Appendix IV A.

Free chlorine

To 10 ml of the aqueous layer obtained in the test for Acidity or alkalinity add 1 ml of a 5.0% w/v solution of *zinc iodide* and 0.1 ml of *starch mucilage*. No blue colour is produced.

Aldehyde

Shake 5 ml with 5 ml of *water* and 0.2 ml of *alkaline potassium tetraiodomercurate solution* in a glass-stoppered flask and allow to stand in the dark for 15 minutes. Not more than a pale yellow colour is produced.

Foreign chlorine compounds

Shake 20 ml for 5 minutes with 10 ml of *sulphuric acid* in a glass-stoppered flask previously rinsed with *sulphuric acid*, allow to stand in the dark for 30 minutes and discard the acid layer. Shake 15 ml of the chloroform layer with 30 ml of *water* in a glass-stoppered flask for 3 minutes and allow to separate. To the aqueous layer add 0.2 ml of *silver nitrate solution* and allow to stand in the dark for 5 minutes. No opalescence is produced.

Related substances

Carry out the method for *gas chromatography*, Appendix III B, injecting 0.1 µl of each of the following solutions. Solution (1) contains 0.2% v/v of *carbon tetrachloride*, 0.2% v/v of *1,1,1-trichloroethane* (internal standard), 0.2% v/v of *dichloromethane*, 0.2% v/v of *ethanol*, 0.5% v/v of *bromochloromethane* and 0.2% v/v of the substance being examined in *propan-1-ol*. Solution (2) is the substance being examined. Solution (3) contains 0.2% v/v of the internal standard in the substance being examined. Solution (4) is *propan-1-ol*.

The chromatographic procedure may be carried out using a glass column (4 m × 3.0 mm) packed with *acid-washed kieselguhr* (60 to 100 mesh) coated with 15% w/w of *di-2-cyanoethyl ether* and maintained at 40° with both the inlet port and the detector at 100° and a flow rate of 30 ml per minute for the carrier gas.

The test is not valid unless the *column efficiency*, determined using the chloroform peak in the chromatogram obtained with solution (1), is greater than 700 plates per metre and the total number of plates is greater than 2,500.

In the chromatogram obtained with solution (1) the peaks, in order of emergence, are due to carbon tetrachloride, 1,1,1-trichloroethane, dichloromethane, chloroform, ethanol, bromochloromethane and propan-1-ol (solvent).

Using the chromatogram obtained with solution (4), make any corrections due to the contribution of *secondary peaks* from the solvent to the peaks in the chromatogram obtained with solution (1).

In the chromatogram obtained with solution (3), the ratio of the areas of any peaks due to carbon tetrachloride, dichloromethane and bromochloromethane to the area of the peak due to the internal standard is not greater than the corresponding ratios in the chromatogram obtained with solution (1) and the ratio of the area of any other *secondary peak* that elutes prior to the solvent peak, except for the peak corresponding to ethanol, to the area of the peak due to the internal standard is not greater than the ratio of the area of the peak due to chloroform to the area of the peak due to the internal standard in the chromatogram obtained with solution (1).

Calculate the percentage content of each of the specified impurities and also calculate the percentage content of each of any other impurities assuming the same response per unit volume as for chloroform. The total content of all impurities is not more than 1.0% v/v.

Ethanol

Carry out the following test for Chloroform that contains ethanol. Carry out the method for *gas chromatography*, Appendix III B, injecting 0.1 µl of each of the following solutions. Solution (1) contains 1.0% v/v of *absolute ethanol* and 1.0% v/v of *propan-1-ol* (internal standard) in *water*. Solution (2) is the substance being examined. Solution (3) contains 1.0% v/v of the internal standard in the substance being examined.

The chromatographic procedure described under Related substances may be used.

The test is not valid unless the height of the trough separating the ethanol peak from the chloroform peak in the chromatogram obtained with solution (2) is less than 15% of the height of the ethanol peak.

Calculate the percentage content of ethanol from the areas of the peaks due to ethanol and the internal standard in the chromatograms obtained with solutions (1) and (3).

Non-volatile matter

25 ml, when evaporated to dryness and dried at 105°, leaves not more than 1 mg of residue.

STORAGE

Chloroform should be kept in a well-closed container with a glass stopper or other suitable closure and protected from light.

LABELLING

The label states whether it contains ethanol or amylene.

IMPURITIES

A. carbon tetrachloride,

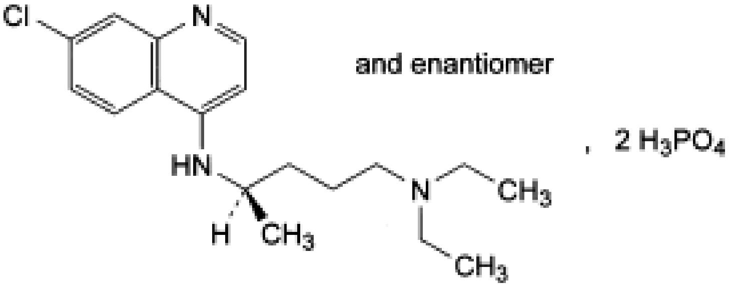
B. dichloromethane,

C. bromochloromethane

Chloroquine Phosphate

General Notices

(Ph Eur monograph 0544)



$C_{18}H_{26}ClN_3,2H_3PO_4$ *515.9* *50-63-5*

Action and use

Antiprotozoal (malaria).

Preparation

Chloroquine Phosphate Tablets

Ph Eur

DEFINITION

Chloroquine phosphate contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of *N*^{4}-(7-chloroquinolin-4-yl)-*N*^{1},*N*^{1}-diethylpentane-1,4-diamine bis (dihydrogen phosphate), calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, hygroscopic, freely soluble in water, very slightly soluble in alcohol and in methanol.

It exists in 2 forms, one of which melts at about 195 °C and the other at about 218 °C.

IDENTIFICATION

First identification *B, D.*

Second identification *A, C, D.*

A. Dissolve 0.100 g in *water R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of this solution to 100.0 ml with *water R.* Examined between 210 nm and 370 nm *(2.2.25)*, the solution shows absorption maxima at 220 nm, 235 nm, 256 nm, 329 nm and 342 nm. The specific absorbances at the maxima are respectively 600 to 660, 350 to 390, 300 to 330, 325 to 355 and 360 to 390.

B. Examine by infrared absorption spectrophotometry *(2.2.24),* comparing with the spectrum obtained with the base isolated from *chloroquine sulphate CRS*. Record the spectra using solutions prepared as follows: dissolve separately 0.1 g of the substance to be examined and 80 mg of the reference substance in 10 ml of *water R*, add 2 ml of *dilute sodium hydroxide solution R* and shake with 2 quantities, each of 20 ml, of *methylene chloride R*; combine the organic layers, wash with *water R*, dry over *anhydrous sodium sulphate R*, evaporate to dryness and dissolve the residues separately, each in 2 ml of *methylene chloride R.*

C. Dissolve 25 mg in 20 ml of *water R* and add 8 ml of *picric acid solution R1*. The precipitate, washed with *water R*, with *alcohol R* and finally with *methylene chloride R*, melts *(2.2.14)* at 206-209 °C.

D. Dissolve 0.1 g in 10 ml of *water R*, add 2 ml of *dilute sodium hydroxide solution R* and shake with 2 quantities, each of 20 ml, of *methylene chloride R*. The aqueous layer, acidified by the addition of *nitric acid R*, gives reaction (b) of phosphates *(2.3.1)*.

TESTS

Solution S

Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution BY_5 or GY_5 *(2.2.2, Method II)*.

pH *(2.2.3)*

The pH of solution S is 3.8 to 4.3.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using silica gel GF_{254} R as the coating substance.

Test solution Dissolve 0.50 g of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dilute 1 ml of the test solution to 100 ml with *water R*.

Reference solution (b) Dilute 5 ml of reference solution (a) to 10 ml with *water R*.

Apply to the plate 2 µl of each solution. Develop over a path of 12 cm using a mixture of 10 volumes of *diethylamine R*, 40 volumes of *cyclohexane R* and 50 volumes of *chloroform R*. Allow the plate to dry in air. Examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (1.0 per cent) and not more than one such spot is more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

Heavy metals *(2.4.8)*

Dissolve 2.0 gin 10 ml of *water R*. Add 5 ml of *concentrated ammonia R* and shake with 40 ml of *methylene chloride R*. Filter the aqueous layer and neutralise the filtrate with *glacial acetic* *acid R*. Heat on a water-bath to eliminate methylene chloride, allow to cool and dilute to 20.0 ml with *water R*. 12 ml of this solution complies with limit test A for heavy metals (20 ppm). Prepare the standard using *lead standard solution (2 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 2.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

Dissolve 0.200 g in 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid* determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 25.79 mg of $C_{18}H_{32}ClN_3O_8P_2$.

STORAGE

In an airtight container, protected from light.

Ph Eur

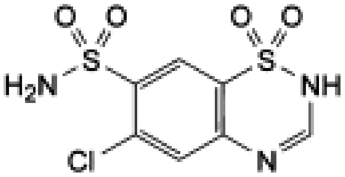
Chlorothiazide

General Notices

(Ph Eur monograph 0385)



$C_7H_6ClN_3O_4S_2$ 295.7 *58-94-6*

Action and use

Diuretic.

Ph Eur

DEFINITION

Chlorothiazide contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of 6-chloro-2*H*-1,2,4-benzothiadiazine-7-sulphonamide 1,1-dioxide, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, very slightly soluble in water, sparingly soluble in acetone, slightly soluble in alcohol. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification *B, C.*

Second identification *A, C, D.*

A. Dissolve 80.0 mg in 100 ml of *0.1 M sodium hydroxide* and dilute to 1000.0 ml with *water R.* Dilute 10.0 ml of the solution to 100.0 ml with *0.01 M sodium hydroxide*. Examined between 220 nm and 320 nm *(2.2.25)*, the solution shows 2 absorption maxima, at 225 nm and 292 nm, and a shoulder at about 310 nm. The specific absorbances at the maxima are 725 to 800 and 425 to 455, respectively.

B. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *chlorothiazide CRS*.

C. Examine by thin-layer chromatography *(2.2.27)*, using *silica gel* GF_{254} *R* as the coating substance.

Test solution Dissolve 25 mg of the substance to be examined in *acetone R* and dilute to 5

ml with the same solvent.

Reference solution Dissolve 25 mg of *chlorothiazide CRS* in *acetone R* and dilute to 5 ml with the same solvent.

Apply to the plate 2 µl of each solution. Develop over a path of 10 cm using *ethyl acetate R*. Dry the plate in a current of air and examine in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. To 0.1 g add a pellet of *sodium hydroxide R* and heat strongly. Gas is evolved which turns *red litmus paper R* blue. After cooling, take up the residue with 10 ml of *dilute hydrochloric acid R*. Gas is evolved which turns lead *acetate paper R* black.

TESTS

Solution S

To 1.0 g of the powdered substance to be examined add 50 ml of *water R*, shake for 2 min and filter.

Acidity or alkalinity

To 10 ml of solution S add 0.2 ml of *0.01 M sodium hydroxide* and 0.15 ml of *methyl red solution R*. The solution is yellow. Not more than 0.4 ml of *0.01 M hydrochloric acid* is required to change the colour of the indicator to red.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel G R* as the coating substance.

Test solution Dissolve 25 mg of the substance to be examined in *acetone R* and dilute to 5 ml with the same solvent.

Reference solution Dilute 1 ml of the test solution to 100 ml with *acetone R.*

Apply to the plate 5 µl of each solution. Develop over a path of 15 cm using a mixture of 15 volumes of *2-propanol R* and 85 volumes of *ethyl acetate R*. Dry the plate in a current of air until the solvents have evaporated (about 10 min) and spray with a mixture of equal volumes of *alcoholic solution of sulphuric acid R* and *alcohol R*; use about 10 ml for a plate 200 mm square and spray in small portions, allowing the solvent to evaporate each time to avoid excessive wetting. Heat at 100-105 °C for 30 min and immediately place the plate above, but not in contact with, 10 ml of a saturated solution of *sodium nitrite R* in a glass tank. Carefully add 0.5 ml of *sulphuric acid R* to the sodium nitrite solution, close the tank, and allow to stand for 15 min. Remove the plate, heat in a ventilated oven at 40 °C for 15 min and spray with 3 quantities, each of 5 ml, of a freshly prepared 5 g/l solution of *naphthylethylenediamine dihydrochloride R* in *alcohol R.* Examine the plate by transmitted light. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (1.0 per cent).

Chlorides *(2.4.4)*

15 ml of solution S complies with the limit test for chlorides (160 ppm).

Heavy metals *(2.4.8)*

1.0 g complies with limit test C for heavy metals (20 ppm). Prepare the standard using 2 ml of

lead standard solution (10 ppm Pb) R.

Loss on drying ***(2.2.32)***

Not more than 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

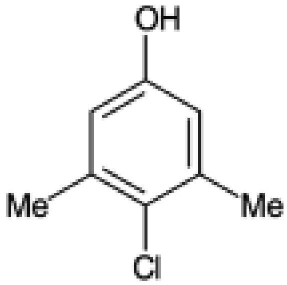
Dissolve 0.250 g in 50 ml of *dimethylformamide R*. Titrate with *0.1 M tetrabutylammonium hydroxide* in 2-propanol determining the end-point potentiometrically *(2.2.20)* at the first point of inflexion. Carry out a blank titration.

1 ml of *0.1 M tetrabutylammonium hydroxide* in 2-propanol is equivalent to 29.57 mg of $C_7H_6ClN_3O_4S_2$.

Ph Eur

Chloroxylenol

General Notices



C_8H_9ClO 156.6 *88-04-0*

Action and use

Antiseptic.

Preparation

Chloroxylenol Solution

DEFINITION

Chloroxylenol is 4-chloro-3,5-xylenol. It contains not less than 98.0% and not more than 103.0% of C_8H_9ClO.

CHARACTERISTICS

White or cream crystals or crystalline powder. It is volatile in steam.

Very slightly soluble in *water*; freely soluble in *ethanol (96%)*; soluble in *ether*, in terpenes and in fixed oils. It dissolves in solutions of the alkali hydroxides.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of chloroxylenol *(RS 055)*.

B. Dissolve 0.1 g in 5 ml of *chloroform* and add 0.5 ml of a filtered 1% w/v solution of *anhydrous iron(III) chloride* in *chloroform* and 0.1 ml of *pyridine*. A blue colour is produced.

C. To 5 ml of a saturated solution in *water* add 0.5 ml of *iron(III) chloride solution R1*. No blue colour is produced.

D. Mix 50 mg with 0.5 g of *anhydrous sodium carbonate* and ignite strongly, cool, boil the residue with 5 ml of *water*, acidify with *nitric acid*, filter and add *silver nitrate solution*. A white precipitate is produced.

TESTS

Melting point

114° to 116°, Appendix V A.

Related substances

Carry out the method for *gas chromatography*, Appendix III B, using solutions in *chloroform* containing (1) 2.0% w/v of the substance being examined and (2) 2.0% w/v of the substance being examined and 0.040% w/v of *4-chloro*-o-*cresol* (internal standard).

The chromatographic procedure may be carried out using a glass column (1.5 m × 4 mm) packed with *acid-washed diatomaceous support* (80 to 100 mesh) coated with 3% w/w of polyethylene glycol (Carbowax 20M is suitable) and maintained at 160°.

In the chromatogram obtained with solution (2) the sum of the areas of any *secondary peaks* is not greater than the area of the peak due to the internal standard.

ASSAY

Dissolve 70 mg in 30 ml of *glacial acetic acid*, add 25 ml of 0.0167M *potassium bromate VS*, 20 ml of a 15% w/v solution of *potassium bromide* and 10 ml of *hydrochloric acid*, stopper the flask and allow to stand protected from light for 15 minutes. Add 1 g of *potassium iodide* and 100 ml of *water* and titrate with 0.1M *sodium thiosulphate VS*, shaking vigorously and using 1 ml of *starch solution*, added towards the end of the titration, as indicator. Repeat the operation without the substance being examined. The difference between the titrations represents the amount of potassium bromate required. Each ml of 0.0167M *potassium bromate VS* is equivalent to 3.915 mg of C_8H_9ClO.

DEFINITION

(3*RS*)-3-(4-Chlorophenyl)-*N*,*N*-dimethyl-3-(pyridin-2-yl)propan-1-amine hydrogen (*Z*)-butenedioate.

Content

98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water, soluble in ethanol (96 per cent).

IDENTIFICATION

A. Melting point (*2.2.14*): 130 °C to 135 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison chlorphenamine maleate CRS.

C. Optical rotation (see Tests).

TESTS

Solution S

Dissolve 2.0 g in *water R* and dilute to 20.0 ml with the same solvent.

Appearance of solution

Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution BY_6 (*2.2.2, Method II*).

Optical rotation (*2.2.7*)

- 0.10 ° to + 0.10 °, determined on solution S.

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 0.100 g of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dilute 0.5 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 10.0 ml with the mobile phase.

Reference solution (c) Dissolve 5 mg of *chlorphenamine impurity C CRS* in 5 ml of the test solution and dilute to 50.0 ml with the mobile phase. Dilute 2 ml of this solution to 20 ml with the mobile phase.

Reference solution (d) Dissolve 5 mg of *2,2′-dipyridylamine R* (impurity B) in the mobile phase and dilute to 100 ml with the mobile phase.

Reference solution (e) Dissolve the contents of a vial of *chlorphenamine impurity A CRS* in 2 ml of the test solution. Sonicate for 5 min.

Column:

— *size:* *l* = 0.30 m, Ø = 3.9 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (10 µm).

Mobile phase Mix 20 volumes of *acetonitrile R* and 80 volumes of a 8.57 g/l solution of *ammonium dihydrogen phosphate R* previously adjusted to pH 3.0 with *phosphoric acid R.*

Flow rate 1.2 ml/min.

Detection Spectrophotometer at 225 nm.

Injection 20 µl.

Run time 3.5 times the retention time of chlorphenamine.

Relative retention With reference to chlorphenamine (retention time = about 11 min): maleic acid = about 0.2; impurity A = about 0.3; impurity B = about 0.4; impurity C = about 0.9; impurity D = about 3.0.

System suitability Reference solution (c):

— *resolution*: minimum 1.5 between the peaks due to impurity C and chlorphenamine.

Limits:

— *correction factors:* for the calculation of contents, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 1.5; impurity B = 1.4;

— *impurity A*: not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *impurities B, C, D*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *unspecified impurities*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard the peaks due to the blank and maleic acid.

Heavy metals (*2.4.8*)

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml *of lead standard solution (10 ppm Pb) R.*

Loss on drying (*2.2.32*)

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Sulphated ash (*2.4.14*)

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 25 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 19.54 mg of $C_{20}H_{23}ClN_2O_4$.

DEFINITION

3-(2-Chloro-10*H*-phenothiazin-10-yl)-*N*,*N*-dimethylpropan-1-amine hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Very soluble in water, freely soluble in ethanol (96 per cent).

It decomposes on exposure to air and light.

mp

About 196 °C.

IDENTIFICATION

First identification *B, D.*

Second identification *A, C, D.*

A. Ultraviolet and visible absorption spectrophotometry *(2.2.25). Prepare the solutions protected from bright light and measure the absorbances immediately*.

Test solution Dissolve 50.0 mg in a 10.3 g/l solution of *hydrochloric acid R* and dilute to 500.0 ml with the same solution. Dilute 5.0 ml of the solution to 100.0 ml with a 10.3 g/l solution of *hydrochloric acid R.*

Spectral range 230-340 nm.

Absorption maximum At 254 nm and 306 nm.

Specific absorbance at the absorption maximum
— at 254 nm: 890 to 960.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *chlorpromazine hydrochloride CRS.*

C. Identification test for phenothiazines by thin-layer chromatography *(2.3.3):* use *chlorpromazine hydrochloride CRS* to prepare the reference solution.

D. It gives reaction (b) of chlorides (*2.3.1*).

TESTS

pH *(2.2.3)*

3.5 to 4.5. *Carry out the test protected from light and use freshly prepared solutions.*

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Related substances

Liquid chromatography (*2.2.29*). *Carry out the test protected from light and use freshly prepared solutions.*

Test solution Dissolve 40 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dissolve 4 mg of *chlorpromazine impurity D CRS* in the mobile phase and dilute to 10.0 ml with the mobile phase. To 1 ml of this solution add 1 ml of the test solution and dilute to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 20.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (c) Dissolve 4.0 mg of *chlorpromazine impurity A CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (d) Dissolve 4 mg of *promazine hydrochloride CRS* (impurity C) and 4.0 mg of *chlorpromazine impurity E CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Column:

— *size*: *l* = 0.25 m, Ø = 4.0 mm,

— *stationary phase: base-deactivated octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 0.2 volumes of *thiodiethylene glycol R* with 50 volumes of *acetonitrile R* and 50 volumes of a 0.5 per cent *V/V* solution of *trifluoroacetic acid R* previously adjusted to pH 5.3 with *tetramethylethylenediamine R*.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 10 µl.

Run time 4 times the retention time of chlorpromazine.

Relative retention

With reference to chlorpromazine (retention time = about 8 min): impurity A = about 0.4; impurity B = about 0.5; impurity C = about 0.7; impurity D = about 0.9; impurity E = about 3.4.

System suitability Reference solution (a):

— *resolution*: minimum 2.0 between the peaks due to impurity D and chlorpromazine.

Limits:

— *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.1 per cent);

— *impurities B, C, D*: for each impurity, not more than 0.6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

— *impurity E*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.1 per cent);

— *any other impurity*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *total:* not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 10 ppm.1.0 g complies with test C. Prepare the reference solution using 1 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in a mixture of 5.0 ml of *0.1 M hydrochloric acid* and 50 ml of *ethanol (96 per cent) R*. Carry out a potentiometric titration *(2.2.20)*, using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 ml of 0*.1 M sodium hydroxide* is equivalent to 35.53 mg of $C_{17}H_{20}Cl_2N_2S$.

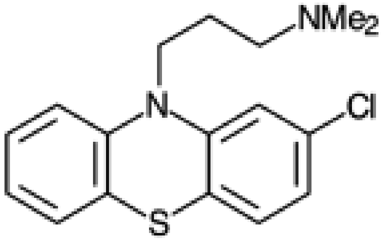
Ph Eur

Chlorpromazine

General Notices



$C_{17}H_{19}ClN_2S$ 318.9 *50-53-3*

Action and use

Dopamine receptor antagonist; neuroleptic.

Preparation

Chlorpromazine Suppositories

DEFINITION

Chlorpromazine is [3-(2-chlorophenothiazin-10-yl)propyl]-dimethylamine. It contains not less than 99.0% and not more than 101.0% of $C_{17}H_{19}ClN_2S$, calculated with reference to the dried substance.

CHARACTERISTICS

A white or creamy white powder or waxy solid.

Practically insoluble in *water*; freely soluble in *ethanol (96%)* and in *ether*.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of chlorpromazine *(RS 056)*.

B. Complies with the test for *identification of phenothiazines*, Appendix III A, using *chlorpromazine hydrochloride EPCRS* to prepare solution (2).

TESTS

Melting point

56° to 58°, Appendix V A.

Related substances

Complies with the test for *related substances in phenothiazines*, Appendix III A, using *mobile phase A*.

Loss on drying

When dried to constant weight over *phosphorus pentoxide* at a pressure not exceeding 0.7 kPa, loses not more than 0.5% of its weight. Use 1 g.

Sulphated ash

Not more than 0.1%, Appendix IX A.

ASSAY

Dissolve 0.8 g in 300 ml of *acetone* and carry out Method I for *non-aqueous titration*, Appendix VIII A, using 3 ml of a saturated solution of *methyl orange* in *acetone* as indicator. Each ml of 0.1M *perchloric acid VS* is equivalent to 31.89 mg of $C_{17}H_{19}ClN_2S$.

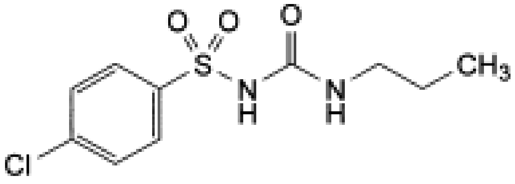
STORAGE

Chlorpromazine should be protected from light.

Chlorpropamide

General Notices

(Ph Eur monograph 1087)



$C_{10}H_{13}ClN_2O_3S$ 276.7 *94-20-2*

Action and use

Inhibition of ATP-dependent potassium channels (sulfonylurea); treatment of diabetes mellitus.

Preparation

Chlorpropamide Tablets

Ph Eur

DEFINITION

Chlorpropamide contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 1-[(4-chlorophenyl)sulphonyl]-3-propylurea, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, practically insoluble in water, freely soluble in acetone and in methylene chloride, soluble in alcohol. It dissolves in dilute solutions of alkali hydroxides.

It shows polymorphism (*5.9*).

IDENTIFICATION

First identification C, D.

Second identification A, B, D.

A. Melting point *(2.2.14)*: 126 °C to 130 °C.

B. Dissolve 0.10 g in *methanol R* and dilute to 50.0 ml with the same solvent. Dilute 5.0 ml of the solution to 100.0 ml with *0.01 M hydrochloric acid*. Dilute 10.0 ml of the solution to 100.0 ml with *0.01 M hydrochloric acid*. Examined between 220 nm and 350 nm *(2.2.25)*, the solution shows an absorption maximum at 232 nm. The specific absorption at the maximum is 570 to 630.

C. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *chlorpropamide CRS*. Examine the substances prepared as discs. If the spectra obtained show differences, dissolve the substance to be examined and the reference substance in *methylene chloride R*, evaporate to dryness and record the new spectra using the residues.

D. Heat 0.1 g with 2 g of *anhydrous sodium carbonate R* until a dull red colour appears for 10 min. Allow to cool, extract the residue with about 5 ml of *water R*, dilute to 10 ml with *water R* and filter. The solution gives the reaction (a) of chloride *(2.3.1)*.

TESTS

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using a suitable *silica gel* as the coating substance.

Test solution Dissolve 0.50 g of the substance to be examined in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 15 mg of *4-chlorobenzenesulphonamide R* (chlorpropamide impurity A) in *acetone R* and dilute to 100 ml with the same solvent.

Reference solution (b) Dissolve 15 mg of *chlorpropamide impurity B CRS* in *acetone R* and dilute to 100 ml with the same solvent.

Reference solution (c) Dilute 0.3 ml of the test solution to 100 ml with *acetone R*.

Reference solution (d) Dilute 5 ml of reference solution (c) to 15 ml with *acetone R*.

Reference solution (e) Dissolve 0.10 g of the substance to be examined, 5 mg of *4-chlorobenzenesulphonamide R* and 5 mg of *chlorpropamide impurity B CRS* in *acetone R* and dilute to 10 ml with the same solvent.

Apply to the plate 5 µl of each solution. Develop over a path of 15 cm using a mixture of 11.5 volumes of *concentrated ammonia R,* 30 volumes of *cyclohexane R*, 50 volumes of *methanol R* and 100 volumes of *methylene chloride R*. Allow the plate to dry in a current of cold air, heat at 110 °C for 10 min. At the bottom of a chromatographic tank, place an evaporating dish containing a mixture of 1 volume of *hydrochloric acid R*, 1 volume of *water R* and 2 volumes of a 50 g/l solution of *potassium permanganate R*, close the tank and allow to stand for 15 min. Place the dried hot plate in the tank and close the tank. Leave the plate in contact with the chlorine vapour for 2 min. Withdraw the plate and place it in a current of cold air until the excess of chlorine is removed and an area of coating below the points of application does not give a blue colour with a drop of *potassium iodide* and *starch solution R*. Spray with *potassium iodide* and *starch solution R.* In the chromatogram obtained with the test solution: any spot corresponding to impurity A is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.3 per cent); any spot corresponding to impurity B is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.3 per cent); any spot, apart from the principal spot and any spot corresponding to impurity A and B, is not more intense than the spot in the chromatogram obtained with reference solution (c) (0.3 per cent); not more than two such spots are more intense than the spot in the chromatogram obtained with reference solution (d) (0.1 per cent). The test is not valid unless the chromatogram obtained with reference solution (e) shows three clearly separated spots with approximate R_F values of 0.4, 0.6 and 0.9 corresponding to chlorpropamide, impurity A and impurity B respectively.

Heavy metals *(2.4.8)*

Dissolve 2.0 g in a mixture of 15 volumes of *water R* and 85 volumes of *acetone R* and dilute to 20 ml with the same mixture of solvents. 12 ml of solution complies with limit test B for heavy metals (20 ppm). Prepare the standard using lead standard solution (2 ppm Pb) prepared by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 15 volumes of *water R* and 85 volumes of *acetone R*.

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 100 °C to 105 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

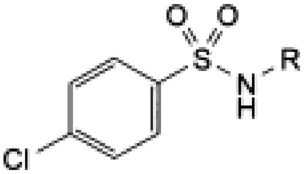
Dissolve 0.250 g in 50 ml of *alcohol R* previously neutralised using *phenolphthalein solution R1* as indicator and add 25 ml of *water R*. Titrate with *0.1 M sodium hydroxide* until a pink colour is obtained.

1 ml of *0.1 M sodium hydroxide* is equivalent to 27.67 mg of $C_{10}H_{13}ClN_2O_3S$.

STORAGE

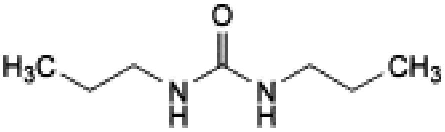
Store protected from light.

IMPURITIES



A. R = H: 4-chlorobenzenesulphonamide,

C. R = $CO-NH_2$: [(4-chlorophenyl)sulphonyl]urea.



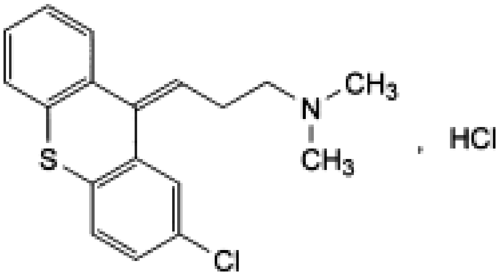
B. 1,3-dipropylurea,

Ph Eur

Chlorprothixene Hydrochloride

General Notices

(Ph Eur monograph 0815)



$C_{18}H_{18}ClNS,HCl$ 352.3 *6469-93-8*

Action and use

Dopamine receptor antagonist; neuroleptic.

Ph Eur

DEFINITION

(*Z*)-3-(2-Chloro-9*H*-thioxanthen-9-ylidene)-*N*,*N*-dimethylpropan-1-amine hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Soluble in water and in alcohol, slightly soluble in methylene chloride.

mp

About 220 °C.

IDENTIFICATION

First identification A, E.

Second identification B, C, D, E.

A. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Dissolve 0.25 g in 10 ml of *water R*. Add 1 ml of *dilute sodium hydroxide solution R.* Shake with 20 ml of *methylene chloride R*. Separate the organic layer and wash with 5 ml of *water R*. Evaporate the organic layer to dryness and dry the residue at 40-50 °C. Examine the residues prepared as discs.

Comparison *chlorprothixene hydrochloride CRS*.

B. Dissolve 0.2 g in a mixture of 5 ml of *dioxan R* and 5 ml of a 1.5 g/l solution of *sodium nitrite R*. Add 0.8 ml of *nitric acid R*. After 10 min add the solution to 20 ml of *water R*. 1 h later filter the precipate formed. The filtrate is used immediately for identification test C. Dissolve the precipitate by warming in about 15 ml of *alcohol R* and add the solution to 10 ml of *water R*. Filter and dry the precipitate at 100-105 °C for 2 h. The melting point (*2.2.14*) is 152 °C to 154 °C.

C. To 1 ml of the filtrate obtained in identification test B, add 0.2 ml of a suspension of 50 mg of *fast red B salt R* in 1 ml of *alcohol R*. Add 1 ml of *0.5 M alcoholic potassium hydroxide*. A dark red colour is produced. Carry out a blank test.

D. Dissolve about 20 mg in 2 ml of *nitric acid R*. A red colour is produced. Add 5 ml of *water R* and examine in ultraviolet light at 365 nm. The solution shows green fluorescence.

E. It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 0.25 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

4.4 to 5.2 for solution S.

Related substances

Liquid chromatography *(2.2.29)*. *Carry out the test protected from bright light.*

Test solution Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 20.0 ml with the mobile phase.

Reference solution (a) Dissolve 20.0 mg of *chlorprothixene hydrochloride CRS* (with a defined content of *E*-isomer) in the mobile phase and dilute to 20.0 ml with the mobile phase.

Reference solution (b) Dilute 2.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 3.0 ml of this solution to 20.0 ml with the mobile phase.

Column:

— *size*: *l* = 0.12 m, Ø = 4.0 mm,

— *stationary phase:* base-deactivated *octadecylsilyl silica gel for chromatography R* (3 µm or 5 µm).

Mobile phase Solution containing 6.0 g/l of *potassium dihydrogen phosphate R*, 2.9 g/l of *sodium laurilsulfate R* and 9 g/l of *tetrabutylammonium bromide R* in a mixture of 50 volumes of *methanol R*, 400 volumes of *acetonitrile R* and 550 volumes of *distilled water R.*

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 254 nm.

Equilibration For about 30 min with the mobile phase.

Injection 20 µl.

Run time Twice the retention time of chlorprothixene.

Relative retention With reference to chlorprothixene: impurity E = about 1.55.

System suitability Reference solution (a):

— *retention time*: chlorprothixene = about 10 min,

— *relative retention* with reference to chlorprothixene: *E*-isomer = about 1.35.

Limits:

— *E-isomer*: not more than 2.0 per cent, calculated from the area of the corresponding peak in the chromatogram obtained with reference solution (a) and taking into account the assigned content of this isomer in *chlorprothixene hydrochloride CRS,*

— *impurity E*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent taking into account a response factor of 3),

— *any other impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent),

— *total* of any other impurity: not more than 2.33 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.7 per cent),

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.03 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with limit test F. Prepare the standard using 2 ml *of lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C for 3 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in a mixture of 5.0 ml of *0.01 M hydrochloric acid* and 50 ml of *alcohol R.* Carry out a potentiometric titration *(2.2.20)*, using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 35.23 mg of $C_{18}H_{19}Cl_2NS$.

STORAGE

16 - 21	65 → 50	35 → 50
21 - 35	50	50
35 - 45	50 → 65	50 → 35

Flow rate 1.4 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 20 µl of test solution (a) and reference solutions (a) and (b).

Identification of impurities Use the chromatogram obtained with reference solution (b) and the chromatogram supplied with *chlortalidone for peak identification CRS* to identify the peaks due to impurities B, G and J.

Relative retention With reference to chlortalidone (retention time = about 7 min): impurity B = about 0.7; impurity J = about 0.9; impurity G = about 6.

System suitability Reference solution (b):

— *resolution*: minimum 1.5 between the peaks due to impurity J and chlortalidone.

Limits:

— *impurity B*: not more than 7 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.7 per cent);

— *impurity J*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— impurity G: not more than 2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than 12 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.2 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Chlorides *(2.4.4)*

Maximum 350 ppm.

Triturate 0.3 g finely, add 30 ml of *water R*, shake for 5 min and filter. 15 ml of the filtrate complies with the test. Prepare the standard using 10 ml of *chloride standard solution (5 ppm Cl) R.*

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

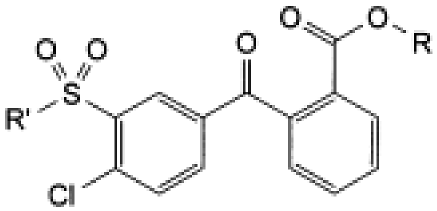
Injection 20 µl of test solution (b) and reference solution (c).

Calculate the percentage content of $C_{14}H_{11}ClN_2O_4S$ from the declared content of *chlortalidone CRS*.

IMPURITIES

Specified impurities B, G, J.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): A, C, D, E, F, H, I.*

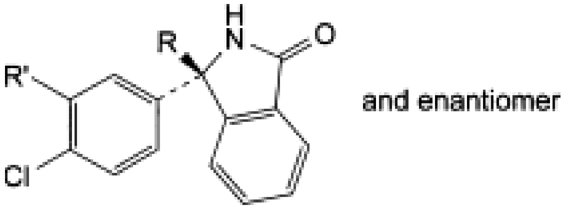


A. R = H, R′ = OH: 2-(4-chloro-3-sulphobenzoyl)benzoic acid,

B. R = H, R′ = NH_2: 2-(4-chloro-3-sulphamoylbenzoyl)benzoic acid,

C. R = C_2H_5, R′ = NH_2: ethyl 2-(4-chloro-3-sulphamoylbenzoyl)benzoate,

I. R = $CH(CH_3)_2$, R′ = NH_2: 1-methylethyl 2-(4-chloro-3-sulphamoylbenzoyl)benzoate,

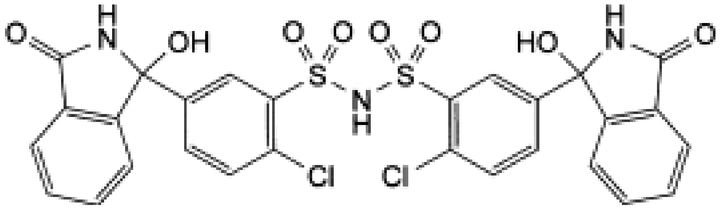


D. R = OC_2H_5, R′ = SO_2-NH_2: 2-chloro-5-[(1*RS*)-1-ethoxy-3-oxo-2,3-dihydro-1*H*-isoindol-1-yl] benzenesulphonamide,

E. R = H, R′ = SO_2-NH_2: 2-chloro-5-[(1*RS*)-3-oxo-2,3-dihydro-1*H*-isoindol-1-yl] benzenesulphonamide,

G. R = OH, R′ = Cl: (3*RS*)-3-(3,4-dichlorophenyl)-3-hydroxy-2,3-dihydro-1*H*-isoindol-1-one,

H. R = $OCH(CH_3)_2$, R′ = SO_2-NH_2: 2-chloro-5-[(1*RS*)-1-(1-methylethoxy)-3-oxo-2,3-dihydro-1*H*-isoindol-1-yl]benzenesulphonamide,



F. bis[2-chloro-5-(1-hydroxy-3-oxo-2,3-dihydro-1*H*-isoindol-1-yl)benzenesulphonyl]amine,

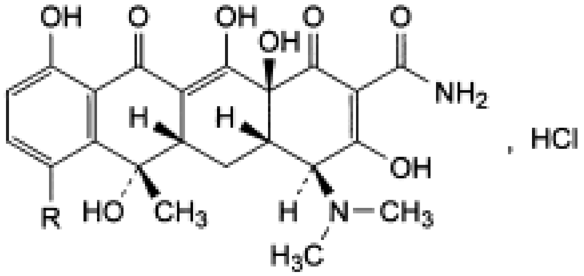
J. impurity of unknown structure with a relative retention of about 0.9.

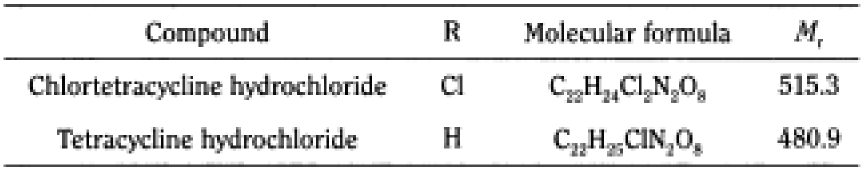
Ph Eur

Chlortetracycline Hydrochloride

General Notices

(Ph Eur monograph 0173)





Compound	R	Molecular formula	M_r
Chlortetracycline hydrochloride	Cl	$C_{22}H_{24}Cl_2N_2O_8$	515.3
Tetracycline hydrochloride	H	$C_{22}H_{25}ClN_2O_8$	480.9

Action and use

Tetracycline antibacterial.

Ph Eur

DEFINITION

Mixture of antibiotics, the main component being the hydrochloride of (4*S*,4a*S*,5a*S*,6*S*,12a*S*)-7-chloro-4-(dimethylamino)-3,6,10,12,12a-pentahydroxy-6-methyl-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracene-2-carboxamide (chlortetracycline hydrochloride), a substance produced by the growth of certain strains of *Streptomyces aureofaciens* or obtained by any other means.

Content:

— $C_{22}H_{24}Cl_2N_2O_8$: minimum 89.5 per cent (anhydrous substance),

— $C_{22}H_{25}ClN_2O_8$: maximum 8.0 per cent (anhydrous substance),

— 94.5 per cent to 102.0 per cent for the sum of the contents of chlortetracycline hydrochloride and tetracycline hydrochloride (anhydrous substance).

CHARACTERS

Appearance

Yellow powder.

Solubility

Slightly soluble in water and in alcohol. It dissolves in solutions of alkali hydroxides and carbonates.

IDENTIFICATION

A. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 5 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 5 mg of *chlortetracycline hydrochloride CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 5 mg of *chlortetracycline hydrochloride CRS*, 5 mg of *doxycycline R* and 5 mg of *demeclocycline hydrochloride R* in *methanol R* and dilute to 10 ml with the same solvent.

Plate *TLC octadecylsilyl silica gel* F_{254} *plate R.*

Mobile phase Mix 20 volumes of *acetonitrile R*, 20 volumes of *methanol R* and 60 volumes of a 63 g/l solution of *oxalic acid R* previously adjusted to pH 2 with *concentrated ammonia R*.

Application 1 µl.

Development Over 3/4 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability The chromatogram obtained with reference solution (b) shows 3 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

B. To about 2 mg add 5 ml of *sulphuric acid R*. A deep blue colour develops which becomes bluish-green. Add the solution to 2.5 ml of *water R*. The colour becomes brownish.

C. It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

pH *(2.2.3)*

2.3 to 3.3.

Dissolve 0.1 g in 10 ml of *carbon dioxide-free water R*, heating slightly.

Specific optical rotation *(2.2.7)*

- 235 to - 250 (anhydrous substance).

Dissolve 0.125 g in *water R* and dilute to 50.0 ml with the same solvent.

Absorbance *(2.2.25)*

Maximum 0.40 at 460 nm.

Dissolve 0.125 g in *water R* and dilute to 25.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the solutions immediately before use*.

Test solution Dissolve 25.0 mg of the substance to be examined in *0.01 M hydrochloric acid* and dilute to 25.0 ml with the same acid.

Reference solution (a) Dissolve 25.0 mg of *chlortetracycline hydrochloride CRS* in *0.01 M hydrochloric acid* and dilute to 25.0 ml with the same acid.

Reference solution (b) Dissolve 10.0 mg of *4-epichlortetracycline hydrochloride CRS* in *0.01 M hydrochloric acid* and dilute to 25.0 ml with the same acid.

Reference solution (c) Dissolve 20.0 mg of *tetracycline hydrochloride CRS* in *0.01 M hydrochloric acid* and dilute to 25.0 ml with the same acid.

Reference solution (d) Mix 5.0 ml of reference solution (a) and 10.0 ml of reference solution (b) and dilute to 25.0 ml with *0.01 M hydrochloric acid*.

Reference solution (e) Mix 5.0 ml of reference solution (b) and 5.0 ml of reference solution (c) and dilute to 50.0 ml with *0.01 M hydrochloric acid*.

Reference solution (f) Dilute 1.0 ml of reference solution (c) to 20.0 ml with *0.01 M hydrochloric acid*. Dilute 5.0 ml of this solution to 200.0 ml with *0.01 M hydrochloric acid*.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm,

— *stationary phase: octylsilyl silica gel for chromatography R* (5 µm),

— *temperature*: 35 °C.

Mobile phase To 500 ml of *water R*, add 50 ml of *perchloric acid solution R*, shake and add 450 ml of *dimethyl sulphoxide R,*

Flow rate 1 ml/min.

Detection Spectrophotometer at 280 nm.

Injection 20 µl; inject the test solution and reference solutions (d), (e) and (f).

System suitability Reference solution (d):

— *resolution*: minimum 2.0 between the peaks due to impurity A and to chlortetracycline; if necessary, adjust the dimethyl sulphoxide content in the mobile phase,

— *symmetry factor*: maximum 1.3 for the peak due to chlortetracycline.

Limits:

— *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (e) (4.0 per cent),

— *total of other impurities eluting between the solvent peak and the peak corresponding to chlortetracycline:* not more than 0.25 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (e) (1.0 per cent),

— *disregard limit*: area of the principal peak in the chromatogram obtained with reference solution (f) (0.1 per cent).

Heavy metals *(2.4.8)*

Maximum 50 ppm.

0.5 g complies with limit test C. Prepare the standard using 2.5 ml of *lead standard solution (10 ppm Pb) R.*

Water *(2.5.12)*

Maximum 2.0 per cent, determined on 0.300 g.

Sulphated ash *(2.4.14)*

Maximum 0.5 per cent, determined on 1.0 g.

Bacterial endotoxins *(2.6.14)*

Less than 1 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography *(2.2.29*) as described in the test for related substances with the following modification.

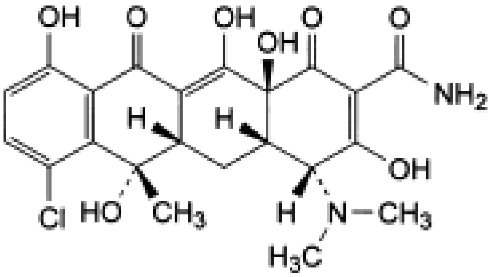
Injection Test solution and reference solutions (a) and (e).

Calculate the percentage content of $C_{22}H_{24}Cl_2N_2O_8$ using the chromatogram obtained with reference solution (a). Calculate the percentage content of $C_{22}H_{25}ClN_2O_8$ using the chromatogram obtained with reference solution (e).

STORAGE

Protected from light. If the substance is sterile, store in a sterile, airtight, tamper-proof container .

IMPURITIES



A. (4*R*,4a*S*,5a*S*,6*S*,12a*S*)-7-chloro-4-(dimethylamino)-3,6,10,12,12a-pentahydroxy-6-methyl-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracene-2-carboxamide (4-epichlortetracycline),

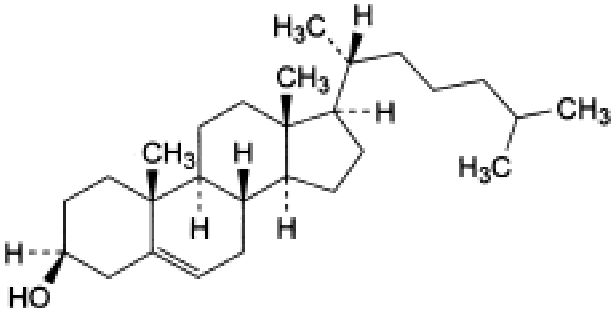
B. demeclocycline.

Ph Eur

Cholesterol

General Notices

(Ph Eur monograph 0993)



$C_{27}H_{46}O$ 386.7 *57-88-5*

Action and use

Excipient.

Ph Eur

DEFINITION

Cholest-5-en-3β-ol.

Content:

— *cholesterol*: minimum 95.0 per cent (dried substance);

— *total sterols*: 97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, sparingly soluble in acetone and in ethanol (96 per cent).

It is sensitive to light.

IDENTIFICATION

A. Melting point *(2.2.14):* 147 °C to 150 °C.

B. Thin-layer chromatography *(2.2.27)*. *Prepare the solutions immediately before use*.

Test solution Dissolve 10 mg of the substance to be examined in ethylene chloride R and dilute to 5 ml with the same solvent.

Reference solution Dissolve 10 mg of *cholesterol CRS* in *ethylene chloride R* and dilute to 5 ml with the same solvent.

Plate *TLC silica gel G plate R*.

Mobile phase *ethyl acetate R, toluene R* (33:66 *V/V*).

Application 20 µl.

Development Immediately, protected from light, over a path of 15 cm.

Drying In air.

Detection Spray 3 times with *antimony trichloride solution R*; examine within 3-4 min.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. Dissolve about 5 mg in 2 ml of *methylene chloride R*. Add 1 ml of *acetic anhydride R,* 0.01 ml of *sulphuric acid R* and shake. A pink colour is produced which rapidly changes to red, then to blue and finally to brilliant green.

TESTS

Solubility in ethanol (96 per cent)

In a stoppered flask, dissolve 0.5 g in 50 ml of *ethanol (96 per cent) R* at 50 °C. Allow to stand for 2 h. No deposit or turbidity is formed.

Acidity

Dissolve 1.0 g in 10 ml of *ether R*, add 10.0 ml of *0.1 M sodium hydroxide* and shake for about 1 min. Heat gently to eliminate ether and then boil for 5 min. Cool, add 10 ml of *water R* and *0.1 ml of phenolphthalein solution R* as indicator and titrate with *0.1 M hydrochloric acid* until the pink colour just disappears, stirring the solution vigorously throughout the titration. Carry out a blank titration. The difference between the volumes of *0.1 M hydrochloric acid* required to change the colour of the indicator in the blank and in the test is not more than 0.3 ml.

Loss on drying *(2.2.32)*

Maximum 0.3 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C for 4 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Gas chromatography *(2.2.28)*.

Internal standard solution Dissolve 0.100 g of *pregnenolone isobutyrate CRS* in *heptane R* and dilute to 100.0 ml with the same solvent.

Test solution Dissolve 25.0 mg of the substance to be examined in the internal standard solution and dilute to 25.0 ml with the same solution.

Reference solution Dissolve 25.0 mg of *cholesterol CRS* in the internal standard solution and dilute to 25.0 ml with the same solution.

Column:
- *material*: fused silica;
- *size:* l = 30 m, Ø = 0.25 mm;
- *stationary phase: poly(dimethyl)siloxane R* (film thickness 0.25 µm).

Carrier gas *helium for chromatography R.*

Flow rate 2 ml/min.

Split ratio 1:25.

Temperature:
- *column*: 275 °C;
- *injection port*: 285 °C;
- *detector*: 300 °C.

Detection Flame ionisation.

Injection 1.0 µl.

System suitability Reference solution:

- *resolution*: minimum 10.0 between the peaks due to pregnenolone isobutyrate and cholesterol.

Calculate the percentage content of cholesterol from the declared content in *cholesterol CRS.* Calculate the percentage content of total sterols by adding together the contents of cholesterol and other substances with a retention time less than or equal to 1.5 times the retention time of cholesterol. Disregard the peaks due to the internal standard and the solvent.

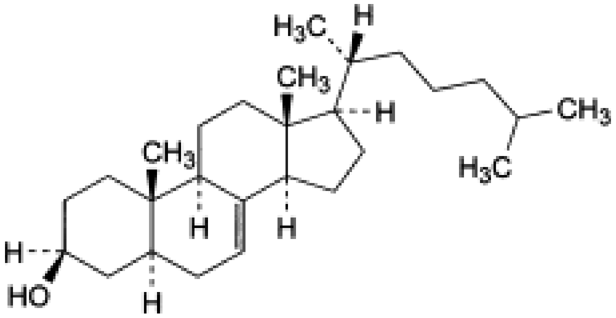
STORAGE

Protected from light.

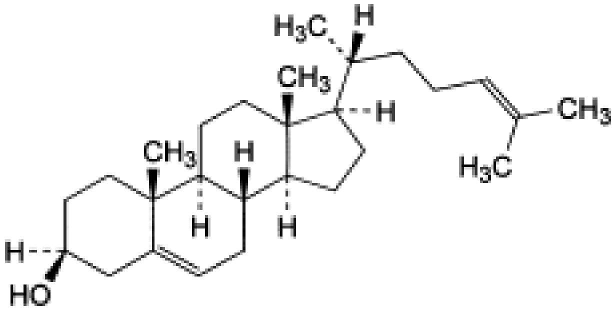
LABELLING

The label states the source material for the production of cholesterol (for example bovine brain and spinal cord, wool fat or chicken eggs).

IMPURITIES



A. 5α-cholest-7-en-3β-ol (lathosterol),



B. cholesta-5,24-dien-3β-ol (desmosterol),
